(54) Title: SYSTEMS AND TECHNIQUES FOR WIRELESS DEVICE CONFIGURATION

FIG. 1

(57) Abstract: Systems and techniques for configuring wireless devices are described. To configure a wireless target device (120) to access a network (140) and/or network-based services, a wireless connection may be formed between the wireless target device (120) and a wireless source device (110) storing configuration data for accessing one or more networks (140) and/or network-based services. The source device (110) may determine whether it is authorized to send at least a portion of the configuration data to the target device (120). The target device (120) may determine whether it is authorized to accept at least a portion of the configuration data provided by the source device (110). The target device (120) may accept at least a portion of the configuration data by storing the accepted configuration data in a memory (e.g., a non-volatile memory) and/or by using the configuration data to access a wireless network (120) and/or a network-based service.
