(54) Title: METHOD AND SYSTEM FOR PROCESSING XML-TYPE TELECOMMUNICATIONS DOCUMENTS

234

(57) Abstract: Techniques for use in telecommunications products and services for processing XML-type (e.g., CCXML or VXML) documents in association with the operation of a telecommunications network include parsing a XML-type document a single time for all instruction execution relating to the XML-type document for generating an XML-type reference document. Compiling the XML reference document occurs next for generating a XML-type binary reference file comprising a plurality of binary data sets derived from the XML-type reference document. Then, the method and system convert the XML-type binary reference file to an object tree for use of the contents of the XML-type binary reference file at essentially execution speeds. The method and system provide for storing data in a cache memory, the data relating to the XML-type binary reference file in the processing of the XML-type document.

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US 07/65347

A. CLASSIFICATION OF SUBJECT MATTER IPC(8) - G06F 9/45 (2007.10) USPC - 717/140			
According to International Patent Classification (IPC) or to both national classification and IPC B. FIELDS SEARCHED			
Minimum documentation searched (classification system followed by classification symbols)			
717/140			
Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched USPC: 707/1, 100; 717/100, 115, 143			
Electronic data base consulted during the international search (name of data base and, where practicable, search terms used) PubWEST: (PGPB,USPT,EPAB,JPAB); Google Scholar Search Terms: VXML document, XML document, parse, parsing, generate reference, reference, compile, binary file, object tree, execution speed, store data, stored data, storing data, data storage, cache memory, execution point, C++, application circuit, XAP, application executor
