UNITED STATES PATENT OFFICE.

CHARLES H. CASEBOLT, OF ST. LOUIS, MISSOURI.

SHIRT.

1,075,010. Specification of Letters Patent. Patented Oct. 7, 1913.

Application filed December 20, 1911. Serial No. 666,981.

To all whom it may concern:

Be it known that I, CHARLES H. CASEBOLT, a citizen of the United States, residing at St. Louis, Missouri, have invented a certain new and useful Improvement in Shirts, of which the following is a full, clear, and exact description, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, forming part of this specification, in which—

Figure 1 is a view of a shirt provided with my improved detachable sleeves. Fig. 2 is a detailed view of one of the detachable sleeves.

This invention relates to a new and useful improvement in detachable and interchangeable sleeves for shirts, the object being to enable the wearer to remove the sleeve to which the cuff is attached and which may be designated as the dress sleeve, upon reaching his place of business in the morning, and substituting another sleeve, which may be designated as a working sleeve, to be worn during working hours, whereby the dress sleeve may be kept clean. The working sleeve of course can be laundried separately as well as the dress sleeves and the body of the shirt used with different sleeves, and vice versa.

Another object of my invention is to provide a shirt with a short half-length sleeve which is designed to fit within the full-length sleeve, thus enabling the full-length sleeve to be removed leaving the arms free, as, for instance, in playing games, such as golf and base-ball, after which the sleeve can be attached having been preserved clean during the game.

In the drawings, 1 indicates the body of the shirt, which may be of the usual construction, said shirt being provided with short or half length sleeves 2. At the upper ends of these sleeves, and at the point located adjacent to the neck yoke, at the upper outer shoulder portion of the shirt, I provide tabs 3 which may be stitched at their upper edges to the seam between the yoke and half length sleeve so that the lower end will be free, or said tab may be stitched to the sleeve itself, this tab forming a reinforcement for the attachment of the button 4 or other fastening device.

5 is the dress sleeve to which a cuff may be attached, said sleeve being reinforced at its shoulder portion by an extra thickness of material 5^a, through which is formed a buttonhole 6 for coöperating with the button 4. This full dress sleeve may be slipped up over the arm of the wearer and over the half length sleeve and attached in position by means of buttoning the same to the button 4, the wearer being able to do this without removing his vest.

When the dress sleeve is removed, a working sleeve, indicated by dotted lines at 7 in Fig. 1, may be buttoned in position, the wearer being able to attach this working sleeve also without removing the vest.

What I claim is.

A garment including in combination, a body portion, a short length sleeve secured on said body portion, a tab secured to said body portion on top of the shoulder and extending out over a portion of said short length sleeve and provided in its outer portion with a means of attachment, and a full length sleeve adapted to be slipped entirely over said short length sleeve and to contact around the sleeve with the body portion of the garment, said full length sleeve being provided with means at its upper extremity for securing it to the garment by the attaching means carried by the tab.

In testimony whereof I hereunto affix my signature in the presence of two witnesses, this 18th day of December, 1911.

CHARLES H. CASEBOLT.
