(54) Title: MEDICAL DATA ACQUISITION AND PATIENT MANAGEMENT SYSTEM AND METHOD

(57) Abstract: A sample analysis and medical data acquisition system for patient management includes a first user interface (UI) display module for displaying a medical chart page that includes selectable items associated with patient management. The first UI display module displays a set of medical delivery systems associated with a selectable medical delivery selection item, from which a medical delivery system is chosen. The system includes a second UI display module, in communication with the first UI display module, for displaying parameter fields for entry of operation data associated with the chosen medical delivery system. Medical data is captured from a patient by an analyzer configured to perform analysis of samples from the patient. The medical data is analyzed in accordance with entered operation data. The system includes an analysis display module, in communication with at least the first UI display module, for displaying sample analysis results.
