## Description

## TECHNICAL FIELD

5 **[0001]** The application discloses compositions and methods useful for treatment, prevention, or suppression of diseases, developmental delays and symptoms related to mitochondrial disorders, such as Friedreich's Ataxia, Leber's Hereditary Optic Neuropathy, Keams-Sayre Syndrome, mitochondrial myopathy, encephalopathy, lactic acidosis, and stroke, and cerebral vascular accidents, and for modulating energy biomarkers in a subject. Compositions of the present invention are administered to a subject for the purpose of compensating for mitochondrial dysfunction and for improving  
10 mitochondrial functions. Methods and compounds useful in treating other disorders such as Amyotrophic Lateral Sclerosis (ALS), Huntington's and Parkinson's are also disclosed.

## BACKGROUND

15 **[0002]** Mitochondria are organelles in eukaryotic cells, popularly referred to as the "powerhouse" of the cell. One of their primary functions is oxidative phosphorylation. The molecule adenosine triphosphate (ATP) functions as an energy "currency" or energy carrier in the cell, and eukaryotic cells derive the majority of their ATP from biochemical processes carried out by mitochondria. These biochemical processes include the citric acid cycle (the tricarboxylic acid cycle, or  
20 Krebs's cycle), which generates reduced nicotinamide adenine dinucleotide (NADH + H<sup>+</sup>) from oxidized nicotinamide adenine dinucleotide (NAD<sup>+</sup>), and oxidative phosphorylation, during which NADH + H<sup>+</sup> is oxidized back to NAD<sup>+</sup>. (The citric acid cycle also reduces flavin adenine dinucleotide, or FAD, to FADH<sub>2</sub>; FADH<sub>2</sub> also participates in oxidative phosphorylation.)

**[0003]** The electrons released by oxidation of NADH + H<sup>+</sup> are shuttled down a series of protein complexes (Complex I, Complex II, Complex III, and Complex IV) known as the respiratory chain. These complexes are embedded in the  
25 inner membrane of the mitochondrion. Complex IV, at the end of the chain, transfers the electrons to oxygen, which is reduced to water. The energy released as these electrons traverse the complexes is used to generate a proton gradient across the inner membrane of the mitochondrion, which creates an electrochemical potential across the inner membrane. Another protein complex, Complex V (which is not directly associated with Complexes I, II, III and IV) uses the energy stored by the electrochemical gradient to convert ADP into ATP.

30 **[0004]** The citric acid cycle and oxidative phosphorylation are preceded by glycolysis, in which a molecule of glucose is broken down into two molecules of pyruvate, with net generation of two molecules of ATP per molecule of glucose. The pyruvate molecules then enter the mitochondria, where they are completely oxidized to CO<sub>2</sub> and H<sub>2</sub>O via oxidative phosphorylation (the overall process is known as aerobic respiration). The complete oxidation of the two pyruvate molecules to carbon dioxide and water yields about at least 28-29 molecules of ATP, in addition to the 2 molecules of  
35 ATP generated by transforming glucose into two pyruvate molecules. If oxygen is not available, the pyruvate molecule does not enter the mitochondria, but rather is converted to lactate, in the process of anaerobic respiration.

**[0005]** The overall net yield per molecule of glucose is thus approximately at least 30-31 ATP molecules. ATP is used to power, directly or indirectly, almost every other biochemical reaction in the cell. Thus, the extra (approximately) at least 28 or 29 molecules of ATP contributed by oxidative phosphorylation during aerobic respiration are critical to the  
40 proper functioning of the cell. Lack of oxygen prevents aerobic respiration and will result in eventual death of almost all aerobic organisms; a few organisms, such as yeast, are able to survive using either aerobic or anaerobic respiration.

**[0006]** When cells in an organism are temporarily deprived of oxygen, anaerobic respiration is utilized until oxygen again becomes available or the cell dies. The pyruvate generated during glycolysis is converted to lactate during anaerobic respiration. The buildup of lactic acid is believed to be responsible for muscle fatigue during intense periods of activity,  
45 when oxygen cannot be supplied to the muscle cells. When oxygen again becomes available, the lactate is converted back into pyruvate for use in oxidative phosphorylation.

**[0007]** Mitochondrial dysfunction contributes to various disease states. Some mitochondrial diseases are due to mutations or deletions in the mitochondrial genome. If a threshold proportion of mitochondria in the cell is defective, and if a threshold proportion of such cells within a tissue have defective mitochondria, symptoms of tissue or organ dysfunction can result. Practically any tissue can be affected, and a large variety of symptoms may be present, depending on the extent to which different tissues are involved.

50 **[0008]** One such disease is Friedreich's ataxia (FRDA or FA). Friedreich's ataxia is an autosomal recessive neurodegenerative and cardiodegenerative disorder caused by decreased levels of the protein frataxin. Frataxin is important for the assembly of iron-sulfur clusters in mitochondrial respiratory-chain complexes. Estimates of the prevalence of FRDA in the United States range from 1 in every 22,000-29,000 people (see [www.nlm.nih.gov/medlineplus/ency/article/001411.htm](http://www.nlm.nih.gov/medlineplus/ency/article/001411.htm)) to 1 in 50,000 people (see [www.umd-cares.org/health\\_info/ADAM/Articles/001411.asp](http://www.umd-cares.org/health_info/ADAM/Articles/001411.asp)). The disease causes the progressive loss of voluntary motor coordination (ataxia) and cardiac complications. Symptoms typically begin in childhood, and the disease progressively worsens as the patient grows older; patients eventually become

wheelchair-bound due to motor disabilities.

**[0009]** Another disease linked to mitochondrial dysfunction is Leber's Hereditary Optic Neuropathy (LHON). The disease is characterized by blindness which occurs on average between 27 and 34 years of age; blindness can develop in both eyes simultaneously, or sequentially (one eye will develop blindness, followed by the other eye two months later on average). Other symptoms may also occur, such as cardiac abnormalities and neurological complications.

**[0010]** Yet another devastating syndrome resulting from mitochondrial defects is mitochondrial myopathy, encephalopathy, lacticidosis, and stroke (MELAS). The disease can manifest itself in infants, children, or young adults. Strokes, accompanied by vomiting and seizures, are one of the most serious symptoms; it is postulated that the metabolic impairment of mitochondria in certain areas of the brain is responsible for cell death and neurological lesions, rather than the impairment of blood flow as occurs in ischemic stroke. Other severe complications, including neurological symptoms, are often present, and elevated levels of lactic acid in the blood occur.

**[0011]** Another mitochondrial disease is Kearns-Sayre Syndrome (KSS). KSS is characterized by a triad of features including: (1) typical onset in persons younger than age 20 years; (2) chronic, progressive, external ophthalmoplegia; and (3) pigmentary degeneration of the retina. In addition, KSS may include cardiac conduction defects, cerebellar ataxia, and raised cerebrospinal fluid (CSF) protein levels (e.g., >100 mg/dL). Additional features associated with KSS may include myopathy, dystonia, endocrine abnormalities (e.g., diabetes, growth retardation or short stature, and hypoparathyroidism), bilateral sensorineural deafness, dementia, cataracts, and proximal renal tubular acidosis. Thus, KSS may affect many organ systems.

**[0012]** Co-Enzyme Q10 Deficiency is a respiratory chain disorder, with syndromes such as myopathy with exercise intolerance and recurrent myoglobin in the urine manifested by ataxia, seizures or mental retardation and leading to renal failure (Di Mauro et al., (2005) *Neuromusc. Disord.*, 15:311-315), childhood-onset cerebellar ataxia and cerebellar atrophy (Masumeci et al., (2001) *Neurology* 56:849-855 and Lamperti et al., (2003) 60:1206:1208); and infantile encephalomyopathy associated with nephrosis. Biochemical measurement of muscle homogenates of patients with CoQ10 deficiency showed severely decreased activities of respiratory chain complexes I and II + III, while complex IV (COX) was moderately decreased (Gempel et al., (2007) *Brain*, 130(8):2037-2044).

**[0013]** Complex I Deficiency or NADH dehydrogenase NADH-CoQ reductase deficiency is a respiratory chain disorder, with symptoms classified by three major forms: (1) fatal infantile multisystem disorder, characterized by developmental delay, muscle weakness, heart disease, congenital lactic acidosis, and respiratory failure; (2) myopathy beginning in childhood or in adult life, manifesting as exercise intolerance or weakness; and (3) mitochondrial encephalomyopathy (including MELAS), which may begin in childhood or adult life and consists of variable combinations of symptoms and signs, including ophthalmoplegia, seizures, dementia, ataxia, pigmentary retinopathy, sensory neuropathy, and uncontrollable movements.

**[0014]** Complex II Deficiency or Succinate dehydrogenase deficiency is a respiratory chain disorder with symptoms including encephalomyopathy and various manifestations, including failure to thrive, developmental delay, hypotonia, lethargy, respiratory failure, ataxia, myoclonus and lactic acidosis.

**[0015]** Complex III Deficiency or Ubiquinone-cytochrome C oxidoreductase deficiency is a respiratory chain disorder with symptoms categorized in four major forms: (1) fatal infantile encephalomyopathy, congenital lactic acidosis, hypotonia, dystrophic posturing, seizures, and coma; (2) encephalomyopathies of later onset (childhood to adult life): various combinations of weakness, short stature, ataxia, dementia, sensory neuropathy, pigmentary retinopathy, and pyramidal signs; (3) myopathy, with exercise intolerance evolving into fixed weakness; and (4) infantile histiocytoid cardiomyopathy.

**[0016]** Complex IV Deficiency or Cytochrome C oxidase deficiency is a respiratory chain disorder with symptoms categorized in two major forms: (1) encephalomyopathy, which is typically normal for the first 6 to 12 months of life and then show developmental regression, ataxia, lactic acidosis, optic atrophy, ophthalmoplegia, nystagmus, dystonia, pyramidal signs, respiratory problems and frequent seizures; and (2) myopathy with two main variants: (a) Fatal infantile myopathy-may begin soon after birth and accompanied by hypotonia, weakness, lactic acidosis, ragged-red fibers, respiratory failure, and kidney problems; and (b) Benign infantile myopathy- may begin soon after birth and accompanied by hypotonia, weakness, lactic acidosis, ragged-red fibers, respiratory problems, but (if the child survives) followed by spontaneous improvement.

**[0017]** Complex V Deficiency or ATP synthase deficiency is a respiratory chain disorder including symptoms such as slow, progressive myopathy.

**[0018]** CPEO or Chronic Progressive External Ophthalmoplegia Syndrome is a respiratory chain disorder including symptoms such as visual myopathy, retinitis pigmentosa, or dysfunction of the central nervous system.

**[0019]** In addition to congenital disorders involving inherited defective mitochondria, acquired mitochondrial dysfunction contributes to diseases, particularly neurodegenerative disorders associated with aging like Parkinson's, Alzheimer's, and Huntington's Diseases. The incidence of somatic mutations in mitochondrial DNA rises exponentially with age; diminished respiratory chain activity is found universally in aging people. Mitochondrial dysfunction is also implicated in excitotoxic, neuronal injury, cerebral vascular accidents such as that associated with seizures, stroke and ischemia.

**[0020]** The diseases above appear to be caused by defects in complex I of the respiratory chain. Electron transfer

from complex I to the remainder of the respiratory chain is mediated by the compound coenzyme Q (also known as ubiquinone). Oxidized coenzyme Q (CoQ<sup>ox</sup> or ubiquinone) is reduced by complex I to reduced coenzyme Q (CoQ<sup>red</sup> or ubiquinol). The reduced coenzyme Q then transfers its electrons to complex III of the respiratory chain (skipping over complex II), where it is re-oxidized to CoQ<sup>ox</sup> (ubiquinone). CoQ<sup>ox</sup> can then participate in further iterations of electron transfer.

**[0021]** Very few treatments are available for patients suffering from these diseases. Recently, the compound idebenone has been proposed for treatment of Friedreich's ataxia. While the clinical effects of idebenone have been relatively modest, the complications of mitochondrial diseases can be so severe that even marginally useful therapies are preferable to the untreated course of the disease. Another compound, MitoQ, has been proposed for treating mitochondrial disorders (see U.S. Patent No. 7,179,928); clinical results for MitoQ have not yet been reported. Administration of coenzyme Q10 (CoQ10) and vitamin supplements have shown only transient beneficial effects in individual cases of KSS.

**[0022]** Mitochondrial dysfunction has also been implicated in various other diseases. Recent studies have suggested that as many 20 percent of patients with autism have markers for mitochondrial disease (Shoffner, J. the 60th Annual American Academy of Neurology meeting in Chicago, April 12-19, (2008); Poling, JS et al J. child Neurol. 2008, 21(2) 170-2; and Rossignol et al., Am. J. Biochem. & Biotech. (2008) 4, 208-217). Some cases of autism have been associated with several different organic conditions, including bioenergetic metabolism deficiency suggested by the detection of high lactate levels in some patients (Coleman M. et al, Autism and Lactic Acidosis, J. Autism Dev Discord., (1985) 15: 1-8; Laszlo et al Serum serotonin, lactate and pyruvate levels in infantile autistic children, Clin. Chim. Acta (1994) 229:205-207; and Chugani et al., Evidence of altered energy metabolism in autistic children, Progr. Neuropsychopharmacol Biol Psychiat., (1999) 23:635-641) and by nuclear magnetic resonance imagining as well as positron emission tomography scanning which documented abnormalities in brain metabolism. Although the mechanism of hyperlactacidemia remains unknown, a likely possibility involves mitochondrial oxidative phosphorylation dysfunction in neuronal cells. A small subset of autistic patients diagnosed with deficiencies in complex I or III of the respiratory chain have been reported in the literature (see Oliveira, G., Developmental Medicine & Child Neurology (2005) 47 185-189; and Filipek, PA et al., Journal of Autism and Developmental Disorders (2004) 34:615-623). However, in many of the cases of autism where there is some evidence of mitochondrial dysfunction, there is an absence of the classic features associated with mitochondrial disease, such as mitochondrial pathology in muscle biopsy (see Rossignol, D.A. et al., Am J. Biochem. & Biotech.,(2008) 4 (2) 208-217).

**[0023]** Recently, Hayashi et al. (Science Express, published online 3 April 2008: DOI: 10.1126/science.1156906, and Ishikawa et al., Science (2 May 2008) 320 (5876) 661-664) indicated that mitochondrial DNA mutations can contribute to tumor progression by enhancing the metastatic potential of tumor cells.

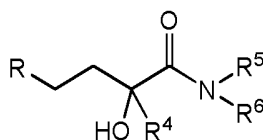

The patent EP 1 454 627 discloses compounds comprising a quinone moiety linked to a dipeptide which are said to be useful in treating mitochondrial disorders.

**[0024]** The ability to adjust biological production of energy has applications beyond the diseases described above. Various other disorders can result in suboptimal levels of energy biomarkers (sometimes also referred to as indicators of energetic function), such as ATP levels. Treatments for these disorders are also needed, in order to modulate one or more energy biomarkers to improve the health of the patient. In other applications, it can be desirable to modulate certain energy biomarkers away from their normal values in an individual that is not suffering from disease. For example, if an individual is undergoing an extremely strenuous undertaking, it can be desirable to raise the level of ATP in that individual.

**[0025]** Accordingly, compounds for treatment of mitochondrial disease and/or to adjust biological production of energy have a wide range of practical applications.

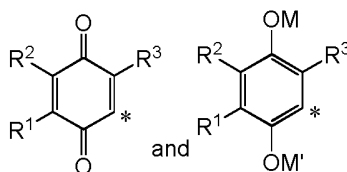

#### DISCLOSURE OF THE INVENTION

**[0026]** In one embodiment, described herein are compounds of formula I-S:

Formula I-S

where R is selected from the group consisting of:

where the \* indicates the point of attachment of R to the remainder of the molecule;

R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> are independently selected from hydrogen, C<sub>1</sub>-C<sub>6</sub>-alkyl, and O-C<sub>1</sub>-C<sub>6</sub>-alkyl;

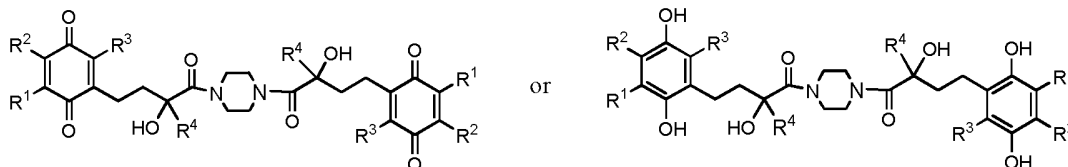

R<sup>4</sup> is C<sub>1</sub>-C<sub>6</sub>-alkyl;

R<sup>5</sup> and R<sup>6</sup> are independently selected from hydrogen, hydroxy, alkoxy, C<sub>1</sub>-C<sub>40</sub>-alkyl, C<sub>1</sub>-C<sub>40</sub>-alkenyl, C<sub>1</sub>-C<sub>40</sub>-alkynyl, and aryl; where the alkyl, alkenyl, alkynyl, or aryl groups may optionally be substituted with

-OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, oxo, C<sub>3</sub>-C<sub>6</sub>-cycloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-R<sup>11</sup>, -C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-OR<sup>11</sup>, -C(O)-O-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-N-R<sup>11</sup>R<sup>11'</sup>, -C(O)-N-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -N-C(O)-R<sup>11</sup>, -N-C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl; where the aryl, heteroaryl and heterocycl ring substituents may be further substituted with C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, oxo, hydroxy, C<sub>1</sub>-C<sub>6</sub>-alkoxy, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl and -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; and where one of the carbons of the alkyl, alkenyl, or alkynyl groups may be substituted with a heteroatom selected from O, N or; or

R<sup>5</sup> and R<sup>6</sup> together with the atom to which they are attached form a saturated or unsaturated 3-8 membered ring, optionally incorporating one or more additional, such as one, two, or three, N, O, or S atoms and optionally substituted with oxo, -OR<sup>10</sup>, -SR<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl; hydroxy-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl, -C(O)-OH, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; or

R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form a *N,N'*-disubstituted piperazine where the nitrogen substitution at the 4-position is a group identical to the substitution at the 1-position forming a compound of formula I-Saa or I-Sbb, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are as defined above:

Formula I-Saa

Formula I-Sbb

R<sup>10</sup> and R<sup>10</sup> are independently selected from the group consisting of H, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl and -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl-aryl;

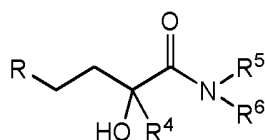

R<sup>11</sup> and R<sup>11'</sup> are selected from hydrogen and C<sub>1</sub>-C<sub>6</sub>-alkyl; and

M and M' are independently selected from hydrogen, -C(O)-R<sup>12</sup>, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkenyl, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkynyl, -C(O)-aryl; -C(O)-heteroaryl, -C(O)-O-R<sup>12</sup>, -C(O)-NR<sup>12</sup>R<sup>12</sup>, -SO<sub>2</sub>OR<sup>12</sup>, -SO<sub>2</sub>-C<sub>1</sub>-C<sub>6</sub>-alkyl, -SO<sub>2</sub>-haloC<sub>1</sub>-C<sub>6</sub>-alkyl; -SO<sub>2</sub>-aryl, -SO<sub>2</sub>-NR<sup>12</sup>R<sup>12</sup>, -P(O)(OR<sup>12</sup>)(OR<sup>12</sup>), and C-linked mono or di-peptide, where R<sup>12</sup> is hydrogen or C<sub>1</sub>-C<sub>6</sub>-alkyl optionally substituted with -OH, -NH<sub>2</sub>, -NH(C<sub>1</sub>-C<sub>4</sub>alkyl), -N(C<sub>1</sub>-C<sub>4</sub>alkyl)<sub>2</sub>, -C(O)-OH, -C(O)-O-C<sub>1</sub>-C<sub>4</sub>-alkyl or halogen; with the proviso that the compound is not *N*-(6-amino-3-methyl-2,4-dioxo-1-phenyl-1,2,3,4-tetrahydropyrimidin-5-yl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide or *N*-(6-amino-3-methyl-2,4-dioxo-1-phenyl-1,2,3,4-tetrahydropyrimidin-5-yl)-4-(2,5-dihydroxy-3,4,6-trimethylphenyl)-2-hydroxy-2-methylbutanamide;

and all salts, stereoisomers, mixtures of stereoisomers, prodrugs, metabolites, solvates, and hydrates thereof.

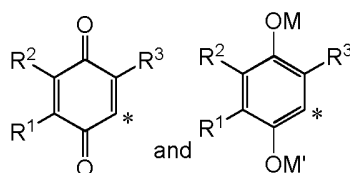

**[0027]** In another embodiment, described herein is a method of treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers, by administering a therapeutically effective amount or effective amount of one or more compounds of formula I-S as described above.

**[0028]** In one embodiment, the invention embraces compounds of formula I:

Formula I

where R is selected from the group consisting of:

where the \* indicates the point of attachment of R to the remainder of the molecule;

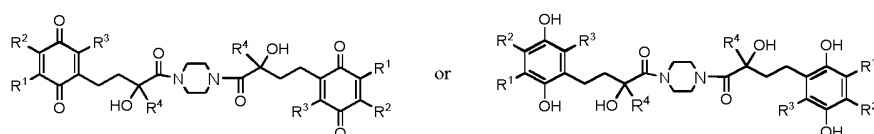

R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> are independently selected from the group consisting of hydrogen and C<sub>1</sub>-C<sub>6</sub>-alkyl;

R<sup>4</sup> is C<sub>1</sub>-C<sub>6</sub>-alkyl;

R<sup>5</sup> and R<sup>6</sup> are independently selected from the group consisting of hydrogen, hydroxy, alkoxy, C<sub>1</sub>-C<sub>40</sub>-alkyl, C<sub>1</sub>-C<sub>40</sub>-alkenyl, C<sub>1</sub>-C<sub>40</sub>-alkynyl, and aryl; where the alkyl, alkenyl, alkynyl, or aryl groups are optionally substituted with -OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10</sup>, oxo, C<sub>3</sub>-C<sub>6</sub>-cycloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-R<sup>11</sup>, -C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-O-R<sup>11</sup>, -C(O)-O-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-N-R<sup>11</sup>R<sup>11</sup>, -C(O)-NH-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -NH-C(O)-R<sup>11</sup>, or -NH-C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl; where the aryl, heteroaryl and heterocyclyl ring substituents are optionally further substituted with C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, oxo, hydroxy, C<sub>1</sub>-C<sub>6</sub>-alkoxy, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; and where one of the carbons of the alkyl, alkenyl, or alkynyl groups is optionally substituted with a heteroatom selected from the group consisting of -O-, -N- and -S-;

R<sup>5</sup> and R<sup>6</sup> together with the atom to which they are attached form a saturated or unsaturated 3-8 membered ring, optionally incorporating 1, 2, or 3 additional N, O, or S atoms, optionally substituted with oxo, -OR<sup>10</sup>, -SR<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10</sup>, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, hydroxy-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl, -C(O)-OH, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; or

R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form a *N,N'*-disubstituted piperazine where the nitrogen substitution at the 4-position is a group identical to the substitution at the 1-position forming a compound of formula Iaa or Ibb, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are as defined above:

Formula Iaa

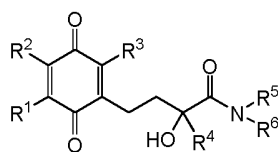

Formula Ibb

R<sup>10</sup> and R<sup>10</sup> are independently selected from the group consisting of hydrogen, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl, and -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl-aryl;

R<sup>11</sup> and R<sup>11</sup> are selected from the group consisting of hydrogen and C<sub>1</sub>-C<sub>6</sub>-alkyl; and M and M' are independently selected from the group consisting of hydrogen, -C(O)-R<sup>12</sup>, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkenyl, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkynyl, -C(O)-aryl, -C(O)-heteroaryl, -C(O)-O-R<sup>12</sup>, -C(O)-NR<sup>12</sup>R<sup>12</sup>, -SO<sub>2</sub>OR<sup>12</sup>, -SO<sub>2</sub>-C<sub>1</sub>-C<sub>6</sub>-alkyl, -SO<sub>2</sub>-haloC<sub>1</sub>-C<sub>6</sub>-alkyl, -SO<sub>2</sub>-aryl, -SO<sub>2</sub>-NR<sup>12</sup>R<sup>12</sup>, -P(O)(OR<sup>12</sup>)(OR<sup>12</sup>), and C-linked mono or di-peptide, where R<sup>12</sup> is hydrogen or C<sub>1</sub>-C<sub>6</sub>-alkyl optionally substituted with -OH, -NH<sub>2</sub>, -NH(C<sub>1</sub>-C<sub>4</sub>alkyl), -N(C<sub>1</sub>-C<sub>4</sub>alkyl)<sub>2</sub>, -C(O)-OH, -C(O)-O-C<sub>1</sub>-C<sub>4</sub>-alkyl, or halogen; or a salt, a stereoisomer, or a mixture of stereoisomers thereof.

**[0029]** In another embodiment, the invention embraces a compound of the invention as defined herein for use in a method of treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers, the method comprising administering to a subject a therapeutically effective amount or effective amount of the compound.

[0030] In another embodiment, the invention embraces compounds of formula Ia:

Formula Ia

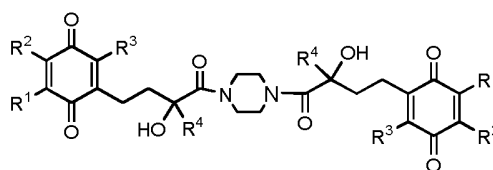

R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> are independently selected from hydrogen and C<sub>1</sub>-C<sub>6</sub>-alkyl;

R<sup>4</sup> is C<sub>1</sub>-C<sub>6</sub>-alkyl;

R<sup>5</sup> and R<sup>6</sup> are independently selected from the group consisting of hydrogen, hydroxy, alkoxy, C<sub>1</sub>-C<sub>40</sub>-alkyl, C<sub>1</sub>-C<sub>40</sub>-alkenyl, C<sub>1</sub>-C<sub>40</sub>-alkynyl, and aryl; where the alkyl, alkenyl, alkynyl, or aryl groups are optionally substituted with -OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10</sup>, oxo, C<sub>3</sub>-C<sub>6</sub>-cycloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-R<sup>11</sup>, -C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-O-R<sup>11</sup>, -C(O)-O-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-N-R<sup>11</sup>R<sup>11</sup>, -C(O)-NH-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -NH-C(O)-R<sup>11</sup>, or -NH-C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl; where the aryl, heteroaryl and heterocyclyl ring substituents are optionally further substituted with C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, oxo, hydroxy, C<sub>1</sub>-C<sub>6</sub>-alkoxy, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; and where one of the carbons of the alkyl, alkenyl, or alkynyl groups is optionally substituted with a heteroatom selected from the group consisting of -O-, -N- and -S-; or

R<sup>5</sup> and R<sup>6</sup> together with the atom to which they are attached form a saturated or unsaturated 3-8 membered ring, optionally incorporating 1, 2, or 3 additional N, O, or S atoms, optionally substituted with oxo, -OR<sup>10</sup>, -SR<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10</sup>, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, hydroxy-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl, -C(O)-OH, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; or

R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form a *N,N'*-disubstituted piperazine where the nitrogen substitution at the 4-position is a group identical to the substitution at the 1-position forming a compound of formula Iaa, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are as defined above:

Formula Iaa

R<sup>10</sup> and R<sup>10</sup> are independently selected from the group consisting of hydrogen, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl and -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl-aryl; and R<sup>11</sup> and R<sup>11</sup> are selected from hydrogen and C<sub>1</sub>-C<sub>6</sub>-alkyl;

and all salts, stereoisomers, and mixtures of stereoisomers thereof.

[0031] In another embodiment, the invention embraces compounds of formula Ia, where R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> are selected from methyl, ethyl, n-propyl, isopropyl, cyclopropyl, n-butyl, isobutyl, sec-butyl, t-butyl, cyclobutyl, cyclopropyl-methyl, methyl-cyclopropyl, pentyl where the point of attachment of the pentyl group to the remainder of the molecule can be at any location on the pentyl fragment, cyclopentyl, hexyl where the point of attachment of the hexyl group to the remainder of the molecule can be at any location on the hexyl fragment, and cyclohexyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

[0032] In another embodiment, the invention embraces compounds of formula Ia, where one of the R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> groups is methyl, and the remaining groups are hydrogen. In another embodiment the invention embraces compounds of formula Ia, where two of the R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> groups are methyl, and the remaining group is hydrogen. In another embodiment the invention embraces compounds of formula Ia, where R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> are methyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

[0033] In another embodiment, the invention embraces compounds of formula Ia, where R<sup>4</sup> is selected from methyl, ethyl, n-propyl, i-propyl, or cyclopropyl; and in another embodiment R<sup>4</sup> is methyl, and all salts, stereoisomers, and mixtures of stereoisomers thereof.

[0034] In another embodiment, the invention embraces compounds of formula Ia, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are methyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0035]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> and R<sup>6</sup>, are independently selected from hydrogen, and C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with hydroxy, alkoxy or -C(O)O-C<sub>1</sub>-C<sub>6</sub> alkyl, and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0036]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> and R<sup>6</sup> are independently hydrogen or C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with aryl; and a salt, a stereoisomer, or a mixture of stereoisomers thereof. In another embodiment, one of R<sup>5</sup> and R<sup>6</sup> is hydrogen and the other is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with aryl; and a salt, a stereoisomer, or a mixture of stereoisomers thereof. In another embodiment, R<sup>5</sup> and R<sup>6</sup> are hydrogen; and a salt, a stereoisomer, or a mixture of stereoisomers thereof.

**[0037]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl; and in another embodiment R<sup>6</sup> is selected from methyl, ethyl, propyl, isopropyl, butyl, isobutyl, 2-methylbutyl, and cyclopropyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0038]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl substituted with hydroxy, alkoxy or -C(O)O-C<sub>1</sub>-C<sub>6</sub> alkyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof. In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl substituted with hydroxy, and all salts, stereoisomers, and mixtures of stereoisomers thereof. In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is selected from -(CH<sub>2</sub>)<sub>1-6</sub>-OH; 1-hydroxyprop-2-yl and 2-hydroxyprop-1-yl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0039]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> and R<sup>6</sup> are independently selected from C<sub>1</sub>-C<sub>6</sub> alkyl substituted with hydroxyl; for example R<sup>5</sup> and R<sup>6</sup> are substituted with hydroxyethyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0040]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is independently selected from C<sub>1</sub>-C<sub>6</sub> alkyl substituted with -NR<sup>10</sup>R<sup>10</sup>, where R<sup>10</sup> and R<sup>10</sup> are independently selected from the group consisting of hydrogen, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl and -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl-aryl; and all salts, stereoisomers, and mixtures of stereoisomers thereof. In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is independently selected from C<sub>1</sub>-C<sub>6</sub> alkyl substituted with -NH<sub>2</sub>, -NH(C<sub>1</sub>-C<sub>6</sub>-alkyl), or -N(C<sub>1</sub>-C<sub>6</sub>-alkyl)<sub>2</sub>, for example where R<sup>6</sup> is dimethylaminoalkyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof. In another embodiment, the invention embraces pharmaceutically acceptable salts of compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is dimethylaminoethyl; for example hydrochloride or mesylate salts.

**[0041]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with phenyl, for example benzyl or phenylethyl, and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0042]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with heterocyclyl or heteroaryl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0043]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with a nitrogen containing heterocyclyl and all salts, stereoisomers, and mixtures of stereoisomers thereof. In another embodiment the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with pyrrolidinyl, piperidinyl, piperazinyl, or morpholinyl, and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0044]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with a nitrogen containing heteroaryl, for example imidazolyl, pyridinyl, pyrrolyl, and pyrimidinyl, and all salts, stereoisomers, and mixtures of stereoisomers thereof. In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with a nitrogen containing heteroaryl, for example imidazol-1-yl or pyridin-2-yl and all salts, stereoisomers, and mixtures of stereoisomers thereof. In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is 3-(1H-imidazol-1-yl)propyl, pyridin-2-ylmethyl, or 2-(pyridin-2-yl)ethyl, and all salts, stereoisomers, and mixtures of stereoisomers thereof.

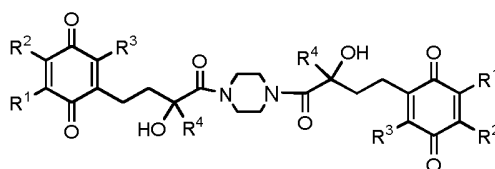

**[0045]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with an oxygen or sulfur containing heterocyclyl or heteroaryl, for example tetrahydropyranyl, tetrahydrofuranyl, tetrahydrothienyl, pyranyl, furanyl, thienyl, benzopyranyl, or benzofuranyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0046]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form an optionally substituted 3 to 8-membered nitrogen containing heterocyclyl ring, for example an azetidine, a pyrrolidine, a piperidine, a piperazine, a morpholine or an azepane ring; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0047]** In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> and R<sup>6</sup> together with the

nitrogen atom to which they are attached form piperidin-1-yl, 4-hydroxy-piperidin-1-yl, 4-methyl-piperazin-1-yl, 4-benzyl-piperazin-1-yl, and azepan-1-yl and all salts, stereoisomers, and mixtures of stereoisomers thereof.

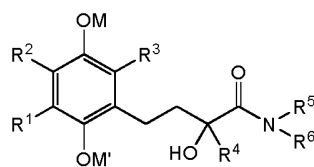

[0048] In another embodiment, the invention embraces compounds of formula Ia, where R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form a *N,N'*-disubstituted piperazine where the nitrogen substitution at the 4-position is a group identical to the substitution at the 1-position forming a compound of formula Iaa, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are as defined above:

Formula Iaa

and all salts, stereoisomers, and mixtures of stereoisomers thereof.

[0049] In another embodiment, the invention embraces compounds of the formula Ib:

Formula Ib

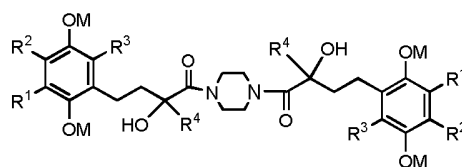

R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> are independently selected from hydrogen and C<sub>1</sub>-C<sub>6</sub>-alkyl;

R<sup>4</sup> is C<sub>1</sub>-C<sub>6</sub>-alkyl;

R<sup>5</sup> and R<sup>6</sup> are independently selected from the group consisting of hydrogen, hydroxy, alkoxy, C<sub>1</sub>-C<sub>40</sub>-alkyl, C<sub>1</sub>-C<sub>40</sub>-alkenyl, C<sub>1</sub>-C<sub>40</sub>-alkynyl, and aryl; where the alkyl, alkenyl, alkynyl, or aryl groups are optionally substituted with -OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10</sup>, oxo, C<sub>3</sub>-C<sub>6</sub>-cycloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-R<sup>11</sup>, -C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-O-R<sup>11</sup>, -C(O)-O-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-N-R<sup>11</sup>R<sup>11</sup>, -C(O)-NH-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -NH-C(O)-R<sup>11</sup>, or -NH-C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl; where the aryl, heteroaryl and heterocyclyl ring substituents are optionally further substituted with C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, oxo, hydroxy, C<sub>1</sub>-C<sub>6</sub>-alkoxy, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; and where one of the carbons of the alkyl, alkenyl, or alkynyl groups is optionally substituted with a heteroatom selected from the group consisting of -O-, -N- and -S-; or

R<sup>5</sup> and R<sup>6</sup> together with the atom to which they are attached form a saturated or unsaturated 3-8 membered ring, optionally incorporating 1, 2, or 3 additional N, O, or S atoms, optionally substituted with oxo, -OR<sup>10</sup>, -SR<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10</sup>, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, hydroxy-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl, -C(O)-OH, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; or

R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form a *N,N'*-disubstituted piperazine where the nitrogen substitution at the 4-position is a group identical to the substitution at the 1-position forming a compound of formula Ibb, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are as defined above:

Formula Ibb

R<sup>10</sup> and R<sup>10</sup> are independently selected from the group consisting of hydrogen, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl and -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl-aryl;

R<sup>11</sup> and R<sup>11</sup> are selected from hydrogen and C<sub>1</sub>-C<sub>6</sub>-alkyl;

M and M' are independently selected from hydrogen, -C(O)-R<sup>12</sup>, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkenyl, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkynyl, -C(O)-aryl, -C(O)-heteroaryl, -C(O)-O-R<sup>12</sup>, -C(O)-NR<sup>12</sup>R<sup>12</sup>, -SO<sub>2</sub>OR<sup>12</sup>, -SO<sub>2</sub>-C<sub>1</sub>-C<sub>6</sub>-alkyl, -SO<sub>2</sub>-haloC<sub>1</sub>-C<sub>6</sub>-alkyl;

-SO<sub>2</sub>-aryl, -SO<sub>2</sub>-NR<sup>12</sup>R<sup>12</sup>, -P(O)(OR<sup>12</sup>)(OR<sup>12</sup>), and C-linked mono- or di-peptide, where R<sup>12</sup> is hydrogen or C<sub>1</sub>-C<sub>6</sub>-alkyl optionally substituted with -OH, -NH<sub>2</sub>, -NH(C<sub>1</sub>-C<sub>4</sub>alkyl), -N(C<sub>1</sub>-C<sub>4</sub>alkyl)<sub>2</sub>, -C(O)-OH, -C(O)-O-C<sub>1</sub>-C<sub>4</sub>-alkyl or halogen;

and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0050]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> are selected from methyl, ethyl, n-propyl, isopropyl, cyclopropyl, n-butyl, isobutyl, sec-butyl, t-butyl, cyclobutyl, cyclopropyl-methyl, methyl-cyclopropyl, pentyl where the point of attachment of the pentyl group to the remainder of the molecule can be at any location on the pentyl fragment, cyclopentyl, hexyl where the point of attachment of the hexyl group to the remainder of the molecule can be at any location on the hexyl fragment and cyclohexyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0051]** In another embodiment, the invention embraces compounds of formula Ib, where one of the R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> groups is methyl, and the remaining groups are hydrogen. In another embodiment the invention embraces compounds of formula Ib, where two of the R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> groups are methyl, and the remaining group is hydrogen. In another embodiment the invention embraces compounds of formula Ib, where R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> are methyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0052]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>4</sup> is selected from methyl, ethyl, n-propyl, i-propyl, or cyclopropyl; and in another embodiment R<sup>4</sup> is methyl, and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0053]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are methyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0054]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> and R<sup>6</sup> are independently selected from hydrogen, and C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with hydroxy, alkoxy or -C(O)O-C<sub>1</sub>-C<sub>6</sub> alkyl, and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0055]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> and R<sup>6</sup> are independently hydrogen or C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with aryl; and a salt, a stereoisomer, or a mixture of stereoisomers thereof. In another embodiment, one of R<sup>5</sup> and R<sup>6</sup> is hydrogen and the other is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with aryl; and a salt, a stereoisomer, or a mixture of stereoisomers thereof. In another embodiment, R<sup>5</sup> and R<sup>6</sup> are hydrogen; and a salt, a stereoisomer, or a mixture of stereoisomers thereof.

**[0056]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is unsubstituted C<sub>1</sub>-C<sub>6</sub> alkyl, and in another embodiment R<sup>6</sup> is selected from methyl, ethyl, propyl, isopropyl, butyl, isobutyl, 2-methylbutyl, cyclopropyl and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0057]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl substituted with hydroxy, alkoxy or -C(O)O-C<sub>1</sub>-C<sub>6</sub> alkyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof. In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl substituted with hydroxy, and all salts, stereoisomers, and mixtures of stereoisomers thereof. In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is selected from -(CH<sub>2</sub>)<sub>1-6</sub>-OH; 1-hydroxyprop-2-yl and 2-hydroxyprop-1-yl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0058]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> and R<sup>6</sup> are independently selected from C<sub>1</sub>-C<sub>6</sub> alkyl substituted with hydroxyl; for example R<sup>5</sup> and R<sup>6</sup> are substituted with hydroxyethyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0059]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is independently selected from C<sub>1</sub>-C<sub>6</sub> alkyl substituted with -NR<sup>10</sup>R<sup>10</sup>, where R<sup>10</sup> and R<sup>10</sup> are independently selected from the group consisting of hydrogen, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl and -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl-aryl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0060]** In another embodiment, the invention embraces compounds of formula Ib where R<sup>5</sup> is hydrogen and R<sup>6</sup> is independently selected from C<sub>1</sub>-C<sub>6</sub> alkyl substituted with -NH<sub>2</sub>, -NH(C<sub>1</sub>-C<sub>6</sub>-alkyl), or -N(C<sub>1</sub>-C<sub>6</sub>-alkyl)<sub>2</sub>, for example where R<sup>6</sup> is dimethylaminoalkyl such as dimethylaminoethyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0061]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with phenyl, for example benzyl or phenylethyl, and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0062]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with heterocyclyl or heteroaryl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0063]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with a nitrogen containing heterocyclyl, and all salts, stereoisomers, and mixtures of

stereoisomers thereof. In another embodiment the invention embraces compounds of formula Ib, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with pyrrolidinyl, piperidinyl, piperazinyl, or morpholinyl, and all salts, stereoisomers, and mixtures of stereoisomers thereof.

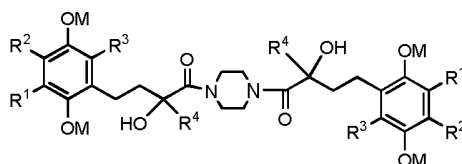

**[0064]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with a nitrogen containing heteroaryl, for example imidazolyl, pyridinyl, pyrrolyl, and pyrimidinyl and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0065]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with an oxygen or sulfur containing heterocyclyl or heteroaryl, for example tetrahydropyranyl, tetrahydrofuranyl, tetrahydrothienyl, pyranyl, furanyl or thienyl; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0066]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form an optionally substituted 3 to 8-membered nitrogen containing heterocyclyl ring, for example an azetidine, a pyrrolidine, a piperidine, a piperazine, a morpholine or an azepane ring; and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0067]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form piperidin-1-yl, 4-hydroxy-piperidin-1-yl, 4-methyl-piperazin-1-yl, 4-benzyl-piperazin-1-yl, and azepan-1-yl and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0068]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form a *N,N'*-disubstituted piperazine where the nitrogen substitution at the 4-position is a group identical to the substitution at the 1-position forming a compound of formula Ibb, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are as defined above:

Formula Ibb

and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0069]** In another embodiment, the invention embraces compounds of formula Ib, where M and M' are selected from hydrogen, -C(O)-H or -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, for example hydrogen or acetyl, and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0070]** In another embodiment, the invention embraces compounds of formula Ib, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are methyl and M and M' are hydrogen or C(O)-R<sup>12</sup>, and a salt, a stereoisomer, or a mixture of stereoisomers. In another embodiment, the invention embraces compounds of formula Ib, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are methyl and M and M' are hydrogen or acetyl, and a salt, a stereoisomer, or a mixture of stereoisomers.

**[0071]** In another embodiment, the invention embraces a pharmaceutical composition comprising a compound of the invention as defined herein, together with a pharmaceutical acceptable excipient, carrier or vehicle.

**[0072]** In another embodiment, the invention embraces a compound or composition of the invention as defined herein for use in a method of treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers, by administering a therapeutically effective amount of the compound or composition.

**[0073]** In another embodiment, the invention embraces a compound of formula Ia, wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> and R<sup>4</sup> are independently selected from -C<sub>1</sub>-C<sub>4</sub> alkyl; or a salt, stereoisomer, or mixtures of stereoisomers thereof for use in a method of treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers.

**[0074]** In another embodiment, the invention embraces a compound of formula Ia, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> and R<sup>4</sup> are independently selected from -C<sub>1</sub>-C<sub>4</sub> alkyl; and where R<sup>4</sup> has an (R) configuration for use in a method of treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers.

**[0075]** In another embodiment, the invention embraces a compound of formula Ia, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are independently selected from -C<sub>1</sub>-C<sub>4</sub> alkyl; and where R<sup>4</sup> has an (S) configuration for use in a method of treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers.

**[0076]** In another embodiment, the invention embraces a compound of formula Ib, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are independently selected from -C<sub>1</sub>-C<sub>4</sub> alkyl; or a salt, stereoisomer, or mixture of stereoisomers for use in a method of

treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers.

**[0077]** In another embodiment, the invention embraces a compound of formula Ib, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are independently selected from -C<sub>1</sub>-C<sub>4</sub>-alkyl; and where R<sup>4</sup> has an (R) configuration for use in a method of treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers.

**[0078]** In another embodiment, the invention embraces a compound of formula Ib, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are independently selected from -C<sub>1</sub>-C<sub>4</sub> alkyl; and where R<sup>4</sup> has an (S) configuration for use in a method of treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarker.

**[0079]** In another embodiment, the invention embraces compounds of formula I, selected from:

- 2-hydroxy-*N*-isopropyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(3-hydroxy-3-methyl-4-oxo-4-(piperidin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(4-(azepan-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- *N*-hexyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-*tert*-butyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N,N*-2-trimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-ethyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-benzyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-propyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(cyclopropylmethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-phenethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(3-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-isopentyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-cyclopropyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(3-hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-hydroxy-*N*-isobutyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-ethyl-2-hydroxy-*N*,2-dimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(4-hydroxybutyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(5-hydroxypentyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-methoxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(1-hydroxypropan-2-yl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*R*)-2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*S*)-2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- methyl 2-(2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamido) acetate;
- *N*-(3-(1*H*-imidazol-1-yl)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-(2-hydroxyethoxy)ethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-(pyridin-2-ylmethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-(2-(pyridin-2-yl)ethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-(3-(2-oxopyrrolidin-1-yl)propyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

- *N*-(4-chlorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

and all salts, stereoisomers, and mixtures of stereoisomers thereof.

**[0080]** In other embodiments, including any of the foregoing embodiments, the mitochondrial disorder is selected from the group consisting of inherited mitochondrial diseases; Myoclonic Epilepsy with Ragged Red Fibers (MERRF); Mitochondrial Myopathy, Encephalopathy, Lactacidosis, and Stroke (MELAS); Leber's Hereditary Optic Neuropathy (LHON); Leigh Disease; Kearns-Sayre Syndrome (KSS); Friedreich's Ataxia (FA); other myopathies; cardiomyopathy; encephalomyopathy; renal tubular acidosis; neurodegenerative diseases; Parkinson's Disease; Alzheimer's Disease; Amyotrophic Lateral Sclerosis (ALS); motor neuron diseases; other neurological diseases; epilepsy; genetic diseases; Huntington's Disease; mood disorders; schizophrenia; bipolar disorder; age-associated diseases; cerebral vascular accidents, macular degeneration; diabetes; and cancer.

**[0081]** In another embodiment, including any of the foregoing embodiments, the mitochondrial disorder is a mitochondrial respiratory chain disorder. In a particular embodiment, the mitochondrial respiratory chain disorder is a respiratory protein chain disorder. In another particular embodiment, the disorder is CoQ10 deficiency.

**[0082]** In another embodiment, including any of the foregoing embodiments, the mitochondrial disorder is selected from the group consisting of inherited mitochondrial diseases; Myoclonic Epilepsy with Ragged Red Fibers (MERRF); Mitochondrial Myopathy, Encephalopathy, Lactacidosis, and Stroke (MELAS); Leber's Hereditary Optic Neuropathy (LHON); Leigh Disease; Kearns-Sayre Syndrome (KSS); Friedreich's Ataxia (FA).

**[0083]** In another embodiment of the invention, including any of the foregoing embodiments, the mitochondrial disorder is Friedreich's Ataxia (FA). In another embodiment of the invention, the mitochondrial disorder is Leber's Hereditary

Optic Neuropathy (LHON). In another embodiment of the invention, including any of the foregoing embodiments, the mitochondrial disorder is mitochondrial myopathy, encephalopathy, lacticidosis, and stroke (MELAS). In another embodiment of the invention, including any of the foregoing embodiments, the mitochondrial disorder is Kearns-Sayre Syndrome (KSS). In another embodiment of the invention, the mitochondrial disorder is Myoclonic Epilepsy with Ragged Red Fibers (MERRF). In another embodiment of the invention, including any of the foregoing embodiments, the disorder is Parkinson's Disease. In another embodiment of the invention, including any of the foregoing embodiments, the disorder is Huntington's Disease. In another embodiment of the invention including any of the foregoing embodiments, the disorder is amyotrophic lateral sclerosis (ALS). In yet another embodiment of the invention including any of the foregoing embodiments, the disorders are cerebral vascular accidents, such as stroke.

**[0084]** In another embodiment of the invention, including any of the foregoing embodiments, the compounds described herein are administered to subjects suffering from a mitochondrial disorder to modulate one or more of various energy biomarkers, including, but not limited to, lactic acid (lactate) levels, either in whole blood, plasma, cerebrospinal fluid, or cerebral ventricular fluid; pyruvic acid (pyruvate) levels, either in whole blood, plasma, cerebrospinal fluid, or cerebral ventricular fluid; lactate/pyruvate ratios, either in whole blood, plasma, cerebrospinal fluid, or cerebral ventricular fluid; phosphocreatine levels, NADH (NADH + H<sup>+</sup>) or NADPH (NADPH + H<sup>+</sup>) levels; NAD or NADP levels; ATP levels; reduced coenzyme Q (CoQ<sup>red</sup>) levels; oxidized coenzyme Q (CoQ<sup>ox</sup>) levels; total coenzyme Q (CoQ<sup>tot</sup>) levels; oxidized cytochrome C levels; reduced cytochrome C levels; oxidized cytochrome C/reduced cytochrome C ratio; acetoacetate levels; beta-hydroxy butyrate levels; acetoacetate/beta-hydroxy butyrate ratio; 8-hydroxy-2'-deoxyguanosine (8-OHdG) levels; levels of reactive oxygen species; oxygen consumption (VO<sub>2</sub>), carbon dioxide output (VCO<sub>2</sub>), respiratory quotient (VCO<sub>2</sub>/VO<sub>2</sub>), and to modulate exercise intolerance (or conversely, modulate exercise tolerance) and to modulate anaerobic threshold. Energy biomarkers can be measured in whole blood, plasma, cerebrospinal fluid, cerebroventricular fluid, arterial blood, venous blood, or any other body fluid, body gas, or other biological sample useful for such measurement. In one embodiment, the levels are modulated to a value within about 2 standard deviations of the value in a healthy subject. In another embodiment, the levels are modulated to a value within about 1 standard deviation of the value in a healthy subject. In another embodiment, the levels in a subject are changed by at least about 10% above or below the level in the subject prior to modulation. In another embodiment, the levels are changed by at least about 20% above or below the level in the subject prior to modulation. In another embodiment, the levels are changed by at least about 30% above or below the level in the subject prior to modulation. In another embodiment, the levels are changed by at least about 40% above or below the level in the subject prior to modulation. In another embodiment, the levels are changed by at least about 50% above or below the level in the subject prior to modulation. In another embodiment, the levels are changed by at least about 75% above or below the level in the subject prior to modulation. In another embodiment, the levels are changed by at least about 100% above or at least about 90% below the level in the subject prior to modulation.

**[0085]** In another embodiment of the invention, including any of the foregoing embodiments, the compounds described herein are administered to treat subjects suffering from pervasive development disorders selected from Autistic Disorder, Asperger's Disorder, Childhood Disintegrative Disorder (CDD), Rett's Disorder, and Pervasive Developmental Disorder-Not Otherwise Specified (PDD-NOS). In another embodiment, the disorder is Austistic Disorder.

**[0086]** In another embodiment, including any of the foregoing embodiments, the subject or subjects in which a method of treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers is performed is/are selected from the group consisting of subjects undergoing strenuous or prolonged physical activity; subjects with chronic energy problems; subjects with chronic respiratory problems; pregnant females; pregnant females in labor; neonates; premature neonates; subjects exposed to extreme environments; subjects exposed to hot environments; subjects exposed to cold environments; subjects exposed to environments with lower-than-average oxygen content; subjects exposed to environments with higher-than-average carbon dioxide content; subjects exposed to environments with higher-than-average levels of air pollution; airline travelers; flight attendants; subjects at elevated altitudes; subjects living in cities with lower-than-average air quality; subjects working in enclosed environments where air quality is degraded; subjects with lung diseases; subjects with lower-than-average lung capacity; tubercular patients; lung cancer patients; emphysema patients; cystic fibrosis patients; subjects recovering from surgery; subjects recovering from illness; elderly subjects; elderly subjects experiencing decreased energy; subjects suffering from chronic fatigue; subjects suffering from chronic fatigue syndrome; subjects undergoing acute trauma; subjects in shock; subjects requiring acute oxygen administration; subjects requiring chronic oxygen administration; or other subjects with acute, chronic, or ongoing energy demands who can benefit from enhancement of energy biomarkers.

**[0087]** In another embodiment, the invention embraces the use of a compound or composition of the invention as defined herein in the manufacture of a medicament for use in (i) treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers as defined herein; or (ii) treating a pervasive development disorder as defined herein.

**[0088]** For all of the compounds and methods described above, the quinone form can also be used in its reduced (hydroquinone) form when desired. Likewise, the hydroquinone form can also be used in its oxidized (quinone) form

when desired.

#### MODES FOR CARRYING OUT THE INVENTION

**[0089]** The invention embraces compounds useful in treating or suppressing mitochondrial disorders, and methods of using such compounds for modulation of energy biomarkers. The redox active therapeutics for treatment or suppression of mitochondrial diseases and associated aspects of the invention are described in more detail herein.

**[0090]** By "subject," "individual," or "patient" is meant an individual organism, preferably a vertebrate, more preferably a mammal, most preferably a human.

**[0091]** "Treating" a disease with the compounds and methods discussed herein is defined as administering one or more of the compounds discussed herein, with or without additional therapeutic agents, in order to reduce or eliminate either the disease or one or more symptoms of the disease, or to retard the progression of the disease or of one or more symptoms of the disease, or to reduce the severity of the disease or of one or more symptoms of the disease. "Suppression" of a disease with the compounds and methods discussed herein is defined as administering one or more of the compounds discussed herein, with or without additional therapeutic agents, in order to suppress the clinical manifestation of the disease, or to suppress the manifestation of adverse symptoms of the disease. The distinction between treatment and suppression is that treatment occurs after adverse symptoms of the disease are manifest in a subject, while suppression occurs before adverse symptoms of the disease are manifest in a subject. Suppression may be partial, substantially total, or total. Because many of the mitochondrial disorders are inherited, genetic screening can be used to identify patients at risk of the disease. The compounds and methods of the invention can then be administered to asymptomatic patients at risk of developing the clinical symptoms of the disease, in order to suppress the appearance of any adverse symptoms. "Therapeutic use" of the compounds discussed herein is defined as using one or more of the compounds discussed herein to treat or suppress a disease, as defined above. An "effective amount" of a compound is an amount of the compound sufficient to modulate, normalize, or enhance one or more energy biomarkers (where modulation, normalization, and enhancement are defined below). A "therapeutically effective amount" of a compound is an amount of the compound, which, when administered to a subject, is sufficient to reduce or eliminate either a disease or one or more symptoms of a disease, or to retard the progression of a disease or of one or more symptoms of a disease, or to reduce the severity of a disease or of one or more symptoms of a disease, or to suppress the clinical manifestation of a disease, or to suppress the manifestation of adverse symptoms of a disease. A therapeutically effective amount can be given in one or more administrations. An "effective amount" of a compound embraces both a therapeutically effective amount, as well as an amount effective to modulate, normalize, or enhance one or more energy biomarkers in a subject.

**[0092]** "Modulation" of, or to "modulate," an energy biomarker means to change the level of the energy biomarker towards a desired value, or to change the level of the energy biomarker in a desired direction (e.g., increase or decrease). Modulation can include, but is not limited to, normalization and enhancement as defined below.

**[0093]** "Normalization" of, or to "normalize," an energy biomarker is defined as changing the level of the energy biomarker from a pathological value towards a normal value, where the normal value of the energy biomarker can be 1) the level of the energy biomarker in a healthy person or subject, or 2) a level of the energy biomarker that alleviates one or more undesirable symptoms in the person or subject. That is, to normalize an energy biomarker which is depressed in a disease state means to increase the level of the energy biomarker towards the normal (healthy) value or towards a value which alleviates an undesirable symptom; to normalize an energy biomarker which is elevated in a disease state means to decrease the level of the energy biomarker towards the normal (healthy) value or towards a value which alleviates an undesirable symptom.

**[0094]** "Enhancement" of, or to "enhance," energy biomarkers means to intentionally change the level of one or more energy biomarkers away from either the normal value, or the value before enhancement, in order to achieve a beneficial or desired effect. For example, in a situation where significant energy demands are placed on a subject, it may be desirable to increase the level of ATP in that subject to a level above the normal level of ATP in that subject. Enhancement can also be of beneficial effect in a subject suffering from a disease or pathology such as a mitochondrial disease, in that normalizing an energy biomarker may not achieve the optimum outcome for the subject; in such cases, enhancement of one or more energy biomarkers can be beneficial, for example, higher-than-normal levels of ATP, or lower-than-normal levels of lactic acid (lactate) can be beneficial to such a subject.

**[0095]** By modulating, normalizing, or enhancing the energy biomarker Coenzyme Q is meant modulating, normalizing, or enhancing the variant or variants of Coenzyme Q which is predominant in the species of interest. For example, the variant of Coenzyme Q which predominates in humans is Coenzyme Q10. If a species or subject has more than one variant of Coenzyme Q present in significant amounts (i.e., present in amounts which, when modulated, normalized, or enhanced, can have a beneficial effect on the species or subject), modulating, normalizing, or enhancing Coenzyme Q can refer to modulating, normalizing or enhancing any or all variants of Coenzyme Q present in the species or subject.

**[0096]** While the compounds described herein can occur and can be used as the neutral (non-salt) compound, the description is intended to embrace all salts of the compounds described herein, as well as methods of using such salts

of the compounds. In one embodiment, the salts of the compounds comprise pharmaceutically acceptable salts. Pharmaceutically acceptable salts are those salts which can be administered as drugs or pharmaceuticals to humans and/or animals and which, upon administration, retain at least some of the biological activity of the free compound (neutral compound or non-salt compound). The desired salt of a basic compound may be prepared by methods known to those of skill in the art by treating the compound with an acid. Examples of inorganic acids include, but are not limited to, hydrochloric acid, hydrobromic acid, sulfuric acid, nitric acid, and phosphoric acid. Examples of organic acids include, but are not limited to, formic acid, acetic acid, propionic acid, glycolic acid, pyruvic acid, oxalic acid, maleic acid, malonic acid, succinic acid, fumaric acid, tartaric acid, citric acid, benzoic acid, cinnamic acid, mandelic acid, sulfonic acids, and salicylic acid. Salts of basic compounds with amino acids, such as aspartate salts and glutamate salts, can also be prepared. The desired salt of an acidic compound can be prepared by methods known to those of skill in the art by treating the compound with a base. Examples of inorganic salts of acid compounds include, but are not limited to, alkali metal and alkaline earth salts, such as sodium salts, potassium salts, magnesium salts, and calcium salts; ammonium salts; and aluminum salts. Examples of organic salts of acid compounds include, but are not limited to, procaine, dibenzylamine, N-ethylpiperidine, N,N-dibenzylethylenediamine, and triethylamine salts. Salts of acidic compounds with amino acids, such as lysine salts, can also be prepared. Additional salts particularly useful for pharmaceutical preparations are described in Berge S.M. et al., "Pharmaceutical salts," J. Pharm. Sci. 1977 Jan; 66(1): 1-19.

**[0097]** The invention also includes all stereoisomers of the compounds, including diastereomers and enantiomers. The invention also includes mixtures of stereoisomers in any ratio, including, but not limited to, racemic mixtures. Unless stereochemistry is explicitly indicated in a structure, the structure is intended to embrace all possible stereoisomers of the compound depicted. If stereochemistry is explicitly indicated for one portion or portions of a molecule, but not for another portion or portions of a molecule, the structure is intended to embrace all possible stereoisomers for the portion or portions where stereochemistry is not explicitly indicated.

**[0098]** For the purpose of the invention, the compounds of Formula I, and all other compounds disclosed herein, either generically or specifically, include derivatives wherein one or more hydrogen atoms have been replaced by a hydrogen isotope, for example by deuterium.

**[0099]** The compounds can be administered in prodrug form. Prodrugs are derivatives of the compounds, which are themselves relatively inactive but which convert into the active compound when introduced into the subject in which they are used by a chemical or biological process in vivo, such as an enzymatic conversion. Suitable prodrug formulations include, but are not limited to, peptide conjugates of the compounds of the invention and esters of compounds of the inventions. Further discussion of suitable prodrugs is provided in H. Bundgaard, Design of Prodrugs, New York: Elsevier, 1985; in R. Silverman, The Organic Chemistry of Drug Design and Drug Action, Boston: Elsevier, 2004; in R.L. Juliano (ed.), Biological Approaches to the Controlled Delivery of Drugs (Annals of the New York Academy of Sciences, v. 507), New York: New York Academy of Sciences, 1987; and in E.B. Roche (ed.), Design of Biopharmaceutical Properties Through Prodrugs and Analogs (Symposium sponsored by Medicinal Chemistry Section, APhA Academy of Pharmaceutical Sciences, November 1976 national meeting, Orlando, Florida), Washington : The Academy, 1977.

**[0100]** Metabolites of the compounds are also embraced by the invention.

**[0101]** "C<sub>1</sub>-C<sub>6</sub> alkyl" is intended to embrace a saturated linear, branched, cyclic, or a combination thereof, hydrocarbon of 1 to 6 carbon atoms. Examples of "C<sub>1</sub>-C<sub>6</sub> alkyl" are methyl, ethyl, n-propyl, isopropyl, cyclopropyl, n-butyl, isobutyl, sec-butyl, t-butyl, cyclobutyl, cyclopropyl-methyl, methyl-cyclopropyl, pentyl where the point of attachment of the pentyl group to the remainder of the molecule can be at any location on the pentyl fragment, cyclopentyl, hexyl where the point of attachment of the hexyl group to the remainder of the molecule can be at any location on the hexyl fragment, and cyclohexyl.

**[0102]** "Halogen" or "halo" designates fluoro, chloro, bromo, and iodo.

**[0103]** "C<sub>1</sub>-C<sub>6</sub> haloalkyl" is intended to embrace any C<sub>1</sub>-C<sub>6</sub> alkyl substituent having at least one halogen substituent; the halogen can be attached via any valence on the C<sub>1</sub>-C<sub>6</sub> alkyl group. Some examples of C<sub>1</sub>-C<sub>6</sub> haloalkyl is -CF<sub>3</sub>, -CCl<sub>3</sub>, -CHF<sub>2</sub>, -CHCl<sub>2</sub>, -CHBr<sub>2</sub>, -CH<sub>2</sub>F, -CH<sub>2</sub>Cl.

**[0104]** The term "aryl" is intended to embrace an aromatic cyclic hydrocarbon group of from 6 to 20 carbon atoms having a single ring (e.g., phenyl) or multiple condensed (fused) rings (e.g., naphthyl or anthryl).

**[0105]** The term "Friedreich's Ataxia" is intended to embrace other ataxias, and is also sometimes referred to as hereditary ataxia, familiar ataxia, or Friedreich's tabes.

**[0106]** The terms "heterocycle", "heterocyclic", "heterocyclo", and "heterocyclyl" is intended to encompass a monovalent, saturated, or partially unsaturated, carbocyclic radical having one or more rings incorporating one, two, three or four heteroatoms within the ring (chosen from nitrogen, oxygen, and/or sulfur). Examples of heterocycles include morpholine, piperidine, piperazine, thiazolidine, pyrazolidine, pyrazoline, imidazolidine, pyrrolidine, tetrahydropyran, tetrahydrofuran, quinuclidine, and the like.

**[0107]** The terms "heteroaryl", is intended to encompass a monovalent aromatic, carbocyclic radical having one or more rings incorporating one, two, three or four heteroatoms within the ring (chosen from nitrogen, oxygen, and/or sulfur). Examples of heteroaryl include pyridine, pyrazine, imidazoline, thiazole, isothiazole, pyrazine, triazine, pyrimidine, py-

ridazine, pyrazole, thiophene, pyrrole, pyran, furan, indole, quinoline, quinazoline, benzimidazole, benzothiophene, benzofuran, benzoxazole, benzothiazole, benzotriazole, imidazo-pyridines, pyrazolo-pyridines, pyrazolo-pyrazine, acridine, carbazole, and the like.

**[0108]** The terms "Parkinson's", (also called "Parkinsonism" and "Parkinsonian syndrome") ("PD") is intended to include not only Parkinson's disease but also drug-induced Parkinsonism and post-encephalitic Parkinsonism. Parkinson's disease is also known as paralysis agitans or shaking palsy. It is characterized by tremor, muscular rigidity and loss of postural reflexes. The disease usually progresses slowly with intervals of 10 to 20 years elapsing before the symptoms cause incapacity. Due to their mimicry of effects of Parkinson's disease, treatment of animals with methamphetamine or MPTP has been used to generate models for Parkinson's disease. These animal models have been used to evaluate the efficacy of various therapies for Parkinson's disease.

*Diseases amenable to treatment or suppression with compound and methods of the invention*

**[0109]** A variety of diseases are believed to be caused or aggravated by mitochondrial disorders and impaired energy processing, and can be treated or suppressed using the compounds and methods of the invention. Such diseases include, but are not limited to, inherited mitochondrial diseases, such as Myoclonic Epilepsy with Ragged Red Fibers (MERRF), Mitochondrial Myopathy, Encephalopathy, Lactacidosis, and Stroke (MELAS), Leber's Hereditary Optic Neuropathy (LHON, also referred to as Leber's Disease, Leber's Optic Atrophy (LOA), or Leber's Optic Neuropathy (LON)), Leigh Disease or Leigh Syndrome, Kearns-Sayre Syndrome (KSS), Friedreich's Ataxia (FA), other myopathies (including cardiomyopathy and encephalomyopathy), and renal tubular acidosis; neurodegenerative diseases, such as Parkinson's disease, Alzheimer's disease, amyotrophic lateral sclerosis (ALS, also known as Lou Gehrig's disease), motor neuron diseases; other neurological diseases such as epilepsy; genetic diseases such as Huntington's Disease (which is also a neurological disease); mood disorders such as schizophrenia and bipolar disorder; cerebral vascular accidents such as stroke, and certain age-associated diseases, particularly diseases for which CoQ10 has been proposed for treatment, such as macular degeneration, diabetes, and cancer. Mitochondrial dysfunction is also implicated in excitotoxic, neuronal injury, such as that associated with seizures, stroke and ischemia. Mitochondrial dysfunction is also implicated in certain patients suffering from pervasive development disorders selected from Autistic Disorder, Asperger's Disorder, Childhood Disintegrative Disorder (CDD), Rett's Disorder, and Pervasive Developmental Disorder-Not Otherwise Specified (PDD-NOS), and those disorders can also be treated or suppressed using the compounds and methods of the invention.

*Clinical assessment of mitochondrial dysfunction and efficacy of therapy*

**[0110]** Several readily measurable clinical markers are used to assess the metabolic state of patients with mitochondrial disorders. These markers can also be used as indicators of the efficacy of a given therapy, as the level of a marker is moved from the pathological value to the healthy value. These clinical markers include, but are not limited to, one or more of the previously discussed energy biomarkers, such as lactic acid (lactate) levels, either in whole blood, plasma, cerebrospinal fluid, or cerebral ventricular fluid; pyruvic acid (pyruvate) levels, either in whole blood, plasma, cerebrospinal fluid, or cerebral ventricular fluid; lactate/pyruvate ratios, either in whole blood, plasma, cerebrospinal fluid, or cerebral ventricular fluid; phosphocreatine levels, NADH (NADH +H<sup>+</sup>) or NADPH (NADPH+H<sup>+</sup>) levels; NAD or NADP levels; ATP levels; anaerobic threshold; reduced coenzyme Q (CoQ<sup>red</sup>) levels; oxidized coenzyme Q (CoQ<sup>ox</sup>) levels; total coenzyme Q (CoQ<sup>tot</sup>) levels; oxidized cytochrome C levels; reduced cytochrome C levels; oxidized cytochrome C/reduced cytochrome C ratio; acetoacetate levels,  $\beta$ -hydroxy, butyrate levels, acetoacetate/ $\beta$ -hydroxy butyrate ratio, 8-hydroxy-2'-deoxyguanosine (8-OHdG) levels; levels of reactive oxygen species; and levels of oxygen consumption (VO<sub>2</sub>), levels of carbon dioxide output (VCO<sub>2</sub>), and respiratory quotient (VCO<sub>2</sub>/VO<sub>2</sub>). Several of these clinical markers are measured routinely in exercise physiology laboratories, and provide convenient assessments of the metabolic state of a subject. In one embodiment of the invention, the level of one or more energy biomarkers in a patient suffering from a mitochondrial disease, such as Friedreich's ataxia, Leber's hereditary optic neuropathy, MELAS, or KSS, is improved to within two standard deviations of the average level in a healthy subject. In another embodiment of the invention, the level of one or more of these energy biomarkers in a patient suffering from a mitochondrial disease, such as Friedreich's ataxia, Leber's hereditary optic neuropathy, MELAS, or KSS is improved to within one standard deviation of the average level in a healthy subject. Exercise intolerance can also be used as an indicator of the efficacy of a given therapy, where an improvement in exercise tolerance (i.e., a decrease in exercise intolerance) indicates efficacy of a given therapy.

**[0111]** Several metabolic biomarkers have already been used to evaluate efficacy of CoQ10, and these metabolic biomarkers can be monitored as energy biomarkers for use in the methods of the current invention. Pyruvate, a product of the anaerobic metabolism of glucose, is removed by reduction to lactic acid in an anaerobic setting or by oxidative metabolism, which is dependent on a functional mitochondrial respiratory chain. Dysfunction of the respiratory chain may lead to inadequate removal of lactate and pyruvate from the circulation and elevated lactate/pyruvate ratios are observed in mitochondrial cytopathies (see Scriver CR, The metabolic and molecular bases of inherited disease, 7th

ed., New York: McGraw-Hill, Health Professions Division, 1995; and Munnich et al., J. Inherit. Metab. Dis. 15(4):448-55 (1992)). Blood lactate/pyruvate ratio (Chariot et al., Arch. Pathol. Lab. Med. 118(7):695-7 (1994)) is, therefore, widely used as a noninvasive test for detection of mitochondrial cytopathies (see again Scriver CR, The metabolic and molecular bases of inherited disease, 7th ed., New York: McGraw-Hill, Health Professions Division, 1995; and Munnich et al., J. Inherit. Metab. Dis. 15(4):448-55 (1992)) and toxic mitochondrial myopathies (Chariot et al., Arthritis Rheum. 37(4):583-6 (1994)). Changes in the redox state of liver mitochondria can be investigated by measuring the arterial ketone body ratio (acetoacetate/3-hydroxybutyrate: AKBR) (Ueda et al., J. Cardiol. 29(2):95-102 (1997)). Urinary excretion of 8-hydroxy-2'-deoxyguanosine (8-OHdG) often has been used as a biomarker to assess the extent of repair of ROS-induced DNA damage in both clinical and occupational settings (Erhola et al., FEBS Lett. 409(2):287-91 (1997); Honda et al., Leuk. Res. 24(6):461-8 (2000); Pilger et al., Free Radic. Res. 35(3):273-80 (2001); Kim et al. Environ Health Perspect 112(6):666-71 (2004)).

**[0112]** Magnetic resonance spectroscopy (MRS) has been useful in the diagnoses of mitochondrial cytopathy by demonstrating elevations in cerebrospinal fluid (CSF) and cortical white matter lactate using proton MRS (1H-MRS) (Kaufmann et al., Neurology 62(8):1297-302 (2004)). Phosphorous MRS (31P-MRS) has been used to demonstrate low levels of cortical phosphocreatine (PCr) (Matthews et al., Ann. Neurol. 29(4):435-8 (1991)), and a delay in PCr recovery kinetics following exercise in skeletal muscle (Matthews et al., Ann. Neurol. 29(4):435-8 (1991); Barbiroli et al., J. Neurol. 242(7):472-7 (1995); Fabrizi et al., J. Neurol. Sci. 137(1):20-7 (1996)). A low skeletal muscle PCr has also been confirmed in patients with mitochondrial cytopathy by direct biochemical measurements.

**[0113]** Exercise testing is particularly helpful as an evaluation and screening tool in mitochondrial myopathies. One of the hallmark characteristics of mitochondrial myopathies is a reduction in maximal whole body oxygen consumption ( $\text{VO}_2\text{max}$ ) (Taivassalo et al., Brain 126(Pt 2):413-23 (2003)). Given that  $\text{VO}_2\text{max}$  is determined by cardiac output ( $\text{Qc}$ ) and peripheral oxygen extraction (arterial-venous total oxygen content) difference, some mitochondrial cytopathies affect cardiac function where delivery can be altered; however, most mitochondrial myopathies show a characteristic deficit in peripheral oxygen extraction (A-V  $\text{O}_2$  difference) and an enhanced oxygen delivery (hyperkinetic circulation) (Taivassalo et al., Brain 126(Pt 2):413-23 (2003)). This can be demonstrated by a lack of exercise induced deoxygenation of venous blood with direct AV balance measurements (Taivassalo et al., Ann. Neurol. 51(1):38-44 (2002)) and non-invasively by near infrared spectroscopy (Lynch et al., Muscle Nerve 25(5):664-73 (2002); van Beekvelt et al., Ann. Neurol. 46(4):667-70 (1999)).

**[0114]** Several of these energy biomarkers are discussed in more detail as follows. It should be emphasized that, while certain energy biomarkers are discussed and enumerated herein, the invention is not limited to modulation, normalization or enhancement of only these enumerated energy biomarkers.

**[0115]** *Lactic acid (lactate) levels:* Mitochondrial dysfunction typically results in abnormal levels of lactic acid, as pyruvate levels increase and pyruvate is converted to lactate to maintain capacity for glycolysis. Mitochondrial dysfunction can also result in abnormal levels of  $\text{NADH} + \text{H}^+$ ,  $\text{NADPH} + \text{H}^+$ , NAD, or NADP, as the reduced nicotinamide adenine dinucleotides are not efficiently processed by the respiratory chain. Lactate levels can be measured by taking samples of appropriate bodily fluids such as whole blood, plasma, or cerebrospinal fluid. Using magnetic resonance, lactate levels can be measured in virtually any volume of the body desired, such as the brain.

**[0116]** Measurement of cerebral lactic acidosis using magnetic resonance in MELAS patients is described in Kaufmann et al., Neurology 62(8): 1297 (2004). Values of the levels of lactic acid in the lateral ventricles of the brain are presented for two mutations resulting in MELAS, A3243G and A8344G. Whole blood, plasma, and cerebrospinal fluid lactate levels can be measured by commercially available equipment such as the YSI 2300 STAT Plus Glucose & Lactate Analyzer (YSI Life Sciences, Ohio).

**[0117]** *NAD, NADP, NADH and NADPH levels:* Measurement of NAD, NADP, NADH ( $\text{NADH} + \text{H}^+$ ) or NADPH ( $\text{NADPH} + \text{H}^+$ ) can be measured by a variety of fluorescent, enzymatic, or electrochemical techniques, e.g., the electrochemical assay described in US 2005/0067303.

**[0118]** *Oxygen consumption ( $\text{vO}_2$  or  $\text{VO}_2$ ) carbons dioxide output ( $\text{vCO}_2$  or  $\text{VCO}_2$ ), and respiratory quotient ( $\text{VCO}_2/\text{VO}_2$ ):*  $\text{vO}_2$  is usually measured either while resting (resting  $\text{vO}_2$ ) or at maximal exercise intensity ( $\text{vO}_2\text{max}$ ). Optimally, both values will be measured. However, for severely disabled patients, measurement of  $\text{vO}_2\text{max}$  may be impractical. Measurement of both forms of  $\text{vO}_2$  is readily accomplished using standard equipment from a variety of vendors, e.g. Korr Medical Technologies, Inc. (Salt Lake City, Utah).  $\text{VCO}_2$  can also be readily measured, and the ratio of  $\text{VCO}_2$  to  $\text{VO}_2$  under the same conditions ( $\text{VCO}_2/\text{VO}_2$ , either resting or at maximal exercise intensity) provides the respiratory quotient (RQ).

**[0119]** *Oxidized Cytochrome C, reduced Cytochrome C, and ratio of oxidized Cytochrome C to reduced Cytochrome C:* Cytochrome C parameters, such as oxidized cytochrome C levels ( $\text{Cyt C}_{\text{ox}}$ ), reduced cytochrome C levels ( $\text{Cyt C}_{\text{red}}$ ), and the ratio of oxidized cytochrome C/reduced cytochrome C ratio ( $\text{Cyt C}_{\text{ox}}/(\text{Cyt C}_{\text{red}})$ ), can be measured by in vivo near infrared spectroscopy. See, e.g., Rolfe, P., "In vivo near-infrared spectroscopy," Annu. Rev. Biomed. Eng. 2:715-54 (2000) and Strangman et al., "Non-invasive neuroimaging using near-infrared light" Biol. Psychiatry 52:679-93 (2002).

**[0120]** *Exercise tolerance/Exercise intolerance:* Exercise intolerance is defined as "the reduced ability to perform

activities that involve dynamic movement of large skeletal muscles because of symptoms of dyspnea or fatigue" (Pina et al., Circulation 107:1210 (2003)). Exercise intolerance is often accompanied by myoglobinuria, due to breakdown of muscle tissue and subsequent excretion of muscle myoglobin in the urine. Various measures of exercise intolerance can be used, such as time spent walking or running on a treadmill before exhaustion, time spent on an exercise bicycle (stationary bicycle) before exhaustion, and the like. Treatment with the compounds or methods of the invention can result in about a 10% or greater improvement in exercise tolerance (for example, about a 10% or greater increase in time to exhaustion, e.g. from 10 minutes to 11 minutes), about a 20% or greater improvement in exercise tolerance, about a 30% or greater improvement in exercise tolerance, about a 40% or greater improvement in exercise tolerance, about a 50% or greater improvement in exercise tolerance, about a 75% or greater improvement in exercise tolerance, or about a 100% or greater improvement in exercise tolerance. While exercise tolerance is not, strictly speaking, an energy biomarker, for the purposes of the invention, modulation, normalization, or enhancement of energy biomarkers includes modulation, normalization, or enhancement of exercise tolerance.

**[0121]** Similarly, tests for normal and abnormal values of pyruvic acid (pyruvate) levels, lactate/pyruvate ratio, ATP levels, anaerobic threshold, reduced coenzyme Q (CoQ<sup>red</sup>) levels, oxidized coenzyme Q (CoQ<sup>ox</sup>) levels, total coenzyme Q (CoQ<sup>tot</sup>) levels, oxidized cytochrome C levels, reduced cytochrome C levels, oxidized cytochrome C/reduced cytochrome C ratio, acetoacetate levels,  $\beta$ -hydroxy, butyrate levels, acetoacetate/ $\beta$ -hydroxy butyrate ratio, 8-hydroxy-2'-deoxyguanosine (8-OHdG) levels, and levels of reactive oxygen species are known in the art and can be used to evaluate efficacy of the compounds and methods of the invention. (For the purposes of the invention, modulation, normalization, or enhancement of energy biomarkers includes modulation, normalization, or enhancement of anaerobic threshold.)

**[0122]** Table 1, following, illustrates the effect that various dysfunctions can have on biochemistry and energy biomarkers. It also indicates the physical effect (such as a disease symptom or other effect of the dysfunction) typically associated with a given dysfunction. It should be noted that any of the energy biomarkers listed in the table, in addition to energy biomarkers enumerated elsewhere, can also be modulated, enhanced, or normalized by the compounds and methods of the invention. RQ = respiratory quotient; BMR = basal metabolic rate; HR (CO) = heart rate (cardiac output); T = body temperature (preferably measured as core temperature); AT = anaerobic threshold; pH = blood pH (venous and/or arterial).

Table 1

Site of Dysfunction	Biochemical Event	Measurable Energy Biomarker	Physical Effect
Respiratory Chain	$\uparrow$ NADH	$\Delta$ lactate, $\Delta$ lactate: pyruvate ratio; and $\Delta$ acetoacetate: $\beta$ -hydroxy butyrate ratio	Metabolic dyscrasia & fatigue
Respiratory Chain	$\downarrow$ H <sup>+</sup> gradient	$\Delta$ ATP	Organ dependent dysfunction
Respiratory Chain	$\downarrow$ Electron flux	$\Delta$ VO <sub>2</sub> , RQ, BMR, $\Delta$ T, AT, pH	Metabolic dyscrasia & fatigue
Mitochondria & cytosol	$\downarrow$ ATP, $\downarrow$ VO <sub>2</sub>	$\Delta$ Work, $\Delta$ HM (CO)	Exercise intolerance
Mitochondria & cytosol	$\downarrow$ ATP	$\Delta$ PCr	Exercise intolerance
Respiratory Chain	$\downarrow$ Cyt C <sub>Ox/Red</sub>	$\Delta \lambda \sim 700 - 900$ nm (Near Infrared Spectroscopy)	Exercise intolerance
Intermediary metabolism	$\downarrow$ Catabolism	$\Delta$ C <sup>14</sup> -Labeled substrates	Metabolic dyscrasia & fatigue
Respiratory Chain	$\downarrow$ Electron flux	$\Delta$ Mixed Venous VO <sub>2</sub>	Metabolic dyscrasia & fatigue
Mitochondria & cytosol	$\uparrow$ Oxidative stress	$\Delta$ Tocopherol & Tocotrienols, CoQ10, docosahexanoic acid	Uncertain
Mitochondria & cytosol	$\uparrow$ Oxidative stress	$\Delta$ Glutathione <sub>red</sub>	Uncertain
Mitochondria & cytosol	Nucleic acid oxidation	$\Delta$ 8-hydroxy 2-deoxy guanosine	Uncertain

(continued)

<u>Site of Dysfunction</u>	<u>Biochemical Event</u>	<u>Measurable Energy Biomarker</u>	<u>Physical Effect</u>
Mitochondria & cytosol	Lipid oxidation	$\Delta$ Isoprostane(s), eicasanoids	Uncertain
Cell membranes	Lipid oxidation	$\Delta$ Ethane (breath)	Uncertain
Cell membranes	Lipid oxidation	$\Delta$ Malondialdehyde	Uncertain

**[0123]** Treatment of a subject afflicted by a mitochondrial disease in accordance with the methods of the invention may result in the inducement of a reduction or alleviation of symptoms in the subject, e.g., to halt the further progression of the disorder.

**[0124]** Partial or complete suppression of the mitochondrial disease can result in a lessening of the severity of one or more of the symptoms that the subject would otherwise experience. For example, partial suppression of MELAS could result in reduction in the number of stroke-like or seizure episodes suffered.

**[0125]** Any one or any combination of the energy biomarkers described herein provide conveniently measurable benchmarks by which to gauge the effectiveness of treatment or suppressive therapy. Additionally, other energy biomarkers are known to those skilled in the art and can be monitored to evaluate the efficacy of treatment or suppressive therapy.

#### *Use of compounds for modulation of energy biomarkers*

**[0126]** In addition to monitoring energy biomarkers to assess the status of treatment or suppression of mitochondrial diseases, the compounds of the invention can be used in subjects or patients to modulate one or more energy biomarkers. Modulation of energy biomarkers can be done to normalize energy biomarkers in a subject, or to enhance energy biomarkers in a subject.

**[0127]** Normalization of one or more energy biomarkers is defined as either restoring the level of one or more such energy biomarkers to normal or near-normal levels in a subject whose levels of one or more energy biomarkers show pathological differences from normal levels (i.e., levels in a healthy subject), or to change the levels of one or more energy biomarkers to alleviate pathological symptoms in a subject. Depending on the nature of the energy biomarker, such levels may show measured values either above or below a normal value. For example, a pathological lactate level is typically higher than the lactate level in a normal (i.e., healthy) person, and a decrease in the level may be desirable. A pathological ATP level is typically lower than the ATP level in a normal (i.e., healthy) person, and an increase in the level of ATP may be desirable. Accordingly, normalization of energy biomarkers can involve restoring the level of energy biomarkers to within about at least two standard deviations of normal in a subject, more preferably to within about at least one standard deviation of normal in a subject, to within about at least one-half standard deviation of normal, or to within about at least one-quarter standard deviation of normal.

**[0128]** Enhancement of the level of one or more energy biomarkers is defined as changing the extant levels of one or more energy biomarkers in a subject to a level which provides beneficial or desired effects for the subject. For example, a person undergoing strenuous effort or prolonged vigorous physical activity, such as mountain climbing, could benefit from increased ATP levels or decreased lactate levels. As described above, normalization of energy biomarkers may not achieve the optimum state for a subject with a mitochondrial disease, and such subjects can also benefit from enhancement of energy biomarkers. Examples of subjects who could benefit from enhanced levels of one or more energy biomarkers include, but are not limited to, subjects undergoing strenuous or prolonged physical activity, subjects with chronic energy problems, or subjects with chronic respiratory problems. Such subjects include, but are not limited to, pregnant females, particularly pregnant females in labor; neonates, particularly premature neonates; subjects exposed to extreme environments, such as hot environments (temperatures routinely exceeding about 85-86 degrees Fahrenheit or about 30 degrees Celsius for about 4 hours daily or more), cold environments (temperatures routinely below about 32 degrees Fahrenheit or about 0 degrees Celsius for about 4 hours daily or more), or environments with lower-than-average oxygen content, higher-than-average carbon dioxide content, or higher-than-average levels of air pollution (airline travelers, flight attendants, subjects at elevated altitudes, subjects living in cities with lower-than-average air quality, subjects working in enclosed environments where air quality is degraded); subjects with lung diseases or lower-than-average lung capacity, such as tubercular patients, lung cancer patients, emphysema patients, and cystic fibrosis patients; subjects recovering from surgery or illness; elderly subjects, including elderly subjects experiencing decreased energy; subjects suffering from chronic fatigue, including chronic fatigue syndrome; subjects undergoing acute trauma;

subjects in shock; subjects requiring acute oxygen administration; subjects requiring chronic oxygen administration; or other subjects with acute, chronic, or ongoing energy demands who can benefit from enhancement of energy biomarkers.

**[0129]** Accordingly, when an increase in a level of one or more energy biomarkers is beneficial to a subject, enhancement of the one or more energy biomarkers can involve increasing the level of the respective energy biomarker or energy biomarkers to about at least one-quarter standard deviation above normal, about at least one-half standard deviation above normal, about at least one standard deviation above normal, or about at least two standard deviations above normal. Alternatively, the level of the one or more energy biomarkers can be increased by about at least 10% above the subject's level of the respective one or more energy biomarkers before enhancement, by about at least 20% above the subject's level of the respective one or more energy biomarkers before enhancement, by about at least 30% above the subject's level of the respective one or more energy biomarkers before enhancement, by about at least 40% above the subject's level of the respective one or more energy biomarkers before enhancement, by about at least 50% above the subject's level of the respective one or more energy biomarkers before enhancement, by about at least 75% above the subject's level of the respective one or more energy biomarkers before enhancement, or by about at least 100% above the subject's level of the respective one or more energy biomarkers before enhancement.

**[0130]** When a decrease in a level of one or more energy biomarkers is desired to enhance one or more energy biomarkers, the level of the one or more energy biomarkers can be decreased by an amount of about at least one-quarter standard deviation of normal in a subject, decreased by about at least one-half standard deviation of normal in a subject, decreased by about at least one standard deviation of normal in a subject, or decreased by about at least two standard deviations of normal in a subject. Alternatively, the level of the one or more energy biomarkers can be decreased by about at least 10% below the subject's level of the respective one or more energy biomarkers before enhancement, by about at least 20% below the subject's level of the respective one or more energy biomarkers before enhancement, by about at least 30% below the subject's level of the respective one or more energy biomarkers before enhancement, by about at least 40% below the subject's level of the respective one or more energy biomarkers before enhancement, by about at least 50% below the subject's level of the respective one or more energy biomarkers before enhancement, by about at least 75% below the subject's level of the respective one or more energy biomarkers before enhancement, or by about at least 90% below the subject's level of the respective one or more energy biomarkers before enhancement.

#### *Use of compounds in research applications., experimental systems, and assays*

**[0131]** The compounds of the invention can also be used in research applications. They can be used *in vitro*, *in vivo*, or *ex vivo* experiments to modulate one or more energy biomarkers in an experimental system. Such experimental systems can be cell samples, tissue samples, cell components or mixtures of cell components, partial organs, whole organs, or organisms. Any one or more of the compounds of formula I, Ia, laa, Ib, and lbb, can be used in experimental systems or research applications. Such research applications can include, but are not limited to, use as assay reagents, elucidation of biochemical pathways, or evaluation of the effects of other agents on the metabolic state of the experimental system in the presence/absence of one or more compounds of the invention.

**[0132]** Additionally, the compounds of the invention can be used in biochemical tests or assays. Such tests can include incubation of one or more compounds of the invention with a tissue or cell sample from a subject to evaluate a subject's potential response (or the response of a specific subset of subjects) to administration of said one or more compounds, or to determine which compound of the invention produces the optimum effect in a specific subject or subset of subjects. One such test or assay would involve 1) obtaining a cell sample or tissue sample from a subject in which modulation of one or more energy biomarkers can be assayed; 2) administering one or more compounds of the invention to the cell sample or tissue sample; and 3) determining the amount of modulation of the one or more energy biomarkers after administration of the one or more compounds, compared to the status of the energy biomarker prior to administration of the one or more compounds. Another such test or assay would involve 1) obtaining a cell sample or tissue sample from a subject in which modulation of one or more energy biomarkers can be assayed; 2) administering at least two compounds of the invention to the cell sample or tissue sample; 3) determining the amount of modulation of the one or more energy biomarkers after administration of the at least two compounds, compared to the status of the energy biomarker prior to administration of the at least compounds, and 4) selecting a compound for use in treatment, suppression, or modulation based on the amount of modulation determined in step 3).

#### *Pharmaceutical formulations*

**[0133]** The compounds described herein can be formulated as pharmaceutical compositions by formulation with additives such as pharmaceutically acceptable excipients, pharmaceutically acceptable carriers, and pharmaceutically acceptable vehicles. Suitable pharmaceutically acceptable excipients, carriers and vehicles include processing agents and drug delivery modifiers and enhancers, such as, for example, calcium phosphate, magnesium stearate, talc, monosaccharides, disaccharides, starch, gelatin, cellulose, methyl cellulose, sodium carboxymethyl cellulose, dextrose,

hydroxypropyl- $\beta$ -cyclodextrin, polyvinylpyrrolidinone, low melting waxes, ion exchange resins, and the like, as well as combinations of any two or more thereof. Other suitable pharmaceutically acceptable excipients are described in "Remington's Pharmaceutical Sciences," Mack Pub. Co., New Jersey (1991), and "Remington: The Science and Practice of Pharmacy," Lippincott Williams & Wilkins, Philadelphia, 20th edition (2003) and 21st edition (2005).

**[0134]** A pharmaceutical composition can comprise a unit dose formulation, where the unit dose is a dose sufficient to have a therapeutic or suppressive effect or an amount effective to modulate, normalize, or enhance an energy biomarker. The unit dose may be sufficient as a single dose to have a therapeutic or suppressive effect or an amount effective to modulate, normalize, or enhance an energy biomarker. Alternatively, the unit dose may be a dose administered periodically in a course of treatment or suppression of a disorder, or to modulate, normalize, or enhance an energy biomarker.

**[0135]** Pharmaceutical compositions containing the compounds of the invention may be in any form suitable for the intended method of administration, including, for example, a solution, a suspension, or an emulsion. Liquid carriers are typically used in preparing solutions, suspensions, and emulsions. Liquid carriers contemplated for use in the practice of the present invention include, for example, water, saline, pharmaceutically acceptable organic solvent(s), pharmaceutically acceptable oils or fats, and the like, as well as mixtures of two or more thereof. The liquid carrier may contain other suitable pharmaceutically acceptable additives such as solubilizers, emulsifiers, nutrients, buffers, preservatives, suspending agents, thickening agents, viscosity regulators, stabilizers, and the like. Suitable organic solvents include, for example, monohydric alcohols, such as ethanol, and polyhydric alcohols, such as glycols. Suitable oils include, for example, soybean oil, coconut oil, olive oil, safflower oil, cottonseed oil, and the like. For parenteral administration, the carrier can also be an oily ester such as ethyl oleate, isopropyl myristate, and the like. Compositions of the present invention may also be in the form of microparticles, microcapsules, liposomal encapsulates, and the like, as well as combinations of any two or more thereof.

**[0136]** Time-release or controlled release delivery systems may be used, such as a diffusion controlled matrix system or an erodible system, as described for example in: Lee, "Diffusion-Controlled Matrix Systems", pp. 155-198 and Ron and Langer, "Erodible Systems", pp. 199-224, in "Treatise on Controlled Drug Delivery", A. Kydonieus Ed., Marcel Dekker, Inc., New York 1992. The matrix may be, for example, a biodegradable material that can degrade spontaneously *in situ* and *in vivo* for, example, by hydrolysis or enzymatic cleavage, e.g., by proteases. The delivery system may be, for example, a naturally occurring or synthetic polymer or copolymer, for example in the form of a hydrogel. Exemplary polymers with cleavable linkages include polyesters, polyorthoesters, polyanhydrides, polysaccharides, poly(phosphoesters), polyamides, polyurethanes, poly(imidocarbonates) and poly(phosphazenes).

**[0137]** The compounds of the invention may be administered enterally, orally, parenterally, sublingually, by inhalation (e.g. as mists or sprays), rectally, or topically in dosage unit formulations containing conventional nontoxic pharmaceutically acceptable carriers, adjuvants, and vehicles as desired. For example, suitable modes of administration include oral, subcutaneous, transdermal, transmucosal, iontophoretic, intravenous, intraarterial, intramuscular, intraperitoneal, intranasal (e.g. via nasal mucosa), subdural, rectal, gastrointestinal, and the like, and directly to a specific or affected organ or tissue. For delivery to the central nervous system, spinal and epidural administration, or administration to cerebral ventricles, can be used. Topical administration may also involve the use of transdermal administration such as transdermal patches or iontophoresis devices. The term parenteral as used herein includes subcutaneous injections, intravenous, intramuscular, intrasternal injection, or infusion techniques. The compounds are mixed with pharmaceutically acceptable carriers, adjuvants, and vehicles appropriate for the desired route of administration. Oral administration is a preferred route of administration, and formulations suitable for oral administration are preferred formulations. The compounds described for use herein can be administered in solid form, in liquid form, in aerosol form, or in the form of tablets, pills, powder mixtures, capsules, granules, injectables, creams, solutions, suppositories, enemas, colonic irrigations, emulsions, dispersions, food premixes, and in other suitable forms. The compounds can also be administered in liposome formulations. The compounds can also be administered as prodrugs, where the prodrug undergoes transformation in the treated subject to a form which is therapeutically effective. Additional methods of administration are known in the art.

**[0138]** Injectable preparations, for example, sterile injectable aqueous or oleaginous suspensions, may be formulated according to the known art using suitable dispersing or wetting agents and suspending agents. The sterile injectable preparation may also be a sterile injectable solution or suspension in a nontoxic parenterally acceptable diluent or solvent, for example, as a solution in propylene glycol. Among the acceptable vehicles and solvents that may be employed are water, Ringer's solution, and isotonic sodium chloride solution. In addition, sterile, fixed oils are conventionally employed as a solvent or suspending medium. For this purpose any bland fixed oil may be employed including synthetic mono- or diglycerides. In addition, fatty acids such as oleic acid find use in the preparation of injectables.

**[0139]** Solid dosage forms for oral administration may include capsules, tablets, pills, powders, and granules. In such solid dosage forms, the active compound may be admixed with at least one inert diluent such as sucrose, lactose, or starch. Such dosage forms may also comprise additional substances other than inert diluents, e.g., lubricating agents such as magnesium stearate. In the case of capsules, tablets, and pills, the dosage forms may also comprise buffering agents. Tablets and pills can additionally be prepared with enteric coatings.

**[0140]** Liquid dosage forms for oral administration may include pharmaceutically acceptable emulsions, solutions, suspensions, syrups, and elixirs containing inert diluents commonly used in the art, such as water. Such compositions may also comprise adjuvants, such as wetting agents, emulsifying and suspending agents, cyclodextrins, and sweetening, flavoring, and perfuming agents.

**[0141]** The compounds of the present invention can also be administered in the form of liposomes. As is known in the art, liposomes are generally derived from phospholipids or other lipid substances. Liposomes are formed by mono- or multilamellar hydrated liquid crystals that are dispersed in an aqueous medium. Any non-toxic, physiologically acceptable and metabolizable lipid capable of forming liposomes can be used. The present compositions in liposome form can contain, in addition to a compound of the present invention, stabilizers, preservatives, excipients, and the like. The preferred lipids are the phospholipids and phosphatidyl cholines (lecithins), both natural and synthetic. Methods to form liposomes are known in the art. See, for example, Prescott, Ed., *Methods in Cell Biology*, Volume XIV, Academic Press, New York, N.W., p. 33 et seq (1976).

**[0142]** The invention also provides articles of manufacture and kits containing materials useful for treating or suppressing mitochondrial diseases. The invention also provides kits comprising any one or more of the compounds of formulas I, Ia, Iaa, Ib, Ibb.. In some embodiments, the kit of the invention comprises the container described above.

**[0143]** In other aspects, the kits may be used for any of the methods described herein, including, for example, to treat an individual with a mitochondrial disorder, or to suppress a mitochondrial disorder in an individual.

**[0144]** The amount of active ingredient that may be combined with the carrier materials to produce a single dosage form will vary depending upon the host to which the active ingredient is administered and the particular mode of administration. It will be understood, however, that the specific dose level for any particular patient will depend upon a variety of factors including the activity of the specific compound employed, the age, body weight, body area, body mass index (BMI), general health, sex, diet, time of administration, route of administration, rate of excretion, drug combination, and the type, progression, and severity of the particular disease undergoing therapy. The pharmaceutical unit dosage chosen is usually fabricated and administered to provide a defined final concentration of drug in the blood, tissues, organs, or other targeted region of the body. The therapeutically effective amount or effective amount for a given situation can be readily determined by routine experimentation and is within the skill and judgment of the ordinary clinician.

**[0145]** Examples of dosages which can be used are an effective amount within the dosage range of about 0.1 mg/kg to about 300 mg/kg body weight, or within about 1.0 mg/kg to about 100 mg/kg body weight, or within about 1.0 mg/kg to about 50 mg/kg body weight, or within about 1.0 mg/kg to about 30 mg/kg body weight, or within about 1.0 mg/kg to about 10 mg/kg body weight, or within about 10 mg/kg to about 100 mg/kg body weight, or within about 50 mg/kg to about 150 mg/kg body weight, or within about 100 mg/kg to about 200 mg/kg body weight, or within about 150 mg/kg to about 250 mg/kg body weight, or within about 200 mg/kg to about 300 mg/kg body weight, or within about 250 mg/kg to about 300 mg/kg body weight. Compounds of the present invention may be administered in a single daily dose, or the total daily dosage may be administered in divided dosage of two, three or four times daily.

**[0146]** While the compounds of the invention can be administered as the sole active pharmaceutical agent, they can also be used in combination with one or more other agents used in the treatment or suppression of disorders. Representative agents useful in combination with the compounds of the invention for the treatment or suppression of mitochondrial diseases include, but are not limited to, Coenzyme Q, vitamin E, idebenone, MitoQ, vitamins, and antioxidant compounds.

**[0147]** When additional active agents are used in combination with the compounds of the present invention, the additional active agents may generally be employed in therapeutic amounts as indicated in the Physicians' Desk Reference (PDR) 53rd Edition (1999), or such therapeutically useful amounts as would be known to one of ordinary skill in the art.

**[0148]** The compounds of the invention and the other therapeutically active agents can be administered at the recommended maximum clinical dosage or at lower doses. Dosage levels of the active compounds in the compositions of the invention may be varied so as to obtain a desired therapeutic response depending on the route of administration, severity of the disease and the response of the patient. When administered in combination with other therapeutic agents, the therapeutic agents can be formulated as separate compositions that are given at the same time or different times, or the therapeutic agents can be given as a single composition.

**[0149]** The invention will be further understood by the following nonlimiting examples.

**[0150]** In general, the nomenclature used in this Application was generated with the help of naming package within the ChemOffice.RTM. version 11.0 suite of programs by CambridgeSoft Corp (Cambridge, Mass.).

#### *Reparation of Compounds of the Invention*

**[0151]** The compounds of this invention can be prepared from readily available starting materials using the following general methods and procedures. It will be appreciated that where typical or preferred process conditions (i.e., reaction temperatures, times, mole ratios of reactants, solvents, pressures, etc.) are given, other process conditions can also be

used unless otherwise stated. Optimum reaction conditions may vary with the particular reactants or solvent used, but such conditions can be determined by one skilled in the art by routine optimization procedures.

**[0152]** Furthermore, the compounds of this invention will typically contain one or more chiral centers. Accordingly, if desired, such compounds can be prepared or isolated as pure stereoisomers, i.e., as individual enantiomers or diastereomers, or as stereoisomer-enriched mixtures. All such stereoisomers (and enriched mixtures) are included within the scope of this invention, unless otherwise indicated. Pure stereoisomers (or enriched mixtures) may be prepared using, for example, optically active starting materials or stereoselective reagents well-known in the art. Alternatively, racemic mixtures of such compounds can be separated using, for example, chiral column chromatography, chiral resolving agents and the like.

#### Protocol A

##### Synthesis of 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamides.

**[0153]** 6-Hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (1 equiv.) was dissolved to 0.2 M THF and the stirred pale yellow solution treated with carbonyldiimidazole (CDI) (1.1 equiv.). The reaction was let stir for one hour and a solution of amine (1.1 equiv 0.2 M in THF) was added over one hour and the reaction stirred overnight. The solution was concentrated, dissolved to 0.04 M in CH<sub>2</sub>Cl<sub>2</sub> and washed sequentially with half-volumes of 0.5 M HCl, 1.0 M NaHCO<sub>3</sub>, saturated NaCl, the organic layer dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated. Flash chromatography yielded the desired 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide derivative.

#### Protocol B

##### Oxidation of 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamides.

**[0154]** A solution of 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide (1.0 equiv.) in 3 mL AcCN (0.28 M) and a drop of water was cooled to 0 °C. A solution of ceric ammonium nitrate (CAN) (2.2 equiv) in water (0.5 M) cooled to 0 °C was added dropwise over 2-3 minutes. The solution was then immediately treated with 10 mL EtOAc and the layers separated. The organic layer was washed 3 x 5 mL H<sub>2</sub>O and the combined aqueous phases back extracted with 3 x 5 mL EtOAc. The combined organics were washed with 10 mL saturated NaCl and dried over Na<sub>2</sub>SO<sub>4</sub>. Flash chromatography yielded the desired 2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide derivative.

#### Example 1

##### *N*-tert-Butyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0155]** Following the amide coupling procedure described in protocol A, 500 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.00 mmol), 355 mg CDI (2.20 mmol) and 160 mg *t*-butylamine (2.20 mmol) produced 125.1 mg of *N*-tert-butyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide as a white crystalline solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.40 (br s, 1H), 4.51 (s, 1H), 2.60 (m, 2H), 2.26 (m, 1H), 2.19 (s, 3H), 2.16 (s, 3H), 2.10 (s, 3H), 1.88 (m, 1H), 1.47 (s, 3H), 1.26 (m, 9H).

**[0156]** Oxidation as described in protocol B, using 95 mg (0.311 mmol) of *N*-tert-butyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide and 358 mg CAN (0.653 mmol) yielded 92.2 mg of *N*-tert-butyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.61 (br s, 1H), 3.45 (s, 1H), 2.55 (m, 1H), 2.39 (m, 1H), 2.04-1.91 (m, 10H), 1.56 (m, 1H), 1.37 (m, 12H).

#### Example 2

##### 2-Hydroxy-*N,N*,2-trimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0157]** Following the amide coupling procedure described in protocol A, 504 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.01 mmol), 361 mg CDI (2.23 mmol) and 1.1 mL of a 2.0 M solution of *NN*-dimethylamine in THF (2.2 mmol) produced 412 mg of 6-hydroxy-*N,N*,2,5,7,8-hexamethylchroman-2-carboxamide as amorphous powder.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 4.31 (s, 1H), 3.26 (s, 3H), 2.85 (s, 3H), 2.80-2.41 (m, 3H), 2.16 (s, 6H), 2.08 (s, 3H), 1.70-1.60 (m, 4H).

**[0158]** Oxidation as described in protocol B, using 138.6 mg (0.50 mmol) of 6-hydroxy-*N,N*,2,5,7,8-hexamethylchroman-2-carboxamide and 560 mg CAN (1.02 mmol) yielded 139.9 mg of 2-hydroxy-*N,N*,2-trimethyl-4-(2,4,5-trimethyl-

3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 5.07 (s, 1H), 2.23 (br s, 3H), 3.07 (br s, 3H), 2.51 (m, 1H), 2.33 (m, 1H), 2.02 (m, 3H), 1.99-1.94 (m, 7H), 1.69 (m, 1H), 1.47 (s, 3H).

### 5 Example 3

N-Benzyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

10 **[0159]** Following the amide coupling procedure described in protocol A, 500 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.0 mmol), 362 mg CDI (2.23 mmol) and 235 mg benzylamine (2.20 mmol) produced 507 mg of N-benzyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide as a brown oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.22 (m, 3H), 7.00 (m, 2H), 6.76 (br t, 1H), 4.81 (s, 1H), 4.50 (m, 1H), 4.35 (m, 1H), 2.62 (m, 2H), 2.45 (m, 1H), 2.16 (s, 3H), 2.11 (s, 6H), 1.92 (m, 1H), 1.58 (s, 3H).

15 **[0160]** Oxidation as described in protocol B, using 130 mg (0.383 mmol) of N-benzyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide and 441 mg CAN (0.805 mmol) yielded 119.7 mg of N-benzyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow foam.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.26 (m, 6H), 4.42 (m, 2H), 3.57 (s, 1H), 2.56 (m, 1H), 2.36 (m, 1H), 2.04-1.93 (m, 10H), 1.59 (m, 1H), 1.42 (s, 3H).

### 20 Example 4

N-Ethyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

25 **[0161]** Following the amide coupling procedure described in protocol A, 500 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.00 mmol), 356 mg CDI (2.20 mmol) and 1.1 mL of a 2.0 solution of ethylamine in methanol (2.2 mmol) produced 334 mg of N-ethyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide as a white solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.44 (br s, 1H), 4.40 (s, 1H), 3.24 (m, 2H), 2.57 (m, 2H), 2.31 (m, 1H), 2.18 (s, 6H), 2.10 (s, 3H), 1.89 (m, 1H), 1.49 (s, 3H), 1.07 (t, 3H).

30 **[0162]** Oxidation as described in protocol B, using 100 mg (0.360 mmol) of N-ethyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide and 415 mg CAN (0.757 mmol) yielded 96.2 mg of N-ethyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.87 (br s, 1H), 3.64 (s, 1H), 3.29 (m, 2H), 2.56 (m, 1H), 2.38 (m, 1H), 2.10-1.97 (m, 10H), 1.59 (m, 1H), 1.39 (s, 3H), 1.15 (t, 3H).

### 35 Example 5

2-Hydroxy-2-methyl-N-propyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

40 **[0163]** Following the amide coupling procedure described in protocol A, 502.3 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.01 mmol), 358 mg CDI (2.21 mmol) and 130 mg propylamine (2.20 mmol) produced 371 mg of 6-hydroxy-2,5,7,8-tetramethyl-N-propylchroman-2-carboxamide as an off white syrup.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.50 (br s, 1H), 4.85 (br s, 1H), 3.18 (q, 2H), 2.62 (m, 2H), 2.37 (m, 1H), 2.18 (s, 6H), 2.09 (s, 3H), 1.91 (m, 1H), 1.50 (s, 3H), 1.42 (m, 2H), 0.80 (t, 3H).

45 **[0164]** Oxidation as described in protocol B, using 90.6 mg (0.311 mmol) of 6-hydroxy-2,5,7,8-tetramethyl-N-propylchroman-2-carboxamide and 374.9 mg CAN (0.684 mmol) yielded 2-hydroxy-2-methyl-N-propyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow powder.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.89 (br t, 1H), 3.61 (s, 1H), 2.21 (q, 2H), 2.56 (m, 1H), 2.36 (m, 1H), 2.02 (m, 10H), 1.56 (m, 3H), 1.40 (m, 3H), 0.92 (t, 3H).

### 50 Example 6

N-(Cyclopropylmethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

55 **[0165]** Following the amide coupling procedure described in protocol A, 502 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.01 mmol), 356 mg CDI (2.20 mmol) and 158 mg cyclopropanemethylamine (2.22 mmol) produced 445 mg of N-(cyclopropylmethyl)-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide as a clear colorless oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.53 (br s, 1H), 4.39 (s, 1H), 3.05 (m, 2H), 2.57 (m, 2H), 2.31 (m, 2H), 2.17 (s, 6H), 2.08 (s, 3H), 1.90 (m, 1H), 1.50 (m, 3H), 0.86 (m, 1H), 0.40 (m, 2H), 0.070 (m, 2H).

**[0166]** Oxidation as described in protocol B, using 76.7 mg (0.253 mmol) of *N*-(cyclopropylmethyl)-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide and 435 mg CAN (0.794 mmol) yielded 71.4 mg of *N*-(cyclopropylmethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow powder.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.93 (br t, 1H), 3.46 (s, 1H), 3.13 (t, 2H), 2.58 (m, 1H), 2.42 (m, 1H), 2.05-1.84 (m, 10H), 1.60 (m, 1H), 1.42 (s, 3H), 0.97 (m, 1H), 0.51 (m, 2H), 0.22 (m, 2H).

#### Example 7

##### 2-Hydroxy-*N*-isopentyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0167]** Following the amide coupling procedure described in protocol A, 492 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (1.97 mmol), 370 mg CDI (2.28 mmol) and 192 mg 3-methylbutamine (2.20 mmol) produced 375 mg of 6-hydroxy-*N*-isopentyl-2,5,7,8-tetramethylchroman-2-carboxamide as white crystals.

**[0168]** Oxidation as described in protocol B, using 101 mg (0.316 mmol) of 6-hydroxy-*N*-isopentyl-2,5,7,8-tetramethylchroman-2-carboxamide and 380 mg CAN (0.694 mmol) yielded 101.2 mg of 2-hydroxy-*N*-isopentyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.85 (br t, 1H), 3.65 (s, 1H), 3.65 (q, 2H), 2.55 (m, 1H), 2.35 (m, 1H), 2.02 - 1.95 (m, 10H), 1.59 (m, 2H), 1.43-1.37 (m, 5H), 0.89 (d, 6H).

#### Example 8

##### 2-Hydroxy-2-methyl-*N*-phenethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0169]** Following the amide coupling procedure described in protocol A, 500 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.00 mmol), 356 mg CDI (2.20 mmol) and 266 mg phenethylamine (2.2 mmol) produced 440 mg of 6-hydroxy-2,5,7,8-tetramethyl-*N*-phenethylchroman-2-carboxamide as a clear pale brown oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.21 (m, 3H), 7.05 (m, 2H), 6.46 (bt t, 1H), 4.29 (s, 1H), 3.52 (m, 2H), 2.78-2.57 (m, 3H), 2.48 (m, 1H), 2.33 (dt, 1H), 2.16 (s, 3H), 2.09 (s, 3H), 1.98 (s, 3H), 1.82 (m, 1H), 1.47 (s, 3H).

**[0170]** Oxidation as described in protocol B, using 102 mg (0.287 mmol) of 6-hydroxy-2,5,7,8-tetramethyl-*N*-phenethylchroman-2-carboxamide and 355 mg CAN (0.647 mmol) yielded 95.8 mg of 2-hydroxy-2-methyl-*N*-phenethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.29 (m, 2H), 7.20 (m, 3H), 6.88 (br t, 1H), 3.54 (m, 2H), 3.32 (s, 1H), 2.84 (t, 2H), 2.48 (m, 1H), 2.29 (m, 1H), 2.02-1.94 (m, 10H), 1.54 (m, 1H), 1.36 (s, 3H).

#### Example 9

##### 2-Hydroxy-*N*-(3-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0171]** Following the amide coupling procedure described in protocol A, 500 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.00 mmol), 357 mg CDI (2.20 mmol) and 165 mg 3-aminopropanol (2.2 mmol) produced 297 mg of 6-hydroxy-*N*-(3-hydroxypropyl)-2,5,7,8-tetramethylchroman-2-carboxamide as an amorphous white solid. <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.78 (br t, 1H), 4.88 (br s, 1H), 3.50-3.31 (m, 5H), 2.66-2.49 (m, 2H), 2.33 (m, 1H), 2.17 (s, 6H), 2.09 (s, 3H), 1.88 (m, 1H), 1.66-1.51 (m, 5H).

**[0172]** Oxidation as described in protocol B, using 56.7 mg (0.184 mmol) of 6-hydroxy-*N*-(3-hydroxypropyl)-2,5,7,8-tetramethylchroman-2-carboxamide and 222 mg CAN (0.406 mmol) yielded 49.7 mg of 2-hydroxy-*N*-(3-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.19 (br t, 1H), 3.65 (q, 2H), 3.58 (br s, 1H), 3.43 (m, 2H), 2.56 (m, 1H), 2.41 (m, 1H), 2.05-1.99 (m, 10H), 1.73 (quintet, 2H), 1.61 (m, 1H), 1.42 (s, 3H).

#### Example 10

##### *N*-Cyclopropyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0173]** Following the amide coupling procedure described in protocol A, 500 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.00 mmol), 357 mg CDI (2.00 mmol) and 126 mg cyclopropylamine (2.2 mmol) produced 227 mg of *N*-cyclopropyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide as a pale brown oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.50 (br s, 1H), 4.32 (br s, 1H), 2.68-2.58 (m, 3H), 2.32 (m, 1H), 2.17 (s, 3H), 2.14 (s, 3H), 2.09 (s, 3H), 1.87 (m, 1H), 1.48 (s, 3H), 0.75 (m, 2H), 0.38 (m, 2H).

**[0174]** Oxidation as described in protocol B, using 100 mg (0.346 mmol) of *N*-cyclopropyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide and 417 mg CAN (0.762 mmol) yielded 40 mg of *N*-cyclopropyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.86 (br s, 1H), 3.45 (s, 1H), 2.74 (m, 1H), 2.54 (m, 1H), 2.38 (m, 1H), 2.02-1.98 (m, 9H), 1.77 (d, 1H), 1.58 (m, 1H), 1.39 (s, 3H), 0.79 (q, 2H), 0.53 (m, 2H).

#### Example 11

2-Hydroxy-*N*-isobutyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0175]** Following the amide coupling procedure described in protocol A, 510 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.04 mmol), 357 mg CDI (2.20 mmol) and 161 mg isobutylamine (2.2 mmol) produced 467 mg of 6-hydroxy-*N*-isobutyl-2,5,7,8-tetramethylchroman-2-carboxamide as an off-white solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.49 (br s, 1H), 4.29 (s, 1H), 3.09 (m, 1H), 3.00 (m, 1H), 2.59 (m, 2H), 2.36 (dt, 1H), 2.10 (s, 6H), 2.09 (s, 3H), 1.88 (m, 1H), 1.65 (m, 1H), 1.52 (s, 3H), 0.76 (dd, 6H).

**[0176]** Oxidation as described in protocol B, using 84 mg (0.278 mmol) of 6-hydroxy-*N*-isobutyl-2,5,7,8-tetramethylchroman-2-carboxamide and 335 mg CAN (0.612 mmol) yielded 78 mg of 2-hydroxy-*N*-isobutyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow-orange oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.94 (t, 1H), 3.55 (s, 1H), 3.09 (m, 2H), 2.58 (m, 1H), 2.89 (m, 1H), 2.07-1.94 (m, 10H), 1.79 (m, 1H), 1.58 (m, 1H), 1.41 (s, 3H), 0.88 (d, 6H).

#### Example 12

2-(3-Hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione.

**[0177]** Following the amide coupling procedure described in protocol A, 500 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.0 mmol), 370 mg CDI (2.28 mmol) and 222 mg 4-hydroxypiperidine (2.20 mmol) produced 222 mg of a (6-hydroxy-2,5,7,8-tetramethylchroman-2-yl)(4-hydroxypiperidin-1-yl)methanone as a white foam.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 4.56-4.31 (br d, 1H), 4.27 (br s, 1H), 4.08 (br s, 1H), 3.85 (m, 1H), 3.56-3.46 (br m, 1H), 3.08 (br s, 1H), 3.77 (m, 1H), 2.57 (n, 2H), 2.15 (s, 6H), 2.08 (m, 3H), 1.82 (br s, 2H), 1.69 (m, 1H), 1.58 (br s, 6H).

**[0178]** Oxidation as described in protocol B, using 100 mg (0.302 mmol) of (6-hydroxy-2,5,7,8-tetramethylchroman-2-yl)(4-hydroxypiperidin-1-yl)methanone and 364 mg CAN (0.664 mmol) yielded 95 mg of a yellow syrup.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 4.00 (m, 4H), 3.45 (m, 3H), 2.53-2.42 (m, 1H), 2.05-1.92 (m, 10H), 1.71 (m, 1H), 1.56 (m, 3H), 1.49 (s, 3H).

#### Example 13

*N*-ethyl-2-hydroxy-*N*,2-dimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0179]** Following the amide coupling procedure described in protocol A, 499 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.00 mmol), 360 mg CDI (2.22 mmol) and 130 mg *N*-methyl ethylamine (2.2 mmol) produced *N*-ethyl-6-hydroxy-*N*,2,5,7,8-pentamethylchroman-2-carboxamide as a clear oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 4.30 (br s, 1H), 3.82 (B, m, 2H), 3.44 (A, m, 1H), 3.20 (A, s, 3H), 3.08 (A, m, 1H), 2.82 (B, s, 3H), 2.75 (m, 1H), 2.66-2.52 (m, 2H), 2.16 (s, 6H), 2.08 (s, 3H), 1.70-1.58 (m, 4H), 1.03 (A+B, dt, 3H). two rotomers in 60:40 mixture, A and B

**[0180]** Oxidation as described in protocol B, using 78 mg (0.268 mmol) of *N*-ethyl-6-hydroxy-*N*,2,5,7,8-pentamethylchroman-2-carboxamide and 323 mg CAN (0.590 mmol) yielded 76 mg of *N*-ethyl-2-hydroxy-*N*,2-dimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 5.12 (br s, 1H), 3.61 (br s, 1H), 3.40 (br s, 1H), 3.21 (s, 3H), 2.98 (br s, 1H), 2.51 (td, 1H), 2.35 (br s, 1H), 2.02 (s, 3H), 1.97 (s, 6H), 1.67 (td, 1H), 1.46 (s, 3H), 1.80 (br m, 3H).

#### Example 14

2-(3-Hydroxy-3-methyl-4-(4-methylpiperazin-1-yl)-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione.

**[0181]** Following the amide coupling procedure described in protocol A, 502 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.01 mmol), 354 mg CDI (2.18 mmol) and 220 mg *N*-methylpiperazine (2.2 mmol) produced 557 mg of (6-hydroxy-2,5,7,8-tetramethylchroman-2-yl)(4-methylpiperazin-1-yl)methanone as a clear oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 4.02 (br s, 2H), 3.56 (br d, 2H), 2.78 (m, 1H), 2.55 (m, 2H), 2.35 (br s, 4H), 2.24 (s, 3H), 2.16 (s, 3H), 2.13 (s, 3H), 2.08 (s, 3H), 1.72 (m, 1H), 1.58 (2, 3H).

**[0182]** Oxidation as described in protocol B, using 122 mg (0.368 mmol) of (6-hydroxy-2,5,7,8-tetramethylchroman-2-yl)(4-methylpiperazin-1-yl)methanone and 444 mg CAN (0.811 mmol) yielded 2-(3-hydroxy-3-methyl-4-(4-methylpiperazin-1-yl)-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione as an orange oil, 67.9 mg.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 4.91 (br s, 1H), 3.77 (br m, 4H), 2.58-2.30 (m, 8H), 2.04-1.76 (m, 10H), 1.71 (m, 1H), 1.48 (s, 3H).

#### Example 15

2-(4-(4-Benzylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione.

**[0183]** Following the amide coupling procedure described in protocol A, 506 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.02 mmol), 365 mg CDI (2.25 mmol) and 386 mg 1-benzylpiperazine (2.2 mmol) yielded 568 mg of (4-benzylpiperazin-1-yl)(6-hydroxy-2,5,7,8-tetramethylchroman-2-yl)methanone as a white powder.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.30 (m, 5H), 5.18 (br s, 1H), 4.06 (br m, 2H), 3.66 (br s, 1H), 3.47 (dd, 2H), 2.78 (m, 1H), 2.58 (m, 2H), 2.39 (m, 5H), 2.18 (s, 3H), 2.14 (s, 3H), 2.08 (s, 3H), 1.74 (m, 1H), 1.60 (s, 3H).

**[0184]** Oxidation as described in protocol B, using 98 mg (0.242 mmol) of (4-benzylpiperazin-1-yl)(6-hydroxy-2,5,7,8-tetramethylchroman-2-yl)methanone and 291 mg CAN (0.531 mmol) yielded 76 mg of 2-(4-(4-benzylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.21 (m, 5H), 4.94 (s, 1H), 3.70 (br s, 2H), 3.63 (br s, 2H), 3.98 (dd, 2H), 2.49-2.31 (m, 6H), 1.96 (s, 3H), 1.91 (s, 6H), 1.84 (m, 1H), 1.61 (m, 1H), 1.30 (s, 3H). APCI-MS M<sup>+</sup>+H 425 m/z.

#### Example 16

2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0185]** Following the amide coupling procedure described in protocol A, 498 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (1.99 mmol), 367 mg CDI (2.26 mmol) and 1.4 mL of 7.0M NH<sub>3</sub> in MeOH (9.8 mmol) produced 187 mg of 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide as a white solid.

**[0186]** Oxidation as described in protocol B, using 186 mg (0.747 mmol) of 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide and 907 mg CAN (1.65 mmol) yielded 157 mg of 2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow solid.

<sup>1</sup>H NMR (400 MHz, d<sub>4</sub>-MeOH) δ 2.71 (ddd, 1H), 2.39 (ddd, 1H), 2.01 (s, 3H), 1.99 (s, 6H), 1.85 (ddd, 1H), 1.58 (m, 1H), 1.38 (s, 3H).

#### Example 17

2-Hydroxy-N-(4-hydroxybutyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0187]** Following the amide coupling procedure described in protocol A, 507 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.03 mmol), 356 mg CDI (2.20 mmol) and 196 mg 4-aminobutanol (2.20 mmol) produced 488 mg of 6-hydroxy-N-(4-hydroxybutyl)-2,5,7,8-tetramethylchroman-2-carboxamide as a white powder.

<sup>1</sup>H NMR (400 MHz, d<sub>4</sub>-MeOH) δ 7.22 (br t, 1H), 3.41 (t, 2H), 3.25 (m, 1H), 3.12 (m, 1H), 2.61 (dt, 1H), 2.50 (m, 1H), 2.32 (dt, 1H), 2.16 (s, 3H), 2.14 (s, 3H), 2.05 (s, 3H), 1.75 (m, 1H), 1.47 (s, 3H), 1.41 (m, 2H), 1.28 (m, 2H).

**[0188]** Oxidation as described in protocol B, using 100 mg (0.311 mmol) of 6-hydroxy-N-(4-hydroxybutyl)-2,5,7,8-tetramethylchroman-2-carboxamide and 375 mg CAN (0.685 mmol) yielded 2-hydroxy-N-(4-hydroxybutyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.12 (t, 1H), 3.97 (s, 1H), 3.67 (t, 2H), 3.29 (q, 2H), 2.81 (br s, 1H), 3.56 (td, 1H), 2.34 (td, 1H), 2.02-1.92 (m, 10H), 1.61 (m, 5H), 1.39 (s, 3H).

#### Example 18

2-Hydroxy-N-(5-hydroxypentyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0189]** Following the amide coupling procedure described in protocol A, 497 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (1.98 mmol), 370 mg CDI (2.28 mmol) and 239 mg 5-aminopentanol (2.2 mmol) produced 468 mg of 6-hydroxy-N-(5-hydroxypentyl)-2,5,7,8-tetramethylchroman-2-carboxamide as a pale brown solid.

<sup>1</sup>H NMR (400 MHz, d<sub>4</sub>-MeOH) δ 7.16 (br t, 1H), 3.42 (t, 2H), 3.07 (m, 1H), 2.60 (dt, 1H), 2.50 (m, 1H), 2.36 (m, 1H), 2.18 (s, 3H), 2.16 (s, 3H), 2.06 (d, 3H), 1.78 (m, 1H), 1.49 (s, 3H), 1.37 (m, 4H), 1.09 (m, 2H).

**[0190]** Oxidation as described in protocol B, using 96 mg (0.286 mmol) of 6-hydroxy-*N*-(5-hydroxypentyl)-2,5,7,8-tetramethylchroman-2-carboxamide and 345 mg CAN (0.629 mmol) yielded 92.8 mg of 2-hydroxy-*N*-(5-hydroxypentyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.96 (t, 1H), 3.83 (br s, 1H), 3.65 (t, 2H), 3.26 (q, 2H), 2.65 (td, 1H), 2.35 (m, 1H), 2.24 (br s, 1H), 2.02-1.93 (m, 10H), 1.57 (m, 5H), 1.43 (m, 5H).

#### Example 19

##### 2-Hydroxy-*N*-(1-hydroxypropan-2-yl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0191]** Following the amide coupling procedure described in protocol A, 500 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.00 mmol), 365 mg CDI (2.25 mmol) and 165 mg 2-amino-1-propanol (2.2 mmol) produced 488 mg of 6-hydroxy-*N*-(1-hydroxypropan-2-yl)-2,5,7,8-tetramethylchroman-2-carboxamide as a pale brown foam.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.31 (t, 0.4H), 7.21 (t, 0.6H), 3.97 (br s, 1.5H), 3.83 (br s, 0.4H), 3.56 (br s, 0.6H), 3.53-3.44 (m, 1H), 3.67 (br s, 0.4H), 3.16 (m, 1H), 2.58 (m, 1H), 2.36 (m, 1H), 2.03-1.90 (m, 10H), 1.61 (m, 1H), 1.424 (s, 1.4H), 1.416 (s, 1.6H), 1.21 (d, 3H).

**[0192]** Oxidation as described in protocol B, using 102.2 mg (0.329 mmol) of 6-hydroxy-*N*-(1-hydroxypropan-2-yl)-2,5,7,8-tetramethylchroman-2-carboxamide and 397 mg CAN (2.45 mmol) yielded 98.5 mg of 2-hydroxy-*N*-(1-hydroxypropan-2-yl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow foam.

#### Example 20

##### 2-Hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0193]** 6-Hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (5.00g 19.98 mmol) in 150 mL THF was treated with 3.65 g CDI (22.5 mmol) and the exothermic reaction let stir for 1 h at room temperature. Ethanolamine (1.35 g, 22.10 mmol) in 50 mL THF was added over 1 h and the solution stirred overnight. The reaction was concentrated, dissolved into 375 mL CH<sub>2</sub>Cl<sub>2</sub> and washed with 250 mL 0.1 M HCl, 250 mL 0.5 M NaHCO<sub>3</sub>, 2 x 100 mL saturated NaCl and dried over Na<sub>2</sub>SO<sub>4</sub>. The acidic aqueous phase was extracted 3 x 100 mL CH<sub>2</sub>Cl<sub>2</sub> and washed with 50 mL saturated NaCl and dried over Na<sub>2</sub>SO<sub>4</sub>. The combined organics were concentrated and purified by flash chromatography yielding 2.88 g of 6-hydroxy-*N*-(2-hydroxyethyl)-2,5,7,8-tetramethylchroman-2-carboxamide as an off white impure solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.88 (br s, 1H), 4.35 (t, 2H), 3.62 (m, 2H), 3.39 (m, 2H), 2.60 (m, 2H), 2.50 (t, 2H), 2.34 (m, 1H), 2.27 (m, 1H), 2.18 (s, 6H), 2.09 (s, 3H), 1.90 (m, 1H), 1.53 (s, 3H).

**[0194]** 6-Hydroxy-*N*-(2-hydroxyethyl)-2,5,7,8-tetramethylchroman-2-carboxamide (2.38 g, 8.11 mmol) was dissolved into 150 mL AcCN, cooled to 0 °C and treated with 9.75 g CAN (17.84 mmol) in 30 mL H<sub>2</sub>O over 20 minutes. EtOAc (150 mL) and H<sub>2</sub>O (20 mL) were then added, layers separated and the organic phase washed 21 x 20 mL H<sub>2</sub>O. The aqueous phase was back extracted 4 x 50 mL EtOAc and the combined organics washed with saturated NaCl, dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated to a yellow powder. Flash chromatography yielded 1.68 g of 2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow solid.

<sup>1</sup>H NMR (400 MHz, d<sub>6</sub>-Ace) δ 7.55 (br s, 1H), 4.62 (s, 1H), 3.99 (t, 1H), 3.62 (q, 2H), 3.34 (m, 2H), 2.69 (td, 1H), 2.36 (td, 1H), 1.98 (s, 9H), 1.89 (m, 1H), 1.60 (m, 1H), 1.37 (s, 3H).

#### Example 21

##### 2-Hydroxy-*N*-(2-methoxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0195]** Following the amide coupling procedure described in protocol A, 499 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.00 mmol), 370 mg CDI (2.28 mmol) and 165.2 mg 2-methoxyethylamine (2.20 mmol) produced 6-hydroxy-*N*-(2-methoxyethyl)-2,5,7,8-tetramethylchroman-2-carboxamide as a white crystalline solid.

**[0196]** Oxidation as described in protocol B, 101 mg (0.329 mmol) of 2-methoxyethylamine (2.20 mmol) yielded 6-hydroxy-*N*-(2-methoxyethyl)-2,5,7,8-tetramethylchroman-2-carboxamide and 396 mg CAN (0.724 mmol) yielding 2-hydroxy-*N*-(2-methoxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow crystalline solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.14 (br s, 1H), 3.53 (s, 1H), 3.46 (m, 4H), 3.35 (s, 3H), 2.58 (td, 1H), 2.37 (td, 1H), 2.05-1.94 (m, 10H), 1.60 (m, 1H), 1.41 (s, 3H).

## Example 22

Methyl 2-(2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamido) acetate.

**[0197]** Following the amide coupling procedure described in protocol A, 499 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.00 mmol), and 361 mg CDI (2.23 mmol) were dissolved in THF. Glycine methyl ester hydrochloride (263.7 mg, 2.1 mmol) dissolved into 10 mL THF, 5 mL CH<sub>2</sub>Cl<sub>2</sub>, 100  $\mu$ L Et<sub>3</sub>N and 2.5 mL MeOH was added over 1 h. Workup as described in protocol A, produced 471.3 mg of methyl 2-(6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamido)acetate

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>)  $\delta$  7.02 (br s, 1H), 4.10 (dd, 1H), 3.92 (dd, 1H), 3.72 (s, 3H), 2.61 (m, 2H), 2.35 (m, 1H), 2.22 (s, 3H), 2.18 (s, 3H), 2.09 (s, 3H), 1.91 (m, 1H), 1.53 (s, 3H).

**[0198]** Oxidation as described in protocol B, using 110 mg (0.344 mmol) of methyl 2-(6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamido)acetate and 415 mg CAN (0.757 mmol) yielded 94.0 mg of methyl 2-(2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamido)acetate as a yellow powder.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>)  $\delta$  7.41 (t, 1H), 4.05 (qd, 2H), 3.74 (s, 3H), 3.62 (br s, 1H), 2.62 (td, 1H), 2.43 (m, 1H), 2.04 (m, 1H), 1.99 (s, 6H), 1.97 (s, 3H), 1.61 (m, 1H), 1.43 (s, 3H).

## Example 23

N-(3-(1H-imidazol-1-yl)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0199]** A solution of 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (500 mg, 2.00 mmol) in 10 mL THF was treated with 358 mg CDI and stirred for 1.25 h at room temperature. To this clear yellow solution was added a solution of 278 mg 1-(3-aminopropyl)imidazole in 10 mL THF over 1 h. The solution was stirred overnight at room temperature, concentrated to a pale brown oil, dissolved into 70 mL CH<sub>2</sub>Cl<sub>2</sub>, washed 1 x 50 mL saturated NaCl, and dried over Na<sub>2</sub>SO<sub>4</sub>. The organic layers were concentrated and flashed chromatographed to yield 524 mg of N-(3-(1H-imidazol-1-yl)propyl)-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide as a white crystalline solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>)  $\delta$  7.22 (s, 1H), 7.02 (s, 1H), 6.58 (s, 1H), 6.41 (t, 1H), 3.71 (quint, 1H), 3.58 (quint, 1H), 3.37 (sextet, 1H), 3.02 (sextet, 1H), 2.34 (dt, 1H), 2.54 (m, 1H), 2.44 (m, 1H), 2.20 (s, 6H), 2.08 (s, 3H), 1.93 (m, 1H), 1.83 (m, 2H), 1.54 (s, 3H).

**[0200]** To a solution of N-(3-(1H-imidazol-1-yl)propyl)-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide (100.7 mg, 0.282 mmol) in 6 mL AcCN and 6 mL CH<sub>2</sub>Cl<sub>2</sub>, cooled to 0 °C, was added a cooled solution of CAN (340 mg, 0.620 mmol) in 2 mL H<sub>2</sub>O, dropwise over 5 minutes. The reaction was immediately treated with 5 mL EtOAc and washed 3 x 3 mL H<sub>2</sub>O. The aqueous layer was basified with 6 mL saturated NaHCO<sub>3</sub> solution and extracted 6 x 3 mL EtOAc. The combined organics were dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated to a yellow oil. Flash chromatography yielded 98.1 mg of N-(3-(1H-imidazol-1-yl)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>)  $\delta$  7.56 (s, 1H), 7.05 (s, 1H), 6.97 (s, 1H), 4.02 (t, 2H), 3.60 (br s, 1H), 3.29 (m, 2H), 2.60 (td, 1H), 2.37 (td, 1H), 2.07-1.92 (m, 12H), 1.63 (m, 1H), 1.41 (s, 3H)

## Example 24

(R)-2-Hydroxy-N-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0201]** Following the amide coupling procedure described in protocol A, 1.846 g 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (7.37 mmol), 1.315 g CDI (8.11 mmol) and 991 mg ethanolamine (16.22 mmol) produced 1.765 g of (R)-6-hydroxy-N-(2-hydroxyethyl)-2,5,7,8-tetramethylchroman-2-carboxamide as a waxy white solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>)  $\delta$  6.88 (br s, 1H), 3.63 (td, 2H), 3.39 (m, 2H), 2.70-2.54 (m, 2H), 2.35 (dt, 1H), 2.18 (s, 6H), 2.10 (s, 3H), 1.90 (m, 1H), 1.53 (s, 3H).

**[0202]** Oxidation as described in protocol B, using 1.49 g (5.11 mmol) of precursor (R)-6-hydroxy-N-(2-hydroxyethyl)-2,5,7,8-tetramethylchroman-2-carboxamide and 6.16 g CAN (11.2 mmol) yielded 1.46 g of (R)-2-hydroxy-N-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a waxy yellow solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>)  $\delta$  7.14 (br s, 1H), 3.78 (t, 2H), 3.48 (m, 2H), 2.59 (m, 1H), 2.39 (m, 1H), 2.04-1.94 (m, 10H), 1.64 (m, 1H), 1.43 (s, 3H).

## Example 25

2-Hydroxy-N-(2-(2-hydroxyethoxy)ethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0203]** Following the amide coupling procedure described in protocol A, 501 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.0 mmol), 360 mg CDI (2.23 mmol) and 231 mg 2-(2-aminoethoxy)ethanol (2.19 mmol) produced 557 mg of 6-hydroxy-N-(2-(2-hydroxyethoxy)ethyl)-2,5,7,8-tetramethylchroman-2-carboxamide as an amorphous white solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.83 (br s, 1H), 3.63 (t, 2H), 3.53-3.36 (m, 6H), 2.60 (m, 2H), 2.35 (dt, 1H), 2.18 (s, 6H), 2.09 (s, 3H), 1.88 (m, 1H), 1.52 (s, 3H).

**[0204]** Oxidation as described in protocol B, using 98.1 mg (0.305 mmol) of 6-hydroxy-N-(2-(2-hydroxyethoxy)ethyl)-2,5,7,8-tetramethylchroman-2-carboxamide and 368 mg CAN (0.671 mmol) yielded 2-hydroxy-N-(2-(2-hydroxyethoxy)ethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.26 (t, 1H), 3.82 (br s, 1H), 3.74 (m, 2H), 3.60 (m, 4H), 3.50 (m, 2H), 2.90 (br s, 1H), 2.57 (td, 1H), 2.38 (m, 1H), 2.03-1.93 (m, 10H), 1.61 (m, 1H), 1.41 (s, 3H).

## Example 26

2-Hydroxy-2-methyl-N-(2-(pyridin-2-yl)ethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0205]** Following the amide coupling procedure described in protocol A, 499 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (1.99 mmol), 370 mg CDI (2.28 mmol) and 324 mg 2-picolyamine (3.0 mmol), produced 579 mg of 6-hydroxy-2,5,7,8-tetramethyl-N-(pyridin-2-ylmethyl)chroman-2-carboxamide as a white solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 8.48 (d, 1H), 7.68 (br s, 1H), 7.58 (td, 1H), 7.15 (m, 1H), 7.02 (d, 1H), 4.53 (m, 2H), 4.32 (s, 1H), 2.63 (m, 2H), 2.39 (dt, 1H), 2.25 (s, 3H), 2.17 (s, 3H), 2.09 (s, 3H), 1.93 (m, 1H), 1.56 (s, 3H).

**[0206]** A solution of 6-hydroxy-2,5,7,8-tetramethyl-N-(pyridin-2-ylmethyl)chroman-2-carboxamide (104 mg, 0.307 mmol) in 4 mL AcCN was chilled to 0 °C and CAN (370 mg in 2 mL H<sub>2</sub>O) added followed by 8 mL EtOAc, 4 mL 1.0 M NaHCO<sub>3</sub> and 250 mg K<sub>2</sub>CO<sub>3</sub>. The emulsion was extracted 5 x 4 mL EtOAc and the combined organics washed 2 x 4 mL saturated NaCl, dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated to yellow oil. Flash chromatography yielded 2-hydroxy-2-methyl-N-(pyridin-2-ylmethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 8.51 (d, 1H), 8.02 (t, 1H), 7.65 (td, 1H), 7.29 (d, 1H), 7.18 (dd, 1H), 4.55 (m, 2H), 4.39 (br s, 1H), 2.63 (m, 1H), 2.34 (m, 1H), 1.99 (m, 1H), 1.96 (s, 3H), 1.93 (s, 6H), 1.66 (m, 1H), 1.46 (s, 3H).

## Example 27

2-Hydroxy-2-methyl-N-(2-(pyridin-2-yl)ethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0207]** A solution of 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (500 mg, 2.0 mmol) in 10 mL THF was treated with 356 mg CDI (2.2 mmol). After 1 h, 366 mg 2-(2-methylaminoethyl)pyridine (3.0 mmol) in 10 mL THF was added over 1 h and stirred overnight. The solution was concentrated, dissolved into 70 mL CHCl<sub>2</sub>, extracted once with 1.0 M NaHCO<sub>3</sub>. The aqueous phase was then back extracted 2 x 25 mL CH<sub>2</sub>Cl<sub>2</sub> and the combined organics washed with 2 x 25 mL saturated NaCl and dried over Na<sub>2</sub>SO<sub>4</sub>. The solution was concentrated and purified by flash chromatography to give 6-hydroxy-2,5,7,8-tetramethyl-N-(2-(pyridin-2-yl)ethyl)chroman-2-carboxamide.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 8.43 (d, 1H), 7.52 (t, 1H), 7.12 (m, 2H), 6.98 (d, 1H), 4.27 (s, 1H), 3.69 (q, 2H), 2.92 (m, 2H), 2.34 (dt, 1H), 2.52 (m, 1H), 2.32 (m, 1H), 2.15 (s, 3H), 2.08 (s, 3H), 2.06 (s, 3H), 1.84 (m, 1H), 1.46 (s, 3H).

**[0208]** 6-Hydroxy-2,5,7,8-tetramethyl-N-(2-(pyridin-2-yl)ethyl)chroman-2-carboxamide (97.7 mg, 0.276 mmol) was dissolved in 3 mL AcCN and 2 mL CH<sub>2</sub>Cl<sub>2</sub> and cooled to 0 °C prior to treatment with 332.5 mg CAN (0.606 mmol) in 2 mL H<sub>2</sub>O. The reaction was quenched by the addition of 5 mL EtOAc and 4 mL 1.0 M NaHCO<sub>3</sub> followed by extraction of the aqueous layer 3 x 5 mL EtOAc. The combined organics were back extracted 3 x 3 mL saturated NaCl, dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated. Flash chromatography yielded 85.8 mg of 2-hydroxy-2-methyl-N-(2-(pyridin-2-yl)ethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 8.53 (d, 1H), 7.65 (t, 1H), 7.48 (br t, 1H), 7.21 (m, 2H), 3.71 (q, 2H), 3.04 (t, 2H), 2.52 (m, 1H), 2.34 (m, 1H), 2.00-1.89 (m, 10H), 1.58 (m, 1H), 1.37 (s, 3H).

## Example 28

(S)-2-hydroxy-N-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0209]** Following the amide coupling procedure described in protocol A, 5.06 g 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (20.2 mmol), 3.68 g CDI (22.7 mmol) and 2.44 g ethanolamine (39.52 mmol) produced 4.576 g of (S)-6-hydroxy-N-(2-hydroxyethyl)-2,5,7,8-tetramethylchroman-2-carboxamide as a white powder.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.88 (s, 1H), 3.64 (t, 2H), 3.39 (m, 2H), 2.62 (m, 2H), 2.35 (dt, 1H), 2.18 (s, 6H), 2.10 (s, 3H), 1.90 (m, 1H), 1.53 (s, 3H).

**[0210]** Oxidation as described in protocol B, using 3.50 g (11.93 mmol) of (S)-6-hydroxy-N-(2-hydroxyethyl)-2,5,7,8-tetramethylchroman-2-carboxamide and 13.73 g CAN (25.06 mmol) yielded 3.341 g of (S)-2-hydroxy-N-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.24 (t, 1H), 3.75 (t, 2H), 3.47 (m, 2H), 3.29 (s, 2H), 2.58 (td, 1H), 2.35 (td, 1H), 2.00-1.94 (m, 10H), 1.61 (td, 1H), 1.42 (s, 3H).

## Example 29

2-Hydroxy-2-methyl-N-(3-(2-oxopyrrolidin-1-yl)propyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0211]** Following the amide coupling procedure described in protocol A, 499 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.00 mmol), 357 mg CDI (2.2 mmol) and 569 mg 1-(3-aminopropyl)pyrrolidin-2-one (4.0 mmol) yielded 598 mg of 6-hydroxy-2,5,7,8-tetramethyl-N-(3-(2-oxopyrrolidin-1-yl)propyl)chroman-2-carboxamide as a white powder.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.02 (t, 1H), 3.31 (m, 2H), 3.24 (m, 1H), 3.11 (m, 2H), 2.59 (m, 2H), 2.37 (m, 3H), 2.24 (s, 3H), 2.17 (s, 3H), 2.08 (s, 3H), 2.01 (m, 2H), 1.87 (m, 1H), 1.61 (m, 4H), 1.51 (s, 3H).

**[0212]** Oxidation as described in protocol B, using 113.2 mg (0.302 mmol) of 6-hydroxy-2,5,7,8-tetramethyl-N-(3-(2-oxopyrrolidin-1-yl)propyl)chroman-2-carboxamide and 364.6 mg CAN (0.665 mmol) yielded 118 mg of 2-hydroxy-2-methyl-N-(3-(2-oxopyrrolidin-1-yl)propyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.52 (br t, 1H), 3.41 (quintet, 4H), 3.26 (m, 2H), 2.58 (td, 1H), 2.42 (m, 3H), 2.09-1.88 (m, 12H), 1.75 (m, 2H), 1.66 (m, 1H), 1.44 (s, 3H).

## Example 30

2-Hydroxy-N-(2-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0213]** Following the amide coupling procedure described in protocol A, 4.98 g 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (19.9 mmol), 3.99 g CDI (24.6 mmol) and 3.01 g 3-amino-2-propanol (39.9 mmol), yielded 5.15 g of 6-hydroxy-N-(2-hydroxypropyl)-2,5,7,8-tetramethylchroman-2-carboxamide as a white powder.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.83 (br s, 1H), 3.8 (m, 1H), 3.39 (m, 1H), 3.11 (m, 1H), 2.62 (m, 2H), 2.38 (dt, 1H), 2.19 (s, 6H), 2.09 (s, 3H), 1.88 (m, 1H), 1.53 (s, 3H), 1.07 (dd, 3H).

**[0214]** Oxidation as described in protocol B, using 505 mg (1.64 mmol) of 6-hydroxy-N-(2-hydroxypropyl)-2,5,7,8-tetramethylchroman-2-carboxamide and 1.99 mg CAN (3.62 mmol) yielded 496 mg of 2-hydroxy-N-(2-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.21 (t, 0.5H), 7.07 (t, 0.5H), 3.98 (m, 1H), 3.52 (m, 1H), 3.15 (m, 1H), 2.61 (m, 1H), 2.42 (m, 1H), 2.04-1.91 (m, 10H), 1.63 (m, 1H), 1.42 (s, 1H), 1.24 (m, 3H).

## Example 31

2-Hydroxy-N-(6-hydroxyhexyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0215]** Following the amide coupling procedure described in protocol A, 500 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.0 mmol), 356 mg CDI (2.2 mmol) and 468 mg 6-amino-1-hexanol (4.0 mmol) yielded 161 mg of 6-hydroxy-N-(6-hydroxyhexyl)-2,5,7,8-tetramethylchroman-2-carboxamide as a white solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.35 (t, 1H), 3.56 (t, 2H), 3.53 (sextet, 1H), 3.05 (sextet, 1H), 2.58 (m, 2H), 2.42 (dt, 1H), 2.19 (s, 6H), 2.09 (s, 3H), 1.83 (m, 1H), 1.53 (s, 3H), 1.53-1.29 (m, 5H), 1.20 (m, 2H), 0.99 (m, 2H).

**[0216]** Oxidation as described in protocol B, using 64.2 mg (0.183 mmol) of 6-hydroxy-N-(6-hydroxyhexyl)-2,5,7,8-tetramethylchroman-2-carboxamide and 230 mg CAN (0.419 mmol) yielded 40 mg of 2-hydroxy-N-(6-hydroxyhexyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.86 (t, 1H), 3.64 (t, 2H), 3.28(q, 2H), 2.54 (m, 1H), 2.39 (m, 1H), 2.04-1.99 (m, 10H), 1.55 (m, 7H), 1.38 (m, 5H).

### Example 32

#### 2-Hydroxy-N-(6-hydroxyhexyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0217]** Following the amide coupling procedure described in protocol A, 496 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (1.98 mmol), 376 mg CDI (2.32 mmol) and 404 mg tetrahydrofuranylamine (4.0 mmol) produced 408.0 mg of crude 6-hydroxy-2,5,7,8-tetramethyl-N-((tetrahydrofuran-2-yl)methyl)chroman-2-carboxamide, which was oxidized following protocol B, with 335 mg CAN (0.612 mmol) to yield 74.7 mg of 2-hydroxy-2-methyl-N-((tetrahydrofuran-2-yl)methyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.16 (m, 1H), 3.98 (m, 1H), 3.87 (m, 1H), 3.76 (q, 1H), 3.56 (m, 1H), 3.3 (d, 1H), 3.20 (m, 1H), 2.59 (m, 1H), 2.40 (m, 1H), 1.99 (m, 10H), 1.89 (q, 2H), 1.56 (m, 2H), 1.42 (s, 3H).

### Example 33

#### 2-Hydroxy-2-methyl-N-(3-morpholinopropyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0218]** To a solution of 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (511 mg, 2.1 mmol) in 10 mL THF was added 356 mg CDI and stirred for 2 h. 3-morpholino-propylamine (438 μl, 432 mg, 3.0 mmol) in 10 mL THF was added dropwise and stirred overnight. The reaction was concentrated, dissolved into 70 mL CH<sub>2</sub>Cl<sub>2</sub>, the organics washed once with 50 mL saturated NaCl solution, dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated to brown oil. Flash chromatography yielded 6-hydroxy-2,5,7,8-tetramethyl-N-(3-morpholinopropyl)chroman-2-carboxamide as a pale brown solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.57 (br s, 1H), 4.38 (br s, 1H), 3.68 (br s, 4H), 3.64 (m, 1H), 3.21 (m, 1H), 1.57 (m, 2H), 2.42-2.30 (m, 5H), 2.19 (s, 3H), 2.17 (s, 3H), 2.09 (s, 3H), 1.84 (m, 1H), 1.61 (m, 4H), 1.52 (s, 3H). LRMS, APCI, (M<sup>+</sup>+1) 377.

**[0219]** To a solution of 100 mg (0.266 mmol) of 6-hydroxy-2,5,7,8-tetramethyl-N-(3-morpholinopropyl)chroman-2-carboxamide in 5 mL AcCN and one drop of H<sub>2</sub>O at 0 °C, was added a solution of 320.3 mg CAN (0.584 mmol) in 3 mL H<sub>2</sub>O dropwise. The solution was treated with 5 mL EtOAc and 5 mL saturated NaCl followed by ~ 1 g of NaHCO<sub>3</sub> and 1 h of vigorous stirring. The suspension was then extracted 3 x 5 mL 4:1 isopropyl alcohol:isopropyl acetate solution and the combined organics dried over Na<sub>2</sub>SO<sub>4</sub>, concentrated to a yellow oil and flashed chromatographed to yield 16 mg of 2-hydroxy-2-methyl-N-(3-morpholinopropyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a dark yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.75 (t, 1H), 3.74 (m, 4H), 3.36 (m, 2H), 2.53 (m, 4H), 2.40 (dt, 1H), 2.00 (s, 3H), 1.99 (s, 3H), 1.97 (s, 3), 1.95 (m, 1H), 1.75 (m, 2H), 1.58 (m, 1H), 1.39 (s, 3H).

<sup>13</sup>C NMR (100 MHz, CDCl<sub>3</sub>) δ 187.6, 187.4, 175.5, 143.3, 140.95, 140.91, 140.2, 75.1, 66.5, 57.6, 53.6, 38.9, 38.6, 27.1, 25.0, 21.1, 12.4, 21.2, 12.0.

### Example 34

#### 2-Hydroxy-N-methoxy-N,2-dimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0220]** To a solution of 5.47 g 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (21.9 mmol) in 170 mL THF was added 3.92 g CDI (24.2 mmol) and stirred for 1.25 h at room temperature. To this was added a solution of 2.14 g N,O-dimethylhydroxylamine hydrochloride (21.97 mmol) and 8.2 g N,N-diisopropylethylamine in 50 mL CH<sub>2</sub>Cl<sub>2</sub> dropwise over 1h. The reaction was stirred overnight, concentrated, 250 mL CH<sub>2</sub>Cl<sub>2</sub> added and washed sequentially with 100 mL 0.625 M HCl, 100 mL 1.0 M NaHCO<sub>3</sub> and 100 mL saturated NaCl. The organics were dried over Na<sub>2</sub>SO<sub>4</sub>, concentrated and purified by flash chromatography yielding 4.43 g of 6-hydroxy-N-methoxy-N,2,5,7,8-pentamethylchroman-2-carboxamide as an off-white crystalline solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 3.63 (s, 3H), 3.31 (s, 3H), 2.74-2.55 (m, 3H), 2.18 (s, 3H), 2.16 (s, 3H), 2.08 (s, 3H), 1.73 (m, 1H), 1.59 (s, 3H).

**[0221]** Oxidation as described in protocol B, using 155 mg (0.528 mmol) of 6-hydroxy-N-methoxy-N,2,5,7,8-pentamethylchroman-2-carboxamide and 637 mg CAN (1.16 mmol) yielding 119.4 mg of 2-hydroxy-N-methoxy-N,2-dimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 3.80 (s, 3H), 3.25 (s, 3H), 2.55 (dt, 1H), 2.37 (dt, 1H), 2.03 (s, 3H), 1.99 (m, 7H), 1.68 (dt, 1H), 1.48 (s, 3H).

## Example 35

2-Hydroxy-*N,N*-bis(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0222]** To a solution of 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (500 mg, 2.00 mmol) in 10 mL THF was added 356 mg CDI (2.20 mmol). After stirring for 1.5 h., a solution of diethanolamine (231 mg, 2.2 mmol) in 10 mL THF was added over 1 h and the reaction was stirred overnight. The reaction was concentrated, dissolved into 70 mL CH<sub>2</sub>Cl<sub>2</sub> and washed sequentially with 50 mL 0.62 M HCl, 50 mL 1.0 M NaHCO<sub>3</sub>, 50 mL saturated NaCl and dried over Na<sub>2</sub>SO<sub>4</sub>. The combined aqueous phases were extracted 3 x 50 mL 3:1 isopropyl alcohol/isopropyl acetate which was dried and concentrated to a brown oil. Flash chromatography yielded 63 mg of 6-hydroxy-*N,N*-bis(2-hydroxyethyl)-2,5,7,8-tetramethylchroman-2-carboxamide as a yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 4.35 (s, 1H), 4.11 (m, 1H), 3.91 (br m, 1H), 3.81-3.65 (br m, 4H), 3.51 (br s, 2H), 2.71-2.57 (m, 4H), 2.16 (s, 6H), 2.09 (s, 3H), 1.74 (m, 1H).

**[0223]** Oxidation as described in protocol B, using 68.4 mg (0.203 mmol) of precursor 6-hydroxy-*N,N*-bis(2-hydroxyethyl)-2,5,7,8-tetramethylchroman-2-carboxamide and 244 mg CAN (0.446 mmol) yielding 18.4 mg of 2-hydroxy-*N,N*-bis(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow oil (25.7%). <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 4.0-3.5 (m, 8H), 2.56 (td, 1H), 2.42 (td, 1H), 2.04 (s, 3H), 2.00 (s, 3H), 1.98 (s, 3H), 1.67 (m, 1H), 1.51 (s, 3H).

## Example 36

*N*-(4-Hydroxyphenethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0224]** Following the amide coupling procedure described in protocol A, 500 mg 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (2.0 mmol), 356 mg CDI (2.2 mmol) and 548 mg tyramine (4.0 mmol) produced 537.8 mg of 6-hydroxy-*N*-(4-hydroxyphenethyl)-2,5,7,8-tetramethylchroman-2-carboxamide as a brown solid.

<sup>1</sup>H NMR (400 MHz, d<sub>6</sub>-DMSO) δ 9.16 (s, 1H), 7.51 (s, 1H), 7.17 (t, 1H), 6.84 (d, 2H), 6.60 (d, 2H), 3.24 (q, 2H), 2.50 (m), 2.37 (m, 1H), 2.14 (m, 1H), 2.10 (s, 3H), 2.01 (s, 3H), 1.99 (s, 3H), 1.69 (m, 1H), 1.32 (s, 3H).

**[0225]** Oxidation as described in protocol B, using 100 mg 6-hydroxy-*N*-(4-hydroxyphenethyl)-2,5,7,8-tetramethylchroman-2-carboxamide (0.271 mmol) and 325 mg CAN (0.595 mmol) yielded 15 mg of *N*-(4-hydroxyphenethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow solid.

<sup>1</sup>H NMR (400 MHz, d<sub>4</sub>-MeOH) δ 7.75 (t, 1H), 7.00 (d, 2H), 6.63 (d, 2H), 3.34 (m, 2H), 2.68 (t, 2H), 2.54 (m, 1H), 2.12 (m, 1H), 1.93 (s, 6H), 1.90 (s, 3H), 1.78 (td, 1H), 1.48 (m, 1H), 1.28 (s, 3H).

## Example 37

*N*-(2-(Dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0226]** Following the amide coupling procedure described in protocol A, 1.03 g 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (4.11 mmol), 0.712 g CDI (4.39 mmol) and 704 mg *N,N*-dimethylethylenediamine (7.99 mmol) produced 1 g of *N*-(2-(dimethylamino)ethyl)-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide as a white crystalline solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.10 (br s, 1H), 4.28 (br s, 1H), 3.22 (m, 2H), 2.60 (m, 2H), 2.33 (m, 2H), 2.23 (m, 6H), 2.09 (s, 9H), 1.89 (m, 1H), 1.52 (s, 3H).

**[0227]** Oxidation as described in protocol B, using 150 mg *N*-(2-(dimethylamino)ethyl)-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide (0.468 mmol) and 564 mg CAN (1.03 mmol) with exceptions as noted. The aqueous phase was basified with NaHCO<sub>3</sub> (s), extracted with EtOAc and the combined organics dried with Na<sub>2</sub>SO<sub>4</sub>, concentrated and flashed yielding 131 mg (83 %) of *N*-(2-(dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide as a yellow solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.62 (t, 1H), 3.48 (q, 2H), 2.63 (m, 3H), 2.37 (s, 6H), 2.30 (td, 1H), 1.96 (m, 10H), 1.57 (m, 1H), 1.41 (s, 3H).

## Example 38

*N*-(2-(Dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide hydrochloride.

**[0228]** A solution of 22.8 mg starting quinone in 2 mL MeOH was treated with 20 μL of a 4.0 M HCl in dioxane solution. After five minutes, the yellow solution was concentrated, redissolved in 0.2 mL MeOH and triturated into a large excess

of Et<sub>2</sub>O, concentrated after one hour and fresh Et<sub>2</sub>O added. After 72 h the reaction was filtered and a yellow solid *N*-(2-(dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide hydrochloride was collected (15.6 mg).

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 9.09 (s, 1H), 5.02 (m, 1H), 4.85 (m, 1H), 4.59 (t, J = 5.6 Hz, 2H), 4.09 (s, 6H), 3.94 (td, 1H), 3.67 (td, 1H), 3.26 (s, 3H), 3.23 (s, 6H), 3.07 (td, 1H), 2.91 (td, 1H), 2.64 (s, 3H).

#### Example 39

*N*-(2-(Dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide mesylate.

**[0229]** *N*-(2-(dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide (25 mg) was dissolved into 1 mL CH<sub>2</sub>Cl<sub>2</sub> and 5.2 μL neat methanesulfonic acid added to the stirred yellow solution. The solution was concentrated, dissolved into CH<sub>2</sub>Cl<sub>2</sub> and triturated from Et<sub>2</sub>O giving 20 mg of *N*-(2-(dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide mesylate as a yellow hygroscopic solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.9 (t, 1H), 3.87 (m, 1H), 3.56 (m, 1H), 3.32 (m, 1H), 2.96 (s, 3H), 2.95 (s, 3H), 2.80 (s, 3H), 2.65 (td, 1H).

#### Example 40

*N*-(3-(dimethylamino)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide.

**[0230]** *N*-(3-(dimethylamino)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide was prepared following the procedure of Example 37 but substituting *N,N*-dimethylethylenediamine with *N*<sup>1</sup>,*N*<sup>1</sup>-dimethylpropane-1,3-diamine.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.2 (t, 1H), 3.36 (m, 1H), 3.2-3.3 (m, 3H), 2.93 (s, 6H), 2.6 (m, 1H), 2.35 (m, 1H), 2.06 (m, 2H), 2.00 (s, 3H), 1.98 (s, 3H), 1.95 (s, 3H), 1.82 (td, 1H), 1.62 (td, 1H), 1.43 (s, 3H).

#### Example 41

6,6'-(4,4'-(piperazine-1,4-diyl)bis(3-hydroxy-3-methyl-4-oxobutane-4,1-diyl))bis(2,3,5-trimethylcyclohexa-2,5-diene-1,4-dione).

**[0231]** A solution of 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (5.0g, 20 mmol), pyridine (50 mL), and acetic anhydride (43 mL) were stirred for 5 h. Water was added and the mixture extracted into methyl *t*-butyl ether (MTBE) (2x 100 mL) and the combined organics washed with water (2x 200 mL), copper sulfate solution (2x 200 mL), and finally brine (2x 50 mL). The organic layer was collected, dried over sodium sulfate and decolorized using activated charcoal and concentrated to a light green foam. The crude material was redissolved in CH<sub>2</sub>Cl<sub>2</sub> (50 mL) and dimethylformamide (2 drops) followed by oxalyl chloride (1.9 mL) added dropwise. Immediate evolution of gas was observed. The mixture was stirred open to the air for 2 h and the solvent removed to give 2-(chlorocarbonyl)-2,5,7,8-tetramethylchroman-6-yl acetate (3.9g, 13 mmol), which was used without further purification.

**[0232]** 2-(chlorocarbonyl)-2,5,7,8-tetramethylchroman-6-yl acetate (3.9 g, 13 mmol) in CH<sub>2</sub>Cl<sub>2</sub> (25 mL) was treated with di-isopropylethylamine (DIEA) (5.0 mL) followed by piperazine (0.48 g, 5.6 mmol). The reaction mixture was auto-refluxed briefly upon piperazine addition. The reaction was allowed to cool to ambient temperature and stirred for 16 h. The mixture was then poured into MTBE (100mL), the organic layer removed and washed with saturated ammonium chloride solution (3x 50 mL) then dried over sodium sulfate. Solvent was removed to provide 2,2'-(piperazine-1,4-diyl)bis(oxomethylene))bis(2,5,7,8-tetramethyl-3,4,5,8-tetrahydro-2H-chromene-6,2-diyl) diacetate (3.7g, 5.8 mmol) as an amorphous off-white solid, which was used directly without further purification.

**[0233]** To a solution of 2,2'-(piperazine-1,4-diyl)bis(oxomethylene))bis(2,5,7,8-tetramethyl-3,4,5,8-tetrahydro-2H-chromene-6,2-diyl) diacetate (2.36 g), THF (25 mL) and MeOH (10 mL) was added KOH (1.04 g as a solution in 10 mL MeOH). The reaction mixture was stirred at ambient temperature for 16 h, after which time it was fully dissolved. To the stirred reaction mixture was then added CAN (9.16 g, 16.7 mmol) as a solution in water (50 mL). After 1 h, addition water was added (50 mL), causing the formation of a beige precipitate. The supernatant was decanted, and extracted with MTBE. Solvent was removed under vacuum to give a crude yellow product, which was purified by flash chromatography, eluting with EtOAc/hexane (30% to 100%) to provide 6,6'-(4,4'-(piperazine-1,4-diyl)bis(3-hydroxy-3-methyl-4-oxobutane-4,1-diyl))bis(2,3,5-trimethylcyclohexa-2,5-diene-1,4-dione) as a hard amorphous yellow solid.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 5.50 (br s, 2H), 3.95 (br s, 4H), 2.50-3.28 (br m, 6H), 2.50-2.40 (m, 4H), 2.02-1.90 (m,

18H), 1.75 (br m, 2H), 1.59 (br m, 2H), 1.36 (s, 6H).

#### Example 42

##### 5 2-(3-Hydroxy-3-methyl-4-oxo-4-(piperidin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione.

**[0234]** 6-Hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (1.005 g, 4.00 mmol) in 22 mL THF was treated with 722.8 mg CDI (4.4 mmol) and stirred for 2 h at room temperature. The pale yellow solution was then treated with 450  $\mu$ L (381 mg, 4.47 mmol) piperidine in 22 mL THF in 1-2 mL portions over 2 h. The reaction was stirred overnight at room temperature. The reaction was concentrated and the residue dissolved in 100 mL  $\text{CH}_2\text{Cl}_2$  and sequentially washed with 50 mL 0.25 M HCl, 50 mL 1.0 M  $\text{NaHCO}_3$ , 50 mL saturated NaCl and dried over  $\text{Na}_2\text{SO}_4$ . The organic phase was concentrated. Flash chromatography yielded 992 mg of (6-hydroxy-2,5,7,8-tetramethylchroman-2-yl)(piperidin-1-yl)methanone as an off-white solid.

$^1\text{H}$  NMR (400 MHz,  $\text{CDCl}_3$ )  $\delta$  4.42 (s, 1H), 3.95-3.83 (br m, 2H), 3.46 (br s, 2H), 2.77 (m, 1H), 2.63-2.52 (m, 2H), 2.16 (s, 3H), 2.15 (s, 3H), 2.08 (s, 3H), 1.70 (m, 1H), 1.58-1.48 (m, 2H), 1.45-1.36 (br s, 2H).

**[0235]** A solution of 319 mg of (6-hydroxy-2,5,7,8-tetramethylchroman-2-yl)(piperidin-1-yl)methanone (1.02 mmol) in 5 mL MTBE which was treated with 1.077 g  $\text{FeCl}_3 \cdot 6\text{H}_2\text{O}$  in 6 mL  $\text{H}_2\text{O}$ . The reaction mixture rapidly turned black which faded to a yellow color over the course of the reaction. An additional 2 mL MTBE was added and stirred vigorously for 3 h at room temp. The reaction was quenched with 10 mL  $\text{H}_2\text{O}$  and 10 mL MTBE, the layers separated and the organics washed with  $\text{H}_2\text{O}$  until colorless. The combined aqueous phases were extracted 2 x 10 mL MTBE and the combined organics washed with saturated NaCl and dried over  $\text{Na}_2\text{SO}_4$ . Flash chromatography yielded 335 mg of 2-(3-hydroxy-3-methyl-4-oxo-4-(piperidin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione as a dark yellow oil.

$^1\text{H}$  NMR (400 MHz,  $\text{CDCl}_3$ )  $\delta$  5.14 (s, 1H), 3.65-3.45 (br m, 4H), 2.48 (td, 1H), 2.36 (dt, 1H), 1.97 (s, 3H), 1.94 (s, 6H), 1.88 (m, 1H), 1.68-1.57 (m, 7H), 1.42 (s, 3H).

$^{13}\text{C}$  NMR (100 MHz,  $\text{CDCl}_3$ )  $\delta$  187.4, 187.1, 173.4, 143.4, 140.6, 140.5, 140.1, 73.3, 38.9, 26.2, 25.9, 24.3, 21.3, 12.3, 12.2, 11.8.

#### Example 43

##### 30 N-Hexyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide.

**[0236]** 6-Hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic acid (5.0 g, 19.99 mmol) was dissolved in pyridine (18 mL) and  $\text{Ac}_2\text{O}$  added (10 mL) in one portion. The exothermic reaction warmed to 40  $^\circ\text{C}$ , was let cool to room temperature and stirred overnight. The crude reaction mixture was quenched with 100 mL  $\text{H}_2\text{O}$ , stirred for 1h followed by additional 100 mL  $\text{H}_2\text{O}$  and 1 h of stirring. A fine white precipitate of 6-acetoxy-2,5,7,8-tetramethylchroman-2-carboxylic acid was formed and collected by filtration (4.544 g).

**[0237]** Crude 6-acetoxy-2,5,7,8-tetramethylchroman-2-carboxylic acid was dissolved in 30 mL  $\text{CH}_2\text{Cl}_2$ , 2 drops of DMF added followed by slow addition of 1.5 mL oxalyl chloride. Gas evolved for 1 h and the solution was stirred overnight at room temperature. The reaction mixture was concentrated separated into five equal aliquots of 2-(chlorocarbonyl)-2,5,7,8-tetramethylchroman-6-yl acetate.

**[0238]** To one of the above aliquots of crude 2-(chlorocarbonyl)-2,5,7,8-tetramethylchroman-6-yl acetate in 10 mL  $\text{CH}_2\text{Cl}_2$  was added 1.0 mL diisopropylethylamine followed by 315 mg 1-hexylamine and overnight stirring. The reaction mixture was poured into 1.0 M citric acid and 50 mL EtOAc added. The organic layer was separated and purified by flash chromatography to give 781 mg of 2-(hexylcarbamoyl)-2,5,7,8-tetramethylchroman-6-yl acetate, as a clear syrup.

MS (m/z):  $\text{M}^+$  376.3

**[0239]** Crude 2-(hexylcarbamoyl)-2,5,7,8-tetramethylchroman-6-yl acetate (187 mg, 0.25 mmol) in 1.25 mL MeOH was treated with 33.7 mg (0.625 mmol) NaOMe and let stir overnight. The stirred brown solution then was diluted with water (10 mL), neutralized with 2.5 M HCl (1.5 mL) and 10 mL EtOAc added. The layers were separated and the organics dried over  $\text{Na}_2\text{SO}_4$  and concentrated. Flash chromatography yielded 90 mg of N-hexyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide.

$^1\text{H}$  NMR (400 MHz,  $\text{CDCl}_3$ )  $\delta$  6.46 (t, 1H), 4.76 (s, 1H), 3.20 (m, 2H), 2.58 (m, 3H), 2.18 (s, 6H), 2.09 (s, 3H), 1.88 (m, 1H), 1.51 (s, 3H), 1.38 (m, 2H), 1.25-1.11 (m, 6H), 0.85 (t, 3H).

**[0240]** A solution of 75 mg of N-hexyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide (0.225 mmol) in 2 mL MTBE was treated with 2.0 mL of 0.5 M  $\text{FeCl}_3 \cdot 6\text{H}_2\text{O}$  and stirred vigorously for 24 h. The solution was treated with 5 mL  $\text{H}_2\text{O}$  and 10 mL MTBE, the layers were separated and the organics washed with 2 x 5 mL  $\text{H}_2\text{O}$ , 2 x 5 mL saturated NaCl. The combined organics were dried over  $\text{Na}_2\text{SO}_4$  and concentrated. Flash chromatography yielded N-hexyl-6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxamide as an orange-brown oil which was rechromatographed to yield 31 mg of a bright yellow oil.

<sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 6.82 (t, 1H), 3.48 (s, 1H), 3.22 (q, 2H), 2.55 (m, 1H), 2.36 (m, 1H), 2.04-1.96 (m, 10H), 1.61-1.46 (m, 3H), 1.38 (s, 3H), 1.33-1.22 (m, 6H), 0.84 (t, 3H).

## Biological Examples

### Example A

#### Screening Compounds of the Invention in Human Dermal Fibroblasts from Friedreich's Ataxia Patients

**[0241]** An initial screen was performed to identify compounds effective for the amelioration of redox disorders. Test samples, 4 reference compounds (idebenone, decylubiquinone, Trolox and  $\alpha$ -tocopherol acetate), and solvent controls were tested for their ability to rescue FRDA fibroblasts stressed by addition of L-buthionine-(S,R)-sulfoximine (BSO), as described in Jauslin et al., Hum. Mol. Genet. 11(24):3055 (2002), Jauslin et al., FASEB J. 17:1972-4 (2003), and International Patent Application WO 2004/003565. Human dermal fibroblasts from Friedreich's Ataxia patients have been shown to be hypersensitive to inhibition of the *de novo* synthesis of glutathione (GSH) with L-buthionine-(S,R)-sulfoximine (BSO), a specific inhibitor of GSH synthetase (Jauslin et al., Hum. Mol. Genet. 11(24):3055 (2002)). This specific BSO-mediated cell death can be prevented by administration of antioxidants or molecules involved in the antioxidant pathway, such as  $\alpha$ -tocopherol, selenium, or small molecule glutathione peroxidase mimetics. However, antioxidants differ in their potency, i.e. the concentration at which they are able to rescue BSO-stressed FRDA fibroblasts.

**[0242]** MEM (a medium enriched in amino acids and vitamins, catalog no. 1-31F24-I) and Medium 199 (M199, catalog no. 1-21F22-I) with Earle's Balanced Salts, without phenol red, were purchased from Bioconcept. Fetal Calf Serum was obtained from PAA Laboratories. Basic fibroblast growth factor and epidermal growth factor were purchased from Pepro-Tech. Penicillin-streptomycin-glutamine mix, L-buthionine (S,R)-sulfoximine, (+)- $\alpha$ -tocopherol acetate, decylubiquinone, and insulin from bovine pancreas were purchased from Sigma. Trolox (6-Hydroxy-2,5,7,8-tetramethylchromane-2-carboxylic acid) was obtained from Fluka. Idebenone was obtained from Chemo Iberica. Calcein AM was purchased from Molecular Probes. Cell culture medium was made by combining 125 ml M199 EBS, 50 ml Fetal Calf Serum, 100 U/ml penicillin, 100  $\mu$ g/ml streptomycin, 2 mM glutamine, 10  $\mu$ g/ml insulin, 10 ng/ml EGF, and 10 ng/ml bFGF; MEM EBS was added to make the volume up to 500 ml. A 10 mM BSO solution was prepared by dissolving 444 mg BSO in 200 ml of medium with subsequent filter-sterilization. During the course of the experiments, this solution was stored at +4°C. The cells were obtained from the Coriell Cell Repositories (Camden, NJ; repository number GM04078) and grown in 10 cm tissue culture plates. Every third day, they were split at a 1:3 ratio.

**[0243]** The test samples were supplied in 1.5 ml glass vials. The compounds were diluted with DMSO, ethanol or PBS to result in a 5 mM stock solution. Once dissolved, they were stored at -20°C. Reference antioxidants (idebenone, decylubiquinone,  $\alpha$ -tocopherol acetate and trolox) were dissolved in DMSO.

**[0244]** Test samples were screened according to the following protocol:

A culture with FRDA fibroblasts was started from a 1 ml vial with approximately 500,000 cells stored in liquid nitrogen. Cells were propagated in 10 cm cell culture dishes by splitting every third day in a ratio of 1:3 until nine plates were available. Once confluent, fibroblasts were harvested. For 54 micro titer plates (96 well-MTP) a total of 14.3 million cells (passage eight) were re-suspended in 480 ml medium, corresponding to 100  $\mu$ l medium with 3,000 cells/well. The remaining cells were distributed in 10 cm cell culture plates (500,000 cells/plate) for propagation. The plates were incubated overnight at 37°C in a atmosphere with 95% humidity and 5% CO<sub>2</sub> to allow attachment of the cells to the culture plate.

**[0245]** MTP medium (243  $\mu$ l) was added to a well of the microtiter plate. The test compounds were unfrozen, and 7.5  $\mu$ l of a 5 mM stock solution was dissolved in the well containing 243  $\mu$ l medium, resulting in a 150  $\mu$ M master solution. Serial dilutions from the master solution were made. The period between the single dilution steps was kept as short as possible (generally less than 1 second).

**[0246]** Plates were kept overnight in the cell culture incubator. The next day, 10  $\mu$ l of a 10 mM BSO solution were added to the wells, resulting in a 1 mM final BSO concentration. Forty-eight hours later, three plates were examined under a phase-contrast microscope to verify that the cells in the 0% control (wells E1-H1) were clearly dead. The medium from all plates was discarded, and the remaining liquid was removed by gently tapping the plate inverted onto a paper towel.

**[0247]** 100  $\mu$ l of PBS containing 1.2  $\mu$ M Calcein AM were then added to each well. The plates were incubated for 50-70 minutes at room temperature. After that time the PBS was discarded, the plate gently tapped on a paper towel and fluorescence (excitation/emission wavelengths of 485 nm and 525 nm, respectively) was read on a Gemini fluorescence reader. Data was imported into Microsoft Excel (EXCEL is a registered trademark of Microsoft Corporation for a spreadsheet program) and used to calculate the EC<sub>50</sub> concentration for each compound.

[0248] The compounds were tested three times, i.e., the experiment was performed three times, the passage number of the cells increasing by one with every repetition.

[0249] The solvents (DMSO, ethanol, PBS) neither had a detrimental effect on the viability of non-BSO treated cells nor did they have a beneficial influence on BSO-treated fibroblasts even at the highest concentration tested (1%). None of the compounds showed auto-fluorescence. The viability of non-BSO treated fibroblasts was set as 100%, and the viability of the BSO- and compound-treated cells was calculated as relative to this value.

[0250] The following table summarizes the EC<sub>50</sub> for the four control compounds.

Compound	EC <sub>50</sub> [μM]				
	Value 1	Value 2	Value 3	Average	Stdev
decylubiquinone	0.05	0.035	0.03	<b>0.038</b>	0.010
alpha-tocopherol acetate	0.4	0.15	0.35	<b>0.30</b>	0.13
Idebenone	1.5	1	1	<b>1.2</b>	0.3
Trolox	9	9	8	<b>8.7</b>	0.6

- *N*-(4-chlorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

exhibited protection against FRDA with an EC<sub>50</sub> of less than about 100 nM.

#### Example B

##### Screening Compounds of the Invention in Fibroblasts from Huntington's Patients

**[0252]** Compounds of the invention were tested using the screen as described in Example A, but substituting FRDA cells with Huntington's cells obtained from the Coriell Cell Repositories (Camden, NJ; repository number GM 04281). The compounds were tested for their ability to rescue human dermal fibroblasts from Huntington's patients from oxidative stress.

**[0253]** Certain compounds of the present invention such as:

- 2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(3-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

- 2-hydroxy-*N*-(4-hydroxyphenethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 6,6'-(4,4'-(piperazine-1,4-diyl)bis(3-hydroxy-3-methyl-4-oxobutane-4,1-diyl))bis(2,3,5-trimethylcyclohexa-2,5-diene-1,4-dione);
- *N*-(3-(dimethylamino)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(4-(4-acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*R*)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*S*)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*R*)-2-(4-(4-acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*S*)-2-(4-(4-acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- *N*-(4-fluorophenethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-chlorophenethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-chlorophenethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(4-methoxyphenyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-fluorophenyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-chlorophenyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(2-fluorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-fluorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-fluorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(2-chlorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-chlorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-chlorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

exhibited protection against Hungtington's with an EC<sub>50</sub> of less than about 100 nM.

### Example C

#### Screening Compounds of the Invention in Fibroblasts from Leber's Hereditary Optic Neuropathy Patients

**[0254]** Compounds of the invention were screened as described in Example A, but substituting FRDA cells with Leber's Hereditary Optic Neuropathy (LHON) cells obtained from the Coriell Cell Repositories (Camden, NJ; repository number GM03858). The compounds were tested for their ability to rescue human dermal fibroblasts from LHON patients from oxidative stress.

**[0255]** Certain compounds of the present invention such as:

- 2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(3-hydroxy-3-methyl-4-oxo-4-(piperidin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(4-(azepan-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- *N*-hexyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-benzyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(3-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-isopentyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(4-hydroxybutyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(5-hydroxypentyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(1-hydroxypropan-2-yl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-(2-hydroxyethoxy)ethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(4-(4-benzylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- *N*-(2-(dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(4-hydroxyphenethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 6,6'-(4,4'-(piperazine-1,4-diyl)bis(3-hydroxy-3-methyl-4-oxobutane-4,1-diyl))bis(2,3,5-trimethylcyclohexa-2,5-diene-1,4-dione) ;
- 2-hydroxy-2-methyl-*N*-(pyridin-4-ylmethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-(pyridin-3-ylmethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-(3-(methylsulfonyl)propyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(4-(4-acetyl piperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(4-(4,4-difluoropiperidin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(4-(4-benzoylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*R*)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*S*)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*R*)-2-(4-(4-acetyl piperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*S*)-2-(4-(4-acetyl piperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*R*)-2-(3-hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*S*)-2-(3-hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- *N*-(2-fluorophenethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-fluorophenethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-fluorophenethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-chlorophenethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-chlorophenethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-fluorophenyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-chlorophenyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(2-fluorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-fluorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-nuorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(2-chlorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-chlorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-chlorobenzyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

exhibited protection against LHON with an EC<sub>50</sub> of less than about 100 nM

*Example D*Screening Compounds of the Invention in Fibroblasts from Parkinson's Disease Patients

**[0256]** Compounds of the invention were screened as described in Example A, but substituting FRDA cells with Parkinson's Disease (PD) cells obtained from the Coriell Cell Repositories (Camden, NJ; repository number AG20439). The compounds were tested for their ability to rescue human dermal fibroblasts from Parkinson's Disease patients from oxidative stress.

**[0257]** Certain compounds of the present invention such as:

- 2-hydroxy-*N*-isopropyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(5-hydroxypentyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*R*)-2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*S*)-2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-(1*H*-imidazol-1-yl)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-(2-hydroxyethoxy)ethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(4-(4-benzylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- *N*-(2-(dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(4-hydroxyphenethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-(dimethylamino)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

exhibited protection against PD with an EC<sub>50</sub> of less than about 100 nM

*Example E*Screening Compounds of the Invention in Fibroblasts from CoQ10 deficient Patients

**[0258]** Compounds of the invention were tested using a screen similar to the one described in Example A, but substituting FRDA cells with cells obtained from CoQ10 deficient patients harboring a CoQ2 mutation. The compounds were tested for their ability to rescue human dermal fibroblasts from CoQ10 deficient patients from oxidative stress.

- 2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-hexyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(2-(dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-(pyridin-3-ylmethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(4-(4-acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(3-hydroxy-3-methyl-4-oxo-4-(piperazin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- *tert*-butyl 4-(2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanoyl)piperazine-1-carboxylate;
- (*S*)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(2-chlorophenethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-fluorophenyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-chlorophenyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

exhibited protection against CoQ10 deficiency with an EC<sub>50</sub> of less than about 100 nM.

*Example F*Screening Compounds of the Invention in Human Dermal Fibroblasts from Autistic Patients

**[0259]** A screen was performed to identify compounds effective for the amelioration of ASD. Test samples, and solvent controls were tested for their ability to rescue ASD fibroblasts stressed by addition of L-buthionine-(S,R)-sulfoximine (BSO).

**[0260]** MEM (a medium enriched in amino acids and vitamins, catalog no. Gibco 11965) and Fetal Calf Serum were obtained from Invitrogen. Basic fibroblast growth factor and epidermal growth factor were purchased from PeproTech. Penicillin-streptomycin-glutamine mix, L-buthionine (S,R)-sulfoximine, and insulin from bovine pancreas were purchased

from Sigma. Calcein AM was purchased from Molecular Probes. Cell culture medium (ATP) was made by combining 75 ml Fetal Calf Serum, 100 U/ml penicillin, 100  $\mu$ g/ml streptomycin, 2 mM glutamine, 10 ng/ml EGF, and 10 ng/ml bFGF; MEM EBS was added to make the volume up to 500 ml. A 10 mM BSO solution was prepared by dissolving 444 mg BSO in 200 ml of medium with subsequent filter-sterilization. During the course of the experiments, this solution was stored at +4°C. The cells obtained from Dr. J.M. Shoffner, Medical Neurogenetics, Atlanta, Ga. were grown in 10 cm tissue culture plates. Every week, they were split at a 1:3 ratio. The samples were supplied in 1.5 ml glass vials. The compounds were diluted with DMSO, ethanol or PBS to result in a 5 mM stock solution. Once dissolved, they were stored at -20°C.

**[0261]** The samples were screened according to the following protocol:

A culture with ASD fibroblasts was started from a 1 ml vial with approximately 500,000 cells stored in liquid nitrogen. Cells were propagated in 10 cm cell culture dishes by splitting every week in a ratio of 1:3 until nine plates were available. Once confluent, fibroblasts were harvested. For 54 micro titer plates (96 well-MTP) a total of 14.3 million cells (passage eight) were re-suspended in 480 ml medium, corresponding to 100  $\mu$ l medium with 3,000 cells/well. The remaining cells were distributed in 10 cm cell culture plates (500,000 cells/plate) for propagation. The plates were incubated overnight at 37°C in an atmosphere with 95% humidity and 5% CO<sub>2</sub> to allow attachment of the cells to the culture plate.

**[0262]** MTP medium (243  $\mu$ l) was added to a well of the microtiter plate. The test compounds were unfrozen, and 7.5  $\mu$ l of a 5 mM stock solution was dissolved in the well containing 243  $\mu$ l medium, resulting in a 150  $\mu$ M master solution. Serial dilutions from the master solution were made. The period between the single dilution steps was kept as short as possible (generally less than 1 second).

**[0263]** Plates were kept overnight in the cell culture incubator. The next day, 10  $\mu$ l of a 10 mM BSO solution were added to the wells, resulting in a 1 mM final BSO concentration. Forty-eight hours later, three plates were examined under a phase-contrast microscope to verify that the cells in the 0% control (wells E1-H1) were clearly dead. The medium from all plates was discarded, and the remaining liquid was removed by gently tapping the plate inverted onto a paper towel.

**[0264]** 100  $\mu$ l of PBS containing 1.2  $\mu$ M Calcein AM were then added to each well. The plates were incubated for 50-70 minutes at room temperature. After that time the PBS was discarded, the plate gently tapped on a paper towel and fluorescence (excitation/emission wavelengths of 485 nm and 525 nm, respectively) was read on a Gemini fluorescence reader. Data was imported into Microsoft Excel (EXCEL is a registered trademark of Microsoft Corporation for a spreadsheet program) and used to calculate the EC<sub>50</sub> concentration for each compound.

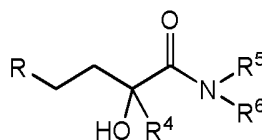

**[0265]** The compounds were tested three times, i.e., the experiment was performed three times, the passage number of the cells increasing by one with every repetition.

**[0266]** The solvents (DMSO, ethanol, PBS) neither had a detrimental effect on the viability of non-BSO treated cells nor did they have a beneficial influence on BSO-treated fibroblasts even at the highest concentration tested (1%). None of the compounds showed auto-fluorescence. The viability of non-BSO treated fibroblasts was set as 100%, and the viability of the BSO- and compound-treated cells was calculated as relative to this value.

**[0267]** Compounds of the present invention are considered to be active if they exhibit protection against ASD with an EC<sub>50</sub> of less than 300 nM. A compound of the invention was tested using the protocol above, and showed 50 nM activity.

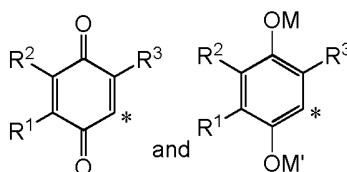

## Claims

1. A compound which is of formula I:

Formula I

where R is selected from the group consisting of:

where the \* indicates the point of attachment of R to the remainder of the molecule;

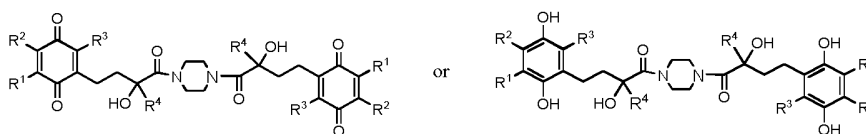

R<sup>1</sup>, R<sup>2</sup>, and R<sup>3</sup> are independently selected from the group consisting of hydrogen and C<sub>1</sub>-C<sub>6</sub>-alkyl;

R<sup>4</sup> is C<sub>1</sub>-C<sub>6</sub>-alkyl;

R<sup>5</sup> and R<sup>6</sup> are independently selected from the group consisting of hydrogen, hydroxy, alkoxy, C<sub>1</sub>-C<sub>40</sub>-alkyl, C<sub>1</sub>-C<sub>40</sub>-alkenyl, C<sub>1</sub>-C<sub>40</sub>-alkynyl, and aryl; where the alkyl, alkenyl, alkynyl, or aryl groups are optionally substituted with

-OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, oxo, C<sub>3</sub>-C<sub>6</sub>-cycloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-R<sup>11</sup>, -C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-OR<sup>11</sup>, -C(O)-O-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-N-R<sup>11</sup>R<sup>11'</sup>, -C(O)-NH-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -NH-C(O)-R<sup>11</sup>, or -NH-C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl; where the aryl, heteroaryl and heterocyclyl ring substituents are optionally further substituted with C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, oxo, hydroxy, C<sub>1</sub>-C<sub>6</sub>-alkoxy, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; and where one of the carbons of the alkyl, alkenyl, or alkynyl groups is optionally substituted with a heteroatom selected from the group consisting of -O-, -N- and -S-; or R<sup>5</sup> and R<sup>6</sup> together with the atom to which they are attached form a saturated or unsaturated 3-8 membered ring, optionally incorporating 1, 2, or 3 additional N, O, or S atoms, optionally substituted with oxo, -OR<sup>10</sup>, -SR<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, hydroxy-C<sub>1</sub>-C<sub>6</sub>-alkyl-, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl, -C(O)-OH, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; or

R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form a *N,N'*-disubstituted piperazine where the nitrogen substitution at the 4-position is a group identical to the substitution at the 1-position forming a compound of formula Iaa or Ibb, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are as defined above:

Formula Iaa

Formula Ibb

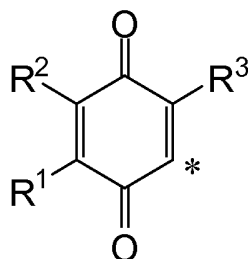

R<sup>10</sup> and R<sup>10'</sup> are independently selected from the group consisting of hydrogen, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl, and -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl-aryl;

R<sup>11</sup> and R<sup>11'</sup> are selected from the group consisting of hydrogen and C<sub>1</sub>-C<sub>6</sub>-alkyl; and

M and M' are independently selected from the group consisting of hydrogen, -C(O)-R<sup>12</sup>-C(O)-C<sub>1</sub>-C<sub>6</sub>-alkenyl, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkynyl, -C(O)-aryl, -C(O)-heteroaryl, -C(O)-O-R<sup>12</sup>, -C(O)-NR<sup>12</sup>R<sup>12'</sup>, -SO<sub>2</sub>OR<sup>12</sup>, -SO<sub>2</sub>-C<sub>1</sub>-C<sub>6</sub>-alkyl, -SO<sub>2</sub>-haloC<sub>1</sub>-C<sub>6</sub>-alkyl, -SO<sub>2</sub>-aryl, -SO<sub>2</sub>-NR<sup>12</sup>R<sup>12'</sup>, -P(O)(OR<sup>12</sup>)(OR<sup>12'</sup>), and C-linked mono or di-peptide, where R<sup>12</sup> is hydrogen or C<sub>1</sub>-C<sub>6</sub>-alkyl optionally substituted with -OH, -NH<sub>2</sub>, -NH(C<sub>1</sub>-C<sub>4</sub>alkyl), -N(C<sub>1</sub>-C<sub>4</sub>alkyl)<sub>2</sub>, -C(O)-OH, -C(O)-O-C<sub>1</sub>-C<sub>4</sub>-alkyl, or halogen;

or a salt, a stereoisomer, or a mixture of stereoisomers thereof.

2. The compound of claim 1, wherein R is

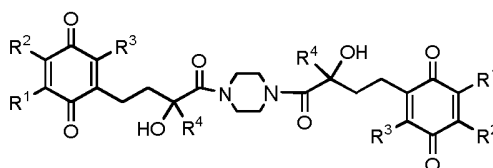

and

R<sup>5</sup> and R<sup>6</sup> are independently selected from the group consisting of hydrogen, hydroxy, alkoxy, C<sub>1</sub>-C<sub>40</sub>-alkyl, C<sub>1</sub>-C<sub>40</sub>-alkenyl, C<sub>1</sub>-C<sub>40</sub>-alkynyl, and aryl; where the alkyl, alkenyl, alkynyl, or aryl groups are optionally substituted with

-OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, oxo, C<sub>3</sub>-C<sub>6</sub>-cycloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-R<sup>11</sup>, -C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-OR<sup>11</sup>, -C(O)-O-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-N-R<sup>11</sup>R<sup>11'</sup>, -C(O)-NH-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -NH-C(O)-R<sup>11</sup>, or -NH-C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl; where the aryl, heteroaryl and heterocyclyl ring substituents are optionally further substituted with C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, oxo, hydroxy, C<sub>1</sub>-C<sub>6</sub>-alkoxy, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; and where one of the carbons of the alkyl, alkenyl, or alkynyl groups is optionally substituted with a heteroatom selected from the group consisting of -O-, -N- and -S-; or R<sup>5</sup> and R<sup>6</sup> together with the atom to which they are attached form a saturated or unsaturated 3-8 membered ring, optionally incorporating 1, 2, or 3 additional N, O, or S atoms, optionally substituted with oxo, -OR<sup>10</sup>, -SR<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, hydroxy-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl, -C(O)-OH, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; or

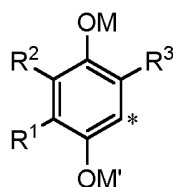

R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form a *N,N'*-disubstituted piperazine where the nitrogen substitution at the 4-position is a group identical to the substitution at the 1-position forming a compound of formula Iaa, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are as defined in claim 1:

Formula Iaa;

or a salt, a stereoisomer, or a mixture of stereoisomers thereof.

3. The compound of claim 1, wherein R is

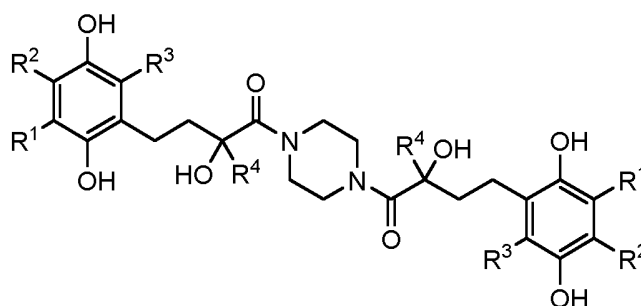

and

R<sup>5</sup> and R<sup>6</sup> are independently selected from the group consisting of hydrogen, hydroxy, alkoxy, C<sub>1</sub>-C<sub>40</sub>-alkyl, C<sub>1</sub>-C<sub>40</sub>-alkenyl, C<sub>1</sub>-C<sub>40</sub>-alkynyl, and aryl; where the alkyl, alkenyl, alkynyl, or aryl groups are optionally substituted with

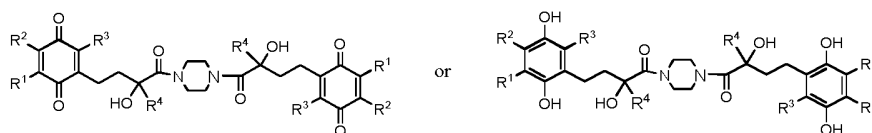

-OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, oxo, C<sub>3</sub>-C<sub>6</sub>-cycloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-R<sup>11</sup>, -C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-OR<sup>11</sup>, -C(O)-O-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -C(O)-N-R<sup>11</sup>R<sup>11'</sup>, -C(O)-NH-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl, -NH-C(O)-R<sup>11</sup>, or -NH-C(O)-C<sub>0</sub>-C<sub>6</sub>-alkyl-aryl; where the aryl, heteroaryl and heterocyclyl ring substituents are optionally further substituted with C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, oxo, hydroxy, C<sub>1</sub>-C<sub>6</sub>-alkoxy, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; and where one of the carbons of the alkyl, alkenyl, or alkynyl groups is optionally substituted with a heteroatom selected from the group consisting of -O-, -N- and -S-; or R<sup>5</sup> and R<sup>6</sup> together with the atom to which they are attached form a saturated or unsaturated 3-8 membered ring, optionally incorporating 1, 2, or 3 additional N, O, or S atoms, optionally substituted with oxo, -OR<sup>10</sup>, -SR<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, hydroxy-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl, -C(O)-OH, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; or

rocyclyl ring substituents are optionally further substituted with C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, oxo, hydroxy, C<sub>1</sub>-C<sub>6</sub>-alkoxy, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; and where one of the carbons of the alkyl, alkenyl, or alkynyl groups is optionally substituted with a heteroatom selected from the group consisting of -O-, -N- and -S-; or R<sup>5</sup> and R<sup>6</sup> together with the atom to which they are attached form a saturated or unsaturated 3-8 membered ring, optionally incorporating 1, 2, or 3 additional N, O, or S atoms, optionally substituted with oxo, -OR<sup>10</sup>, -SR<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10</sup>, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, hydroxy-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl, -C(O)-OH, or -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-alkyl; or R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form a *N,N'*-disubstituted piperazine where the nitrogen substitution at the 4-position is a group identical to the substitution at the 1-position forming a compound of formula Ibb, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are as defined in claim 1:

Formula Ibb;

- or a salt, a stereoisomer, or a mixture of stereoisomers thereof.
4. The compound of claim 2 or 3, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are methyl; or a salt, a stereoisomer, or a mixture of stereoisomers thereof.
  5. The compound of claim 2 or 3, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl substituted with hydroxy, alkoxy, or -C(O)O-C<sub>1</sub>-C<sub>6</sub> alkyl; or a salt, a stereoisomer, or a mixture of stereoisomers thereof.
  6. The compound of claim 2 or 3, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl substituted with -NR<sup>10</sup>R<sup>10</sup>, where R<sup>10</sup> and R<sup>10</sup> are independently selected from the group consisting of hydrogen, C<sub>1</sub>-C<sub>6</sub>-alkyl, C<sub>1</sub>-C<sub>6</sub>-haloalkyl, aryl, aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, heteroaryl, heterocyclyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-aryl and -C(O)-C<sub>1</sub>-C<sub>6</sub>-alkyl-aryl; or a salt, a stereoisomer, or a mixture of stereoisomers thereof.
  7. The compound of claim 2 or 3, where R<sup>5</sup> is hydrogen and R<sup>6</sup> is C<sub>1</sub>-C<sub>6</sub> alkyl substituted with heterocyclyl or heteroaryl; or a salt, a stereoisomer, or a mixture of stereoisomers thereof.
  8. The compound of claim 2 or 3, where R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form an optionally substituted 3 to 8-membered nitrogen containing heterocyclyl ring; or a salt, a stereoisomer, or a mixture of stereoisomers thereof.
  9. The compound of claim 2 or 3, where R<sup>5</sup> and R<sup>6</sup> together with the nitrogen atom to which they are attached form a *N,N'*-disubstituted piperazine where the nitrogen substitution at the 4-position is a group identical to the substitution at the 1-position forming a compound of formula Iaa or Ibb, where R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are as defined in claim 1:

Formula Iaa

Formula Ibb

or a salt, a stereoisomer, or a mixture of stereoisomers thereof.

10. The compound of claim 2 or 3, where R<sup>5</sup> and R<sup>6</sup> are independently hydrogen or C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with aryl; or a salt, a stereoisomer, or a mixture of stereoisomers thereof.

11. The compound of claim 2 or 3, where one of R<sup>5</sup> and R<sup>6</sup> is hydrogen and the other is C<sub>1</sub>-C<sub>6</sub> alkyl optionally substituted with aryl; or a salt, a stereoisomer, or a mixture of stereoisomers thereof.

12. The compound of claim 2 or 3, where R<sup>5</sup> and R<sup>6</sup> are hydrogen; or a salt, a stereoisomer, or a mixture of stereoisomers thereof.

13. The compound of claim 2 selected from the group consisting of:

- 2-hydroxy-*N*-isopropyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(3-hydroxy-3-methyl-4-oxo-4-(piperidin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(4-(azepan-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- *N*-hexyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-*tert*-butyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N,N*,2-trimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-ethyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-benzyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-propyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(cyclopropylmethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-phenethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(3-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-isopentyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-cyclopropyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(3-hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-hydroxy-*N*-isobutyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-ethyl-2-hydroxy-*N*,2-dimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(4-hydroxybutyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(5-hydroxypentyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-methoxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(1-hydroxypropan-2-yl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*R*)-2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*S*)-2-hydroxy-*N*-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- methyl(2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamido)acetate;
- *N*-(3-(1*H*-imidazol-1-yl)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-(2-hydroxyethoxy)ethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-(pyridin-2-ylmethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-(2-(pyridin-2-yl)ethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-(3-(2-oxopyrrolidin-1-yl)propyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(6-hydroxyhexyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(3-hydroxy-3-methyl-4-(4-methylpiperazin-1-yl)-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-hydroxy-2-methyl-*N*-((tetrahydrofuran-2-yl)methyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-(3-morpholinopropyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-methoxy-*N*,2-dimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N,N*-bis(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(2-(dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(4-hydroxyphenethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-(dimethylamino)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

- 6,6'-(4,4'-(piperazine-1,4-diyl)bis(3-hydroxy-3-methyl-4-oxobutane-4,1-diyl))bis(2,3,5-trimethylcyclohexa-2,5-diene-1,4-dione);
- *N*-butyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-*N*-(2-hydroxyethyl)-*N*,2-dimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N,N*-diethyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *tert*-butyl-2-(2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamido)ethylcarbamate;
- 2-hydroxy-2-methyl-*N*-(pyridin-4-ylmethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-hydroxy-2-methyl-*N*-(pyridin-3-ylmethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamido)acetic acid;
- 2-(4-(4-acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(4-(4-fluoropiperidin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(4-(4,4-difluoropiperidin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(3-hydroxy-3-methyl-4-oxo-4-(piperazin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- *tert*-butyl-4-(2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanoyl)piperazine-1-carboxylate;
- 2-(4-(4-benzoylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*R*)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*S*)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(3-hydroxy-4-(4-isopropylpiperazin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(4-(4-(cyclopropanecarbonyl)piperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*R*)-2-(4-(4-acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*S*)-2-(4-(4-acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*R*)-2-(3-hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*S*)-2-(3-hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-hydroxy-*N*-(4-methoxyphenyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(4-fluorophenyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide; and
- *N*-(4-chlorophenyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

or a salt, a stereoisomer, or a mixture of stereoisomers thereof.

**14.** The compound of claim 13 selected from the group consisting of:

- 2-(3-hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-(1*H*-imidazol-1-yl)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(3-hydroxy-3-methyl-4-(4-methylpiperazin-1-yl)-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- *N*-(2-(dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- *N*-(3-(dimethylamino)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(4-(4-acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(3-hydroxy-3-methyl-4-oxo-4-(piperazin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(4-(4-benzoylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*R*)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- (*S*)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;
- 2-(3-hydroxy-4-(4-isopropylpiperazin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- 2-(4-(4-(cyclopropanecarbonyl)piperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;

- (*R*)-2-(4-(4-acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*S*)-2-(4-(4-acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;
- (*R*)-2-(3-hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione; and
- (*S*)-2-(3-hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-diene-1,4-dione;

or a salt, a stereoisomer, or a mixture of stereoisomers thereof.

15. The compound of claim 14, wherein the compound is:

- 2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

or a salt, a stereoisomer, or a mixture of stereoisomers thereof.

16. The compound of claim 14, wherein the compound is:

- (*R*)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

or a salt thereof.

17. The compound of claim 14, wherein the compound is:

- (*S*)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamide;

or a salt thereof.

18. A pharmaceutical composition comprising a compound as defined in any of claims 1 to 17, together with a pharmaceutically acceptable excipient, carrier or vehicle.

19. A compound as claimed in any one of claims 1 to 17 or a composition as claimed in claim 18 for use in a method of treating or suppressing a mitochondrial disorder, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers, the method comprising administering to a subject a therapeutically effective amount or effective amount of the compound or composition.

20. A compound as claimed in any one of claims 1 to 17 or a composition as claimed in claim 18 for use in a method of treating or suppressing a mitochondrial disorder, the method comprising administering a therapeutically effective amount of the compound or composition, where the mitochondrial disorder is selected from the group consisting of inherited mitochondrial diseases; Myoclonic Epilepsy with Ragged Red Fibers (MERRF); Mitochondrial Myopathy, Encephalopathy, Lactacidosis, and Stroke (MELAS); Leber's Hereditary Optic Neuropathy (LHON); Leigh Disease or Syndrome; Kearns-Sayre Syndrome (KSS); Friedreich's Ataxia (FA); other myopathies; cardiomyopathy; encephalomyopathy; renal tubular acidosis; neurodegenerative diseases; Parkinson's disease; Alzheimer's disease; amyotrophic lateral sclerosis (ALS); motor neuron diseases; other neurological diseases; epilepsy; genetic diseases; Huntington's Disease; mood disorders; schizophrenia; bipolar disorder; age-associated diseases; cerebral vascular accidents, macular degeneration; diabetes; and cancer.

21. The compound or composition as claimed in claim 19, for use in treating or suppressing a mitochondrial disorder, wherein the mitochondrial disorder is an age-associated disease.

22. The compound or composition as claimed in claim 19, for use in treating or suppressing a mitochondrial disorder, wherein the mitochondrial disorder is Parkinson's disease.

23. The compound or composition as claimed in claim 19, for use in treating or suppressing a mitochondrial disorder, wherein the mitochondrial disorder is Alzheimer's disease.

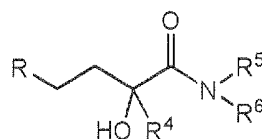

24. The compound or composition as claimed in claim 19, for use in treating or suppressing a mitochondrial disorder,

wherein the mitochondrial disorder is amyotrophic lateral sclerosis (ALS).

25. The compound or composition as claimed in claim 19, for use in treating or suppressing a mitochondrial disorder, wherein the mitochondrial disorder is epilepsy.
26. The compound or composition as claimed in claim 19, for use in treating or suppressing a mitochondrial disorder, wherein the mitochondrial disorder is Huntington's Disease.
27. The compound or composition as claimed in claim 19, for use in treating or suppressing a mitochondrial disorder, wherein the mitochondrial disorder is schizophrenia.
28. The compound or composition as claimed in claim 19, for use in treating or suppressing a mitochondrial disorder, wherein the mitochondrial disorder is bipolar disorder.
29. The compound or composition as claimed in claim 19, for use in treating or suppressing a mitochondrial disorder, wherein the mitochondrial disorder is a cerebral vascular accident.
30. The compound or composition as claimed in claim 19, for use in treating or suppressing a mitochondrial disorder, wherein the mitochondrial disorder is seizures.
31. The compound or composition as claimed in claim 19, for use in treating or suppressing a mitochondrial disorder, wherein the mitochondrial disorder is stroke.
32. A compound as claimed in any one of claims 1 to 17 or a composition as claimed in claim 18 for use in a method of treating a subject suffering from a pervasive development disorder, the method comprising administering a therapeutically effective amount of the compound or composition to the subject, wherein the pervasive development disorder is selected from the group consisting of Autistic Disorder, Asperger's Disorder, Childhood Disintegrative Disorder (CDD), Rett's Disorder, and Pervasive Developmental Disorder-Not Otherwise Specified (PDD-NOS).
33. The compound or composition as claimed in any one of claims 19 to 31, for use as defined in said claims, wherein the method is a method of treating the mitochondrial disorder.
34. Use of a compound as defined in any one of claims 1 to 17 or a composition as claimed in claim 18, in the manufacture of a medicament for use in (i) treating or suppressing a mitochondrial disorder as defined in any of claims 19 to 31 or 33, modulating one or more energy biomarkers, normalizing one or more energy biomarkers, or enhancing one or more energy biomarkers; or (ii) treating a pervasive development disorder as defined in claim 32.

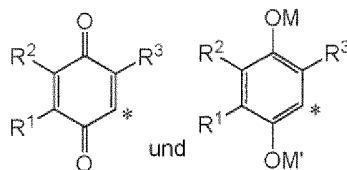

## Patentansprüche

1. Verbindung der Formel I:

Formel I

worin R ausgewählt ist aus der Gruppe, bestehend aus:

worin der \* den Punkt der Verknüpfung von R mit dem Rest des Moleküls bezeichnet;

R<sup>1</sup>, R<sup>2</sup> und R<sup>3</sup> unabhängig voneinander ausgewählt sind aus der Gruppe, bestehend aus Wasserstoff und C<sub>1</sub>-C<sub>6</sub>-Alkyl;

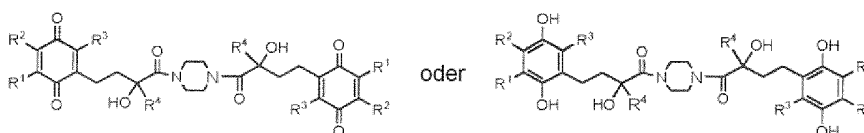

R<sup>4</sup> C<sub>1</sub>-C<sub>6</sub>-Alkyl ist;

R<sup>5</sup> und R<sup>6</sup> unabhängig ausgewählt sind aus der Gruppe, bestehend aus Wasserstoff, Hydroxy, Alkoxy, C<sub>1</sub>-C<sub>4</sub>O-Alkyl, C<sub>1</sub>-C<sub>40</sub>-Alkenyl, C<sub>1</sub>-C<sub>40</sub>-Alkynyl und Aryl; wobei Alkyl-, Alkenyl-, Alkynyl- oder Arylgruppen optional substituiert sind mit

-OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, Oxo, C<sub>3</sub>-C<sub>6</sub>-Cycloalkyl, Aryl, Aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, Heteroaryl, Heterocyclyl, -C(O)-R<sup>11</sup>, -C(O)-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl, -C(O)-O-R<sup>11</sup>, -C(O)-O-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl, -C(O)-N-R<sup>11</sup>R<sup>11'</sup>, -C(O)-NH-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl, -NH-C(O)-R<sup>11</sup> oder -NH-C(O)-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl; wobei Aryl-, Heteroaryl- und Heterocyclylringsubstituenten optional weiter substituiert sind mit C<sub>1</sub>-C<sub>6</sub>-Alkyl, C<sub>1</sub>-C<sub>6</sub>-Halogenalkyl, Oxo, Hydroxy, C<sub>1</sub>-C<sub>6</sub>-Alkoxy, -C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkyl oder -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-Alkyl; und wobei eines der Kohlenstoffatome der Alkyl-, Alkenyl- oder Alkynylgruppen optional substituiert ist mit einem Heteroatom, ausgewählt aus der Gruppe, bestehend aus -O-, -N- und -S-; oder

R<sup>5</sup> und R<sup>6</sup> zusammen mit dem Atom, an das sie gebunden sind, einen gesättigten oder ungesättigten 3-8-gliedrigen Ring bilden, optional enthaltend 1, 2 oder 3 zusätzliche N-, O- oder S-Atome, optional substituiert mit Oxo, -OR<sup>10</sup>, -SR<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, C<sub>1</sub>-C<sub>6</sub>-Alkyl, C<sub>1</sub>-C<sub>6</sub>-Halogenalkyl, Hydroxy-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkyl, -C(O)-Aryl, -C(O)-OH oder -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-Alkyl; oder

R<sup>5</sup> und R<sup>6</sup> zusammen mit dem Stickstoffatom, an das sie gebunden sind, ein N,N'-disubstituiertes Piperazin bilden, wobei die Stickstoffsubstitution in der 4-Position eine Gruppe ist, die identisch ist mit der Substitution in der 1-Position, wobei eine Verbindung der Formel Iaa oder Ibb gebildet wird, wobei R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> und R<sup>4</sup> wie voranstehend definiert sind:

Formel Iaa

Formel Ibb

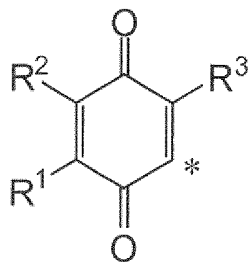

R<sup>10</sup> und R<sup>10'</sup> unabhängig voneinander ausgewählt sind aus der Gruppe, bestehend aus Wasserstoff, C<sub>1</sub>-C<sub>6</sub>-Alkyl, C<sub>1</sub>-C<sub>6</sub>-Halogenalkyl, Aryl, Aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, Heteroaryl, Heterocyclyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkyl, -C(O)-Aryl und -C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkyl-aryl;

R<sup>11</sup> und R<sup>11'</sup> ausgewählt sind aus der Gruppe, bestehend aus Wasserstoff und C<sub>1</sub>-C<sub>6</sub>-Alkyl; und

M und M' unabhängig voneinander ausgewählt sind aus der Gruppe, bestehend aus Wasserstoff, -C(O)-R<sup>12</sup>-C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkenyl, -C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkynyl, -C(O)-Aryl, -C(O)-Heteroaryl, -C(O)-O-R<sup>12</sup>, -C(O)-NR<sup>12</sup>R<sup>12</sup>, -SO<sub>2</sub>OR<sup>12</sup>, -SO<sub>2</sub>-C<sub>1</sub>-C<sub>6</sub>-Alkyl, -SO<sub>2</sub>-Halogen-C<sub>1</sub>-C<sub>6</sub>-alkyl, -SO<sub>2</sub>-Aryl, -SO<sub>2</sub>-NR<sup>12</sup>R<sup>12</sup>, -P(O)(OR<sup>12</sup>)(OR<sup>12</sup>) und C-verknüpftem Mono- oder Dipeptid, wobei R<sup>12</sup> Wasserstoff oder C<sub>1</sub>-C<sub>6</sub>-Alkyl ist, das optional substituiert ist mit -OH, -NH<sub>2</sub>, -NH(C<sub>1</sub>-C<sub>4</sub>-Alkyl), -N(C<sub>1</sub>-C<sub>4</sub>-Alkyl)<sub>2</sub>, -C(O)-OH, -C(O)-O-C<sub>1</sub>-C<sub>4</sub>-Alkyl oder Halogen;

oder ein Salz, ein Stereoisomer oder ein Gemisch aus Stereoisomeren davon.

2. Verbindung nach Anspruch 1, wobei R

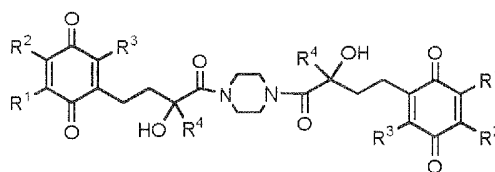

ist und

R<sup>5</sup> und R<sup>6</sup> unabhängig voneinander ausgewählt sind aus der Gruppe, bestehend aus Wasserstoff, Hydroxy, Alkoxy, C<sub>1</sub>-C<sub>40</sub>-Alkyl, C<sub>1</sub>-C<sub>40</sub>-Alkenyl, C<sub>1</sub>-C<sub>40</sub>-Alkynyl und Aryl; wobei die Alkyl-, Alkenyl-, Alkynyl- oder Arylgruppen optional substituiert sind mit

-OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, Oxo, C<sub>3</sub>-C<sub>6</sub>-Cycloalkyl, Aryl, Aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, Heteroaryl, Heterocyclyl, -C(O)-R<sup>11</sup>, -C(O)-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl, -C(O)-O-R<sup>11</sup>, -C(O)-O-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl, -C(O)-N-R<sup>11</sup>R<sup>11'</sup>, -C(O)-NH-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl, -NH-C(O)-R<sup>11</sup> oder -NH-C(O)-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl; wobei die Aryl-, Heteroaryl- und Heterocyclylringsubstituenten optional weiter substituiert sind mit C<sub>1</sub>-C<sub>6</sub>-Alkyl, C<sub>1</sub>-C<sub>6</sub>-Halogenalkyl, Oxo, Hydroxy, C<sub>1</sub>-C<sub>6</sub>-Alkoxy, -C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkyl oder -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-Alkyl; und wobei eines der Kohlenstoffatome der Alkyl-, Alkenyl- oder Alkynylgruppen optional substituiert ist mit einem Heteroatom, ausgewählt aus der Gruppe, bestehend aus -O-, -N- und -S-; oder

R<sup>5</sup> und R<sup>6</sup> zusammen mit dem Atom, an das sie gebunden sind, einen gesättigten oder ungesättigten 3-8-gliedrigen Ring bilden, optional enthaltend 1, 2 oder 3 zusätzliche N-, O- oder S-Atome, optional substituiert mit Oxo, -OR<sup>10</sup>, -SR<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, C<sub>1</sub>-C<sub>6</sub>-Alkyl, C<sub>1</sub>-C<sub>6</sub>-Halogenalkyl, Hydroxy-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkyl, -C(O)-Aryl, -C(O)-OH oder -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-Alkyl; oder

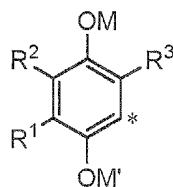

R<sup>5</sup> und R<sup>6</sup> zusammen mit dem Stickstoffatom, an das sie gebunden sind, ein N,N'-disubstituiertes Piperazin bilden, wobei die Stickstoffsubstitution in der 4-Position eine Gruppe ist, die identisch ist mit der Substitution in der 1-Position, wobei eine Verbindung der Formel Iaa gebildet wird, wobei R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> und R<sup>4</sup> wie in Anspruch 1 definiert sind:

Formel Iaa;

oder ein Salz, ein Stereoisomer oder ein Gemisch aus Stereoisomeren davon.

### 3. Verbindung nach Anspruch 1, wobei R

ist und

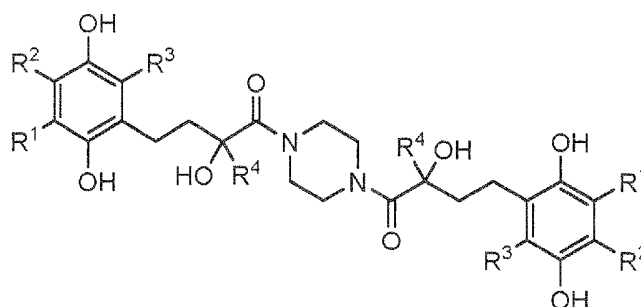

R<sup>5</sup> und R<sup>6</sup> unabhängig voneinander ausgewählt sind aus der Gruppe, bestehend aus Wasserstoff, Hydroxy, Alkoxy, C<sub>1</sub>-C<sub>40</sub>-Alkyl, C<sub>1</sub>-C<sub>40</sub>-Alkenyl, C<sub>1</sub>-C<sub>40</sub>-Alkynyl und Aryl; wobei die Alkyl-, Alkenyl-, Alkynyl- oder Arylgruppen optional substituiert sind mit

-OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, Oxo, C<sub>3</sub>-C<sub>6</sub>-Cycloalkyl, Aryl, Aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, Heteroaryl,

Heterocyclyl, -C(O)-R<sup>11</sup>, -C(O)-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl, -C(O)-O-R<sup>11</sup>, -C(O)-O-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl, -C(O)-N-R<sup>11</sup>R<sup>11'</sup>, -C(O)-NH-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl, -NH-C(O)-R<sup>11</sup> oder -NH-C(O)-C<sub>0</sub>-C<sub>6</sub>-Alkyl-aryl; wobei die Aryl-, Heteroaryl- und Heterocyclylringsubstituenten optional weiter substituiert sind mit C<sub>1</sub>-C<sub>6</sub>-Alkyl, C<sub>1</sub>-C<sub>6</sub>-Halogenalkyl, Oxo, Hydroxy, C<sub>1</sub>-C<sub>6</sub>-Alkoxy, -C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkyl oder -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-Alkyl; und wobei eines der Kohlenstoffatome der Alkyl-, Alkenyl- oder Alkynylgruppen optional substituiert ist mit einem Heteroatom, ausgewählt aus der Gruppe, bestehend aus -O-, -N- und -S-; oder

R<sup>5</sup> und R<sup>6</sup> zusammen mit dem Atom, an das sie gebunden sind, einen gesättigten oder ungesättigten 3-8-gliedrigen Ring bilden, optional enthaltend 1, 2 oder 3 zusätzliche N-, O- oder S-Atome, optional substituiert mit Oxo, -OR<sup>10</sup>, -SR<sup>10</sup>, -CN, -F, -Cl, -Br, -I, -NR<sup>10</sup>R<sup>10'</sup>, C<sub>1</sub>-C<sub>6</sub>-Alkyl, C<sub>1</sub>-C<sub>6</sub>-Halogenalkyl, Hydroxy-C<sub>1</sub>-C<sub>6</sub>-alkyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkyl, -C(O)-Aryl, -C(O)-OH oder -C(O)-O-C<sub>1</sub>-C<sub>6</sub>-Alkyl; oder

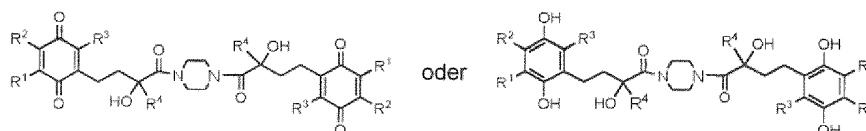

R<sup>5</sup> und R<sup>6</sup> zusammen mit dem Stickstoffatom, an das sie gebunden sind, ein N,N'-disubstituiertes Piperazin bilden, wobei die Stickstoffsubstitution in der 4-Position eine Gruppe ist, die identisch ist mit der Substitution in der 1-Position, wobei eine Verbindung der Formel Ibb gebildet wird, wobei R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> und R<sup>4</sup> wie in Anspruch 1 definiert sind:

Formel Ibb;

oder ein Salz, ein Stereoisomer oder ein Gemisch aus Stereoisomeren davon.

4. Verbindung nach Anspruch 2 oder 3, wobei R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> und R<sup>4</sup> Methyl sind; oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.
5. Verbindung nach Anspruch 2 oder 3, wobei R<sup>5</sup> Wasserstoff ist und R<sup>6</sup> C<sub>1</sub>-C<sub>6</sub>-Alkyl ist, das substituiert ist mit Hydroxy, Alkoxy oder -C(O)O-C<sub>1</sub>-C<sub>6</sub>-Alkyl; oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.
6. Verbindung nach Anspruch 2 oder 3, wobei R<sup>5</sup> Wasserstoff ist und R<sup>6</sup> C<sub>1</sub>-C<sub>6</sub>-Alkyl ist, das substituiert ist mit -NR<sup>10</sup>R<sup>10'</sup>, wobei R<sup>10</sup> und R<sup>10'</sup> unabhängig voneinander ausgewählt sind aus der Gruppe, bestehend aus Wasserstoff, C<sub>1</sub>-C<sub>6</sub>-Alkyl, C<sub>1</sub>-C<sub>6</sub>-Halogenalkyl, Aryl, Aryl-C<sub>1</sub>-C<sub>6</sub>-alkyl, Heteroaryl, Heterocyclyl, -C(O)-H, -C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkyl, -C(O)-Aryl und -C(O)-C<sub>1</sub>-C<sub>6</sub>-Alkyl-aryl; oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.
7. Verbindung nach Anspruch 2 oder 3, wobei R<sup>5</sup> Wasserstoff ist und R<sup>6</sup> C<sub>1</sub>-C<sub>6</sub>-Alkyl ist, das substituiert ist mit Heterocyclyl oder Heteroaryl; oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.
8. Verbindung nach Anspruch 2 oder 3, wobei R<sup>5</sup> und R<sup>6</sup> zusammen mit dem Stickstoffatom, an das sie gebunden sind, einen optional substituierten 3- bis 8-gliedrigen Stickstoff enthaltenden Heterocyclylring bilden; oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.
9. Verbindung nach Anspruch 2 oder 3, wobei R<sup>5</sup> und R<sup>6</sup> zusammen mit dem Stickstoffatom, an das sie gebunden sind, ein N,N'-disubstituiertes Piperazin bilden, wobei die Stickstoffsubstitution an der 4-Position eine Gruppe ist, die identisch ist mit der Substitution in der 1-Position, wobei eine Verbindung der Formel Iaa oder Ibb gebildet wird, wobei R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> und R<sup>4</sup> wie in Anspruch 1 definiert sind:

Formel Iaa

Formel Ibb

oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.

10. Verbindung nach Anspruch 2 oder 3, wobei  $R^5$  und  $R^6$  unabhängig voneinander Wasserstoff oder  $C_1$ - $C_6$ -Alkyl sind, das optional substituiert ist mit Aryl; oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.

11. Verbindung nach Anspruch 2 oder 3, wobei eines von  $R^5$  und  $R^6$  Wasserstoff ist und das andere  $C_1$ - $C_6$ -Alkyl ist, das optional substituiert ist mit Aryl; oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.

12. Verbindung nach Anspruch 2 oder 3, wobei  $R^5$  und  $R^6$  Wasserstoff sind; oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.

13. Verbindung nach Anspruch 2, ausgewählt aus der Gruppe, bestehend aus:

- 2-Hydroxy-N-isopropyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-(3-Hydroxy-3-methyl-4-oxo-4-(piperidin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 2-(4-(Azepan-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- N-Hexyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N-tert-Butyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N,N-2-trimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N-Ethyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N-Benzyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-2-methyl-N-propyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N-(Cyclopropylmethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-2-methyl-N-phenethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-(3-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-isopentyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N-Cyclopropyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-(3-Hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 2-Hydroxy-N-isobutyl-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N-Ethyl-2-hydroxy-N,2-dimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-(4-hydroxybutyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-(5-hydroxypentyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-(2-methoxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-(1-hydroxypropan-2-yl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- (R)-2-Hydroxy-N-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- (S)-2-Hydroxy-N-(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- Methyl-2-(2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamido)acetat;
- N-(3-(1H-Imidazol-1-yl)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-(2-(2-hydroxyethoxy)ethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-2-methyl-N-(pyridin-2-ylmethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-2-methyl-N-(2-(pyridin-2-yl)ethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-2-methyl-N-(3-(2-oxopyrrolidin-1-yl)propyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-(2-hydroxypropyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-(6-hydroxyhexyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-(3-Hydroxy-3-methyl-4-(4-methylpiperazin-1-yl)-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;

- 2-Hydroxy-2-methyl-N-((tetrahydrofuran-2-yl)methyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-2-methyl-N-(3-morpholinopropyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-methoxy-N,2-dimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 5 • 2-Hydroxy-N,N-bis(2-hydroxyethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N-(2-(Dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-(4-hydroxyphenethyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N-(3-(Dimethylamino)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 10 • 6,6'-(4,4'-(Piperazin-1,4-diyl)bis(3-hydroxy-3-methyl-4-oxobutan-4,1-diyl))bis(2,3,5-trimethylcyclohexa-2,5-dien-1,4-dion);
- N-Butyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-N-(2-hydroxyethyl)-N,2-dimethyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N,N-Diethyl-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 15 • tert-Butyl-2-(2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamido)ethylcarbamid;
- 2-Hydroxy-2-methyl-N-(pyridin-4-ylmethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-Hydroxy-2-methyl-N-(pyridin-3-ylmethyl)-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-(2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamido)essigsäure;
- 20 • 2-(4-(4-Acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 2-(4-(4-Fluoropiperidin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 2-(4-(4,4-Difluoropiperidin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 2-(3-Hydroxy-3-methyl-4-oxo-4-(piperazin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 25 • tert-Butyl-4-(2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanoyl)piperazin-1-carboxylat;
- 2-(4-(4-Benzoylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- (R)-2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- (S)-2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-(3-Hydroxy-4-(4-isopropylpiperazin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 30 • 2-(4-(4-(Cyclopropanecarbonyl)piperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- (R)-2-(4-(4-Acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- (S)-2-(4-(4-Acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- (R)-2-(3-Hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 35 • (S)-2-(3-Hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 2-Hydroxy-N-(4-methoxyphenyl)-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N-(4-Fluorphenyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid und
- 40 • N-(4-Chlorphenyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;

oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.

**14. Verbindung nach Anspruch 13, ausgewählt aus der Gruppe, bestehend aus:**

- 2-(3-Hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N-(3-(1H-Imidazol-1-yl)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 45 • 2-(3-Hydroxy-3-methyl-4-(4-methylpiperazin-1-yl)-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- N-(2-(Dimethylamino)ethyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- N-(3-(Dimethylamino)propyl)-2-hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 2-(4-(4-Acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 50 • 2-(3-Hydroxy-3-methyl-4-oxo-4-(piperazin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 2-(4-(4-Benzoylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- (R)-2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- (S)-2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- 55 • 2-(3-Hydroxy-3-methyl-4-oxo-4-(piperazin-1-yl)butyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 2-(4-(4-Benzoylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- (R)-2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;
- (S)-2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;

- 2-(3-Hydroxy-4-(4-isopropylpiperazin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- 2-(4-(4-(Cyclopropanecarbonyl)piperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- (R)-2-(4-(4-Acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- (S)-2-(4-(4-Acetylpiperazin-1-yl)-3-hydroxy-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;
- (R)-2-(3-Hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion und
- (S)-2-(3-Hydroxy-4-(4-hydroxypiperidin-1-yl)-3-methyl-4-oxobutyl)-3,5,6-trimethylcyclohexa-2,5-dien-1,4-dion;

oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.

**15.** Verbindung nach Anspruch 14, wobei die Verbindung ist:

- 2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;

oder ein Salz, ein Stereoisomer oder ein Gemisch von Stereoisomeren davon.

**16.** Verbindung nach Anspruch 14, wobei die Verbindung ist:

- (R)-2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;

oder ein Salz davon.

**17.** Verbindung nach Anspruch 14, wobei die Verbindung ist:

- (S)-2-Hydroxy-2-methyl-4-(2,4,5-trimethyl-3,6-dioxocyclohexa-1,4-dienyl)butanamid;

oder ein Salz davon.

**18.** Pharmazeutische Zusammensetzung, umfassend eine Verbindung wie in einem der Ansprüche 1 bis 17 definiert, zusammen mit einem pharmazeutisch annehmbaren Hilfsstoff, Träger oder Vehikel.

**19.** Verbindung wie in einem der Ansprüche 1 bis 17 beansprucht oder Zusammensetzung wie in Anspruch 18 beansprucht, zur Verwendung in einem Verfahren zur Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, und zwar unter Modulation von einem oder mehreren Energiebiomarkern, Normalisierung von einem oder mehreren Energiebiomarkern oder Verstärkung von einem oder mehreren Energiebiomarkern, wobei das Verfahren umfasst: die Verabreichung an einen Patienten einer therapeutisch wirksamen Menge oder wirksamen Menge der Verbindung oder Zusammensetzung.

**20.** Verbindung wie in einem der Ansprüche 1 bis 17 beansprucht oder Zusammensetzung wie in Anspruch 18 beansprucht, zur Verwendung in einem Verfahren zur Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, wobei das Verfahren umfasst: das Verabreichen einer therapeutisch wirksamen Menge der Verbindung oder Zusammensetzung, wobei die mitochondriale Erkrankung ausgewählt ist aus der Gruppe, bestehend aus vererbter mitochondrialer Erkrankung; myoklonaler Epilepsie mit zottigen roten Fasern (MERRF); mitochondrialer Myopathie, Enzephalopathie, Laktazidose und Schlaganfall (MELAS); Leberscher hereditärer optischer Neuropathie (LHON); Leigh-Erkrankung oder -Syndrom; Kearns-Sayre-Syndrom (KSS); Friedreichscher Ataxie (FA); anderen Myopathien; Kardiomyopathie; Enzephalomyopathie; renaler tubulärer Azidose; neurodegenerativer Erkrankung; Parkinsonscher Erkrankung; Alzheimerscher Erkrankung; amyotropher Lateralsklerose (ALS); Motoneuronenerkrankung; anderen neurologischen Erkrankungen; Epilepsie; genetischen Erkrankungen; Huntingtonscher Erkrankung; affektiven Störungen; Schizophrenie; bipolarer Störung; altersbedingten Erkrankungen; Hirndurchblutungsstörungen, Makuladegeneration; Diabetes und Krebs.

**21.** Verbindung oder Zusammensetzung wie in Anspruch 19 beansprucht, zur Verwendung bei der Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, wobei die mitochondriale Erkrankung eine altersbedingte Erkrankung ist.

**22.** Verbindung oder Zusammensetzung wie in Anspruch 19 beansprucht, zur Verwendung bei der Behandlung oder

Unterdrückung einer mitochondrialen Erkrankung, wobei die mitochondriale Erkrankung Parkinsonsche Erkrankung ist.

23. Verbindung oder Zusammensetzung wie in Anspruch 19 beansprucht, zur Verwendung bei der Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, wobei die mitochondriale Erkrankung Alzheimersche Erkrankung ist.

24. Verbindung oder Zusammensetzung wie in Anspruch 19 beansprucht, zur Verwendung bei der Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, wobei die mitochondriale Erkrankung amyotrophe Lateralsklerose (ALS) ist.

25. Verbindung oder Zusammensetzung wie in Anspruch 19 beansprucht, zur Verwendung bei der Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, wobei die mitochondriale Erkrankung Epilepsie ist.

26. Verbindung oder Zusammensetzung wie in Anspruch 19 beansprucht, zur Verwendung bei der Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, wobei die mitochondriale Erkrankung Huntingtonsche Erkrankung ist.

27. Verbindung oder Zusammensetzung wie in Anspruch 19 beansprucht, zur Verwendung bei der Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, wobei die mitochondriale Erkrankung Schizophrenie ist.

28. Verbindung oder Zusammensetzung wie in Anspruch 19 beansprucht, zur Verwendung bei der Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, wobei die mitochondriale Erkrankung bipolare Störung ist.

29. Verbindung oder Zusammensetzung wie in Anspruch 19 beansprucht, zur Verwendung bei der Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, wobei die mitochondriale Erkrankung Hirndurchblutungsstörung ist.

30. Verbindung oder Zusammensetzung wie in Anspruch 19 beansprucht, zur Verwendung bei der Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, wobei die mitochondriale Erkrankung Anfälle ist.

31. Verbindung oder Zusammensetzung wie in Anspruch 19 beansprucht, zur Verwendung bei der Behandlung oder Unterdrückung einer mitochondrialen Erkrankung, wobei die mitochondriale Erkrankung Schlaganfall ist.

32. Verbindung wie in einem der Ansprüche 1 bis 17 beansprucht oder Zusammensetzung wie in Anspruch 18 beansprucht, zur Verwendung in einem Verfahren zur Behandlung eines Patienten, der an einer pervasiven Entwicklungsstörung leidet, wobei das Verfahren umfasst: das Verabreichen einer therapeutisch wirksamen Menge der Verbindung oder Zusammensetzung an den Patienten, wobei die pervasive Entwicklungsstörung ausgewählt ist aus der Gruppe, bestehend aus autistischer Erkrankung, Aspergerscher Erkrankung, disintegrativer Störung bei Kindern (CDD), Rettcher Erkrankung und nicht anderweitig spezifizierter pervasiver Entwicklungsstörung (PDD-NOS).

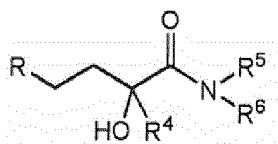

33. Verbindung oder Zusammensetzung wie in einem der Ansprüche 19 bis 31 beansprucht, zur Verwendung wie in den genannten Ansprüchen definiert, wobei das Verfahren ein Verfahren zur Behandlung der mitochondrialen Erkrankung ist.

34. Verwendung einer Verbindung wie in einem der Ansprüche 1 bis 17 definiert oder einer Zusammensetzung wie in Anspruch 18 beansprucht, zur Herstellung eines Medikaments zur Verwendung bei der (i) Behandlung oder Unterdrückung einer mitochondrialen Erkrankung wie in einem der Ansprüche 19 bis 31 oder 33 definiert, und zwar unter Modulation von einem oder mehreren Energiebiomarkern, Normalisierung von einem oder mehreren Energiebiomarkern oder Verstärkung von einem oder mehreren Energiebiomarkern; oder (ii) bei der Behandlung einer pervasiven Entwicklungsstörung wie in Anspruch 32 definiert.

## Revendications

1. Composé qui est de formule I :

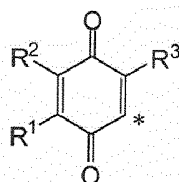

Formule I :

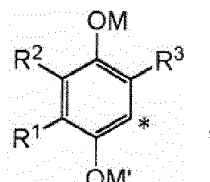

dans laquelle

- R représente un groupe choisi dans l'ensemble constitué par ceux

de formule

ou

où l'astérisque \*

indique le point par lequel ce groupe R rattache au reste de la molécule ;

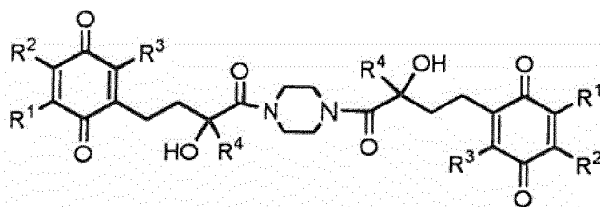

- R<sup>1</sup>, R<sup>2</sup> et R<sup>3</sup> représentent chacun une entité choisie indépendamment dans l'ensemble formé par un atome d'hydrogène et les groupes alkyle en C<sub>1</sub>-C<sub>6</sub> ;- R<sup>4</sup> représente un groupe alkyle en C<sub>1</sub>-C<sub>6</sub> ;

- R<sup>5</sup> et R<sup>6</sup> représentent chacun une entité choisie indépendamment dans l'ensemble formé par un atome d'hydrogène et les groupes hydroxyle, alcoxy, alkyle en C<sub>1</sub>-C<sub>40</sub>, alcényle en C<sub>1</sub>-C<sub>40</sub>, alcynyle en C<sub>1</sub>-C<sub>40</sub> et aryle ; étant entendu que ces groupes alkyle, alcényle, alcynyle et aryle, en option, portent un ou des substituant(s) de formule -OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup> ou -NR<sup>10</sup>R<sup>10'</sup>, cyano, fluoro, chloro, bromo, iodo, oxo, cycloalkyle en C<sub>3</sub>-C<sub>6</sub>, aryle, aryl-(alkyle en C<sub>1</sub>-C<sub>6</sub>), hétéroaryle ou hétérocyclyle, ou de formule -C(O)-R<sup>11</sup>, -C(O)-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle, -C(O)-O-R<sup>11</sup>, -C(O)-O-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle, -C(O)-NR<sup>11</sup>R<sup>11'</sup>, -C(O)-NH-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle, -NH-C(O)-R<sup>11</sup> ou -NH-C(O)-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle ; étant entendu que, en option, les substituants cycliques aryle, hétéroaryle et hétérocyclyle portent encore un ou des substituant(s) alkyle en C<sub>1</sub>-C<sub>6</sub>, halogénoalkyle en C<sub>1</sub>-C<sub>6</sub>, oxo, hydroxy, alcoxy en C<sub>1</sub>-C<sub>6</sub>, (alkyle en C<sub>1</sub>-C<sub>6</sub>)-carbonyle ou (alkyle en C<sub>1</sub>-C<sub>6</sub>)-oxy-carbonyle, et que, en option, l'un des atomes de carbone des groupes alkyle, alcényle ou alcynyle est remplacé par un hétéroatome choisi parmi les atomes d'oxygène, d'azote et de soufre ;

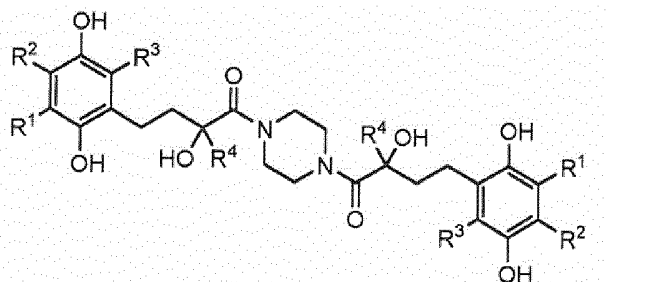

- ou bien R<sup>5</sup> et R<sup>6</sup> représentent des entités qui, conjointement avec l'atome auquel elles sont liées, forment un cycle de 3 à 8 chaînons, saturé ou insaturé qui, en option, comporte 1, 2 ou 3 atome(s) supplémentaire(s) d'azote, d'oxygène ou de soufre et qui, en option, porte un ou des substituant(s) oxo, de formule -OR<sup>10</sup>, -SR<sup>10</sup> ou -NR<sup>10</sup>R<sup>10'</sup>, ou cyano, fluoro, chloro, bromo, iodo, alkyle en C<sub>1</sub>-C<sub>6</sub>, halogéno-alkyle en C<sub>1</sub>-C<sub>6</sub>, hydroxy-alkyle en C<sub>1</sub>-C<sub>6</sub>, formyle, (alkyle en C<sub>1</sub>-C<sub>6</sub>)-carbonyle, aryl-carbonyle, carboxy ou (alkyle en C<sub>1</sub>-C<sub>6</sub>)-oxy-carbonyle ;

- ou encore R<sup>5</sup> et R<sup>6</sup> représentent des entités qui, conjointement avec l'atome d'azote auquel elles sont liées, forment un fragment de pipérazine à deux substituants en N et N' dont le substituant placé sur l'atome d'azote en position 4 est identique au substituant placé en position 1, ce qui donne un composé de formule Iaa ou Ibb, dans lesquelles formules les symboles R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> et R<sup>4</sup> ont les significations indiquées plus haut ;

Formule Iaa :

Formule Ibb :

- R<sup>10</sup> et R<sup>10'</sup> représentent des entités choisies, indépendamment, dans l'ensemble formé par un atome d'hydrogène et les groupes alkyle en C<sub>1</sub>-C<sub>6</sub>, halogéno-alkyle en C<sub>1</sub>-C<sub>6</sub>, aryle, aryl-(alkyle en C<sub>1</sub>-C<sub>6</sub>), hétéroaryle, hétérocyclyle, formyle, (alkyle en C<sub>1</sub>-C<sub>6</sub>)-carbonyle, aryl-carbonyle et aryl-(alkyle en C<sub>1</sub>-C<sub>6</sub>)-carbonyle ;

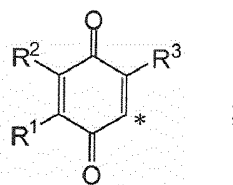

- R<sup>11</sup> et R<sup>11'</sup> représentent des entités choisies dans l'ensemble formé par un atome d'hydrogène et les groupes alkyle en C<sub>1</sub>-C<sub>6</sub> ;

- et M et M' représentent des entités choisies, indépendamment, dans l'ensemble formé par un atome d'hydrogène, les groupes (alcényle en C<sub>1</sub>-C<sub>6</sub>)-carbonyle, (alcynyle en C<sub>1</sub>-C<sub>6</sub>)-carbonyle, aryl-carbonyle et hétéroaryl-carbonyle, les groupes symbolisés par -C(O)-R<sup>12</sup>, -C(O)-OR<sup>12</sup>, -C(O)-NR<sup>12</sup>R<sup>12</sup>, -S(O)<sub>2</sub>-OR<sup>12</sup>, -SO<sub>2</sub>-(alkyle en C<sub>1</sub>-C<sub>6</sub>), -SO<sub>2</sub>-(halogéno-alkyle en C<sub>1</sub>-C<sub>6</sub>), -SO<sub>2</sub>-(aryle), -S(O)<sub>2</sub>-NR<sup>12</sup>R<sup>12</sup> ou -P(O)(OR<sup>12</sup>)(OR<sup>12</sup>), et les mono-peptides et dipeptides rattachés par un atome de carbone, étant entendu que R<sup>12</sup> représente un atome d'hydrogène ou un groupe alkyle en C<sub>1</sub>-C<sub>6</sub>, en option porteur d'un ou de substituant(s) hydroxy, amino, (alkyle en C<sub>1</sub>-C<sub>4</sub>)-amino, di(alkyle en C<sub>1</sub>-C<sub>4</sub>)-amino, carboxy, (alkyle en C<sub>1</sub>-C<sub>4</sub>)-oxy-carbonyle ou halogéno ;

ou sel d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.

## 2. Composé conforme à la revendication 1, dans lequel

- R représente un groupe de formule

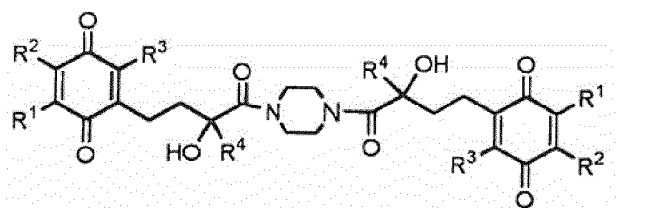

- R<sup>5</sup> et R<sup>6</sup> représentent chacun une entité choisie indépendamment dans l'ensemble formé par un atome d'hydrogène et les groupes hydroxyle, alcoxy, alkyle en C<sub>1</sub>-C<sub>40</sub>, alcényle en C<sub>1</sub>-C<sub>40</sub>, alcynyle en C<sub>1</sub>-C<sub>40</sub> et aryle ; étant entendu que ces groupes alkyle, alcényle, alcynyle et aryle, en option, portent un ou des substituant(s) de formule -OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup> ou -NR<sup>10</sup>R<sup>10'</sup>, cyano, fluoro, chloro, bromo, iodo, oxo, cycloalkyle en C<sub>3</sub>-C<sub>6</sub>, aryle, aryl-(alkyle en C<sub>1</sub>-C<sub>6</sub>), hétéroaryle ou hétérocyclyle, ou de formule -C(O)-R<sup>11</sup>, -C(O)-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle, -C(O)-O-R<sup>11</sup>, -C(O)-O-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle, -C(O)-NR<sup>11</sup>R<sup>11'</sup>, -C(O)-NH-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle, -NH-C(O)-R<sup>11</sup> ou -NH-C(O)-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle ; étant entendu que, en option, les substituants cycliques aryle, hétéroaryle et hétérocyclyle portent encore un ou des substituant(s) alkyle en C<sub>1</sub>-C<sub>6</sub>, halogénoalkyle en C<sub>1</sub>-C<sub>6</sub>, oxo, hydroxy, alcoxy en C<sub>1</sub>-C<sub>6</sub>, (alkyle en C<sub>1</sub>-C<sub>6</sub>)-carbonyle ou (alkyle en C<sub>1</sub>-C<sub>6</sub>)-oxy-carbonyle, et que, en option, l'un des atomes de carbone des groupes alkyle, alcényle ou alcynyle est remplacé par un hétéroatome choisi parmi les atomes d'oxygène, d'azote et de soufre ;

- ou bien R<sup>5</sup> et R<sup>6</sup> représentent des entités qui, conjointement avec l'atome auquel elles sont liées, forment un cycle de 3 à 8 chaînons, saturé ou insaturé qui, en option, comporte 1, 2 ou 3 atome(s) supplémentaire(s) d'azote, d'oxygène ou de soufre et qui, en option, porte un ou des substituant(s) oxo, de formule -OR<sup>10</sup>, -SR<sup>10</sup> ou -NR<sup>10</sup>R<sup>10'</sup>, ou cyano, fluoro, chloro, bromo, iodo, alkyle en C<sub>1</sub>-C<sub>6</sub>, halogéno-alkyle en C<sub>1</sub>-C<sub>6</sub>, hydroxy-alkyle en C<sub>1</sub>-C<sub>6</sub>, formyle, (alkyle en C<sub>1</sub>-C<sub>6</sub>)-carbonyle, aryl-carbonyle, carboxy ou (alkyle en C<sub>1</sub>-C<sub>6</sub>)-oxy-carbonyle ;

- ou encore R<sup>5</sup> et R<sup>6</sup> représentent des entités qui, conjointement avec l'atome d'azote auquel elles sont liées, forment un fragment de pipérazine à deux substituants en N et N' dont le substituant placé sur l'atome d'azote en position 4 est identique au substituant placé en position 1, ce qui donne un composé de formule Iaa, dans laquelle les symboles R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> et R<sup>4</sup> ont les significations indiquées dans la revendication 1 ;

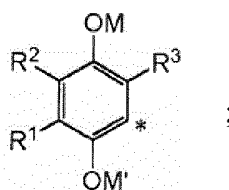

Formule Iaa :

ou sel d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.

3. Composé conforme à la revendication 1, dans lequel

- R représente un groupe de formule

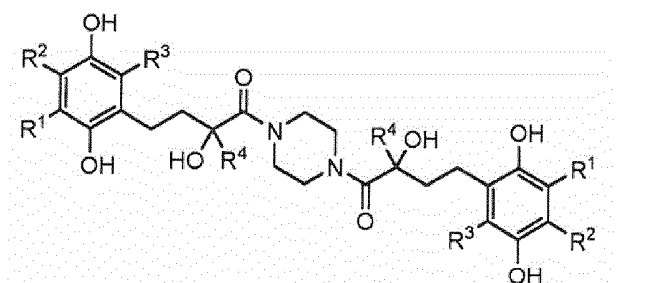

- R<sup>5</sup> et R<sup>6</sup> représentent chacun une entité choisie indépendamment dans l'ensemble formé par un atome d'hydrogène et les groupes hydroxyle, alcoxy, alkyle en C<sub>1</sub>-C<sub>40</sub>, alcényle en C<sub>1</sub>-C<sub>40</sub> et aryle ; étant entendu que ces groupes alkyle, alcényle, alcynyle et aryle, en option, portent un ou des substituant(s) de formule -OR<sup>10</sup>, -S(O)<sub>0-2</sub>R<sup>10</sup> ou -NR<sup>10</sup>R<sup>10'</sup>, cyano, fluoro, chloro, bromo, iodo, oxo, cycloalkyle en C<sub>3</sub>-C<sub>6</sub>, aryle, aryl-(alkyle en C<sub>1</sub>-C<sub>6</sub>), hétéroaryle ou hétérocyclyle, ou de formule -C(O)-R<sup>11</sup>, -C(O)-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle, -C(O)-O-R<sup>11</sup>, -C(O)-O-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle, -C(O)-NR<sup>11</sup>R<sup>11'</sup>, -C(O)-NH-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle, -NH-C(O)-R<sup>11</sup> ou -NH-C(O)-(alkyle en C<sub>0</sub>-C<sub>6</sub>)-aryle ; étant entendu que, en option, les substituants cycliques aryle, hétéroaryle et hétérocyclyle portent encore un ou des substituant(s) alkyle en C<sub>1</sub>-C<sub>6</sub>, halogénoalkyle en C<sub>1</sub>-C<sub>6</sub>, oxo, hydroxy, alcoxy en C<sub>1</sub>-C<sub>6</sub>, (alkyle en C<sub>1</sub>-C<sub>6</sub>)-carbonyle ou (alkyle en C<sub>1</sub>-C<sub>6</sub>)-oxy-carbonyle, et que, en option, l'un des atomes de carbone des groupes alkyle, alcényle ou alcynyle est remplacé par un hétéroatome choisi parmi les atomes d'oxygène, d'azote et de soufre ;

- ou bien R<sup>5</sup> et R<sup>6</sup> représentent des entités qui, conjointement avec l'atome auquel elles sont liées, forment un cycle de 3 à 8 chaînons, saturé ou insaturé qui, en option, comporte 1, 2 ou 3 atome(s) supplémentaire(s) d'azote, d'oxygène ou de soufre et qui, en option, porte un ou des substituant(s) oxo, de formule -OR<sup>10</sup>, -SR<sup>10</sup> ou -NR<sup>10</sup>R<sup>10'</sup>, ou cyano, fluoro, chloro, bromo, iodo, alkyle en C<sub>1</sub>-C<sub>6</sub>, halogéno-alkyle en C<sub>1</sub>-C<sub>6</sub>, hydroxy-alkyle en C<sub>1</sub>-C<sub>6</sub>, formyle, (alkyle en C<sub>1</sub>-C<sub>6</sub>)-carbonyle, aryl-carbonyle, carboxy ou (alkyle en C<sub>1</sub>-C<sub>6</sub>)-oxy-carbonyle ;

- ou encore R<sup>5</sup> et R<sup>6</sup> représentent des entités qui, conjointement avec l'atome d'azote auquel elles sont liées, forment un fragment de pipérazine à deux substituants en N et N' dont le substituant placé sur l'atome d'azote en position 4 est identique au substituant placé en position 1, ce qui donne un composé de formule Ibb, dans laquelle les symboles R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> et R<sup>4</sup> ont les significations indiquées dans la revendication 1 :

Formule Ibb :

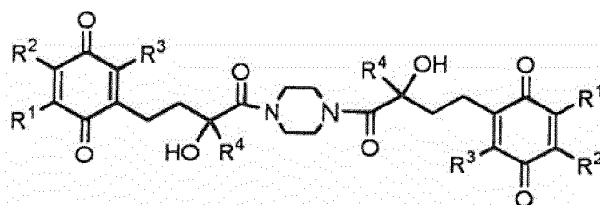

ou sel d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.

4. Composé conforme à la revendication 2 ou 3, dans lequel R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> et R<sup>4</sup> représentent des groupes méthyle, ou

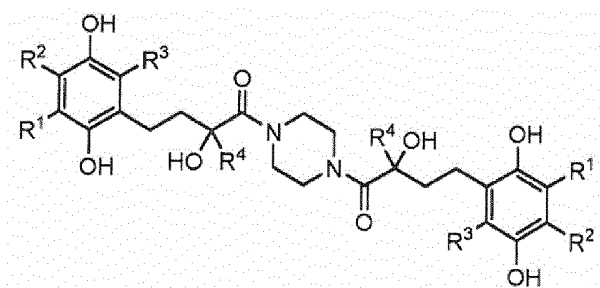

sel d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.

5. Composé conforme à la revendication 2 ou 3, dans lequel  $R^5$  représente un atome d'hydrogène et  $R^6$  représente un groupe alkyle en  $C_1-C_6$  porteur d'un ou de substituant(s) hydroxy, alcoxy ou (alkyle en  $C_1-C_6$ )-oxy-carbonyle, ou sel d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.
6. Composé conforme à la revendication 2 ou 3, dans lequel  $R^5$  représente un atome d'hydrogène et  $R^6$  représente un groupe alkyle en  $C_1-C_6$  porteur d'un ou de substituant(s) de formule  $-NR^{10}R^{10'}$ , dans laquelle  $R^{10}$  et  $R^{10'}$  représentent des entités choisies, indépendamment, dans l'ensemble formé par un atome d'hydrogène et les groupes alkyle en  $C_1-C_6$ , halogéno-alkyle en  $C_1-C_6$ , aryle, aryl-(alkyle en  $C_1-C_6$ ), hétéroaryle, hétérocyclyle, formyle, (alkyle en  $C_1-C_6$ )-carbonyle, aryl-carbonyle et aryl-(alkyle en  $C_1-C_6$ )-carbonyle, ou sel d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.
7. Composé conforme à la revendication 2 ou 3, dans lequel  $R^5$  représente un atome d'hydrogène et  $R^6$  représente un groupe alkyle en  $C_1-C_6$  porteur d'un ou de substituant(s) hétérocyclyle ou hétéroaryle, ou sel d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.
8. Composé conforme à la revendication 2 ou 3, dans lequel  $R^5$  et  $R^6$  représentent des entités qui, conjointement avec l'atome d'azote auquel elles sont liées, forment un hétérocycle azoté de 3 à 8 chaînons, en option porteur d'un ou de substituant(s), ou sel d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.
9. Composé conforme à la revendication 2 ou 3, dans lequel  $R^5$  et  $R^6$  représentent des entités qui, conjointement avec l'atome d'azote auquel elles sont liées, forment un fragment de pipérazine à deux substituants en N et N' dont le substituant placé sur l'atome d'azote en position 4 est identique au substituant placé en position 1, ce qui donne un composé de formule Iaa ou Ibb, dans lesquelles formules les symboles  $R^1$ ,  $R^2$ ,  $R^3$  et  $R^4$  ont les significations indiquées dans la revendication 1 :

Formule Iaa :

Formule Ibb :

ou sel d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.

10. Composé conforme à la revendication 2 ou 3, dans lequel  $R^5$  et  $R^6$  représentent chacun, indépendamment, un atome d'hydrogène ou un groupe alkyle en  $C_1-C_6$ , en option porteur d'un ou de substituant(s) aryle, ou sel d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.
11. Composé conforme à la revendication 2 ou 3, dans lequel l'un des symboles  $R^5$  et  $R^6$  représente un atome d'hydrogène et l'autre représente un groupe alkyle en  $C_1-C_6$ , en option porteur d'un ou de substituant(s) aryle, ou sel d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.
12. Composé conforme à la revendication 2 ou 3, dans lequel  $R^5$  et  $R^6$  représentent des atomes d'hydrogène, ou sel

d'un tel composé, ou stéréoisomère ou mélange de stéréoisomères d'un tel composé.

13. Composé conforme à la revendication 2, choisi dans l'ensemble formé par les suivants :

- 5
  - 2-hydroxy-N-isopropyl-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxocyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N-(2-hydroxy-éthyl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-[3-hydroxy-3-méthyl-4-oxo-4-(pipéridin-1-yl)-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
  - 2-[4-(azépan-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
  - N-hexyl-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 10
  - N-*tertio*-butyl-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N,N,2-triméthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - N-éthyl-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - N-benzyl-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-2-méthyl-N-propyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 15
  - N-(cyclopropyl-méthyl)-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-2-méthyl-N-phénéthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N-(3-hydroxy-propyl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N-isopentyl-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - N-cyclopropyl-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 20
  - 2-[3-hydroxy-4-(4-hydroxy-pipéridin-1-yl)-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
  - 2-hydroxy-N-isobutyl-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - N-éthyl-2-hydroxy-N,2-diméthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 25
  - 2-hydroxy-N-(4-hydroxy-butyl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N-(5-hydroxy-pentyl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N-(2-méthoxy-éthyl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N-(1-hydroxy-prop-2-yl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - (*R*)-2-hydroxy-N-(2-hydroxy-éthyl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 30
  - (*S*)-2-hydroxy-N-(2-hydroxy-éthyl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-[2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide]-acétate de méthyle
  - N-[3-(1H-imidazol-1-yl)-propyl]-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N-[2-(2-hydroxy-éthoxy)-éthyl]-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 35
  - 2-hydroxy-2-méthyl-N-[(pyridin-2-yl)-méthyl]-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-2-méthyl-N-[2-(pyridin-2-yl)-éthyl]-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-2-méthyl-N-[3-(2-oxo-pyrrolidin-1-yl)-propyl]-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 40
  - 2-hydroxy-N-(2-hydroxy-propyl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N-(6-hydroxy-hexyl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-[3-hydroxy-3-méthyl-4-(4-méthyl-pipérazin-1-yl)-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
  - 2-hydroxy-2-méthyl-N-[(tétrahydrofuran-2-yl)-méthyl]-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 45
  - 2-hydroxy-2-méthyl-N-(3-morpholino-propyl)-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N-méthoxy-N,2-diméthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N,N-bis(2-hydroxy-éthyl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - N-[2-(diméthylamino)-éthyl]-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 50
  - 2-hydroxy-N-(4-hydroxy-phénéthyl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - N-[3-(diméthylamino)-propyl]-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 6,6'-[4,4'-(pipérazine-1,4-diyl)-bis(3-hydroxy-3-méthyl-4-oxo-butane-4,1-diyl)]-bis(2,3,5-triméthyl-cyclohexa-2,5-diène-1,4-dione)
- 55
  - N-butyl-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - 2-hydroxy-N-(2-hydroxy-éthyl)-N,2-diméthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
  - N,N-diéthyl-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide

- 2-[2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamido]-éthyl-carbamate de *tertio*-butyle
- 2-hydroxy-2-méthyl-N-[(pyridin-4-yl)-méthyl]-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 2-hydroxy-2-méthyl-N-[(pyridin-3-yl)-méthyl]-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 5 - acide 2-[2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamido]-acétique
- 2-[4-(4-acétyl-pipérazin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 2-[4-(4-fluoro-pipéridin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 2-[4-(4,4-difluoro-pipéridin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 10 - 2-[3-hydroxy-3-méthyl-4-oxo-4-(pipérazin-1-yl)-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 4-[2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanoyl]-pipérazine-1-carboxylate de *tertio*-butyle
- 2-[4-(4-benzoyl-pipérazin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 15 - (*R*)-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- (*S*)-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 2-[3-hydroxy-4-(4-isopropyl-pipérazin-1-yl)-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 2-[4-(4-(cyclopropyl-carbonyl)-pipérazin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 20 - (*R*)-2-[4-(4-acétyl-pipérazin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- (*S*)-2-[4-(4-acétyl-pipérazin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 25 - (*R*)-2-[3-hydroxy-4-(4-hydroxy-pipéridin-1-yl)-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- (*S*)-2-[3-hydroxy-4-(4-hydroxy-pipéridin-1-yl)-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 2-hydroxy-N-(4-méthoxy-phényl)-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 30 - N-(4-fluoro-phényl)-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- N-(4-chloro-phényl)-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide

ou un sel de l'un de ces composés, ou un stéréoisomère ou un mélange de stéréoisomères de l'un de ces composés.

- 35 **14.** Composé conforme à la revendication 13, choisi dans l'ensemble formé par les suivants :

- 2-[3-hydroxy-4-(4-hydroxy-pipéridin-1-yl)-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 40 - N-[3-(1H-imidazol-1-yl)-propyl]-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 2-[3-hydroxy-3-méthyl-4-(4-méthyl-pipérazin-1-yl)-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- N-[2-(diméthylamino)-éthyl]-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 45 - N-[3-(diméthylamino)-propyl]-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 2-[4-(4-acétyl-pipérazin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 2-[3-hydroxy-3-méthyl-4-oxo-4-(pipérazin-1-yl)-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 50 - 2-[4-(4-benzoyl-pipérazin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- (*R*)-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- (*S*)-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide
- 2-[3-hydroxy-4-(4-isopropyl-pipérazin-1-yl)-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- 55 - 2-[4-(4-(cyclopropyl-carbonyl)-pipérazin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- (*R*)-2-[4-(4-acétyl-pipérazin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione

dione

- (S)-2-[4-(4-acétyl-pipérazin-1-yl)-3-hydroxy-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- (R)-2-[3-hydroxy-4-(4-hydroxy-pipéridin-1-yl)-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione
- (S)-2-[3-hydroxy-4-(4-hydroxy-pipéridin-1-yl)-3-méthyl-4-oxo-butyl]-3,5,6-triméthyl-cyclohexa-2,5-diène-1,4-dione

ou un sel de l'un de ces composés, ou un stéréoisomère ou un mélange de stéréoisomères de l'un de ces composés.

**15.** Composé conforme à la revendication 14, lequel composé est le suivant :

- 2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide

ou un sel de ce composé, ou un stéréoisomère ou un mélange de stéréoisomères de ce composé.

**16.** Composé conforme à la revendication 14, lequel composé est le suivant :

- (R)-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide

ou un sel de ce composé.

**17.** Composé conforme à la revendication 14, lequel composé est le suivant :

- (S)-2-hydroxy-2-méthyl-4-(2,4,5-triméthyl-3,6-dioxo-cyclohexa-1,4-diényl)-butanamide

ou un sel de ce composé.

**18.** Composition pharmaceutique comprenant un composé conforme à l'une des revendications 1 à 17, conjointement avec un excipient, support ou véhicule pharmacologiquement admissible.

**19.** Composé conforme à l'une des revendications 1 à 17, ou composition conforme à la revendication 18, pour utilisation dans un procédé de traitement ou de suppression d'un trouble mitochondrial, de modulation d'un ou de plusieurs biomarqueurs énergétiques, de normalisation d'un ou de plusieurs biomarqueurs énergétiques, ou de stimulation d'un ou de plusieurs biomarqueurs énergétiques, lequel procédé comporte le fait d'administrer à un sujet, en une quantité efficace ou à effet thérapeutique, du composé ou de la composition.

**20.** Composé conforme à l'une des revendications 1 à 17, ou composition conforme à la revendication 18, pour utilisation dans un procédé de traitement ou de suppression d'un trouble mitochondrial, lequel procédé comporte le fait d'administrer, en une quantité à effet thérapeutique, du composé ou de la composition, étant entendu que le trouble mitochondrial est choisi dans l'ensemble formé par les troubles suivants : maladies mitochondriales héréditaires, épilepsie myoclonique à fibres rouges déchiquetées (MERRF), syndrome MELAS (myopathie mitochondriale, encéphalopathie, acidose lactique et attaque), neuropathie optique héréditaire de Leber (NOHL), maladie ou syndrome de Leigh, syndrome de Kearns (SK), ataxie de Friedreich (AF), autres myopathies, cardiomyopathie, encéphalomyopathie, acidose tubulaire rénale, maladies neurodégénératives, maladie de Parkinson, maladie d'Alzheimer, sclérose latérale amyotrophique (SLA), maladies des neurones moteurs, autres maladies neurologiques, épilepsie, maladies génétiques, chorée de Huntington, troubles de l'humeur, schizophrénie, trouble bipolaire, maladies liées à l'âge, accidents vasculaires cérébraux, dégénérescence maculaire, diabète et cancers.

**21.** Composé ou composition conforme à la revendication 19, pour utilisation dans le traitement ou la suppression d'un trouble mitochondrial, lequel trouble mitochondrial est une maladie liée à l'âge.

**22.** Composé ou composition conforme à la revendication 19, pour utilisation dans le traitement ou la suppression d'un trouble mitochondrial, lequel trouble mitochondrial est la maladie de Parkinson.

**23.** Composé ou composition conforme à la revendication 19, pour utilisation dans le traitement ou la suppression d'un trouble mitochondrial, lequel trouble mitochondrial est la maladie d'Alzheimer.

24. Composé ou composition conforme à la revendication 19, pour utilisation dans le traitement ou la suppression d'un trouble mitochondrial, lequel trouble mitochondrial est la sclérose latérale amyotrophique (SLA).
- 5 25. Composé ou composition conforme à la revendication 19, pour utilisation dans le traitement ou la suppression d'un trouble mitochondrial, lequel trouble mitochondrial est l'épilepsie.
26. Composé ou composition conforme à la revendication 19, pour utilisation dans le traitement ou la suppression d'un trouble mitochondrial, lequel trouble mitochondrial est la chorée de Huntington.
- 10 27. Composé ou composition conforme à la revendication 19, pour utilisation dans le traitement ou la suppression d'un trouble mitochondrial, lequel trouble mitochondrial est la schizophrénie.
28. Composé ou composition conforme à la revendication 19, pour utilisation dans le traitement ou la suppression d'un trouble mitochondrial, lequel trouble mitochondrial est le trouble bipolaire.
- 15 29. Composé ou composition conforme à la revendication 19, pour utilisation dans le traitement ou la suppression d'un trouble mitochondrial, lequel trouble mitochondrial est un accident vasculaire cérébral.
30. Composé ou composition conforme à la revendication 19, pour utilisation dans le traitement ou la suppression d'un trouble mitochondrial, lequel trouble mitochondrial provoque des crises.
- 20 31. Composé ou composition conforme à la revendication 19, pour utilisation dans le traitement ou la suppression d'un trouble mitochondrial, lequel trouble mitochondrial est une attaque.
- 25 32. Composé conforme à l'une des revendications 1 à 17, ou composition conforme à la revendication 18, pour utilisation dans un procédé de traitement d'un sujet souffrant d'un trouble envahissant du développement, lequel procédé comporte le fait d'administrer au sujet, en une quantité à effet thérapeutique, du composé ou de la composition, étant entendu que le trouble envahissant du développement est choisi dans l'ensemble formé par les suivants : trouble autistique, syndrome d'Asperger, trouble désintégratif de l'enfance (TDE), syndrome de Rett, et trouble envahissant du développement non autrement spécifié (TED-ns).
- 30 33. Composé ou composition conforme à l'une des revendications 19 à 31 pour utilisation définie dans lesdites revendications, dans laquelle le procédé est un procédé de traitement du trouble mitochondrial.
- 35 34. Utilisation d'un composé conforme à l'une des revendications 1 à 17, ou d'une composition conforme à la revendication 18, dans la fabrication d'un médicament destiné à être utilisé
  - i) dans le traitement ou la suppression d'un trouble mitochondrial, tel que défini dans l'une des revendications 19 à 31 et 33, ou dans la modulation d'un ou de plusieurs biomarqueurs énergétiques, la normalisation d'un ou de plusieurs biomarqueurs énergétiques ou la stimulation d'un ou de plusieurs biomarqueurs énergétiques,
  - 40 ii) ou dans le traitement d'un trouble envahissant du développement, tel que défini dans la revendication 32.

## SZABADALMI IGÉNYPONTOK

1. Vegyület képlet I szerinti:

képlet I

5 ahol R ki van választva a következőkből álló csoportból::

ahol a \* R kapcsolódási pontját jelzi a molekula maradékához;

$R^1$ ,  $R^2$ , és  $R^3$  függetlenül ki van választva a következőkből álló csoportból: hidrogén és  $C_1$ - $C_6$ -alkil;

10  $R^4$   $C_1$ - $C_6$ -alkil;

$R^5$  és  $R^6$  függetlenül ki van választva a következőkből álló csoportból: hidrogén, hidroxil, alkoxil,  $C_1$ - $C_{40}$ -alkil,  $C_1$ - $C_{40}$ -alkenil,  $C_1$ - $C_{40}$ -alkinil, és aril; ahol az alkil, alkenil, alkinil, vagy aril csoportok opcionálisan szubsztituálva vannak a következővel:

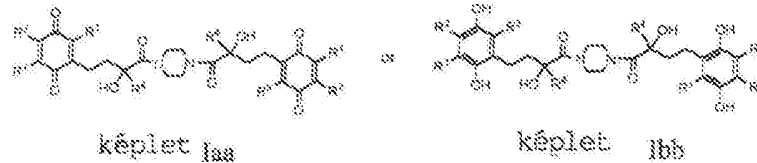

15  $-OR^{10}$ ,  $-S(O)_{0-2}R^{10}$ ,  $-CN$ ,  $-F$ ,  $-Cl$ ,  $-Br$ ,  $-I$ ,  $-NR^{10}R^{10'}$ , oxo,  $C_3$ - $C_6$ -cikloalkil, aril, aril- $C_1$ - $C_6$ -alkil, heteroaril, heterociklil,  $-C(O)-R^{11}$ ,  $-C(O)-C_0$ - $C_6$ -alkil-aril,  $-C(O)-OR^{11}$ ,  $-C(O)-O-C_0$ - $C_6$ -alkil-aril,  $-C(O)-N-R^{11}R^{11'}$ ,  $-C(O)-NH-C_0$ - $C_6$ -alkil-aril,  $-NH-C(O)-R^{11}$ , vagy  $-NH-C(O)-C_0$ - $C_6$ -alkil-aril; ahol az aril, heteroaril és heterociklil gyűrű szubsztituensek opcionálisan továbbá szubsztituálva vannak a következővel:  $C_1$ - $C_6$ -alkil,  $C_3$ - $C_6$ -haloalkil, oxo, hidroxil,  $C_1$ - $C_6$ -alkoxil,  $-C(O)-C_1$ - $C_6$ -alkil, vagy  $-C(O)-O-C_1$ - $C_6$ -alkil; és ahol az alkil, alkenil, vagy alkinil csoportok szeneinek egyike opcionálisan szubsztituálva van a következővel:

20 egy heteroatom, amely ki van választva a következőkből álló csoportból:  $-O-$ ,  $-N-$  és  $-S-$ ; vagy

$R^5$  és  $R^6$  együtt az atommal, amelyhez kapcsolódnak, egy telített vagy telítetlen 3-8 tagú gyűrűt képeznek, opcionálisan magában foglalva 1, 2, vagy 3 további N, O, vagy S atomot, opcionálisan szubsztituálva a következővel: oxo,  $-OR^{10}$ ,  $-SR^{10}$ ,  $-CN$ ,  $-F$ ,  $-Cl$ ,  $-Br$ ,  $-I$ ,  $-NR^{10}R^{10'}$ ,  $C_1$ - $C_6$ -alkil,  $C_1$ - $C_6$ -haloalkil, hidroxil- $C_1$ - $C_6$ -alkil-,  $-C(O)-H$ ,  $-C(O)-C_1$ - $C_6$ -alkil,  $-C(O)$ -aril,  $-C(O)-OH$ , vagy  $-C(O)-O-C_1$ - $C_6$ -alkil; vagy

25

$R^5$  és  $R^6$  együtt a nitrogén atommal, amelyhez kapcsolódnak,  $N,N'$ -diszubsztituált piperazint képeznek, ahol a nitrogén szubsztitúció a 4-helyen egy csoport, amely azonos a szubsztitúcióval az 1-helyen, egy a képlet Iaa vagy Ibb szerinti vegyületet képezve, ahol  $R^1$ ,  $R^2$ ,  $R^3$ , és  $R^4$  ahogy a fentiekben van definiálva:

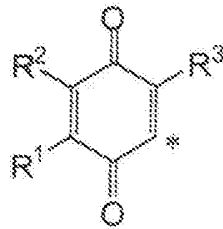

$R^{10}$  és  $R^{11}$  függetlenül ki van választva a következőkből álló csoportból: hidrogén,  $C_1$ - $C_6$ -alkil,  $C_1$ - $C_6$ -haloalkil, aril, aril- $C_1$ - $C_6$ -alkil, heteroaril, heterociklil,  $-C(O)-H$ ,  $-C(O)-C_1-C_6$ -alkil,  $-C(O)$ -aril, és  $-C(O)-C_1-C_6$ -alkil-aril;

5  $R^{12}$  és  $R^{13}$  ki van választva a következőkből álló csoportból: hidrogén és  $C_1$ - $C_6$ -alkil; és

$M$  és  $M'$  függetlenül ki van választva a következőkből álló csoportból: hidrogén,  $-C(O)-R^{12}$ ,  $-C(O)-C_1-C_6$ -alkenil,  $-C(O)-C_1-C_6$ -alkinil,  $-C(O)$ -aril,  $-C(O)$ -heteroaril,  $-C(O)OR^{12}$ ,  $-C(O)NR^{12}R^{12}$ ,  $-SO_2OR^{12}$ ,  $-SO_2-C_1-C_6$ -alkil,  $-SO_2$ -halo- $C_1-C_6$ -alkil,  $-SO_2$ -aril,  $-SO_2-NR^{12}R^{12}$ ,  $-P(O)(OR^{12})(OR^{12})$ , és  $C$ -kapcsolt mono vagy di-peptid, ahol  $R^{12}$  hidrogén vagy  $C_1$ - $C_6$ -alkil opcionálisan szubsztituálva vannak a  
 10 következővel:  $-OH$ ,  $-NH_2$ ,  $-NH(C_1-C_6$ alkil),  $-N(C_1-C_6$ alkil) $_2$ ,  $-C(O)-OH$ ,  $-C(O)-O-C_1-C_6$ -alkil, vagy halogén;

vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.

2. Az 1. igénypont szerinti vegyület, ahol  $R$

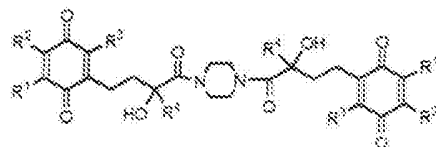

15 és

$R^5$  és  $R^6$  függetlenül ki van választva a következőkből álló csoportból: hidrogén, hidroxil, alkoxil,  $C_1$ - $C_{40}$ -alkil,  $C_1$ - $C_{40}$ -alkenil,  $C_1$ - $C_{40}$ -alkinil, és aril; ahol az alkil, alkenil, alkinil, vagy aril csoportok opcionálisan szubsztituálva vannak a következővel:

$-OR^{10}$ ,  $-S(O)_{0,2}R^{10}$ ,  $-CN$ ,  $-F$ ,  $-Cl$ ,  $-Br$ ,  $-I$ ,  $-NR^{10}R^{10}$ , oxo,  $C_1$ - $C_6$ -cikloalkil, aril, aril- $C_1$ - $C_6$ -alkil, heteroaril, heterociklil,  $-C(O)-R^{11}$ ,  $-C(O)-C_1-C_6$ -alkil-aril,  $-C(O)-OR^{11}$ ,  $-C(O)-O-C_1-C_6$ -alkil-aril,  $-C(O)-N-R^{11}R^{11}$ ,  $-C(O)-NH-C_1-C_6$ -alkil-aril,  $-NH-C(O)-R^{11}$ , vagy  $-NH-C(O)-C_1-C_6$ -alkil-aril; ahol az aril, heteroaril és heterociklil gyűrű szubsztituensek opcionálisan tovább szubsztituálva vannak a következővel:  $C_1$ - $C_6$ -alkil,  $C_1$ - $C_6$ -haloalkil, oxo, hidroxil,  $C_1$ - $C_6$ -alkoxil,  $-C(O)-C_1-C_6$ -alkil, vagy  $-C(O)-O-C_1-C_6$ -alkil; és ahol az alkil, alkenil, vagy alkinil csoportok szeneinek egyike opcionálisan szubsztituálva van a következővel:  
 25 egy heteroatom, amely ki van választva a következőkből álló csoportból:  $-O-$ ,  $-N-$  és  $-S-$ ; vagy

$R^5$  és  $R^6$  együtt az atommal, amelyhez kapcsolódnak, egy telített vagy telítetlen 3-8 tagú gyűrűt képeznek, opcionálisan magában foglalva 1, 2, vagy 3 további N, O, vagy S atomot, opcionálisan szubsztituálva a következővel: oxo,  $-OR^{10}$ ,  $-SR^{10}$ ,  $-CN$ ,  $-F$ ,  $-Cl$ ,  $-Br$ ,  $-I$ ,  $-NR^{10}R^{10}$ ,  $C_1$ - $C_6$ -alkil,  $C_1$ - $C_6$ -haloalkil, hidroxil- $C_1$ - $C_6$ -alkil,  $-C(O)-H$ ,  $-C(O)-C_1-C_6$ -alkil,  $-C(O)$ -aril,  $-C(O)-OH$ , vagy  $-C(O)-O-C_1-C_6$ -alkil; vagy  
 30 alkil; vagy

$R^5$  és  $R^6$  egyútt a nitrogén atommal, amelyhez kapcsolódnak egy *N,N'*-diszubsztituált piperazint képeznek, ahol a nitrogén szubsztitúció a 4-helyen, egy csoport, amely azonos a szubsztitúcióval az 1-helyen, a képlet Iaa szerinti vegyületet képezve, ahol  $R^1$ ,  $R^2$ ,  $R^3$ , és  $R^4$ , ahogy az 1. igénypontban definiálva van:

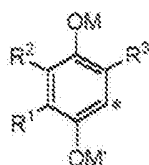

képlet Iaa:

3

vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.

3. Az 1. igénypont szerinti vegyület, ahol R

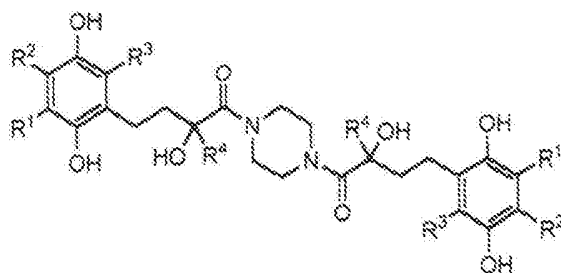

és

10  $R^5$  és  $R^6$  függetlenül ki van választva a következőkből álló csoportból: hidrogén, hidroxil, alkoxil,  $C_1$ - $C_{40}$ -alkil,  $C_1$ - $C_{40}$ -alkenil,  $C_1$ - $C_{40}$ -alkinil, és aril; ahol az alkil, alkenil, alkinil, vagy aril csoportok opcionálisan szubsztituálva vannak a következővel:

15  $-OR^{10}$ ,  $-S(O)_{0,2}R^{10}$ ,  $-CN$ ,  $-F$ ,  $-Cl$ ,  $-Br$ ,  $-I$ ,  $-NR^{10}R^{10'}$ , oxo,  $C_3$ - $C_6$ -cikloalkil, aril, aril- $C_1$ - $C_6$ -alkil, heteroaril, heterociklil,  $-C(O)-R^{11}$ ,  $-C(O)-C_0-C_6$ -alkil-aril,  $-C(O)-OR^{11}$ ,  $-C(O)-O-C_0-C_6$ -alkil-aril,  $-C(O)-N-R^{11}R^{11'}$ ,  $-C(O)-NH-C_0-C_6$ -alkil-aril,  $-NH-C(O)-R^{11}$ , vagy  $-NH-C(O)-C_0-C_6$ -alkil-aril; ahol az aril, heteroaril és heterociklil gyűrű szubsztituensek opcionálisan továbbá szubsztituálva vannak a következővel:  $C_1$ - $C_6$ -alkil,  $C_1$ - $C_6$ -haloalkil, oxo, hidroxil,  $C_1$ - $C_6$ -alkoxil,  $-C(O)-C_1-C_6$ -alkil, vagy  $-C(O)-O-C_1-C_6$ -alkil; és ahol az alkil, alkenil, vagy alkinil csoportok szeneinek egyike opcionálisan szubsztituálva van a következővel: egy heteroatom, amely ki van választva a következőkből álló csoportból:  $-O-$ ,  $-N-$  és  $-S-$ ; vagy

20  $R^5$  és  $R^6$  egyútt az atommal, amelyhez kapcsolódnak egy telített vagy telítetlen 3-8 tagú gyűrűt képeznek, opcionálisan magában foglalva 1, 2, vagy 3 további N, O, vagy S atomot, opcionálisan szubsztituálva a következővel: oxo,  $-OR^{10}$ ,  $-SR^{10}$ ,  $-CN$ ,  $-F$ ,  $-Cl$ ,  $-Br$ ,  $-I$ ,  $-NR^{10}R^{10'}$ ,  $C_1$ - $C_6$ -alkil,  $C_1$ - $C_6$ -haloalkil, hidroxil- $C_1$ - $C_6$ -alkil,  $-C(O)-H$ ,  $-C(O)-C_1-C_6$ -alkil,  $-C(O)$ -aril,  $-C(O)-OH$ , vagy  $-C(O)-O-C_1-C_6$ -alkil; vagy

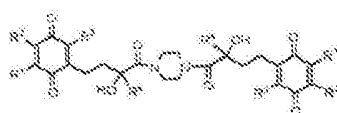

25  $R^5$  és  $R^6$  egyútt a nitrogén atommal, amelyhez kapcsolódnak egy *N,N'*-diszubsztituált piperazint képeznek, ahol a nitrogén szubsztitúció a 4-helyen egy csoport, amely azonos a szubsztitúcióval az 1-helyen, képezve egy, a képlet Ibb szerinti vegyületet, ahol  $R^1$ ,  $R^2$ ,  $R^3$ , és  $R^4$ , ahogy az az 1. igénypontban definiálva van:

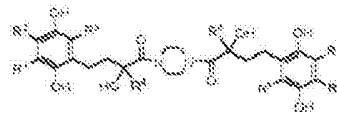

képlet Ibb;

vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.

4. A 2. vagy 3. igénypont szerinti vegyület, ahol  $R^1$ ,  $R^2$ ,  $R^3$ , és  $R^4$  metil; vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.
5. A 2. vagy 3. igénypont szerinti vegyület, ahol  $R^5$  hidrogén és  $R^6$   $C_1$ - $C_6$  alkil szubsztituálva van a következővel: hidroxil, alkoxil, vagy  $-C(O)O-C_1-C_6$  alkil; vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.
6. A 2. vagy 3. igénypont szerinti vegyület, ahol  $R^5$  hidrogén és  $R^6$   $C_1$ - $C_6$  alkil szubsztituálva van a következővel:  $-NR^{10}R^{10}$ , ahol  $R^{10}$  és  $R^{10}$  függetlenül ki van választva a következőkből álló csoportból: hidrogén,  $C_1$ - $C_6$ -alkil,  $C_1$ - $C_6$ -haloalkil, aril, aril- $C_1$ - $C_6$ -alkil, heteroaril, heterocikliklil,  $-C(O)-H$ ,  $-C(O)-C_1-C_6$ -alkil,  $-C(O)$ -aril és  $-C(O)-C_1-C_6$ -alkil-aril; vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.
7. A 2. vagy 3. igénypont szerinti vegyület, ahol  $R^5$  hidrogén és  $R^6$   $C_1$ - $C_6$  alkil szubsztituálva van a következővel: heterocikliklil vagy heteroaril; vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.
8. A 2. vagy 3. igénypont szerinti vegyület, ahol  $R^5$  és  $R^6$  együtt a nitrogén atommal, amelyhez kapcsolódnak, egy opcionálisan szubsztituált 3- 8 tagú nitrogént tartalmazó heterocikliklil gyűrűt képeznek; vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.
9. A 2. vagy 3. igénypont szerinti vegyület, ahol  $R^5$  és  $R^6$  együtt a nitrogén atommal, amelyhez kapcsolódnak, egy  $N,N'$ -diszubsztituált piperazint képeznek, ahol a nitrogén szubsztitúció a 4-helyen egy csoport, amely azonos a szubsztitúcióval az 1-helyen, a képlet Iaa vagy Ibb szerinti vegyületet képezve, ahol  $R^1$ ,  $R^2$ ,  $R^3$ , és  $R^4$ , ahogy az az 1. igénypontban van definiálva:

képlet Iaa

képlet Ibb

vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.

10. A 2. vagy 3. igénypont szerinti vegyület, ahol  $R^5$  és  $R^6$  függetlenül hidrogén vagy  $C_1$ - $C_6$  alkil, amely opcionálisan szubsztituálva van a következővel: aril; vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.

11. A 2. vagy 3. igénypont szerinti vegyület, ahol  $R^5$  és  $R^6$  egyike hidrogén és a másika  $C_1$ - $C_6$  alkil, amely opcionálisan szubsztituálva van a következővel: aril; vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.
12. A 2. vagy 3. igénypont szerinti vegyület, ahol  $R^5$  és  $R^6$  hidrogén; vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.
13. A 2. igénypont szerinti vegyület, amely ki van választva a következőkből álló csoportból::
- 2-hidroxi-*N*-izopropil-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-hidroxi-*N*-(2-hidroxietil)-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-(3-hidroxi-3-metil-4-oxo-4-(piperidin-1-il)butil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
  - 10 • 2-(4-(azepan-1-il)-3-hidroxi-3-metil-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
  - *N*-hexil-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - *N*-*tert*-butil-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-hidroxi-*N,N*,2-trimetil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - *N*-etil-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 15 • *N*-benzil-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil) butanamid;
  - 2-hidroxi-2-metil-*N*-propil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - *N*-(ciklopropilmetil)-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-hidroxi-2-metil-*N*-fenetil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 20 • 2-hidroxi-*N*-(3-hidroxiipropil)-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-hidroxi-*N*-izopentil-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - *N*-ciklopropil-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-(3-hidroxi-4-(4-hidroxiipiperidin-1-il)-3-metil-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
  - 25 • 2-hidroxi-*N*-izobutil-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - *N*-etil-2-hidroxi-*N*,2-dimetil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-hidroxi-*N*-(4-hidroxiibutil)-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-hidroxi-*N*-(5-hidroxiipentil)-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 30 • 2-hidroxi-*N*-(2-metoxietil)-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-hidroxi-*N*-(1-hidroxiopropan-2-il)-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - (*R*)-2-hidroxi-*N*-(2-hidroxietil)-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;

- (S)-2-hidroxi-N-(2-hidroxietyl)-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
- metil-2-(2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamido)acetate;
- N-(3-(1H-imidazol-1-il)propil)-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
- 2-hidroxi-N-(2-(2-hidroxi-etoksi)etil)-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
- 2-hidroxi-2-metil-N-(piridin-2-ilmetil)-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
- 2-hidroxi-2-metil-N-(2-(piridin-2-il)etil)-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
- 2-hidroxi-2-metil-N-(3-(2-oxopirrolidin-1-il)propil)-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
- 2-hidroxi-N-(2-hidroxi-propil)-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
- 2-hidroxi-N-(6-hidroxi-hexil)-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
- 2-(3-hidroxi-3-metil-4-(4-metilpiperazin-1-il)-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-diën-1,4-dion;
- 2-hidroxi-2-metil-N-((tetrahidrofuran-2-il)metil)-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;

- vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.

14. A 13. igénypont szerinti vegyület, amely ki van választva a következőkből álló csoportból:
- 2-(3-hidroxi-4-(4-hidroxipiperidin-1-il)-3-metil-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
  - 2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 5 • *N*-(3-(1*H*-imidazol-1-il)propil)-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-(3-hidroxi-3-metil-4-(4-metilpiperazin-1-il)-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
  - *N*-(2-(dimetilamino)etil)-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-
  - 10 dienil)butanamid;
  - *N*-(3-(dimetilamino)propil)-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 2-(4-(4-acetilpiperazin-1-il)-3-hidroxi-3-metil-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
  - 15 • 2-(3-hidroxi-3-metil-4-oxo-4-(piperazin-1-il)butil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
  - 2-(4-(4-benzoilpiperazin-1-il)-3-hidroxi-3-metil-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
  - (*R*)-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - (*S*)-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 20 • 2-(3-hidroxi-4-(4-izopropilpiperazin-1-il)-3-metil-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
  - 2-(4-(4-(ciklopropánkarbonil)piperazin-1-il)-3-hidroxi-3-metil-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
  - (*R*)-2-(4-(4-acetilpiperazin-1-il)-3-hidroxi-3-metil-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-
  - 25 1,4-dion;
  - (*S*)-2-(4-(4-acetilpiperazin-1-il)-3-hidroxi-3-metil-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
  - (*R*)-2-(3-hidroxi-4-(4-hidroxipiperidin-1-il)-3-metil-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion; és
  - 30 • (*S*)-2-(3-hidroxi-4-(4-hidroxipiperidin-1-il)-3-metil-4-oxobutil)-3,5,6-trimetilciklohexa-2,5-dién-1,4-dion;
- vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.
15. A 14. igénypont szerinti vegyület, ahol a vegyület:
- 2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;
  - 35 vagy annak sója, sztereoizomere vagy sztereoizomereinek keveréke.

16. A 14. igénypont szerinti vegyület, ahol a vegyület:  
• (*R*)-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;  
vagy annak sója.
17. A 14. igénypont szerinti vegyület, ahol a vegyület:  
5 • (*S*)-2-hidroxi-2-metil-4-(2,4,5-trimetil-3,6-dioxociklohexa-1,4-dienil)butanamid;  
vagy annak sója.
18. Gyógyszerészeti kompozíció, amely tartalmazza az 1-17. igénypontok bármelyikében definiált vegyületet, együtt egy gyógyszerészetileg elfogadható excipiensekkel, hordozóanyaggal vagy vehikulummal.
19. Az 1-17. igénypontok bármelyike szerinti vegyület vagy a 18. igénypont szerinti kompozíció  
10 felhasználásra eljárásban mitokondriális betegség kezeléséhez vagy elnyomásához, egy vagy több energia biomarker modulálásához, egy vagy több energia biomarker modulálásához, vagy egy vagy több energia biomarker feljavításához, az eljárás tartalmazza a vegyület vagy kompozíció terápiásan hatásos vagy hatásos mennyiségének adagolását alanyoknak.
20. Az 1-17. igénypontok bármelyike szerinti vegyület vagy a 18. igénypont szerinti kompozíció  
15 felhasználásra eljárásban mitokondriális betegség kezeléséhez vagy elnyomásához, az eljárás tartalmazza a vegyület vagy kompozíció terápiásan hatásos mennyiségének adagolását, ahol a mitokondriális betegség ki van választva a következőkből álló csoportból: örökölt mitokondriális betegségek; myoklonusos epilepszia rongyos vörös rostokkal (MERRF); mitokondriális myopathia, encephalopathia, lactacidosis, és Stroke (MELAS); Leber örökletes optikai neuropathia (LHON); Leigh betegség vagy szindróma; Kearns-Sayre szindróma (KSS); Friedreich Ataxia (FA); más myopathiák; cardiomyopathia; encephalomyopathia; renális tubularis acidosis; neurodegeneratív betegségek; Parkinson kór; Alzheimer betegség; amyotrófiás laterális sclerosis (ALS); motoros neuron betegségek; más neurológiai betegségek; epilepszia; genetikai betegségek; Huntington betegség; hangulat betegségek; skizofrénia; bipoláris betegség; korral összefüggő betegségek; cerebrális vasculáris balesetek, macula degeneráció; diabétesz; és rák.
- 25 21. A 19. igénypont szerinti vegyület vagy kompozíció felhasználásra mitokondriális betegség kezeléséhez vagy elnyomásához, ahol a mitokondriális betegség korral összefüggő betegség.
22. A 19. igénypont szerinti vegyület vagy kompozíció felhasználásra mitokondriális betegség kezeléséhez vagy elnyomásához, ahol a mitokondriális betegség Parkinson betegség.
23. A 19. igénypont szerinti vegyület vagy kompozíció felhasználásra mitokondriális betegség  
30 kezeléséhez vagy elnyomásához, ahol a mitokondriális betegség Alzheimer kór.
24. A 19. igénypont szerinti vegyület vagy kompozíció felhasználásra mitokondriális betegség kezeléséhez vagy elnyomásához, ahol a mitokondriális betegség amyotrófiás laterális sclerosis (ALS).
25. A 19. igénypont szerinti vegyület vagy kompozíció felhasználásra mitokondriális betegség kezeléséhez vagy elnyomásához, ahol a mitokondriális betegség epilepszia.
- 35 26. A 19. igénypont szerinti vegyület vagy kompozíció felhasználásra mitokondriális betegség kezeléséhez vagy elnyomásához, ahol a mitokondriális betegség Huntington betegség.

27. A 19. igénypont szerinti vegyület vagy kompozíció felhasználásra mitokondriális betegség kezeléséhez vagy elnyomásához, ahol a mitokondriális betegség skizofrénia.
28. A 19. igénypont szerinti vegyület vagy kompozíció felhasználásra mitokondriális betegség kezeléséhez vagy elnyomásához, ahol a mitokondriális betegség bipoláris betegség.
- 5 29. A 19. igénypont szerinti vegyület vagy kompozíció felhasználásra mitokondriális betegség kezeléséhez vagy elnyomásához, ahol a mitokondriális betegség a cerebralis vascularis baleset.
30. A 19. igénypont szerinti vegyület vagy kompozíció felhasználásra mitokondriális betegség kezeléséhez vagy elnyomásához, ahol a mitokondriális betegség roham.
31. A 19. igénypont szerinti vegyület vagy kompozíció felhasználásra mitokondriális betegség  
10 kezeléséhez vagy elnyomásához, ahol a mitokondriális betegség stroke.
32. Az 1-17. igénypontok bármelyike szerinti vegyület vagy a 18. igénypont szerinti kompozíció felhasználásra eljárásban alany kezeléséhez, aki pervazív fejlődési betegségtől szenved, az eljárás tartalmazza a vegyület vagy kompozíció terápiásan hatásos mennyiségének adagolását az alany számára, ahol a pervazív fejlődési betegség ki van választva a következőkből álló csoportból: autista betegség,  
15 Asperger betegség, gyermek disintegratív betegség (CDD), Rett betegség, és pervazív fejlődési betegség-nem másképp specifikálva (PDD-NOS).
33. A 19-31. igénypontok bármelyike szerinti vegyület vagy kompozíció felhasználásra, ahogy az az igénypontokban definiálva van, ahol az eljárás eljárás mitokondriális betegség kezelésére.
34. Az 1-17. igénypontok bármelyike szerinti vegyület vagy a 18. igénypont szerinti kompozíció  
20 felhasználásra gyógyszer előállítására, amely a következőkre szolgál: (i) mitokondriális betegség kezelésére vagy elnyomására, ahogy az 19-31. igénypontok bármelyikében vagy a 33. igénypontban van definiálva, egy vagy több energia biomarker modulálására, egy vagy több energia biomarker normalizálására, vagy egy vagy több energia biomarker feljavítására; vagy (ii) pervazív fejlődési betegség kezelésére, ahogy az a 32. igénypontban definiálva van.
