⑤④ **A display device.**

⑤⑦ A display device comprises a frame supporting in parallel spaced apart relationship a sheet of reflective glass (130) and a mirror (120). The mirror (120) is etched to define the outline of matter to be displayed. A lighting unit (170) which is encased in a housing (160) fixed to the frame is located on the side of the mirror (120) remote from the sheet of reflective glass (130). Light from the lighting unit (170) projects the matter to be displayed onto the sheet of reflective glass (130) so that when the display is viewed from the side of the sheet of reflective glass (130) remote from the mirror (120) there is produced a multiple reflection of matter to be displayed. A proportion of the matter to be displayed is printed onto a light diffuser sheet (167) provided between the mirror (120) and the lighting unit (170). A photographically produced colour transparency (166) of the remainder of the matter to be displayed is secured between the diffuser sheet (167) and the mirror (120).
