UNITED STATES PATENT OFFICE

JACOB ZATZKIN, OF BROOKLYN, NEW YORK, ASSIGNOR TO EAGLE METALIC BED CORPORATION, OF BROOKLYN, NEW YORK, A CORPORATION OF NEW YORK

COMBINED BED END AND WARDROBE

Application filed July 13, 1929. Serial No. 378,005.

This invention relates to combined bed ends and wardrobes, chifforobes, chest of drawers, medicine chests and the like and has for one of its objects the provision of a bed end of this character of simple and inexpensive construction adapted for use in the home, hospital or anywhere a saving of space is desirable.

Another object is to produce a device of the character described in which the maximum simplicity of construction and operation is secured.

Other objects and advantages will appear as the nature of the improvements is better understood, the invention consisting substantially in the novel arrangement and co-relation of parts herein fully described, and illustrated in the accompanying drawings, wherein similar reference characters are used to describe corresponding parts throughout the several views, and then finally pointed out and specifically defined and indicated in the appended claims.

The disclosure made the basis of exemplifying the present inventive concept suggests a practical embodiment thereof, but the invention is not to be restricted to the exact details of this disclosure, and the latter, therefore, is to be understood from an illustrative, rather than a restrictive standpoint.

The inventive idea involved is capable of receiving a variety of mechanical expressions, one of which, for the purpose of illustration, is shown in the accompanying drawings, in which

Figure 1 is a view in perspective of a preferred form of my invention.

Figure 2 is a sectional view taken on line 2—2 Fig. 1 and Fig. 3 is a longitudinal sectional view taken on line 3—3 Fig. 2.

Referring to the drawings in detail 5 indicates a combined bed end and wardrobe or the like comprising a casing 6 preferably made of metal, although other suitable material, such as wood, for instance, may be used.

In the present disclosure I have illustrated my invention as consisting of the casing 6 provided with a rear wall 7 inner side walls 8 and outer angular side walls 9 bent up from a single sheet of metal. The casing 6 may be reenforced by means of longitudinal tubular members 10 adapted to receive the ends of the angular side walls 9, and the said tubular members 10 are in turn secured as by soldering to bed posts 11. To further reenforce and tie the casing 6 together, I provide a horizontal tubular member 12 adapted to receive the bottom end of the rear wall 7 and secure the said tubular member to the posts 11 by brazing, soldering or the like. The bed posts 11 have secured to them the usual bed or spring rail retaining members 14 for receiving the ends of the spring supporting rails 15.

The inner side walls 8 have secured to them shelves 18 providing means for slidingly supporting thereon drawers 19, suitable drawpulls or handles 20 are provided for sliding the said drawers inwardly and outwardly. The casing 6 is supported on the bed posts 11 and front legs 21.

Instead of providing drawers I may if desired provide closets instead or may divide the casing so as to have a combined closet and wardrobe bed end.

From the foregoing it will be seen that I have provided a combined bed end and wardrobe or the like simple and efficient in construction and adapted for use in the home and hospital or wherever the saving of space is desirable.

Having described my invention what I claim as new and desire to secure by Letters Patent is:

1. A combined bed end and wardrobe, comprising bed posts, a casing having a rear wall, inner side walls at right angles to the rear wall, outer angular side walls secured to the bed posts, and a tying member on the rear wall secured to the bed posts.

2. A combined bed end and wardrobe, com-

prising bed posts, a casing having a rear wall, inner side walls extending from the rear wall, and outer side walls extending from the forward end of the inner side walls and secured to the bed posts.

3. A combined bed end and wardrobe, comprising bed posts, a casing having a rear wall, inner side walls extending from the rear wall, outer side walls extending from the inner side walls and secured to the bed posts, and tying means extending from the rear wall to the bed posts.

JACOB ZATZKIN.
