UNITED STATES PATENT OFFICE.

RICHARD H. WELLES, OF KENOSHA, WISCONSIN.

CATALOGUING-CHART

1,058,690.

Specification of Letters Patent.

Patented Apr. 8, 1913.

Application filed May 3, 1909. Serial No. 493,458.

To all whom it may concern:

Be it known that I, RICHARD H. WELLES, a citizen of the United States, residing in the city of Kenosha, county of Kenosha, and State of Wisconsin, have invented certain new and useful Improvements in Cataloguing-Charts, of which the following is a specification.

This invention relates to improvements in cataloguing charts and has among its salient objects, to provide a chart or print representing a given mechanism or device, the various parts or accessories of which are each so associated with certain identifying or cataloguing data upon the printed face of the chart, that the user thereof can by simply glancing at any given part of the device obtain the desired identifying or cataloguing information; to provide a construction of the above character of which all of the identifying or cataloguing data for any given part of the device represented on the chart is compactly grouped together in an outline space whereby it may be more readily found; to provide in each of said outline spaces, data showing the various grades or qualities of the associated part or accessory, and the cataloguing numerals, prices, etc., for each grade; to provide a chart which permits of considerable variation and arrangement in the character of the outline spaces in order to give an attractive and finished appearance to the chart as a whole, and in general to provide an improved construction of the character referred to.

The invention consists in the matters hereinafter described and more particularly pointed out in the appended claim.

In the drawing Figure 1 represents a motor car equipped with various kinds of lamps or head lights, and each lamp associated with an outline space upon which is printed certain identifying or cataloguing data. Fig. 2 represents a page of the catalogue giving cataloguing data regarding one of the accessories shown in Fig. 1.

Referring to the drawing, 1 designates as a whole a motor car equipped with various kinds of lamps or head lights, each of which is mounted in its normal position upon the car. Referring to these lamps 2 designates the head-lights mounted in front of the hood, 3 designates the side-dash lamps secured at the side of the car in the rear of the hood; 4 the search lights secured as usual directly in front of the steering wheel; 5

the tail lamps at the rear of the car; 6 the lamps; 7 the generator mounted in its usual position above the foot board of the car as shown. The face of the chart is provided with a plurality of outline spaces 8, 8, each of which is associated with one of the lamps by an arrow 9 and leading line 10. The generator 7 is similarly associated with an outline space 11 provided with a similar arrow 12 and leading line 13. These outline spaces 8 and 11 are each provided with a heading corresponding to the part of the car with which they are associated. For example the outline space 8 associated with the lamps 2 has printed thereon the heading "Headlights"; and the outline space associated with the lamps 5 is similarly provided with a heading "Tail lamps." The remaining outline spaces are correspondingly provided with the proper heading as clearly shown in the drawing. Upon each of these outline spaces is printed certain cataloguing data. Referring to the outline space 8 associated with the side dash lamps, we find thereon beside the heading the following: "820" "\$3.75" page "31," and also "922E" "\$5.50" page "36." The numerals "820" and "922E" refer to the cataloguing numerals of two different grades or styles of side dash lamps, the figures "\$3.75" and "\$5.50" the prices thereof, and page "31" and page "36" the page number of the catalogue upon which this data and other descriptive matter will be found. It is, of course, apparent that the cataloguing or identifying data upon the face of the outlined space may be varied as desired.

In Fig. 2 is shown a page of the catalogue associated with the chart, which page gives cataloguing information regarding one of the accessories shown in the chart, as for example, the searchlight marked 4 on the chart. The other accessory shown in the chart will have similar cataloguing data on the proper page of the catalogue.

From the foregoing it will be seen that I secure the objects of the invention heretofore stated in a simple and effective manner.

It is apparent that the chart may be considerably varied in style and manner of arrangement without departing from the spirit of the invention.

I claim as my invention:

The combination with a catalogue, of a reference chart therefor, said chart comprising a picture of a main device adapted to be

equipped with various accessories, each of which pertain functionally to a definite location on said main device, representations of sundry accessories respectively shown in said chart applied in their proper locations, a group of reference data printed on the chart for each of the pictured accessories, each group of reference data referring to the page of the catalogue on which will be found a detailed description of such accessory relating to prices, sizes and characteristic features of such accessory, and a tail line leading from each such group on the chart to its corresponding pictured accessory where-

by at a glance the reference data is associated with the proper accessory and ready reference may be had to the more detailed description of such accessory in the catalogue, and said catalogue comprising a plurality of numbered pages, such pages bearing complete data relative to the reference data printed on the chart for a given one of the pictured accessories identified by a like page number.
