M.^{rs} P. Bresson, David Stuart, & Jacob Beesby, Philadelphia, Penn.,
Letters Patent (Design N^o. 75) dated 25th July 1846

The Schedule referred to in these Letters Patent and
making part of the same. —

To all whom it may concern:

Recorded in Fig. 1 A. A. and more particularly in Fig. 2 A. A. the circular corners are each ornamented over their corners with a scroll Fig. 2 B B B B. Fig. 3 represents the side plates and also intended to form the back of the Base its general form is an oblong square and is built in a circular form intended to form part of the tricolour corner it is ornamented on the top and bottom edge of the plate

Be it known that we, Wm. P. Hession, David Stuart & Jacob Beesly all of the County of Philadelphia in the State of Pennsylvania have invented a new and useful Design for a cast iron Stove Base, and do hereby declare that the following is a full and exact description of the particular plates which we wish to Patent —

The general form of the Base when complete will be square the height not so great as the length and breadth, the four upright corners will be tricolour pilasters —

The plates which we wish to Patent the particular form together with the ornamental device on each are fully represented in the accompanying drawings, to say, —

Fig. 1 represents the bottom plate, or as usually denominated the hearth plate, its general form is an oblong square, there is an ornamental — moulding, filled round the ledges placed on it and intended to receive and steady the side, front plates and pilaster corners of the stove represented at Fig. 1 A A. And the hearth or top of the stove which is formed by extending the square form of this plate is ornamented with a series of scrolls & scrolls, particularly represented in the drawing Fig. 1 B B B.

Fig. 2 represents the top plate of the Base on which is a collar intended to receive & steady the body of the stove or superstructure of the Base its general form is square with extended circular corners intended to form an are or capping to the tri column corners of the Base, it is ornamented with the same moulding filled round the collar and edge of the plate, with the same moulding as represented in A A Fig. 1 & A A Fig. 2 the circular ends are ornamented with leaf work carved in a horizontal position or around the column with intermediate tongues to fill the spaces represented Fig. 3 B B. The centre of the plate is ornamented with a raised panel of oval form highly ornamented around the edge and on the top with leaf and flower work as particularly represented on the drawing Fig. 3 D.

We have thus described and represented the general form and particularly the respective plates which we wish to Patent and do hereby claim the
