(54) Title: NON-CONVENTIONAL SOURCE FOR POWER PRODUCTION USING STAGNANT WATER

Fig 1

(57) Abstract: A hydro electric generation system that uses electricity from an outer source in the initial stage to produce electricity from stagnant water and becomes self powered after the production starts. The stagnant water used to rotate the turbine is splashed on it in such a way or direction (horizontal or oblique) that requires less input of electric power and give more amount of electric power or electric energy. The stagnant water used in the system can be recycled, and this makes the system easily implemented anywhere or in any place where we get stagnant water easily and round the year.
