wherein

\(R^1, R^2, R^3, R^4, \) and \( R^5 \) are defined as in claim 1 and pharmaceutically acceptable salts thereof and the use of these compounds for the preparation of a medicament for treating a disease selected from asthma, COPD, rheumatoid arthritis, specific lymphomas and specific diseases of the nervous system.

1. Background to the invention

1.1 Syk-inhibitors

The present invention describes new substituted quinolines that inhibit the protein kinase Syk (spleen tyrosine kinase), the preparation and formulation thereof and their use for preparing a medicament.

Syk is an intracellular tyrosine kinase that has an important mediator function in the signal transduction of different receptors in B-cells, mast cells, monocytes, macrophages, neutrophils, T-cells, dendritic cells and epithelial cells. The receptors in which Syk performs an important function in signal transduction include for example the receptors for IgE (FcsRI) and IgG (FcyR1) on mast cells and B cells, the B-cell receptor (BCR) and the T-cell receptor (TCR) on B- and T-cells, the ICAM1 receptor (ICAM1 R) on epithelial cells of the respiratory tract, the DAP12-receptor on natural killer cells, dendritic cells and osteoclasts, the dectin 1-receptor on a subpopulation of T-helper cells (Th-17 cells), as well as the integrin receptors for \( \beta_1-, \beta_2- \) and \( \beta_3-\text{ integrin} \) on neutrophils, monocytes and macrophages (Wong et al.; Expert Opin. Investig. Drugs (2004) 13(7), 743-762; Ulanova et al.; Expert Opion. Ther.
Target (2005) 9(5); 901-921; Wang et al.; J. Immunol. (2006) 177, 6859-6870; Leib und Gut-Landmann et al.; Nature Immunology (2007) 8, 630-638; Slack et al., European J. Immunol. (2007) 37, 1600-1612. The molecular processes are described best for the signal transduction of the FcsRI. In mast cells the binding of IgE to FcsRI causes the cross-linking of IgE-receptors and the recruiting and activation of Lyn (a tyrosine kinase from the Src family). Active Lyn phosphorylates so-called ITAM motifs, which are present in many of the receptors listed above, and thereby generates binding sites for the SH2-domain of Syk. As a result of the binding to the ITAM motif Syk is activated and then phosphorylates various substrates which are needed for the release of allergic and inflammatory mediators such as e.g. histamine and β-hexosamidase (βHA), as well as for the synthesis of lipid mediators, such as e.g. prostaglandins and leukotrienes.

Allergic rhinitis and asthma are diseases associated with allergic reactions and inflammatory processes and involving different cell types such as e.g. Mast cells, eosinophils, T-cells and dendritic cells. After exposure to allergens has occurred, the high affinity immunoglobulin receptors for IgE (FcsRI) and IgG (FcyR1) are activated and induce the release of pro-inflammatory mediators and bronchoconstrictors. An inhibitor of the Syk kinase activity should thus be able to inhibit these steps.

Rheumatoid arthritis (RA) is an autoimmune disease in which the bones and ligaments structures surrounding the joints are progressively destroyed. In the pathophysiology of RA, B-cells play a significant role, as has been demonstrated for example by the therapeutic use of rituximab, a B cell-depleting antibody. In addition to the function of Syk in the signal transduction of the BCR (which after being stimulated also induces the release of pro-inflammatory mediators), Syk also plays an important part in the maturation and proliferation of B cells (Cheng et al. Nature (1995) 378, 303-306, Cornall et al., PNAS (2000) 97(4), 1713-1718). An inhibitor of the Syk kinase activity may thus offer a therapeutic option for the treatment of autoimmune diseases such as RA and diseases with an increased proliferation of B cells, such as e.g. B-cell lymphomas.
Chronic obstructive pulmonary disease (COPD) is characterised by a successive deterioration in lung function and chronic inflammation of the airways, which is initiated and produced by noxious substances of all kinds and contributes to the maintenance of the course of the disease. At a cellular level, in COPD there is in particular a multiplication of T-lymphocytes, neutrophils, granulocytes and macrophages. In particular, there is an increase in the number of CD8-positive lymphocytes, that is directly connected with the impairment of lung function. Another characteristic of COPD are acute deteriorations in lung function (exacerbations), characterised by viral (e.g. Rhinovirus), or bacterial (e.g. Streptococcus pneumoniae, Haemophilus influenzae and Moraxella catarrhalis) infections.

In view of the pro-inflammatory function of Syk in macrophages, T-cells and neutrophils as described above (see: Wong et al.; Expert Opin. Investig. Drugs (2004) 13(7), 743-762; and references cited therein) an inhibitor of the Syk kinase activity could be a new therapeutic approach to the treatment of the inflammatory processes that underlie COPD. It has also been shown that Syk in epithelial cells of the respiratory tract is involved in the ICAM1 R-mediated uptake and subsequent replication of the Rhinovirus and that a si-RNA against Syk blocks these steps (Wang et al.; J. Immunol. (2006) 177, 6859-6870; Lau et al.; J. Immunol. (2008) 180, 870-880). Thus, an inhibitor of the Syk kinase activity could also be used therapeutically in exacerbations caused by Rhinoviruses.

Various studies suggest that Syk is involved in the malignant transformation of lymphocytes (summarised in Sigh and Masuda, Annual Reports in Medicinal Chemistry (2007) Vol 42; 379-391). A TEL-Syk fusion protein with a constitutive Syk activity transformed B cells of a patient with myelodysplastic syndrome, a constitutively active ITK-Syk fusion protein was isolated from patients with peripheral T-cell lymphomas (PTCL). Moreover, constitutively active Syk was found in B-cell lymphoma cells of patients, especially in B-lineage acute lymphoblastic leukemia (B-ALL), follicular lymphoma (FL), diffuse large B-cell lymphoma (DLBCL), mantle cell lymphomas and B cell Non-Hodgkin Lymphomas (NHLs) as well as in acute myeloid leukemia (AML). On the basis of these data it seems that Syk is a proto-oncogene in haematopoietic cells and represents a potential target for the treatment of certain leukaemias and lymphomas.

Idiopathic thrombocytoenic purpura (ITP) is an autoimmune disease in which IgG autoantibodies against antigens present on platelets bind to and destroy platelets. Patients with ITP have an accelerated clearance of circulating IgG-coated platelets via macrophages in the spleen and the liver. In view of the pro-inflammatory FcyR-mediated function of Syk in macrophages an inhibitor of Syk is considered to have a therapeutic benefit in FcyR-
mediated cytopenias like ITP. Indeed the Syk inhibitor R788 (R406) improved platelet counts in a single center, oben label study in patients with ITP (Podolanczuk et al; Blood (2009) 113, 3154-3169).

Atherosclerosis is a chronic inflammatory condition in which the wall of medium- and large-sized arteries thickens as a result of the accumulation of inflammatory cells (mainly macrophages), smooth muscle cells, extracellular matrix and cholesterol deposited by modified low density lipoproteins. The plaques grow over decades until either stenosis of the lumen occurs resulting in ischaemia, or they rupture, exposing thrombogenic material resulting in thrombus formation, and potentially thromboembolism. The Syk inhibitor R788 (R406) reduced atherosclerotic plaque size in a murine model of atherosclerosis (Hilgendorf et al. Arterioscler, Thromb, Vase Res (2011) 31:1991-1999).

Bullous pemphigoid (Ujiie et al. Journal of Dermatology 2010; 37; 194-204) is a chronic, autoimmune, subepidermal, blistering skin disease that rarely involves mucous membranes. Bullous pemphigoid is characterized by the presence of immunoglobulin G (IgG) autoantibodies specific for the hemidesmosomal bullous pemphigoid antigens BP230 (BPAgl) and BP180 (BPAg2). Pemphigus vulgaris (Venugopal et al. Dermatol. Clin. 2011;29:373-80) is a chronic blistering skin disease with skin lesions that are rarely pruritic, but which are often painful. Pemphigus vulgaris is an autoimmune disease caused by IgG autoantibodies directed against both desmoglein 1 and desmoglein 3 resulting in the loss of cohesion between keratinocytes in the epidermis. It is characterized by extensive flaccid blisters and mucocutaneous erosions. In both diseases IgG autoantibodies bind to Fc receptor gamma (FcRg) and activate FcRg and downstream signaling via Syk kinase. Thus, an inhibitor of the Syk kinase activity which blocks downstream signalling of the FcRg could be used therapeutically to treat patients with bullous pemphigoid and pemphigus vulgaris.

Systemic lupus erythematosus (SLE) is a chronic autoimmune disease which can affect basically any organ of the body. It is characterised by a multisystem inflammation of the microvascular and the presence of autoantibodies. FcyR-deficient mice are protected from several aspects of SLE in disease-related preclinical models, suggesting that an inhibitor of Syk can have a therapeutic benefit in SLE in view of the pro-inflammatory FcyR-mediated function of Syk in various cells.
1.2 Prior art

WO 98/18782 discloses 2-pyridinyl-pyrimidines as Syk-inhibitors which - in contrast to the compounds of the instant invention - may not be substituted in 4-position by amino-indolyl and which do not carry an imidazolyl-residue at the 2-position.

WO 2004/058749 discloses 2,4-bisubstituted pyrimidines as Syk-inhibitors which are substituted in 4-position with a bicyclic heteroaryl containing at least one nitrogen-atom and one oxygen-atom for the treatment of for instance asthma. In contrast to that the compounds of the instant invention comprise in 4-position an imidazolyl-residue.

WO 02/096905, WO 2004/087698 and WO 2004/087699 disclose pyrimidines as inhibitors of certains protein kinases such as Syk which are in 4-position substituted by a thiazole-residue and which may be used for the treatment of asthma.

WO 201 1/075515, WO 201 1/075560 and WO 201 1/075517 disclose pyrimidines which are substituted in the 2-position by amino-phenyl which may be used as Syk-inhibitors for the treatment of COPD and asthma, whereas the pyrimidines of the instant invention are substituted in the 2-position by aminoindolyl.

The unpublished application PCT/EP2012050672 discloses substituted 2-pyridinyl-pyrimidines as Syk-inhibitors and their use as medicaments for the treatment of of instance asthma.

However, surprisingly it has now been found that the (2-imidazolyl)-(4-amino-indolyl)-pyrimidines of formula _1_ are particularly suitable for the treatment of respiratory complaints, allergic diseases, osteoporosis, gastrointestinal diseases, autoimmune diseases, inflammatory diseases and diseases of the peripheral or central nervous system, particularly for the treatment of asthma, allergic rhinitis, rheumatoid arthritis, allergic dermatitis and COPD.

2. DESCRIPTION OF THE INVENTION

The instant invention refers to compound of formula _1_
wherein

$R^1$ is selected from the group consisting of hydrogen, C$_{1-6}$-alkyl, C$_{1-6}$-haloalkyl,

$R^2$ is selected from the group consisting of hydrogen, C$_{1-6}$-alkyl, C$_{1-6}$-haloalkyl,

-(Cl$_{3}$-alkylene)-0-(Cl$_{3}$-alkyl), three-, four-, five- or six-membered cycloalkyl, wherein this cycloalkyl may optionally be substituted by halogen

$R^3$ is selected from the group consisting of hydrogen, C$_{1-6}$-alkyl, halogen, -O-C$_{1-6}$-alkyl, three-, four-, five- or six-membered cycloalkyl, -S-(Cl$_{3}$-alkylene)-A, -S-A, -A,

with A being a group selected from the group consisting of CO-N(2-alkylene)-2, CO-NH(Cl$_{3}$-alkyl), CO-NH$_2$, five- or six-membered heteroaryl comprising 1, 2 or 3 heteroatoms each independently selected from the group of S, O and N; five-, six- or seven-membered heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group of S, O and N,

wherein A may optionally be further substituted by one, two or three groups each independently selected from -Cl$_{3}$-alkyl, halogen, -oxo, -OH and C$_{1-6}$-haloalkyl,

$R^4$ is selected from the group consisting of

-CO-N(2-alkylene)-0-(Cl$_{3}$-alkyl), -NH$_2$, -Cl$_{6}$-alkylene-L, -SO$_2$-phenyl,

-SO$_2$-(Cl$_{3}$-alkyl), -CO-N(Cl$_{4}$-alkyl)$_2$ and -CO-N(2-alkylene-0-CI$_{3}$-alkyl)$_2$.
or wherein \( R^4 \) is a five- or six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, wherein said heteroaromatic group on any atom available for substitution may optionally be further substituted by one, two or three groups each independently selected from among -\( \text{Cl}-3\)-alkyl, halogen, and \( C_{1-3}\)-haloalkyl,

with \( Y \) being a group selected from the group consisting of -\( \text{NH}_2 \), -\( \text{NH} (\text{CH}_3) \), -\( \text{N} (\text{CH}_2\text{CH}_3) \), -\( \text{Cl},-\text{alkylene-N} (\text{CH}_3) \), -\( \text{O},-\text{alkyl} \), -\( \text{O},-\text{alkanol} \), -\( \text{O},-\text{alkyl} \), a four-, five-, six- or seven-membered fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a five- or six-membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group of N, S and O, -\( \text{C}_{6-10}\)-aryl and \( C_{3-6}\)-cycloalkyl,

or with \( Y \) being a 8- to 11-membered bicyclic annellated fully saturated, partially unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently from each other selected from the group N, S and O,

or with \( Y \) being an 8- to 11-membered bicyclic fully saturated spiro-heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, with the proviso that this spiro-heterocycle comprises at least one N-atom and that this heterocycle is directly attached to the molecule via this N-atom,

or with \( Y \) being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, which is bridged by an additional \( \text{C}_{1-3}\)-alkylene-unit,

whereby each \( Y \) may optionally be substituted by one, two or three groups \( Z \) each independently from each other selected from the group consisting of halogen, -\( \text{O}x\), -\( \text{OH} \), -\( \text{CN} \), -\( \text{Cl}-5\)-alkyl, -\( \text{Cl},-5\)-alkanol, -\( \text{O}-\text{Cl},-3\)-alkyl, a four-, five-, six- or seven-membered fully saturated or
partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a fully saturated or partially unsaturated C\textsubscript{3-6}-cycloalkyl, a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; -CO-(C\textsubscript{1-3}-alkyl), -CHO, -CO-L, -C\textsubscript{1-3}-alkylene-CO-L, -C\textsubscript{1-4}-alkylene-0-C\textsubscript{1-3}-alkyl, -N(CH\textsubscript{3})\textsubscript{2} and -N(ethyl)\textsubscript{2}.

whereby each group Z may optionally be further substituted by one, two or three groups T each independently selected from the group consisting of -oxo, OH, halogen, -C\textsubscript{1-3}-alkyl, -0-C\textsubscript{1-3}-alkyl, -N(methyl)\textsubscript{2}, -N(ethyl)\textsubscript{2}, 5- to 6-membered fully saturated, partially unsaturated or aromatic heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, a C\textsubscript{3-6}-cycloalkyl and -CN,

wherein each group T may also optionally be substituted by a group selected from the group consisting of C\textsubscript{1-3}-alkyl, halogen, OH, oxo and -0-C\textsubscript{1-3}-alkyl,

whereby L denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, which said heterocycle may optionally be substituted by one, two or three groups independently selected from among methyl, halogen, OH and -oxo,

R\textsuperscript{5} is selected from the group consisting of hydrogen, C\textsubscript{1-6}-alkyl, C\textsubscript{1-3}-haloalkyl and -(C\textsubscript{1-4}-alkylene)-0-(C\textsubscript{1-3}-alkyl),

and the pharmaceutically acceptable salts of the aforementioned compounds.

In a preferred embodiment the instant invention refers to the above-mentioned compounds of formula \textsubscript{1}, wherein

R\textsuperscript{4} is selected from the group consisting of

-\textsuperscript{-CO-Y, -CO-N(CH\textsubscript{3})\textsubscript{2}-Y, -CO-N(CH\textsubscript{3})(C\textsubscript{1-5}-alkylene)-Y, -CO-N(ethyl)(C\textsubscript{1-5}-alkylene)-Y, -CO-NH-Y and -CO-NH-C\textsubscript{1-6}-alkylene-Y,}

R\textsuperscript{4} is a five- or six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, wherein said heteroaromatic group on
any atom available for substitution may optionally be further substituted by one, two or three groups each independently selected from among -Cl, -alkyl halogen, and C₁₋₃-haloalkyl,

with Y being a group selected from the group consisting of -NH₂, -NH(CH₃), -N(CH₃)₂,

-Cl₆-alkylene-N(CH₃)₂, -0-Cl, -Cl₃-haloalkyl, -OH and -C₄₋₅-alkynyl,

or with Y being a group selected from the group consisting of a four-, five-, six- or seven-membered monocyclic fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a five- or six-membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group of N, S and O, -C₆₋₁₀-aryl and a C₃₋₆-cycloalkyl,

or with Y being an 8-, 9-, 10- or 11-membered bicyclic annelated fully saturated, partially unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently from each other selected from the group N, S and O,

or with Y being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, which is bridged by an additional C₁₋₃-alkylene-unit,

whereby each Y may optionally be substituted by one, two or three groups Z each independently from each other selected from the group consisting of -F, -Cl, -Br, -I, -oxo, OH, -CN, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, pentyl, -Cl₃-alkanol, -0-CH₃, -O-ethyl, -O-(n-propyl), -O-isopropyl, a four-, five-, six- or seven-membered fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a fully saturated or partially unsaturated C₃₋₆-cycloalkyl, a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; -CO-methyl, -CO-ethyl, -CO-propyl, -CHO, -CO-L, -Cl₃-alkylene-CO-L, -Cl₄-alkylene-0-Cl, -NH(CH₃)₂ and -N(ethyl)₂,
whereby each group Z may optionally be further substituted by one, two or three groups T each independently selected from the group consisting of -oxo, OH, halogen, methyl, ethyl, n-propyl, isopropyl, -O-methyl, -O-ethyl, -O-(n-propyl), -O-(isopropyl), -N(methyl)$_2$, -N(ethyl)$_2$, 5- to 6-membered fully saturated, partially unsaturated or aromatic heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, a C$_3$-6-cycloalkyl and -CN,

whereby L denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, which said heterocycle may optionally be substituted by one, two or three groups independently selected from among methyl, halogen, OH and -oxo,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In a further preferred embodiment the invention concerns the aforementioned compounds of formula 1, wherein

R$^1$ is selected from the group consisting of hydrogen or methyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

Another preferred embodiment of the invention concerns the aforementioned compounds of formula 1, wherein

R$^2$ is selected from the group consisting of methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, cyclopropyl, -methylene-O-methyl, -ethylene-O-methyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In another preferred embodiment the invention refers to the aforementioned compounds of formula 1, wherein

R$^2$ is selected from the group consisting of methyl, isopropyl, isobutyl, cyclopropyl, -ethylene-O-methyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In a further particularly preferred embodiment the invention concerns the aforementioned compounds of formula 1, wherein
R\textsuperscript{1} is hydrogen,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In another preferred embodiment the invention refers to the aforementioned compounds of formula \textsuperscript{1}, wherein

R\textsuperscript{2} is methyl, isopropyl or cyclopropyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In another particularly preferred embodiment the invention concerns the aforementioned compounds of formula \textsuperscript{1}, wherein

R\textsuperscript{2} is methyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

Additionally the invention preferably concerns the aforementioned compounds of formula \textsuperscript{1}, wherein

R\textsuperscript{3} is selected from the group consisting of hydrogen, methyl, ethyl, n-propyl, isopropyl, -F, -Cl, -Br, -O-methyl, -O-ethyl, -O-(n-propyl), -O-(isopropyl), cyclopropyl, -S-methylene-A, -A,

with A being a group selected from the group consisting of-CO-N(CH\textsubscript{3})\textsubscript{2},

-CO-NH(CH\textsubscript{3}), five- or six-membered heteroaryl comprising 1, 2 or 3 heteroatoms each independently selected from the group of S, O and N;

wherein A may optionally be further substituted by one, two or three groups each independently selected from methyl, ethyl, propyl or isopropyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

The invention further preferably concerns the above-mentioned compounds of formula \textsuperscript{1}, wherein

R\textsuperscript{3} is selected from -Cl or methyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In another preferred embodiment the invention concerns the aforementioned compounds of formula \textsuperscript{1}, wherein
\( R^5 \) is selected from the group consisting of hydrogen, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, -methylene-O-methyl and -ethylene-O-methyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In another more preferred embodiment the invention concerns the aforementioned compounds of formula \( 1_\ldots \), wherein

\( R^5 \) is selected from the group consisting of hydrogen, methyl, isobutyl and -ethylene-O-methyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In another particularly preferred embodiment the invention refers to the aforementioned compounds of formula \( 1_\ldots \), wherein

\( R^5 \) is hydrogen,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In a further preferred embodiment the invention refers to the above-mentioned compounds of formula \( 1_\ldots \), wherein

\( R^4 \) is selected from the group consisting of

\( -\text{CO-}Y, -\text{CO-N(CH}_3\text{)}_2-Y, -\text{CO-N(CH}_3\text{)}(\text{Cl}_2-\text{alkylene})-Y, -\text{CO-N(ethyl)}(\text{Cl}_2-\text{alkylene})-Y, -\text{CO-NH-Y and -CO-NH-Cl}_2-\text{alkylene-Y,} \)

\( R^4 \) is a five- or six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, wherein said heteroaromatic group on any atom available for substitution may optionally be further substituted by one, two or three groups each independently selected from among methyl, ethyl, n-propyl, isopropyl, F, Cl, Br, and -CF\(_3\),

with \( Y \) being a group selected from the group consisting of \( -\text{NH}_2, -\text{NH}(\text{CH}_3)_2, -\text{N}(\text{CH}_3)_2, -\text{Cl}_2-\text{alkylene-N(}\text{CH}_3\text{)}_2, -\text{O-methyl, -O-ethyl, -O-n-propyl, -O-isopropyl, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, -Cl}_3-\text{haloalkyl, -OH and} \)

\( \text{CH}_2-\text{CH}_3 \).
or with \( Y \) being a group selected from the group consisting of a four-, five-, six- or seven-membered monocyclic fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a five- or six-membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group of N, S and O, -C\(_{6}\)-io-aryl and a C\(_{3,6}\)-cycloalkyl,

or with \( Y \) being a 8-, 9-, 10- or 11-membered bicyclic annelated fully saturated, partially unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently from each other selected from the group N, S and O,

or with \( Y \) being an 8-, 9-, 10- or 11-membered bicyclic fully saturated spiro-heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, with the proviso that this spiro-heterocycle comprises at least one N-atom and that this heterocycle is directly attached to the molecule via this N-atom,

or with \( Y \) being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, which is bridged by an additional C\(_{1,3}\)-alkylene-unit,

whereby each \( Y \) may optionally be substituted by one, two or three groups \( Z \) each independently from each other selected from the group consisting of -F, -Cl, -Br, -I, -oxo, OH, -CN, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, pentyl, -C\(_{3}\)-alkanol, -O-CH\(_{3}\), -O-ethyl, -O-(n-propyl), -O-isopropyl, a four-, five-, six- or seven-membered fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a fully saturated or partially unsaturated C\(_{5,6}\)-cycloalkyl, a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; -CO-methyl, -CO-ethyl, -CO-propyl, -CHO, -CO-L, -C\(_{3}\)-alkylene-CO-L, -C\(_{4}\)-alkylene-O-Ci\(_{3}\)-alkyl, -N(CH\(_{3}\))\(_{2}\) and -N(ethyl)\(_{2}\),

whereby each group \( Z \) may optionally be further substituted by one, two or three groups \( T \) each independently selected from the group consisting of -oxo, OH, halogen, methyl, ethyl, n-propyl, isopropyl, -O-methyl, -O-ethyl, -O-(n-propyl), -O-(isopropyl), -N(methyl)\(_{2}\), -N(ethyl)\(_{2}\), C\(_{3,6}\)-cycloalkyl, -CN, 5- to 6-membered fully saturated, partially unsaturated or aromatic.
heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S,

whereby L denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, which said heterocycle may optionally be substituted by one, two or three groups independently selected from among methyl, -Cl, -Br, -F, -OH and -oxo,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In a particularly preferred embodiment the invention concerns the above-mentioned compounds of formula \( \text{I} \), wherein

\[
R^4 \text{is selected from the group consisting of} \quad \\
-\text{CO-N(CH}_3\text{)}_Y, -\text{CO-N(CH}_3\text{)}(\text{Cl}_5\text{-alkylene})_Y, \\
\]

with \( Y \) being a group selected from the group consisting of -NH(CH\(_3\))\(_2\), -N(CH\(_3\))\(_2\), -O-methyl, -CF\(_3\), methyl, ethyl, OH,

or with \( Y \) being a group selected from the group consisting of a four-, five-, six- or seven-membered monocyclic fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a five- or six-membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group of N, S and O, -C\(_6\)-aryl, cyclopropyl, cyclobutyl, cyclopentyl and cyclohexyl,

or with \( Y \) being a 8-, 9-, 10- or 11-membered bicyclic annellated fully saturated, partially unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently from each other selected from the group N, S and O,

or with \( Y \) being an 8-, 9-, 10- or 11-membered bicyclic fully saturated spiro-heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, with the proviso that this spiro-heterocycle comprises at least one N-atom and that this heterocycle is directly attached to the molecule via this N-atom,
or with \( Y \) being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group \( N, S \) and \( O \), which is bridged by an additional \(-\text{CH}_2\)-unit,

whereby each \( Y \) may optionally be substituted by one, two or three groups \( Z \) each independently from each other selected from the group consisting of \(-F, -\text{Cl}, -\text{Br}, -I, -\text{oxo}, \text{OH}, -\text{CN}, \text{methyl}, \text{ethyl}, n\text{-propyl}, \text{isopropyl}, n\text{-butyl}, \text{isobutyl}, t\text{-butyl}, \text{pentyl}, -\text{Cl}_5\text{-alkanol}, -0-\text{CH}_3, \-O-\text{ethyl}, -O-(n-propyl), -O-isopropyl, a four-, five-, six- or seven-membered fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group \( N, S \) and \( O \); a fully saturated or partially unsaturated \( C_5\text{-cycloalkyl}, \) a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group \( N, S \) and \( O \); -\text{CO-methyl}, -\text{CO-ethyl}, -\text{CO-propyl}, -\text{CHO}, -\text{CO-L}, -\text{Cl}_3\text{-alkylene-CO-L}, -\text{Cl}_4\text{-alkylene-CO-L}, -\text{Cl}_5\text{-alkyl}, -N(\text{CH}_3)_2 \) and \(-\text{N(ethyl)}_2, \)

whereby each group \( Z \) may optionally be further substituted by one, two or three groups \( T \) each independently selected from the group consisting of \(-\text{oxo}, \text{OH}, \text{halogen}, \text{methyl}, \text{ethyl}, n\text{-propyl}, \text{isopropyl}, -O-\text{methyl}, -O-\text{ethyl}, -O-(n-propyl), -O-(isopropyl), -N(\text{methyl})_2, -N(\text{ethyl})_2, \) \( C_5\text{-cycloalkyl}, -\text{CN}, 5\text{- to 6-membered fully saturated, partially unsaturated or aromatic heterocycle comprising 1 or 2 heteroatoms each independently selected from the group \( N, O \) and \( S, \)

whereby \( L \) denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group \( N, O \) and \( S, \) which said heterocycle may optionally be substituted by one, two or three groups independently selected from among \text{methyl, -Cl, -Br, -F, -OH and -oxo,}

and the pharmaceutically acceptable salts of the aforementioned compounds.

In another particularly preferred embodiment the invention concerns the above-mentioned compounds of formula 1, wherein

\( R^4 \) is selected from the group consisting of 
-\text{CO-NH-Y} or \text{-CO-NH-Cl}_5\text{-alkylene-Y},

with \( Y \) being a group selected from the group consisting of \(-\text{NH(\text{CH}_3)}, -\text{N(\text{CH}_3)}_2, -\text{O-methyl, -CF}_3, \text{methyl, ethyl, -OH}, \)

35
or with Y being a group selected from the group consisting of a four-, five-, six- or seven-membered monocyclic fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a five- or six-membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group of N, S and O, -C₆-io-aryl, cyclopropyl, cyclobutyl, cyclopentyl and cyclohexyl,

or with Y being an 8-, 9-, 10- or 11-membered bicyclic annelated fully saturated, partially unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently from each other selected from the group N, S and O,

or with Y being an 8-, 9-, 10- or 11-membered bicyclic fully saturated spiro-heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, with the proviso that this spiro-heterocycle comprises at least one N-atom and that this heterocycle is directly attached to the molecule via this N-atom,

or with Y being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, which is bridged by an additional -CH₂-unit,

whereby each Y may optionally be substituted by one, two or three groups Z each independently from each other selected from the group consisting of -F, -Cl, -Br, -I, -oxo, OH, -CN, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, pentyl, -Ci₅-alkanol, -O-CH₃, -O-ethyl, -O-(n-propyl), -O-isopropyl, a four-, five-, six- or seven-membered fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a fully saturated or partially unsaturated C₅-6-cycloalkyl, a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; -CO-methyl, -CO-ethyl, -CO-propyl, -CHO, -CO-L, -Ci-s-alkylene-CO-L, -Ci₄-alkylene-0-Ci₃-alkyl, -N(CH₃)₂ and -N(ethyl)₂;

whereby each group Z may optionally be further substituted by one, two or three groups T each independently selected from the group consisting of -oxo, OH, halogen, methyl, ethyl, n-propyl, isopropyl, -O-methyl, -O-ethyl, -O-(n-propyl), -O-(isopropyl), -N(methyl)₂, -N(ethyl)₂, C₅-6-cycloalkyl, -CN, 5- to 6-membered fully saturated, partially unsaturated or aromatic
heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S,

whereby L denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, which said heterocycle may optionally be substituted by one, two or three groups independently selected from among methyl, -Cl, -Br, -F, -OH and -oxo,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In another particularly preferred embodiment the invention concerns the above-mentioned compounds of formula \( \text{I} \), wherein

\[ \text{R}^4 \] is selected from the group consisting of

-CO-Y,

with Y being a group selected from the group consisting of -NH(CH\(_3\))\(_2\), -N(CH\(_3\))\(_2\), -O-methyl, -CF\(_3\), methyl, ethyl, -OH,

or with Y being a group selected from the group consisting of a four-, five-, six- or seven-membered monocyclic fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a five- or six-membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group of N, S and O; -C\(_6\)-aryl, cyclopropyl, cyclobutyl, cyclopentyl and cyclohexyl,

or with Y being a 8-, 9-, 10- or 11-membered bicyclic annellated fully saturated, partially unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently from each other selected from the group N, S and O,

or with Y being an 8-, 9-, 10- or 11-membered bicyclic fully saturated spiro-heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, with the proviso that this spiro-heterocycle comprises at least one N-atom and that this heterocycle is directly attached to the molecule via this N-atom,
or with \( Y \) being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, which is bridged by an additional \(-\text{CH}_2\)-unit,

whereby each \( Y \) may optionally be substituted by one, two or three groups \( Z \) each independently from each other selected from the group consisting of \(-\text{F}, -\text{Cl}, -\text{Br}, -\text{I}, -\text{oxo}, \text{OH}, -\text{CN}, \text{methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, pentyl, -Cl}_5\text{-alkanol, -0-CH}_3, -\text{O-ethyl, -O-(n-propyl), -O-isopropyl, a four-, five-, six- or seven-membered fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a fully saturated or partially unsaturated C\(_{5,6}\)-cycloalkyl, a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; -CO-methyl, -CO-ethyl, -CO-propyl, -CHO, -CO-L, -Cl\(_s\)-alkylene-CO-L, -Cl\(_4\)-alkylene-0 -Cl\(_3\)-alkyl, -N(\text{CH}_3)_2 and -N(ethyl)_2,\)

whereby each group \( Z \) may optionally be further substituted by one, two or three groups \( T \) each independently selected from the group consisting of \(-\text{oxo}, \text{OH}, \text{halogen, methyl, ethyl, n-propyl, isopropyl, -O-methyl, -O-ethyl, -O-(n-propyl), -O-(isopropyl), -N(methyl)_2, -N(ethyl)_2, C\(_{5,6}\)-cycloalkyl, -CN, 5- to 6-membered fully saturated, partially unsaturated or aromatic heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S,\)

whereby \( L \) denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, which said heterocycle may optionally be substituted by one, two or three groups independently selected from among methyl, -Cl, -Br, -F, -OH and -oxo,

and the pharmaceutically acceptable salts of the aforementioned compounds.

In another particularly preferred embodiment the invention concerns the above-mentioned compounds of formula \( 1, \)

wherein

\( \text{R}^1 \) is a five- or six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, wherein said heteroaromatic group on any atom available for substitution may optionally be further substituted by one, two or three groups each independently selected from among methyl, ethyl, F, Cl, Br, and -CF\(_3\),

and the pharmaceutically acceptable salts of the aforementioned compounds.
In a further particularly preferred embodiment the invention concerns the above-mentioned compounds of formula 1_, wherein \( R^4 \) is an oxadiazole group that may optionally be substituted by one, two or three groups each independently selected from methyl, ethyl, F, Cl, and \(-\text{CF}_3\) and the pharmaceutically acceptable salts of the aforementioned compounds.

In another particularly preferred embodiment the invention concerns the above-mentioned compounds of formula 1_, selected from the group consisting of

![Chemical Structures]

...
and
and the pharmaceutically acceptable salts of the aforementioned compounds.

In a further preferred embodiment the invention concerns the use of the aforementioned compounds of formula \( \text{1} \) for preparing a medicament for the treatment of diseases which can be treated by inhibition of the Syk enzyme.

In a further preferred embodiment the invention concerns the use of the aforementioned compounds of formula \( \text{1} \) for preparing a medicament for the treatment of diseases selected from among allergic rhinitis, asthma, COPD, adult respiratory distress syndrome, bronchitis, B-cell lymphoma, dermatitis and contact dermatitis, allergic dermatitis, allergic rhinoconjunctivitis, rheumatoid arthritis, anti-phospholipid syndrome, Berger's disease, Evans's syndrome, ulcerative colitis, allergic antibody-based glomerulonephritis, granulocytopenia, Goodpasture's syndrome, hepatitis, Henoch-Schonlein purpura, hypersensitivity vasculitis, immunohaemolytic anaemia, autoimmune haemolytic anemia, idiopathic thrombocytopenic purpura, Kawasaki syndrome, allergic conjunctivitis, lupus erythematoses, capsule cell lymphoma, neutropenia, artheriosclerosis non-familial lateral sclerosis, Crohn's disease, multiple sclerosis, myasthenia gravis, osteoporosis, osteolytic diseases, osteopenia, psoriasis, Sjogren's syndrome, sclerodermy, T-cell lymphoma, urticaria / angiooedema, Wegener's granulomatosis and coeliac disease.

In another preferred embodiment the invention concerns the use of the aforementioned compounds of formula \( \text{1} \) for preparing a medicament for the treatment of diseases selected from among asthma, COPD, allergic rhinitis, adult respiratory distress syndrome, bronchitis, allergic dermatitis, contact dermatitis, idiopathic thrombocytopenic purpura, rheumatoid arthritis and allergic rhinoconjunctivitis.

In a further preferred embodiment the invention concerns the use of the aforementioned compounds of formula \( \text{1} \) for preparing a medicament for the treatment of diseases selected from among asthma, COPD, allergic rhinitis, allergic dermatitis and rheumatoid arthritis.

Another preferred embodiment of the invention concerns pharmaceutical formulations which contain one or more of the aforementioned compounds of formula \( \text{1} \).
A further preferred embodiment of the invention refers to pharmaceutical formulations which contain one or more compounds of formula _ in combination with an active substance selected from among anticholinergics, betamimetics, corticosteroids, PDE4-inhibitors, EGFR-inhibitors, LTD4-antagonists, CCR3-inhibitors, iNOS-inhibitors, CRTH2-antagonists and HMG-CoA reductase inhibitors.

A further preferred embodiment of the invention refers to intermediate compounds according to formula $\text{Z}$

\[
\begin{align*}
\text{Z} & \\
\text{H} & \\
\text{NH} & \\
\text{NH} & \\
\text{NH}_2 & \\
\text{R}^3 & \\
\text{R}^4 & \\
\text{R}^5 & \\
\end{align*}
\]

wherein $R^3$, $R^4$ and $R^5$ are defined as above-mentioned,

and the pharmaceutically acceptable salts of the aforementioned compounds.

A further preferred embodiment of the invention refers to intermediate compounds according to formula $\text{8}$

\[
\begin{align*}
\text{8} & \\
\text{HO} & \\
\text{CO} & \\
\text{R}^1 & \\
\text{R}^2 & \\
\text{R}^3 & \\
\text{R}^4 & \\
\text{R}^5 & \\
\end{align*}
\]

wherein $R^1$, $R^2$, $R^3$ and $R^5$ are defined as above-mentioned,

and the pharmaceutically acceptable salts of the aforementioned compounds.
A further preferred embodiment of the invention refers to intermediate compounds according to formula 10

wherein \( R^1, R^2, R^4 \) and \( R^5 \) are defined as above-mentioned,

and the pharmaceutically acceptable salts of the aforementioned compounds.

3. TERMS AND DEFINITIONS USED

Unless stated otherwise, all the substituents are independent of one another. If for example a number of \( \text{C}_{1-6} \)-alkyl groups are possible substituents at a group, in the case of three substituents, for example, \( \text{C}_{1-6} \)-alkyl could represent, independently of one another, a methyl, an n-propyl and a ie/f-butyl.

Within the scope of this application, in the definition of possible substituents, these may also be presented in the form of a structural formula. An asterisk (\( ^* \)) in the structural formula of the substituent is to be understood as being the linking point to the rest of the molecule. Moreover, the atom of the substituent following the linking point is understood as being the atom in position number 1. Thus for example the groups N-piperidinyl (I), 4-piperidinyl (II), 2-tolyl (III), 3-tolyl (IV) and 4-tolyl (V) are represented as follows:
If there is no asterisk (*) in the structural formula of the substituent, each hydrogen atom may be removed at the substituent and the valency thus freed may serve as a binding site to the rest of a molecule. Thus, for example, VI

```
  VI
```

may represent 2-tolyl, 3-tolyl, 4-tolyl and benzyl.

Alternatively to the * within the scope of this application x₁ is also understood as being the linking point of the group R₁ to the structure of formula _₁ and X₂ as being the linking point of the group R² to the structure of formula _₂.

By the term "C₄₋₅-alkyl" (including those which are part of other groups) are meant branched and unbranched alkyl groups with 1 to 6 carbon atoms and by the term "Ci₋₅-alkyl" are meant branched and unbranched alkyl groups with 1 to 3 carbon atoms. "C₄₋₅-alkyl" accordingly denotes branched and unbranched alkyl groups with 1 to 4 carbon atoms. Alkyl groups with 1 to 4 carbon atoms are preferred. Examples of these include: methyl, ethyl, n-propyl, iso-propyl, n-buty1, /so-buty1, sec-buty1, ie/f-buty1, n-pentyl, /so-pentyl, neo-pentyl or hexyl. The abbreviations Me, Et, n-Pr, /-Pr, n-Bu, /-Bu, f-Bu, etc., may also optionally be used for the above-mentioned groups. Unless stated otherwise, the definitions propyl, butyl, pentyl and hexyl include all the possible isomeric forms of the groups in question. Thus, for example, propyl includes n-propyl and /so-propyl, butyl includes /so-buty1, sec-buty1 and ie/f-buty1 etc.

By the term "Ci₋₅-alkylene" (including those which are part of other groups) are meant branched and unbranched alkylene groups with 1 to 6 carbon atoms and by the term "Ci₋₅-alkylene" are meant branched and unbranched alkylene groups with 1 to 4 carbon atoms. Alkylene groups with 1 to 4 carbon atoms are preferred. Examples of these include: methylene, ethylene, propylene, 1-methylethylene, butylene, 1-methylpropylene, 1,1-dimethylethylene, 1,2-dimethylethylene, penty1ene, 1,1-dimethylpropylene, 2,2-dimethylpropylene, 1,2-dimethylpropylene, 1,3-dimethylpropylene or hexylene. Unless stated otherwise, the definitions propylene, butylene, penty1ene and hexylene include all the possible isomeric forms of the groups in question with the same number of carbons. Thus, for example, propyl includes also 1-methylethylene and butylene includes 1-methylpropylene, 1,1-dimethylethylene, 1,2-dimethylethylene.
If the carbon chain is substituted by a group which together with one or two carbon atoms of
the alkylene chain forms a carbocyclic ring with 3, 5 or 6 carbon atoms, this includes, inter
alia, the following examples of the rings:

\[ \text{Examples} \]

By the term "C\textsubscript{2}-6-alkenyl" (including those which are part of other groups) are meant
branched and unbranched alkenyl groups with 2 to 6 carbon atoms and by the term
"C\textsubscript{2}-4-alkenyl" are meant branched and unbranched alkenyl groups with 2 to 4 carbon atoms,
provided that they have at least one double bond. Alkenyl groups with 2 to 4 carbon atoms
are preferred. Examples include: ethenyl or vinyl, propenyl, butenyl, pentenyl or hexenyl.
Unless stated otherwise, the definitions propenyl, butenyl, pentenyl and hexenyl include all
the possible isomeric forms of the groups in question. Thus, for example, propenyl includes
1-propenyl and 2-propenyl, butenyl includes 1-, 2- and 3-butenyl, 1-methyl-1-propenyl, 1-
methyl-2-propenyl etc.

By the term "C\textsubscript{2}-6-alkenylene" (including those which are part of other groups) are meant
branched and unbranched alkenylene groups with 2 to 6 carbon atoms and by the term
"C\textsubscript{2}-4-alkenylene" are meant branched and unbranched alkenylene groups with 2 to 4 carbon
atoms. Alkenylene groups with 2 to 4 carbon atoms are preferred. Examples of these
include: ethylene, propylene, 1-methylethenylene, butylene, 1-methylpropylene,
1,1-dimethylethenylene, 1,2-dimethylethenylene, pentenylene, 1,1-dimethylpropylene,
2,2-dimethypropylene, 1,2-dimethylpropylene, 1,3-dimethylpropylene or
hexenylene. Unless stated otherwise, the definitions propenylene, butenylene, pentenylene
and hexenylene include all the possible isomeric forms of the groups in question with the
same number of carbons. Thus, for example, propenyl also includes 1-methylethenylene and
butenylene includes 1-methylpropylene, 1, 1-dimethylethenylene, 1, 2-dimethylethenylene.

By the term "C\textsubscript{2}-6-alkynyl" (including those which are part of other groups) are meant
branched and unbranched alkynyl groups with 2 to 6 carbon atoms and by the term
"C\textsubscript{2}-4-alkynyl" are meant branched and unbranched alkynyl groups with 2 to 4 carbon atoms,
provided that they have at least one triple bond. Alkynyl groups with 2 to 4 carbon atoms
are preferred. Examples include: ethynyl, propynyl, butynyl, pentynyl, or hexynyl. Unless stated
otherwise, the definitions propynyl, butynyl, pentynyl and hexynyl include all the possible
isomeric forms of the groups in question. Thus for example propynyl includes 1-propynyl and 2-propynyl, butynyl includes 1, 2- and 3-butynyl, 1-methyl-1-propynyl, 1-methyl-2-propynyl etc.

By the term "C<sub>2</sub>-6-alkynylene" (including those which are part of other groups) are meant branched and unbranched alkynylene groups with 2 to 6 carbon atoms and by the term "C<sub>2</sub>-4-alkynylene" are meant branched and unbranched alkylene groups with 2 to 4 carbon atoms. Preferred are alkynylene groups with 2 to 4 carbon atoms. Examples include: ethynylene, propynylene, 1-methylene, butynylene, 1-methylpropynylene, 1,1-dimethylethynylene, 1,2-dimethylethynylene, pentynylene, 1,1-dimethylpropynylene, 2,2-dimethylpropynylene, 1,2-dimethylpropynylene, 1,3-dimethylpropynylene or hexynylene. Unless stated otherwise, the definitions propynylene, butynylene, pentynylene and hexynylene include all the possible isomeric forms of the groups in question with the same number of carbons. Thus for example propynyl also includes 1-methylene and butynylene includes 1-methylpropynylene, 1,1-dimethylethynylene, 1,2-dimethylethynylene.

By the term "aryl" (including those which are part of other groups) are meant aromatic ring systems with 6 or 10 carbon atoms. Examples include: phenyl or naphthyl, the preferred aryl group being phenyl. Unless otherwise stated, the aromatic groups may be substituted by one or more groups selected from among methyl, ethyl, /so-propyl, ie/f-butyl, hydroxy, fluorine, chlorine, bromine and iodine.

By the term "aryl-C<sub>1</sub>-5-alkylene" (including those which are part of other groups) are meant branched and unbranched alkylene groups with 1 to 6 carbon atoms, which are substituted by an aromatic ring system with 6 or 10 carbon atoms. Examples include: benzyl, 1- or 2-phenylethyl or 1- or 2-naphthylethyl. Unless otherwise stated, the aromatic groups may be substituted by one or more groups selected from among methyl, ethyl, /so-propyl, ie/f-butyl, hydroxy, fluorine, chlorine, bromine and iodine.

By the term "heteroaryl-C<sub>1</sub>-5-alkylene" (including those which are part of other groups) are meant - even though they are already included under "aryl-C<sub>1</sub>-5-alkylene" - branched and unbranched alkylene groups with 1 to 6 carbon atoms, which are substituted by a heteroaryl.
A heteroaryl of this kind includes five- or six-membered heterocyclic aromatic groups or 5-10-membered, bicyclic heteroaryl rings which may contain one, two, three or four heteroatoms selected from among oxygen, sulphur and nitrogen, and contain so many conjugated double bonds that an aromatic system is formed. The following are examples of five- or six-membered heterocyclic aromatic groups or bicyclic heteroaryl rings:

Unless otherwise stated, these heteroaryls may be substituted by one or more groups selected from among methyl, ethyl, isopropyl, i- or s-butyl, hydroxy, fluorine, chlorine, bromine and iodine.

The following are examples of heteroaryl-Ci₆-alkylenes:

By the term "C₆-haloalkyl" (including those which are part of other groups) are meant branched and unbranched alkyl groups with 1 to 6 carbon atoms, which are substituted by one or more halogen atoms. By the term "C₄-alkyl" are meant branched and unbranched alkyl groups with 1 to 4 carbon atoms, which are substituted by one or more halogen atoms. Alkyl groups with 1 to 4 carbon atoms are preferred. Examples include: CF₃, CHF₂, CH₂F, CH₂CF₃.
By the term "C\textsubscript{3-7}-cycloalkyl" (including those which are part of other groups) are meant cyclic alkyl groups with 3 to 7 carbon atoms. Examples include: cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl or cycloheptyl. Unless otherwise stated, the cyclic alkyl groups may be substituted by one or more groups selected from among methyl, ethyl, /iso-propyl, ie/f-butyl, hydroxy, fluorine, chlorine, bromine and iodine.

By the term "C\textsubscript{3-10}-cycloalkyl" are also meant monocyclic alkyl groups with 3 to 7 carbon atoms and also bicyclic alkyl groups with 7 to 10 carbon atoms, or monocyclic alkyl groups which are bridged by at least one C\textsubscript{1,3}-carbon bridge.

By the term "heterocyclic rings" or "heterocycle" are meant, unless stated otherwise, five-, six- or seven-membered, saturated, partially saturated or unsaturated heterocyclic rings which may contain one, two or three heteroatoms, selected from among oxygen, sulphur and nitrogen, while the ring may be linked to the molecule through a carbon atom or through a nitrogen atom, if there is one. Although included by the term "heterocyclic rings" or "heterocycles", the term "saturated heterocyclic ring" refers to five-, six- or seven-membered saturated rings. Examples include:

\begin{center}
\begin{tikzpicture}
\draw (0,0) circle (0.2cm);
\draw (0.5,0) circle (0.2cm);
\draw (1,0) circle (0.2cm);
\draw (1.5,0) circle (0.2cm);
\draw (2,0) circle (0.2cm);
\draw (2.5,0) circle (0.2cm);
\draw (3,0) circle (0.2cm);
\draw (3.5,0) circle (0.2cm);
\draw (4,0) circle (0.2cm);
\draw (4.5,0) circle (0.2cm);
\draw (5,0) circle (0.2cm);
\draw (0,0) -- (0.5,0);
\draw (0.5,0) -- (1,0);
\draw (1,0) -- (1.5,0);
\draw (1.5,0) -- (2,0);
\draw (2,0) -- (2.5,0);
\draw (2.5,0) -- (3,0);
\draw (3,0) -- (3.5,0);

\draw (4.5,0) -- (5,0);
\end{tikzpicture}
\end{center}

Although included by the term "heterocyclic rings" or "heterocyclic group", the term "partially saturated heterocyclic group" refers to five-, six- or seven-membered partially saturated rings which contain one or two double bonds, without so many double bonds being produced that an aromatic system is formed. Examples include:
Although included by the term "heterocyclic rings" or "heterocycles", the term "heterocyclic aromatic rings", "unsaturated heterocyclic group" or "heteroaryl" refers to five- or six-membered heterocyclic aromatic groups or 5-10-membered, bicyclic heteroaryl rings which may contain one, two, three or four heteroatoms, selected from among oxygen, sulphur and nitrogen, and contain so many conjugated double bonds that an aromatic system is formed. Examples of five- or six-membered heterocyclic aromatic groups include:

Unless otherwise mentioned, a heterocyclic ring (or heterocycle) may be provided with a keto group. Examples include:

Although covered by the term "cycloalkyl", the term "bicyclic cycloalkyls" generally denotes eight-, nine- or ten-membered bicyclic carbon rings. Examples include
Although already included by the term "heterocycle", the term "bicyclic heterocycles" generally denotes eight-, nine- or ten-membered bicyclic rings which may contain one or more heteroatoms, preferably 1-4, more preferably 1-3, even more preferably 1-2, particularly one heteroatom, selected from among oxygen, sulphur and nitrogen. The ring may be linked to the molecule through a carbon atom of the ring or through a nitrogen atom of the ring, if there is one. Examples include:

Although already included by the term "aryl", the term "bicyclic aryl" denotes a 5-10 membered, bicyclic aryl ring which contains sufficient conjugated double bonds to form an aromatic system. One example of a bicyclic aryl is naphthyl.

Although already included under "heteroaryl", the term "bicyclic heteroaryl" denotes a 5-10 membered, bicyclic heteroaryl ring which may contain one, two, three or four heteroatoms, selected from among oxygen, sulphur and nitrogen, and contains sufficient conjugated double bonds to form an aromatic system.

Although included by the term "bicyclic cycloalkyls" or "bicyclic aryl", the term "fused cycloalkyl" or "fused aryl" denotes bicyclic rings wherein the bridge separating the rings denotes a direct single bond. The following are examples of a fused, bicyclic cycloalkyl:

Although included by the term "bicyclic heterocycles" or "bicyclic heteroaryls", the term "fused bicyclic heterocycles" or "fused bicyclic heteroaryls" denotes bicyclic 5-10 membered heterorings which contain one, two, three or four heteroatoms, selected from among oxygen, sulphur and nitrogen and wherein the bridge separating the rings denotes a direct single bond. The "fused bicyclic heteroaryls" moreover contain sufficient conjugated double bonds to form an aromatic system. Examples include pyrrolizine, indole, indolizine, isoindole, indazole, purine, quinoline, isoquinoline, benzimidazole, benzofuran, benzopyran,
benzothiazole, benzothiazole, benzoisothiazole, pyridopyrimidine, pteridine, pyrimidopyrimidine,

By the term "spiro group" (spiro) are meant 5-10 membered, spirocyclic rings which may optionally contain one, two or three heteroatoms, selected from among oxygen, sulphur and nitrogen, while the ring may be linked to the molecule through a carbon atom or if available through a nitrogen atom. Unless otherwise mentioned, a spirocyclic ring may be provided with an oxo, methyl or ethyl group. Examples of this include:

"Halogen" within the scope of the present invention denotes fluorine, chlorine, bromine or iodine. Unless stated to the contrary, fluorine, chlorine and bromine are regarded as preferred halogens.

Compounds of general formula 1 may have acid groups, mainly carboxyl groups, and/or basic groups such as e.g. Amino functions. Compounds of general formula 1 may therefore be present as internal salts, as salts with pharmaceutically usable inorganic acids such as hydrochloric acid, sulphuric acid, phosphoric acid, sulphonic acid or organic acids (such as for example maleic acid, fumaric acid, phosphoric acid, tartaric acid or acetic acid) or as salts with pharmaceutically usable bases such as alkali metal or alkaline earth metal hydroxides or carbonates, zinc or ammonium hydroxides or organic amines such as e.g. diethylamine, triethylamine, triethanolamine, *inter alia*.

As mentioned previously, the compounds of formula 1 may be converted into the salts thereof, particularly for pharmaceutical use into the physiologically and pharmacologically acceptable salts thereof. These salts may be present on the one hand as physiologically and
pharmacologically acceptable acid addition salts of the compounds of formula _1_ with inorganic or organic acids. On the other hand, the compound of formula _1_ may be converted by reaction with inorganic bases into physiologically and pharmacologically acceptable salts with alkali or alkaline earth metal cations as counter-ion. The acid addition salts may be prepared for example using hydrochloric acid, hydrobromic acid, sulphuric acid, phosphoric acid, methanesulphonic acid, acetic acid, fumaric acid, succinic acid, lactic acid, citric acid, tartaric acid or maleic acid. It is also possible to use mixtures of the above-mentioned acids. To prepare the alkali and alkaline earth metal salts of the compound of formula _1_, it is preferable to use the alkali and alkaline earth metal hydroxides and hydrides, of which the hydroxides and hydrides of the alkali metals, particularly sodium and potassium, are preferred, while sodium and potassium hydroxide are particularly preferred.

The compounds of general formula _1_ may optionally be converted into the salts thereof, particularly for pharmaceutical use into the pharmacologically acceptable acid addition salts with an inorganic or organic acid. Examples of suitable acids for this purpose include succinic acid, hydrobromic acid, acetic acid, fumaric acid, maleic acid, methanesulphonic acid, lactic acid, phosphoric acid, hydrochloric acid, sulphuric acid, tartaric acid or citric acid. It is also possible to use mixtures of the above-mentioned acids.

The invention relates to the compounds in question, optionally in the form of the individual optical isomers, mixtures of the individual enantiomers or racemates, in the form of the tautomers as well as in the form of the free bases or the corresponding acid addition salts with pharmacologically acceptable acids - such as for example acid addition salts with hydrohalic acids - for example hydrochloric or hydrobromic acid - or organic acids - such as for example oxalic, fumaric, diglycolic or methanesulphonic acid.

The compounds according to the invention may optionally be present as racemates, but may also be obtained as pure enantiomers, i.e. in the (R) or (S) form.

The invention relates to the compounds in question, optionally in the form of the individual optical isomers, diastereomers, mixtures of diastereomers, mixtures of the individual enantiomers or racemates, in the form of the tautomers as well as in the form of the free bases or the corresponding acid addition salts with pharmacologically acceptable acids - such as for example acid addition salts with hydrohalic acids - for example hydrochloric or
hydrobromic acid - or organic acids - such as for example oxalic, fumaric, diglycolic or methanesulphonic acid.

The invention relates to the respective compounds of formula 1 in the form of the pharmacologically acceptable salts thereof. These pharmacologically acceptable salts of the compounds of formula 1 may also be present in the form of their respective hydrates (e.g. Monohydrates, dihydrates, etc.) as well as in the form of their respective solvates.

By a hydrate of the compound according to the formula 1 is meant, for the purposes of the invention, a crystalline salt of the compound according to formula 1, containing water of crystallisation.

By a solvate of the compound according to formula 1 is meant, for the purposes of the invention, a crystalline salt of the compound according to formula 1, which contains solvent molecules (e.g. Ethanol, methanol etc) in the crystal lattice.

The skilled man will be familiar with the standard methods of obtaining hydrates and solvates (e.g. recrystallisation from the corresponding solvent or from water).
4. METHODS OF PREPARATION

The Examples 1 according to the invention were prepared according to Scheme 1a -1g.

Scheme 1a

Wherein \( R^1, R^2, R^3, R^4 \) and \( R^5 \) are herein defined as aforementioned.
Scheme 1b

\[
\begin{align*}
\text{amine} & \quad 9 \\
\text{reaction 6} & \\
\end{align*}
\]

5 wherein \(R^1, R^2, R^3, R^4\) and \(R^5\) are herein defined as aforementioned.

Scheme 1c

\[
\begin{align*}
\text{reaction 7} & \\
\end{align*}
\]

10 wherein \(R^1, R^2, R^3, R^4\) and \(R^5\) are herein defined as aforementioned.
Scheme 1d

wherein R₁, R₂, R₃, R⁴ and R⁵ are herein defined as aforementioned and wherein R⁸ is selected from -(C₁₋₃-alkylene)-A and -A and wherein A is herein defined as aforementioned.

Scheme 1e

wherein R₁, R₂, R³ and R⁵ are herein defined as aforementioned and wherein R⁴ is a five- or six-membered heterocycle that may optionally be substituted by R⁹ and wherein R⁹ is selected from -Cl₄-alkyl and H, preferably from methyl and H.
Scheme 1f

wherein $R^1$, $R^2$, $R^3$, $R^4$ and $R^5$ are herein defined as aforementioned and wherein $R^9$ is selected from $-\text{Cl}$, $-\text{alkyl}$ and $\text{H}$.

Scheme 1g (Example 4)

wherein $R^1$, $R^2$, $R^3$, $R^4$ and $R^5$ are herein defined as aforementioned.
4.1 Intermediate products

4.1.1 Compounds with formula 3 according to Scheme 1a: Synthesis of 1-(1-Isopropyl-1H-imidazol-4-yl)-ethanone (3.1) for Example 17, 23, 29

![Chemical structures]

Step 1

A mixture of 5.0 ml ethyl isocyanoacetate and 12.5 ml tert-butoxybis(dimethylamino)methane was stirred at ambient temperature overnight. The mixture was evaporated under reduced pressure and the resulting residue was purified by column chromatography with cyclohexane/ethyl acetate (80:20 \(\rightarrow\) 65:35) to give the intermediate 1.1.

Yield: 7.1 g of 1.1 (92% of theory) Analysis: \([M+H]^+ = 169\)

Step 2

A mixture of 7.0 g 1.1 and 11.0 ml isopropylamine was stirred at 70°C for 3h and at ambient temperature overnight. The mixture was worked up by adding water, followed by extraction with diethylether and tetrahydrofuran. The combined organic extracts were washed with saturated brine, dried over sodium sulfate, filtered and concentrated in vacuo. The crude material was purified by flash chromatography (dichloromethane/methanol = 100/0 \(\rightarrow\) 95/5) to give the intermediate 1.2.

Yield: 6.4 g 1.2 (84% of theory) Analysis: \([M+H]^+ = 183\)
Step 3

To a mixture of 6.4 g 1.2 in 100 ml toluene were added 3.0 g sodium hydride in mineral oil (60%) at 50°C followed by 30 ml ethyl acetate. The reaction mixture was stirred at 70°C for 4 h and evaporated to give compound 1.3, which was used in the next step without further purification.

Yield: 7.9 g 1.3 (crude, 99% of theory) Analysis: HPLC-MS (method B): \( R_t = 0.92 \) min

Step 4

A mixture of 7.6 g 1.3 and 4.5 g potassium hydroxide in 10 ml water and 80 ml ethanol was stirred under reflux for 3.5 h. The solvent was evaporated. The residue was extracted with dichloromethane and water. The combined organic extracts were washed with saturated brine, dried over sodium sulfate, filtered and concentrated in vacuo.

Yield: 3.6 g 3.1 (70% of theory) Analysis: \([M+H]^+ = 153\); HPLC-MS (method A): \( R_t = 0.28 \) min

4.1.2 Synthesis of compounds with formula 3 according to Scheme 1a: Synthesis of 1-(1,5-Dimethyl-1H-imidazol-4-yl)-ethanone (3.2) for Example 1
Step 1
To a stirred suspension of 5.4 g ethyl 4-methyl-5-imidazolecarboxylate in 30 ml tetrahydrofuran were added 1.4 g sodium hydride in mineral oil (60%) in portions at ambient temperature under argon atmosphere. After gas formation ceased, 2.24 ml methyl iodide were added dropwise at 0°C, then the mixture was stirred at ambient temperature overnight. The precipitate was filtered off and the filtrate was concentrated. The resulting residue was purified by column chromatography eluted with dichloromethane:methanol (100:0 -> 87:13) to give pure intermediate 1.4.

Yield: 1.0 g of 1.4 (17% of theory) Analysis: [M+H]⁺ = 169; HPLC-MS (method G): Rₜ = 0.76 min

Step 2
1.0g 1.4 and 15 ml toluene were heated to 50°C. 0.72 g sodium hydride in mineral oil (60%) were added in portions, followed by 8 ml ethyl acetate, then the mixture was stirred at 80°C for 2h. The solvent was removed by destination to give compound 1.5, which was used in the next step without further purification.

Analysis: [M+H]⁺ = 211; HPLC-MS (method D): Rₜ = 0.66 min

Step 3
Crude 1.5 was taken up in 50 ml methanol and 5 ml water and treated with 0.79 g potassium hydroxide under reflux for 2 h. The solvent was evaporated and the residue extracted with dichloromethane and water. The combined organic phases were dried over magnesium sulfate, filtered and concentrated in vacuo to give the intermediate 3.2.

Yield: 0.8 g 3.2 (97% of theory over 2 steps) Analysis: [M+H]⁺ = 139; HPLC-MS (method G): Rₜ = 0.54 min
4.1.3 Compounds with formula 3 according to Scheme 1a: Synthesis of 1-(1-Methyl-1H-imidazol-4-yl)-ethanone (3.3) for Example 2-16, 18, 19, 22, 26-28, 32-101, 103-175

![Chemical structure of 3.3]

43.4 ml 1.4M methylmagnesiumbromide in toluene were added dropwise to a mixture of 5.0 g 1-methyl-1H-imidazole-carbonitrile in 70 ml diethylether at 0°C. After 30 min, the mixture was warmed up to ambient temperature. After 1 h the reaction was quenched with 1M aqueous HCl solution and neutralised with saturated sodium bicarbonate solution. The reaction mixture was extracted with dichloromethane. The combined organic extracts were dried with magnesium sulfate and concentrated under reduced pressure. The crude material was purified by flash chromatography (dichloromethane/methanol = 98/2) to give the intermediate 3.3.

Yield: 4.8 g of 3.3 (75% content; 62% of theory); Analysis: [M+H]^+ = 125

4.1.4 Synthesis of compounds with formula 4: Reaction 2 from Scheme 1a

Synthesis of 3-Dimethylamino-1-(1-isopropyl-1H-imidazol-4-yl)-propenone (4.1) for Example 17, 23, 29

![Chemical structure of 3.1 and 4.1]

3.6 g 3.1 and 40 ml dimethoxymethyl-dimethyl-amine were refluxed for 2 days. The solvent was removed by distillation and the residue triturated with diethyl ether. The precipitate was filtered off to give 2.8 g of the intermediate 4.1. The filtrate was concentrated and purified by
flash chromatography (dichloromethane/methanol = 95/5) to give 0.1 g of the intermediate 4.1.

Yield: 2.9 g of 4.1 (59% of theory); Analysis: [M+H]^+ = 208

The following enaminones were prepared by using a procedure analogous to 3.1 and 4.1 with the corresponding amines:

3-Dimethylamino-1-(1-isobutyl-1 H-imidazol-4-yl)-propenone (4.2) for Example 21, 25, 31
Yield: 1.14 g of 4.2 (86% of theory) Analysis: [M+H]^+ = 222; HPLC-MS (method B): R_t = 1.03 min

1-(1-cyclopropyl-1 H-imidazol-4-yl)-3-dimethylamino-propenone (4.3) for Example 20, 24, 30
Yield: 3.47 g of 4.3 (81% of theory) Analysis: [M+H]^+ = 206; HPLC-MS (method B): R_t = 0.87 min

3-Dimethylamino-1-[1-(2-methoxy-ethyl)-1 H-imidazol-4-yl]-propenone (4.4) for Example 102
Yield: 1.59 g of 4.4 (79% of theory) Analysis: [M+H]^+ = 224; HPLC-Ms (method B): R_t = 0.78 min

The following enaminone was prepared by using a procedure analogous to 4.1 with ketone 3.2:

3-Dimethylamino-1-(1,5-dimethyl-1 H-imidazol-4-yl)-propenone (4.5) for Example 1
Yield: 0.23 g of 4.5 (53% of theory) Analysis: [M+H]^+ = 194; HPLC-MS (method G): R_t = 0.70 min

The following enaminone was prepared by using a procedure analogous to 4.1 with ketone 3.3:

3-Dimethylamino-1-(1-methyl-1 H-imidazol-4-yl)-propenone (4.6) for Example 2-16, 18, 19, 22, 26-28, 32-101, 103-175
Yield: 4.08 g of 4.6 (49% of theory) Analysis: [M+H]^+ = 180; HPLC-MS (method J): R_t = 1.50 min
4.1.5 Synthesis of compounds with formula 5:

Synthesis of 7-Methyl-5-nitro-1H-indole-2-carboxylic acid ethyl ester (5.1) for Example 1, 4, 5, 8, 13, 23-25, 32-40, 97, 100, 103-145, 154-175

**Step 1**

To a stirred suspension of 7.6 g (2-methyl-4-nitro-phenyl)-hydrazine in 7 ml dioxane was added a solution of 5.1 ml 2-oxo-propionic acid ethyl ester in 7 ml dioxane. The mixture was stirred at ambient temperature for 1 h. The organic solvent was removed by distillation to give compound 1.6, which was used in the next step without further purification.

**Yield:** 12.1 g of 1.6 (99% of theory) Analysis: [M+H]⁺ = 266; HPLC-MS (method G): \( R_t = 1.18 \) min

**Step 2**

A mixture of 1.0 g 1.6 in 8.0 g polyphosphoric acid was stirred at 95°C for 20 min. The mixture was quenched with ice-water. The precipitate was filtered off, washed with water and ethanol and dried to give intermediate 5.1.

**Yield:** 340 mg of 5.1 (36% of theory) Analysis: [M+H]⁺ = 249; HPLC-MS (method H): \( R_t = 1.95 \) min

The following intermediate was prepared by using a procedure analogous to 5.1 with the corresponding hydrazine:
7-Chloro-5-nitro-1 H-indole-2-carboxylic acid ethyl ester (5.2) for Example 3, 6, 7, 11, 12, 14, 17, 20, 21, 26-31, 41-94, 99, 102, 146-148, 151-153

Yield: 36.0 g of 5.2 (16% of theory)

$^1$H NMR: DMSO 400 MHz 5 = 12.900 (s, 1H), 8.664-8.659 (d, $J$ = 2Hz, 1H), 8.1 19-8.1 13 (d, $J$ = 2.4Hz, 1H), 7.488-7.483 (d, $J$ = 2.0Hz, 1H), 4.370-4.310 (m, 2H), 1.345-1.309 (t, $J$ = 7.2Hz, 3H)

The following compounds are commercially available:

5-Nitro-1 H-indole-2-carboxylic acid ethyl ester (5.3) for Examples 96, 149, 150

7-Methoxy-5-nitro-1 H-indole-2-carboxylic acid ethyl ester (5.4) for Examples 9, 101

4.1.6 Synthesis of compounds with formula 5:

Synthesis of 7-Chloro-5-nitro-1 H-indole-2-carboxylic acid dimethylamide (5.5) for Example 6, 17, 20, 21, 26-28, 102

**Step 1**

A mixture of 18.0 g intermediate 5.2, 45 mL 1M aqueous NaOH solution and 22 mL 4M aqueous NaOH solution in 280 mL ethanol was stirred at 65°C for 3h and ambient temperature overnight. Ethanol was removed by distillation. The residue was acidified with 1 M aqueous HCl solution, the precipitate was filtered off and dried.

Yield: 15.5 g of I.7 (85% content; 96% of theory) Analysis: [M+H]$^+$ = 239; HPLC-MS (method A): $R_t$ = 0.75 min
Step 2

15.5 g (85% content) 1.7 were stirred with 24.0 g [(benzotriazol-1-ylxy)-dimethylamino-methylene]-dimethyl-ammonium tetrafluoroborate (TBTU) and 17 ml N,N-diisopropylethylamine in 150 ml N,N-dimethylformamide at ambient temperature. After 5 min, 50 ml 2M dimethylamine solution in tetrahydrofuran were added and the reaction mixture was stirred at ambient temperature overnight. 1M aqueous NaOH solution and water was added and extracted with dichloromethane. The organic layers were washed with brine, dried over sodium sulfate und concentrated in vacuo. The resulting residue was filtered through Aluminum oxide (Alox), washed with methanol and concentrated in vacuo. The residue was triturated with water, filtered off and dried.

Yield: 14.0 g of 5.5 (90% content; 85% of theory) Analysis: [M+H]^+ = 268; HPLC-MS (method B): R_t = 1.27 min

The following intermediate was prepared by using a procedure analogous to 5.5 with the corresponding ester:

7-Methyl-5-nitro-1H-indole-2-carboxylic acid dimethyamide (5.6) for Example 1, 5, 23-25

Yield: 3.80 g of 5.6 (81% of theory) Analysis: [M+H]^+ = 248; [M-H]^- = 246

The following intermediate was prepared by using a procedure analogous to 5.5 with the corresponding acid (commercially available):

5-Nitro-1H-indole-2-carboxylic acid dimethyamide (5.7) for Example 2

Yield: 13.73 g of 5.7 (81% of theory) Analysis: [M+H]^+ = 234; HPLC-MS (method B): R_t = 1.15 min

The following intermediate was prepared by using a procedure analogous to 5.5 with the corresponding amine:

(7-Chloro-5-nitro-1H-indol-2yl)-(4-methyl-piperazin-1-yl)-methanone (5.8) for Example 29-31

Yield: 0.67 g of 5.8 (31% of theory) Analysis: [M+H]^+ = 323; HPLC-MS (method C): R_t = 0.93 min
4.1.7 Synthesis of compounds with formula 5:

Synthesis of 7-Choro-1-methyl-5-nitro-1H-indole-2-carboxylic acid dimethylamide (5.9) for Example 27

503 mg potassium tert-butoxide were added to a mixture of 1.0 g intermediate 5.5 in 14.5 ml N,N-dimethylformamide. After 25 min, 325 µl methyl iodide were added, then the mixture was stirred at ambient temperature for 2.5 h and at 70°C for 2 h. The reaction mixture was diluted with water. The precipitate was filtered off, washed with water and dried.

Yield: 845 mg of 5.9 (80% of theory) Analysis: [M+H]+ = 282; HPLC-MS (method B): R_t = 1.29 min

The following intermediates were prepared by using a procedure analogous to 5.9 with the corresponding alkyl halogenids:

7-Choro-1-isobutyl-5-nitro-1H-indole-2-carboxylic acid dimethylamide (5.10) for Example 26

Yield: 0.57 g of 5.10 (47% of theory) Analysis: [M+H]+ = 324; HPLC-MS (method B): R_t = 1.50 min

7-Choro-1-(2-methoxy-ethyl)-5-nitro-1H-indole-2-carboxylic acid dimethylamide (5.11) for Example 28

Yield: 0.17 g of 5.11 (14% of theory) Analysis: [M+H]+ = 326; HPLC-MS (method B): R_t = 1.36 min
4.1.8 Synthesis of compounds with formula 6: Reaction 3 from Scheme 1a

Synthesis of 5-Amino-7-chloro-1H-indole-2-carboxylic acid dimethylamide (6.1) for Example 6, 17, 20, 21, 102

- A mixture of 4.96 g 5.5 and 1.0 g platinum on carbon in 10 ml methanol and 90 ml tetrahydrofuran was hydrogenated at ambient temperature for 3 h. The catalyst was removed by filtration and the solvent was evaporated in vacuo.

  Yield: 4.0 g of 6.1 (91% of theory) Analysis: [M+H]+ = 238; HPLC-MS (method L): R_t = 1.87 min

- The following intermediates were prepared by using a procedure analogous to 6.1 with the corresponding intermediates 5:

  (5-Amino-7-chloro-1H-indole-2-yl)-4-(methyl-piperazin-1-yl)-methanone (6.2) for Example 29-31

  Yield: 0.65 g of 6.2 Analysis: [M+H]+=293; HPLC-MS (method B): R_t = 0.98 min

- 5-Amino-7-chloro-1H-indole-2-carboxylic acid ethyl ester (6.3) for Example 3, 7, 11, 12, 14, 41-94, 99, 146-148, 151-153

  Yield: 1.50 g of 6.3 (84% of theory)

- 5-Amino-7-chloro-1-methyl-1H-indole-2-carboxylic acid dimethylamide (6.4) for Example 27

  Yield: 0.76 g of 6.4 (100% of theory) Analysis: [M+H]+=252; HPLC-MS (method C): R_t=0.68

- 5-Amino-7-chloro-1-isobutyl-1H-indole-2-carboxylic acid dimethylamide (6.5) for Example 26

  Yield: 0.52 g of 6.5 (100% of theory) Analysis: [M+H]+=294; HPLC-MS (method B): R_t=1.28 min
5-Amino-7-chloro-1-(2-methoxy-ethyl)-1 \textit{H}-indole-2-carboxylic acid dimethylamide (6.6) for Example 28

Yield: 0.16 g of 6.6 (99% of theory) Analysis: [M+H]$^+=$296; HPLC-MS (method B): $R_t=1.36$ min

The following intermediates were prepared by using a procedure analogous to 6.1 with the corresponding intermediates 5 (using Pd/C instead of Pt/C):

5-Amino-7-methyl-1 \textit{H}-indole-2-carboxylic acid dimethylamide (6.7) for Example 1, 5, 23-25

Yield: 3.20 g of 6.7 (96% of theory) Analysis: [M+H]$^+=$218

5-Amino-7-methyl-1 \textit{H}-indole-2-carboxylic acid ethyl ester (6.8) for Example 4, 8, 13, 32-40, 97, 100, 103-145, 154-175

Yield: 3.94 g of 6.8 (90% of theory) Analysis: [M+H]$^+=$219; HPLC-MS (method B): $R_t=1.10$ min

5-Amino-1 \textit{H}-indole-2-carboxylic acid ethyl ester (6.9) for Example 96, 149, 150

Yield: 8.46 g of 6.9 (97% of theory) Analysis: [M+H]$^+=$205

5-Amino-1 \textit{H}-indole-2-carboxylic acid dimethylamide (6.10) for Example 2

Yield: 3.70 g of 6.10 (90% of theory) Analysis: [M+H]$^+=$204

5-Amino-7-methoxy-1 \textit{H}-indole-2-carboxylic acid ethyl ester (6.11) for Example 9, 101

Yield: 1.8 g of 6.11 Analysis: [M+H]$^+=$235
4.1.9 Synthesis of compounds with formula 6

Synthesis of 5-Amino-7-bromo-1 H-indole-2-carboxylic acid dimethylamide (6.12) for Example 10, 15, 16, 18, 19, 22

**Step 1**

A mixture of 45.0 g (2-bromo-4-nitro-phenyl)-hydrazine and 22.0 ml 2-oxo-propionic acid ethyl ester in 220 ml dioxane was stirred at ambient temperature for 2 h. The organic solvent was removed by destination. The resulting residue was triturated with diethyl ether. The
precipitate was filtered off and dried to give 54.0 g of compound 1.8. The filtrate was concentrated in vacuo to give 10.0 g of compound 1.8.

Yield: 64.0 g of 1.8 (99% of theory) Analysis: [M+H]+ = 330; HPLC-MS (method A): R_t = 0.97 min

**Step 2**

A mixture of 3.0 g 1.8 and 0.3 g Raney nickel in 90 ml ethyl acetate was hydrogenated at 60°C for 7 h. The catalyst was removed by filtration and the solvent was evaporated in vacuo to give compound 1.9.

Yield: 3.0 g of 1.9 (87% content; 97% of theory) Analysis: [M+H]+ = 300; HPLC-MS (method S): R_t = 0.60 min

**Step 3**

A mixture of 6.7 g 1.9 and 2.2 ml acetic anhydride in 100 ml N,N-dimethylformamide was stirred at ambient temperature overnight. The solvent was removed by destination, the residue taken up in ethyl acetate and washed with brine. The combined organic phases were dried over magnesium sulfate, filtered and concentrated in vacuo.

Yield: 6.65 g of 1.10 (87% of theory) Analysis: [M+H]+ = 342; HPLC-MS (method B): R_t = 1.32 min

**Step 4**

A mixture of 11.3 g compound 1.10 in 110 g polyphosphoric acid was stirred at 90°C for 6 h. The mixture was quenched with water. The precipitate was filtered off and dried.

Yield: 7.44 g of 1.11 (69% of theory) Analysis: [M+H]+ = 325; HPLC-MS (method B): R_t = 1.24 min
Step 5
A mixture of 4.0 g compound 1.11 and 15.4 ml 4M aqueous NaOH solution in 50 ml ethanol was stirred at ambient temperature for 1 h. Ethanol was removed by destination. The residue was acidified with 1 M aqueous HCl solution, the precipitate was filtered off and dried.

Yield: 3.1 g of 1.12 (85% of theory) Analysis: [M+H]+ = 297; HPLC-MS (method C): Rₜ = 0.91 min

Step 6
1.95 g 1.12 were stirred with 2.11 g [(benzotriazol-1-yloxy)-dimethylamino-methylene]-dimethyl-ammonium tetrafluoroborate (TBTU) and 1.12 ml N,N-diisopropylethylamine in 75 ml N,N-dimethylformamide at ambient temperature. After 5 min, 50 ml 2M dimethylamine solution in tetrahydrofuran were added and the reaction mixture was stirred at ambient temperature for 1 h. The solvent was removed by destination and the residue was purified by flash chromatography (cyclohexane:ethyl acetate = 50:50 → 0:100 → ethyl acetate:methanol 100:0 → 95:5).

Yield: 1.3 g of 1.13 (61% of theory) Analysis: [M+H]+ = 324; HPLC-MS (method B): Rₜ = 1.03 min

Step 7
A mixture of 3.34 g 1.13 and 6 ml hydrochlorid acid (32%) in 32 ml ethanol was refluxed for 5 h. The solvent was removed by destination. The residue was taken up in water, neutralized with saturated NaHCO₃ solution and extracted with dichloromethane. The combined organic phases were dried and concentrated in vacuo.

Yield: 1.65 g of 6.12 (57% of theory) Analysis: [M+H]+ = 282; HPLC-MS (method B): Rₜ = 0.96 min
4.1.10 Synthesis of compounds with formula T; Reaction 4 from Scheme 1a

Synthesis of 7-Chloro-5-guanidino-1H-indole-2-carboxylic acid dimethylamide tosylate (7.1) for Example 6, 17, 20, 21, 102

To a stirred mixture of 1.9 g 6.1 in 50 ml dioxane were added 1.5 g p-toluenesulfonic acid and 0.5 g cyanamide. The reaction mixture was stirred at 110°C for 2 h, then at ambient temperature for 3 days. The precipitate was filtered, washed with dioxane and dried to give the intermediate 7.1.

Yield: 3.2 g 7.1 (89% of theory) Analysis: [M+H]⁺ = 280; HPLC-MS (method E): Rₜ = 1.11 min

The following intermediates were prepared by using a procedure analogous to 7.1 with the corresponding anilines 6:

N-[7-Chloro-2-(4-methyl-piperazine-1-carbonyl)-1H-indol-5yl]-guanidine tosylate (7.2) for Example 29-31

Yield: 0.73 g of 7.2 (65% of theory) Analysis: [M+H]⁺ = 335; HPLC-MS (method B): Rₜ = 1.10 min

7-Chloro-5-guanidino-1 H-indole-2-carboxylic acid ethyl ester tosylate (7.3) for Example 3, 7, 11, 12, 14, 41-94, 99, 146-148, 151-153

Yield: 3.0 g of 7.3 (82% of theory) Analysis: [M+H]⁺ = 281/283(Cl); HPLC-MS (method D): Rₜ = 0.92 min

7-Chloro-5-guanidino-1-methyl-1 H-indole-2-carboxylic acid dimethylamide tosylate (7.4) for Example 27
Yield: 0.72 g of 7.4 (52% of theory) Analysis: [M+H]+=294; HPLC-MS (method B) R_t=1.22 min

7-Chloro-5-guanidino-1-isobutyl-1 H-indole-2-carboxylic acid dimethylamide tosylate (7.5) for Example 26

Yield: 0.62 g of 7.5 (68% of theory) Analysis: [M+H]+=336; HPLC-MS (method B) R_t=1.28 min

7-Chloro-5-guanidino-1-(2-methoxy-ethyl)-1 H-indole-2-carboxylic acid dimethylamide tosylate (7.6) for Example 28

Yield: 0.39 g of 7.6 Analysis: [M+H]+=338; HPLC-MS (method B) R_t= 1.29 min

5-Guanidino-7-methyl-1 H-indole-2-carboxylic acid dimethylamide tosylate (7.7) for Example 1, 5, 23-25

Yield: 0.56 g of 7.7 (95% of theory) Analysis: [M+H]+=26

5-Guanidino-7-methyl-1 H-indole-2-carboxylic acid ethyl ester tosylate (7.8) for Example 4, 8, 13, 32-40, 97, 100, 103-145, 154-175

Yield: 7.70 g of 7.8 (95% of theory)

5-Guanidino-1 H-indole-2-carboxylic acid ethyl ester tosylate (7.9) for Example 96, 149, 150

Yield: 7.10 g of 7.9 (99% of theory) Analysis: [M+]

5-Guanidino-1 H-indole-2-carboxylic acid dimethylamide tosylate (7.10) for Example 2

Yield: 3.80 g of 7.10 (71% of theory)

5-Guanidino-7-methoxy-1 H-indole-2-carboxylic acid ethyl ester tosylate (7.11) for Example 9, 101

Yield: 3.42 g of 7.11 (85% of content, 109% of theory) Analysis: [M+H]+=277

7-Bromo-5-guanidino-1 H-indole-2-carboxylic acid dimethylamide tosylate (7.12) for Example 10, 15, 16, 18, 19, 22

Yield: 2.22 g of 7.12 (76% of theory) Analysis: [M+H]+=324; HPLC-MS (method B) R_t= 1.04 min
4.1.1 Synthesis of compounds with formula 8 according to Scheme 1b (or with formula 1 according to Scheme 1a): Reaction 5 from Scheme 1a

Synthesis of 7-Chloro-5-[4-(1-methyl-1H-imidazol-4-yl)-pyrimidin-2-ylamino]-1H-indole-2-carboxylic acid methyl ester (Example 99) and 7-Chloro-5-[4-(1-methyl-1H-imidazol-4-yl)-pyrimidin-2-ylamino]-1H-indole-2-carboxylic acid (8.1 / Example 98) for Example 3, 7, 11, 12, 14, 41-94, 146-148, 151-153

\[ \text{4.6} \quad + \quad \text{7.3} \quad \rightarrow \quad \text{Example 99} \]

**Step 1**

A mixture of 0.48 g 4.6, 1.20 g 7.3 and 5.0 mL 0.5 M sodium methylate in methanol was stirred at 140 °C for 30 min under microwave irradiation. The reaction mixture was diluted with dichloromethane and methanol, filtered through Alox. The filtrate was concentrated in vacuo and purified by flash chromatography (dichloromethane/methanol 100:0 -> 90:10). A small part was triturated with diethyl ether. The precipitate was filtered off, washed with diethyl ether and dried to give **example 99**.
Yield: 20 mg of **Example 99** (2% of theory) Analysis: [M+H]$^+$ = 383; HPLC-MS (method D): $R_t$ = 1.05 min

**Step 2**

The rest of the residue was taken up in 20 ml methanol and 20 ml tetrahydrofuran and treated with 5 mL 1M aqueous NaOH solution at 60°C for 2 hours. The organic solvent was removed by destination and the residue was acidified with 1 M aqueous HCl solution. The precipitate was filtered off, washed with water and dried to give intermediate **8.1 / Example 98**.

Yield: 180 mg of **8.1 / Example 98** (18% of theory) Analysis: [M+H]$^+$ = 369; HPLC-MS (method D): $R_t$ = 0.95 min

The following acids were prepared by using a procedure analogous to **8.1** with the corresponding guanidines 7:

- 7-Methoxy-5-[4-(1-methyl-1H-imidazol-4-yl)-pyrimidin-2-ylamino]-1H-indole-2-carboxylic acid (**8.2** for Example 9, 101)
- 7-Methyl-5-[4-(1-methyl-1H-imidazol-4-yl)-pyrimidin-2-ylamino]-1H-indole-2-carboxylic acid (**8.3 / Example 97** for Example 4, 8, 13, 32-40, 100, 103-145, 154-175)
- 5-[4-(1-Methyl-1H-imidazol-4-yl)-pyrimidin-2-ylamino]-1H-indole-2-carboxylic acid (**8.4 / Example 96** for Example 149, 150)
4.1.12 Synthesis of compounds with formula 10 according to Scheme 1c (or with formula 1 according to Scheme 1a): Reaction 5 from Scheme 1a

Synthesis of 7-Bromo-5-[4-(1-methyl-1H-imidazol-4-yl)-pyrimidin-2-ylamino]-1H-indole-2-carboxylic acid dimethylamide (10.1 / Example 15) for Example 10, 16, 18, 19, 22

A mixture of 1.6 g 4.6, 2.2 g 7.12 and 2.5 g potassium tert-butoxide in 30 ml N,N-dimethylformamide was stirred at 150 °C for 1.5 h under microwave irradiation. The reaction mixture was concentrated in vacuo and the resulting residue was purified by flash chromatography (dichloromethane/methanol 100:0 → 90:10) to give intermediate 10.1 / Example 15.

Yield: 670 mg of 10.1 /Example 15 (34% of theory) Analysis: [M+H]^+ = 440; HPLC-MS (method C): R_t = 0.97 min
4.1.13 Synthesis of amines with formula 9 according to Scheme 1b:

Synthesis of cis-4-(2-Dimethylamino-ethyl)-cyclohexylamine (9.1) for Example 87

Step 1

3.0 g cis-(4-Benzoylcarbonylamino-cyclohexyl)-acetic acid were stirred with 4.0 g [[benzotriazol-1-yloxy]-dimethylamino-methylene]-dimethyl-ammonium tetrafluoroborate (TBTU) and 1.45 ml triethylamine in 40 ml tetrahydrofuran at ambient temperature. After 1 h, 15.5 ml 2M dimethylamine solution in tetrahydrofuran were added and the reaction mixture was stirred at ambient temperature overnight. The reaction mixture was diluted with ethyl acetate and washed with saturated aqueous potassium carbonate solution, 1 M aqueous HCl solution and brine. The combined organic phases were dried over sodium sulfate, filtered and concentrated in vacuo.

Yield: 3.2 g of 1.14 (98% of theory) Analysis: [M+H]$^+$ = 318

Step 2

A mixture of 3.2 g 1.14 and 0.4 g palladium on carbon in 70 ml methanol was hydrogenated at ambient temperature. The catalyst was removed by filtration and the solvent was evaporated in vacuo.

Yield: 2.0 g of 1.15 (crude, 99% of theory) Analysis: [M+H]$^+$ = 185
**Step 3**

15 ml tetrahydrofuran were heated to 60°C. 1.24 g lithium aluminium hydride were added and stirred at 60°C for 10 min, then 2.0g 1.15 (crude) in 15 ml tetrahydrofuran were added dropwise and the reaction mixture was stirred at 60°C for 4 h and at ambient temperature overnight. The mixture was quenched with water and 1 M aqueous NaOH solution, filtered through Celite and washed with tetrahydrofuran. The filtrate was concentrated in vacuo.

Yield: 1.6 g of 9.1 (87% of theory) Analysis: \([M+H]^+ = 171\)

**4.1.14 Synthesis of amines with formula 9 according to Scheme 1b:**

Synthesis of 1-Methyl-4-oxa-1,9-diaza-spiro[5.5]undecan-2-one hydrochloride (9.2) for Example 34, 49, 150

**Step 1**

To a solution of 6.7 g 2-Oxo-4-oxa-1,9-diaza-spiro[5.5]undecane-9-carboxylic acid tert-butyl ester in 70 ml tert-amyl alcohol were added 4.17 g potassium tert-butoxide, then 2.3 ml iodomethane. The reaction mixture was stirred at ambient temperature overnight. To the mixture were added 1.5 ml iodomethane and it was stirred at ambient temperature for 1.5 h. The solvent was evaporated. The residue was triturated with hot ethyl acetate, the precipitate was filtered off, triturated with dichloromethane and filtered off. The combined filtrates were evaporated. The residue was recrystallized with ethyl acetate. The precipitate was filtered off and purified by flash chromatography (dichloromethane/methanol = 100:0 → 96:4) to give pure compound 1.16.

Yield: 5.7 g of 1.16 (81% of theory) Analysis: \([M+H]^+ = 285\)
Step 2

To a solution of 5.7 g 1.16 in 15 ml dioxane were added 22.5 ml 4 M hydrochloric acid in dioxane. The reaction mixture was stirred at ambient temperature for 2 days, then diluted with diisopropyl ether. The precipitate was filtered off, washed with diisopropyl ether and dried.

Yield: 4.4 g of 9.2 (99% of theory) Analysis: [M+H]+ = 185

4.1.15 Synthesis of amines with formula 9 according to Scheme 1b:

Synthesis of 4-(3-Methoxy-azetidin-1-yl)-piperidine (9.3) for Example 70

Step 1

A mixture of 5.0 g 1-(Benzyloxycarbonyl)-4-piperidinone and 2.9 g 3-Methoxy-azetidine hydrochloride in 20 ml tetrahydrofuran was acidified with glacial acetic acid (pH 5 - 6) and stirred at ambient temperature for 40 min. The mixture was cooled with ice, 7.8 g sodium triacetoxyborohydride were added and the mixture was stirred at ambient temperature overnight. The mixture was quenched with aqueous potassium carbonate solution and extracted with ethyl acetate. The combined organic phases were washed with saturated brine, dried over sodium sulfate, filtered and concentrated in vacuo.

Yield: 6.5 g of 1.17 (99% of theory) Analysis: [M+H]+ = 305; HPLC-MS (method P) R_t = 0.90 min
Step 2

A mixture of 6.5 g 1.17 and 0.8 g palladium on carbon in 20 ml methanol was hydrogenated at ambient temperature for 15 h. The catalyst was removed by filtration and the solvent was evaporated in vacuo.

Yield: 3.55 g of 9.3 (98% of theory) Analysis: [M+H]⁺ = 171; HPLC-MS (method Q) Rₜ = 0.90 min

4.1.16 Synthesis of amines with formula 9 according to Scheme 1b:

Synthesis of 1-Isopropyl-4,5,6,7-tetrahydro-1H-pyrazolo[4,3-c]pyridine hydrochloride (9.4) for Example 113

Step 1

A mixture of 1.0 g 3-Dimethylaminomethylene-4-oxo-piperidine-1-carboxylic acid tert-butyl ester and 0.8 g isopropylhydrazine oxalate in 10 ml ethanol was stirred at 140 °C for 5 min under microwave irradiation. The solvent was removed by destination. The residue was taken up in ethyl acetate and extracted with water. The combined organic phases were washed with saturated brine, dried over sodium sulfate, filtered and concentrated in vacuo.

Yield: 940 mg of 1.18 (90% of theory) Analysis: [M+H]⁺ = 266; HPLC-MS (method R) Rₜ = 1.29 min
Step 2

To a solution of 2.2 g 1.18 in 100 ml dichloromethane were added 16 ml 2 M HCl solution in diethylether at 0 °C. The resulting mixture was stirred at ambient temperature for 4 days. The solvent was removed by distillation to give crude intermediate 9.4.

Yield: 2.1 g of 9.4 (crude, 100% of theory) Analysis: [M+H]^+ = 166

The synthesis of the following compound is described in the literature:

(R)-3-(3-fluoropyrrolidin-1-yl)propan-1-amine (9.6) for Example 89 WO 2009053737 A2

All the others used amines (9) are commercially available.

4.2 Synthesis of the Examples of formula 1

4.2.1 Reaction 5 from Scheme 1a

Example 1: 5-[4-(1,5-Dimethyl-1 H-imidazol-4-yl)-pyrimidin-2-ylamino]-7-methyl-1 H-indole-2-carboxylic acid dimethylamide

A mixture of 42.5 mg 4.5, 80.0 mg 7.7 and 10.8 mg sodium methylate in 2 ml methanol was stirred at 140 °C for 60 min under microwave irradiation. The resulting mixture was purified by preparative HPLC. The combined product fractions were evaporated. The residue was dissolved in acetonitrile/water 1/1 and lyophilized to obtain the Example 1.
Yield: 12 mg Example 1 (14% of theory); Analysis [M+H]^+ = 390; HPLC-MS (method D) \( R_t = 0.96 \) min

4.2.2 Reaction 6 from Scheme 1b

Example 7: 7-Chloro-5-[4-(1-methyl-1H-imidazol-4-yl)-pyrimidin-2-ylamino]-1H-indole-2-carboxylic acid methylamide

\[
\begin{align*}
\text{Cl} & \quad \text{HN} & \quad \text{N} \\
& \quad \text{HN} & \quad \text{N} \\
& \quad \text{Cl} & \quad \text{CH}_3 \\
& \quad \text{NH} & \quad \text{N} \\
& \quad \text{CH}_3 & \quad \text{H}_2\text{N} &= \text{CH}_3
\end{align*}
\]

Example 7

74 mg 8.1 were stirred with 64 mg [(benzotriazol-1-yl/oxy)-dimethylamino-methylene]-dimethyl-ammonium tetrafluoroborate (TBTU) and 69 \( \mu l \) N,N-diisopropylethylamine in 2 ml N,N-dimethylformamide at ambient temperature. After 10 min, 0.5 ml 2M methylamine solution in tetrahydrofuran were added and the reaction mixture was stirred at ambient temperature overnight. The resulting mixture was purified by preparative HPLC. The combined product fractions were evaporated. The residue was dissolved in acetonitrile/water 1/1 and lyophilized to obtain the example 7.

Yield: 30 mg Example 7 (39% of theory) Analysis: [M+H]^+ = 382; HPLC-MS (method E): \( R_t = 1.43 \) min
4.2.3 Reaction 7 from Scheme 1c

Example 19:  5-[4-(1 -methyl-1 H-imidazol-4-yl)-pyrimidin-2-ylamino]-7-(1 -methyl-1 H-pyrazol-4-yl)-1 H-indole-2-carboxylic acid dimethylamide

\[
\begin{align*}
\text{Example 19} & \quad \text{10.1 / Example 15} \\
\text{Example 19} & \quad \text{10.1 / Example 15}
\end{align*}
\]

A mixture of 50.0 mg 10.1, 23.6 mg 1-methyl-4-(4,4,5,5-tetramethyl-1,3,2-dioxaborolan-2-yl)-1H pyrazole, 8.3 mg 1,1’ bis(diphenylphosphino)ferrocenedichloropalladium(II) and 23.5 mg potassium carbonate in 400 \( \mu \)I dioxane and 200 \( \mu \)I water was stirred at 100 °C for 15 min under microwave irradiation under argon atmosphere. The solvent was removed by destination and the residue was purified by preparative HPLC. The combined product fractions were concentrated and lyophilized to obtain the example 19.

Yield: 43 mg Example 19 (86% of theory); Analysis [M+H]\(^+\) = 442; HPLC-MS (method F) \( R_t = 0.52 \) min

4.2.4 Reaction 8 from Scheme 1d

Example 22: 7-(Furan-2-ylmethylsulfanyl)-5-[4-(1 -methyl-1 H-imidazol-4-yl)-pyrimidin-2-ylamino]-1H-indole-2-carboxylic acid dimethylamide

\[
\begin{align*}
\text{Example 22} & \quad \text{10.1 / Example 15} \\
\text{Example 22} & \quad \text{10.1 / Example 15}
\end{align*}
\]

A mixture of 50.0 mg 10.1, 12.7 \( \mu \)I furan-2-yl-methanethiol, 10.4 mg tris(dibenzylideneacetone)dipalladium(0), 6.6 mg Xantphos and 40 \( \mu \)I N,N-
diisopropylethylamine in 0.5 ml dioxane was stirred at 110 °C for 1.5 h under argon atmosphere. The solvent was removed by distillation and the residue was purified by preparative HPLC. The combined product fractions were concentrated and lyophilized to obtain the example 22.

Yield: 38 mg Example 22 (71% of theory); Analysis \([M+H]^+ = 474\); HPLC-MS (method F) \(R_t = 0.60\) min

4.2.5 Reaction 9 from Scheme 1e

Example 171: [4-(1-Methyl-1 H-imidazol-4-yl)-pyrimidin-2-yl]-[7-methyl-2-(3-methyl-1,2,4]oxadiazol-5-yl)-1 H-indol-5-yl]-amine

Step 1

70 mg 8.3 were stirred with 64 mg [(benzotriazol-1-yloxy)-dimethylamino-methylene]-dimethyl-ammonium tetrafluoroborate (TBTU) and 69 \(\mu\)l \(N,N\)-diisopropylethylamine in 1 ml \(N,N\)-dimethylformamide at ambient temperature. After 10 min, 15 mg N-hydroxyacetamidine
were added and the reaction mixture was stirred at ambient temperature for 2 h to give compound 1.18, which was used in the next step without further purification.

**Step 2**

The reaction mixture (contains 1.18) was stirred at 115 °C for 2 h. The resulting mixture was purified by preparative HPLC. The combined product fractions were evaporated. The residue was dissolved in acetonitrile/water 1/1 and lyophilized to obtain the example 171.

Yield: 25 mg Example 171 (32% of theory) Analysis: [M+H]+ = 387; HPLC-MS (method D): R_t = 1.07 min

**4.2.6 Reaction 10 from Scheme 1f**

Examples 174 and 175: 7-Methyl-5-[4-(1-methyl-1H-imidazol-4-yl)-pyrimidin-2-ylamino]-1H-indole-2-carboxylic acid N'-hydroxymethyl-hydrazide and [4-(1-Methyl-1H-imidazol-4-yl)-pyrimidin-2-yl]-[7-methyl-2-[1,3,4]oxadiazol-2-yl]-1H-indol-5-yl]-amine
Step 1

279 mg 8.3 were stirred with 257 mg [(benzotriazol-l-yloxy)-dimethylamino-methylene]-dimethyl-ammonium tetrafluoroborate (TBTU) and 275 µl N,N-diisopropylethylamine in 4 ml N,N-dimethylformamide at ambient temperature. After 10 min, 48 mg formic acid hydrazide were added and the reaction mixture was stirred at ambient temperature for 1 h. The resulting mixture was purified by preparative HPLC. The combined product fractions were evaporated and the precipitating product collected by filtration, washed with water and dried to give example 174.

Yield: 150 mg Example 174 (48% of theory) Analysis: [M+H]^+ = 391 ; HPLC-MS (method G): R_t = 0.72 min

Step 2

A mixture of 40 mg example 174 and 500 µl phosphorus oxychloride was stirred at 80 °C for 2 h. The resulting mixture was concentrated in vacuo and the resulting residue purified by preparative HPLC. The combined product fractions were evaporated. The residue was dissolved in acetonitrile/water 1/1 and lyophilized to obtain the example 175.

Yield: 15 mg Example 175 (39% of theory) Analysis: [M+H]^+ = 373; HPLC-MS (method D): R_t = 0.94 min
4.2.7 Reaction 11 from Scheme 1g

Example 4: 7-Methyl-5-[4-(1-methyl-1H-imidazol-4-yl)-pyrimidin-2-ylamino]-1H-indole-2-carboxylic acid amide

Step 1

261 mg 8.3 were stirred with 241 mg [(benzotriazol-1-yl oxy)-dimethylamino-methylene]-dimethyl-ammonium tetrafluoroborate (TBTU) and 258 μl N,N-diisopropylethylamine in 20 ml N,N-dimethylformamide at ambient temperature. After 10 min, 125 mg 2,4-dimethoxybenzylamine were added and the reaction mixture was stirred at ambient temperature for 1 h. The reaction mixture was diluted with water and the precipitate was filtered off to give compound 1.19, which was used in the next step without further purification.

Analysis: [M+H]⁺ = 498; HPLC-MS (method D): Rᵣ = 1.16 min
Step 2
Crude compound 1.19 was taken up in 10 mL dichloromethane and treated with 10 mL trifluoroacetic acid at ambient temperature for 2 h. The solvent was removed by destination and the residue triturated with water. The precipitate was filtered off and the filtrate was purified by preparative HPLC. The combined product fractions were evaporated to obtain the example 4.

Yield: 160 mg Example 4 (61% of theory) Analysis: [M+H]+ = 348; HPLC-MS (method D): Rt = 0.82 min

4.3 Chromatographic Methods (HPLC-MS Methods)

The example compounds prepared according to the foregoing synthesis schemes were characterised by the following chromatographic methods, which - if they were carried out are specified individually in Table 1.

Method A:
Waters Acquity mit DA- und MS-Detektor

Eluent A: Water (+ 0.13% TFA)
Eluent B: Methanol (+ 0.05% TFA)

<table>
<thead>
<tr>

5. **EXAMPLES**

The following Examples were prepared analogously to the methods of synthesis described above. These compounds are suitable as Syk inhibitors and have IC$_{50}$-values measured in the in vitro assay of less than or equal to 1 µM. The IC$_{50}$-values are shown in the following Table 1 and were experimentally determined as follows:

**In vitro Syk Kinase Test**

Recombinant human Syk (amino acids 342-635) was expressed as a fusion protein with an N-terminal GST tag, affinity-purified and deep-frozen at a concentration of approx. 50 - 100 µM in test buffer (25 mM HEPES pH7.5; 25 mM MgCl$_2$; 5 mM MnCl$_2$; 50 mM KCl; either 0.2% BSA or 0.2 % HSA or 1 % HSA (varies from example to example depending on the used assay), for details see Table 1); 0.01 % CHAPS; 100 µM Na$_2$VO$_4$; 0.5 mM DTT) and 10% glycerol at -80°C until use.

The catalytic activity of the GST-Syk kinase fusion protein was determined using the Kinase Glo® Luminescence Kinase test (Promega; V6712). In this homogeneous test the amount of ATP remaining after the kinase reaction is quantified by a luciferin-luciferase reaction using luminescence. The luminescence signal obtained correlates with the amount of ATP still present and thus correlates inversely with the activity of the protein kinase.

**Method**

The test compounds were dissolved in 100 % DMSO at a concentration of 10 mM and diluted in DMSO to a concentration of 1 mM. All further dilutions of the substances were carried out with 7.5 % DMSO in test buffer until a concentration was reached which was 7.5 times above the final test concentration (final concentration of the compounds: 30 µM to 1 nM). 2 µl aliquots of these dilutions were transferred into a 384-well Optiplate (Perkin Elmer, # 6007290). GST-Syk was diluted to 6.0 nM in the test buffer and 10 µl of this dilution were used in the kinase test (final concentration of Syk = 4 nM in a total volume of 15 µl). After 15 minutes incubation at room temperature 3 µl of a mixture of 750 nM ATP and 100 µg/ml poly (L-Glutamic acid L-Tyrosine 4:1), Fluka # 81357) in test buffer were added to each well and the incubation was continued for a further 60 minutes at room temperature.
Positive controls are the reaction mixtures that contain no test substance; negative controls (blanks) are reaction mixtures that contain no kinase.

After 60 minutes, 10 μl Kinase-Glo® solution (Promega, Cat. # V6712) (heated to room temperature) were added to each well and incubation was continued for a further 15 minutes.

The plates were read in a Microplate Scintillation and Luminescence Counter (Canberra Packard GmbH).

Data evaluation and Calculation:

The output file of the "Counter" is a text file that contains the well number and measured counts in two columns. For data evaluation and calculation, the measurement of the negative control was set as 100 % inhibition and the measurement of the positive control was set as 0% inhibition. Based on this values the % inherent value for the measurement of each substance concentration was calculated using an "MS-Excel - VB macro". Normally, the % inhibition values calculated are between 100% and 0 % inhibition values but may also occur outside these limits in individual cases. The IC_{50} values were calculated from the % inhibition values using "GraphPadPrism" software (Version 5) (GraphPad Software Inc.).

The following Examples of formula 1 having the following properties were prepared according to the methods of synthesis described above:

6. INDICATIONS

As has been found, the compounds of formula $1$ are characterised by their range of applications in the therapeutic field. Particular mention should be made of those applications for which the compounds of formula $1$ according to the invention are preferably used on the basis of their pharmaceutical activity as Syk-inhibitors. Examples include respiratory complaints, allergic diseases, osteoporosis, gastrointestinal diseases or complaints, immune or autoimmune diseases, allergic diseases, inflammatory diseases, e.g. inflammatory diseases of the joints, skin and eyes and diseases of the peripheral or central nervous system.

Particular mention should be made of the prevention and treatment of respiratory tract and pulmonary diseases which are accompanied by increased mucus production, inflammation and/or obstructive diseases of the airways. Examples of these include asthma, paediatric asthma, ARDS (Adult Respiratory Distress Syndrome), acute, allergic or chronic bronchitis, autoimmune haemolytic anemia, chronic obstructive bronchitis (COPD) (including the treatment of Rhinovirus-induced exacerbations), coughs, allergic rhinitis or sinusitis, allergic rhinoconjunctivitis, chronic rhinitis or sinusitis, alveolitis, farmers’ lung, hyperreactive airways, infectious bronchitis or pneumonitis, bronchiectasis, pulmonary fibrosis, bronchial oedema, pulmonary oedema, pneumonia or interstitial pneumonia triggered by various causes such as aspiration, inhalation of toxic gases or bronchitis, pneumonia or interstitial pneumonia triggered by cardiac insufficiency, radiation, chemotherapy, cystic fibrosis or mucoviscidosis, alphal -antitrypsin deficiency.

The compounds according to the invention are preferably also suitable for the treatment of allergic diseases such as for example allergic rhinitis, allergic rhinoconjunctivitis, allergic conjunctivitis, and contact dermatitis, urticaria / angioedema and allergic dermatitis.

Mention should also preferably be made of the treatment of inflammatory diseases of the gastrointestinal tract. Examples of these are Crohn's disease and ulcerative colitis.

The compounds according to the invention are preferably also suitable for the treatment of inflammatory diseases of the joints, of the blood vessels and of the kidney or inflammatory diseases of the skin and eyes. Examples of these are rheumatoid arthritis, antibody-based
glomerulonephritis, psoriasis, Kawasaki syndrome, coeliac disease (sprue), arteriosclerosis and Wegener's granulomatosis.

The compounds according to the invention are preferably also suitable for the treatment of autoimmune diseases. Examples of these are hepatitis (autoimmune-based), lupus erythematoses, anti-phospholipid syndrome, Berger's disease, Evans's syndrome, immunohaemolytic anaemia, ITP (idiopathic thrombocytopenic purpura; adult, neonatal and paediatric), myasthenia gravis, Sjogren's syndrome, sclerodermy, Bullous pemphigoid and Pemphigus vulgaris.

The compounds according to the invention are preferably also suitable for the treatment of B-cell lymphomas, like chronic lymphocytic leukaemia and non Hodgkin's lymphomas or T cell lymphomas.

Mention may preferably also be made of the prevention and treatment of diseases of the peripheral or central nervous system. Examples of these are acute and chronic multiple sclerosis or non-familial lateral sclerosis.

Mention may preferably also be made of the prevention and treatment of osteoporotic diseases such as for example disease-associated osteopenia, osteoporosis and osteolytic diseases.

The present invention relates particularly preferably to the use of compounds of formula 1 for preparing a pharmaceutical composition for the treatment of diseases selected from among asthma, COPD, allergic rhinitis, Adult Respiratory Distress Syndrome, bronchitis, allergic dermatitis, contact dermatitis, ITP, rheumatoid arthritis and allergic rhinoconjunctivitis.

Most preferably, the compounds of formula 1 may be used for the treatment of a disease selected from among asthma, allergic rhinitis, rheumatoid arthritis, allergic dermatitis and COPD.
7. COMBINATIONS

The compounds of formula 1 may be used on their own or in conjunction with other active substances of formula 1 according to the invention. The compounds of formula 1 may optionally also be used in conjunction with other pharmacologically active substances. Preferably the active substances used here may be selected for example from among the betamimetics, anticholinergics, corticosteroids, PDE4-inhibitors, LTD4-antagonists, EGFR-inhibitors, MRP4-inhibitors, dopamine agonists, H1-antihistamines, PAF-antagonists, iNos-inhibitors, HMG-CoA reductase inhibitors (statins), PI3-kinase-inhibitors, CCR3-antagonists, CCR2-antagonists, CCR1-antagonists, IKK2-inhibitors, A2a agonists, alpha-4-integrin-inhibitors, CRTH2-antagonists, histamine 1, combined H1/H3-antagonists, p38 kinase inhibitors, methylxanthines, ENaC-inhibitors, CXCR1-antagonists, CXCR2-antagonists, ICE-inhibitors, LTB4-antagonists, 5-LO antagonists, FLAP-antagonists. LTB4-antagonists; cromoglycine, dissociated glucocorticoid mimetics, anti-TNF-antibodies, anti-GM-CSF antibodies, anti-CD46- antibodies, anti-IL-1- antibodies, anti-IL-2- antibodies, anti-IL-4-antibodies, anti-IL-5- antibodies, anti-IL-13 antibodies, anti-IL_18 antibodies, anti-CD30 L antibodies, anti-Ox40L-antibodies, anti-IL-4/IL-13- antibodies, or double or triple combinations thereof, such as for example combinations of one, two or three compounds selected from among the

- Syk-inhibitors of formula 1, betamimetics, corticosteroids, EGFR- inhibitors and PDE4-antagonists,
- Syk-inhibitors of formula 1, anticholinergics, betamimetics, corticosteroids, EGFR-inhibitors and PDE4-antagonists,
- Syk-inhibitors of formula 1, PDE4-inhibitors, corticosteroids and EGFR- inhibitors,
- Syk-inhibitors of formula 1, EGFR- inhibitors and PDE4- inhibitors,
- Syk-inhibitors of formula 1 and EGFR- inhibitors,
- Syk-inhibitors of formula 1, betamimetics and anticholinergics
- Syk-inhibitors of formula 1, anticholinergics, betamimetics, corticosteroids and PDE4-inhibitors,
- Syk-inhibitors of formula 1, anticholinergics, betamimetics, corticosteroids, iNOS inhibitors, HMG-CoA reductase inhibitors.

Combinations of three active substances each taken from one of the above-mentioned categories of compounds are also an object of the invention.
Suitable betamimetics used are preferably compounds selected from among arformoterol, carmoterol, formoterol, indacaterol, salmeterol, albuterol, bambuterol, bitolterol, broxaterol, carbuterol, clenbuterol, fenoterol, hexoprenalin, ibuterol, isoetharin, isoprenalin, levosalbutamol, mabuterol, meluadrin, metaproterenol, milveterol, orciprenalin, pirbuterol, procaterol, reprotnerol, rimiterol, ritodrin, salmefamol, soterenol, sulphonterol, terbutalin, tiaramide, tolbuterol, zinterol, 6-Hydroxy-8-[1-hydroxy-2-[4-methoxy-phenyl]-1,1-dimethyl-ethylamino]-ethyl]-4H-benzo[1,4]oxazine-3-one; 8-[2-[2-(2,4-Difluor-phenyl)-1,1-dimethyl-ethylamino]-1-hydroxy-ethyl]-6-hydroxy-4H-benzo[1,4]oxazine-3-one; 8-[2-[2-(3,5-Difluor-phenyl)-1,1-dimethyl-ethylamino]-1-hydroxy-ethyl]-6-hydroxy-4H-benzo[1,4]oxazine-3-one; 8-[2-[2-(4-Ethoxy-phenyl)-1,1-dimethyl-ethylamino]-1-hydroxy-ethyl]-6-hydroxy-4H-benzo[1,4]oxazine-3-one; 8-[2-[2-(4-Fluor-phenyl)-1,1-dimethyl-ethylamino]-1-hydroxy-ethyl]-6-hydroxy-4H-benzo[1,4]oxazine-3-one; N-(5-[2-[3-(4,4-Diethyl-6-fluoro-2-oxo-4H-benzo[1,3]oxazine-1-yl)-1,1-dimethyl-propylamino]-1-hydroxy-ethyl}-2-hydroxy-phenyl)-methansulfonamide; N-(5-[2-[3-(4,4-Diethyl-6-methoxy-2-oxo-4H-benzo[1,3]oxazine-1-yl)-1,1-dimethyl-propylamino]-1-hydroxy-ethyl}-2-hydroxy-phenyl)-methansulfonamide; N-(5-[2-[1,1-Dimethyl-3-(2-oxo-2,3-dihydro-benzoimidazol-1-yl)-propylamino]-1-hydroxy-ethyl}-2-hydroxy-phenyl)-methansulfonamide; 8-[2-[1,1-Dimethyl-3-(2-oxo-2,3-dihydro-benzoimidazol-1-yl)-propylamino]-1-hydroxy-ethyl]-6-hydroxy-4H-benzo[1,4]oxazine-3-one; 8-[2-[1,1-Dimethyl-3-(6-methyl-2-oxo-2,3-dihydro-benzoimidazol-1-yl)-propylamino]-1-hydroxy-ethyl]-6-hydroxy-4H-benzo[1,4]oxazine-3-one; 8-[2-[1,1-Dimethyl-3-(2-oxo-5-trifluoromethyl-2,3-dihydro-benzoimidazol-1-yl)-propylamino]-1-hydroxy-ethyl]-6-hydroxy-4H-benzo[1,4]oxazine-3-one; 8-[2-[1,1-Dimethyl-3-(3-methyl-2-oxo-2,3-dihydro-benzoimidazol-1-yl)-propylamino]-1-hydroxy-ethyl]-6-hydroxy-4H-benzo[1,4]oxazine-3-one; N-[2-Hydroxy-5-((1R)-1-hydroxy-2-{2-[4-(2-hydroxy-2-[4-(2-Amino-2-methyl-propoxy)-phenylamino]-phenyl}-ethylamino}]-1-hydroxy-ethyl}-2-hydroxymethyl-phenol; 4-(2-[6-[2-(6-Dichloro-benzyloxy)-ethoxy]-hexylamino]-1-hydroxy-ethyl)-2-hydroxymethyl-phenol, 4-[2-[6-[2-(6-Dichloro-benzyloxy)-ethoxy]-hexylamino]-1-hydroxy-ethyl]-2-hydroxymethyl-phenol, Vilanterol; \(\Lambda^-/1\)-Adamantanyl-2-{3-[((2R)-2-Hydroxy-2-[4-(3-Cyclopentanesulfonyl-phenyl)-butoxy}-hexylamino]-1-hydroxy-ethyl}]
According to the invention the acid addition salts of the betamimetics are preferably selected from among the hydrochloride, hydrobromide, hydroiodide, hydrosulphate, hydrophosphate, hydromethanesulphonate, hydronitrate, hydromaleate, hydroacetate, hydrocitrate, hydrofumarate, hydrotartrate, hydrooxalate, hydrosuccinate, hydrobenzoate and hydro-p-toluenesulphonate, preferably the hydrochloride, hydrobromide, hydrosulphate,
hydrophosphate, hydrofumarate and hydromethanesulphonate. Of the above-mentioned acid addition salts the salts of hydrochloric acid, methanesulphonic acid, benzoic acid and acetic acid are particularly preferred according to the invention.

The anticholinergics used are preferably compounds selected from among tiotropium salts, particularly the bromide salt, oxtropium salts, particularly the bromide salt, flutropium salts, particularly the bromide salt, ipratropium salts, particularly the bromide salt, Acldinium salts, particularly the bromide salt, glycopyrronium salts, particularly the bromide salt, tropium salts, particularly the chloride salt, tolterodin, (3R)-1-Phenethyl-3-(9H-xanthene-9-carbonyloxy)-1-azoniabicyclo[2.2.2]octan-salts; 2,2-Diphenyl propionic acid tropenole ester-methobromide; 2,2-Diphenyl propionic acid scopine ester-methobromide; 2-Fluor-2,2-Diphenyl acetic acid scopine ester-methobromide; 2-Fluor-2,2-Diphenyl acetic acid tropenole ester-methobromide; 3,3',4,4'-Tetrafluor benzilic acid tropenole ester-methobromide; 3,3',4,4'-Tetrafluor benzilic acid scopine ester-methobromide; 4,4'-Difluor benzilic acid tropenole ester-methobromide; 4,4'-Difluor benzilic acid scopine ester-methobromide; 3,3'-Difluor benzilic acid tropenole ester-methobromide; 3,3'-Difluor benzilic acid scopine ester-methobromide; 9-Hydroxy-fluorene-9-carboxylic acid tropenole ester-methobromide; 9-Fluor-fluorene-9-carboxylic acid tropenole ester-methobromide; 9-Hydroxy-fluorene-9-carboxylic acid scopine ester-methobromide; 9-Fluor-fluorene-9-carboxylic acid scopine ester-methobromide; 9-Methyl-fluorene-9-carboxylic acid tropenole ester-methobromide; 9-Methyl-fluorene-9-carboxylic acid scopine ester-methobromide; 9-Methyl-fluorene-9-carboxylic acid cyclopropyl tropine ester-methobromide; 2,2-Diphenyl propionic acid cyclopropyltropine ester-methobromide; 9-Hydroxy-xanthene-9-carboxylic acid cyclopropyltropine ester-methobromide; 9-Methyl-fluorene-9-carboxylic acid cyclopropyltropine ester-methobromide; 9-Methyl-xanthene-9-carboxylic acid cyclopropyltropine ester-methobromide; 9-Hydroxy-fluorene-9-carboxylic acid cyclopropyltropine ester-methobromide; 4,4'-Difluor benzilic acid methyl ester cyclopropyltropine ester-methobromide; 9-Hydroxy-xanthene-9-carboxylic acid tropenole ester-methobromide; 9-Hydroxy-xanthene-9-carboxylic acid scopine ester-methobromide; 9-Methyl-xanthene-9-carboxylic acid tropenole ester-methobromide; 9-Hydroxymethyl-xanthene-9-carboxylic acid tropenole ester-methobromide; 9-Hydroxymethyl-xanthene-9-carboxylic acid scopine ester-methobromide; 3-[2-(3-Chloro-phenyl)-ethoxy]-N-(2-diethylamino-ethyl)-N-{2-[2-(4-hydroxy-2-oxo-2,3-dihydro-benzothiazol-7-yl)-ethylamino]-ethyl}-propionamide;
N-(2-Diethylamino-ethyl)-N-\{2-[2-(4-hydroxy-2-oxo-2,3-dihydro-benzothiazol-7-yl)ethylamino]-ethyl\}-3-(2-naphthalen-1-y1-ethoxy)-propionamide;

7-[2-[3-[2-(2-Chloro-phenyl)-ethylamino]-propylsulfanyl]-ethylamino]-1-hydroxy-ethyl]-4-hydroxy-3H-benzothiazol-2-one and Darotropium;

optionally in the form of the solvates or hydrates thereof.

In the above-mentioned salts the cations tiotropium, oxitropium, ipratropium, glycopyrronium, aclidinium and trospium are the pharmacologically active ingredients. As anions, the above-mentioned salts may preferably contain chloride, bromide, iodide, sulphate, phosphate, methanesulphonate, nitrate, maleate, acetate, citrate, fumarate, tartrate, oxalate, succinate, benzoate or p-toluensulphonate, while chloride, bromide, iodide, sulphate, methanesulphonate or p-toluensulphonate are preferred as counter-ions. Of all the salts, the chlorides, bromides, iodides and methanesulphonate are particularly preferred.

Of particular importance is tiotropium bromide. In the case of tiotropium bromide the pharmaceutical combinations according to the invention preferably contain it in the form of the crystalline tiotropium bromide monohydrate, which is known from WO 02/30928. If the tiotropium bromide is used in anhydrous form in the pharmaceutical combinations according to the invention, it is preferable to use anhydrous crystalline tiotropium bromide, which is known from WO 03/000265.

Corticosteroids used here are preferably compounds selected from among beclomethasone, betamethasone, budesonide, butixocort, ciclesonide, deflazacort, dexamethasone, etiprednole, flunisolide, fluticasone, loteprrednole, mometasone, prednisolone, prednisone, roleponide, triamcinolone, tipredane; Pregna-1,4-diene-3,20-dione, 6-fluoro-1 1-hydroxy-6,17-\{(1-methylene)dienylene\} bis(oxy))]-21-[[4-[(nitrooxy)methyl]benzoyl]oxy], (6-alpha,1 1-beta,16-alpha)- (9Cl); 16,17-butyldenedioxy-6,9-difluoro-1 1-hydroxy-17-(methylthio)androst-4-en-3-one; 6,9-Difluor-1 17-[(2-furanyldiene)oxy]-1 1-hydroxy-16-methyl-3-oxo-17,4-dien-17beta-carboxylic acid cyanomethyl ester, each optionally in the form of the
racemates, enantiomers or diastereomers thereof and optionally in the form of the salts and derivatives, solvates and/or hydrates thereof.

Particularly preferably the steroid is selected from among budesonide, fluticasone, mometasone, ciclesonide and (S)-fluoromethyl 6,9-difluoro-17-[(2-furanylcarbonyloxy)-1-1-hydroxy-16-methyl-3-oxo-androsta-1,4-diene-17-carbothionate, optionally in the form of the racemates, enantiomers or diastereomers thereof and optionally in the form of the salts and derivatives, solvates and/or hydrates thereof.

Any reference to steroids includes a reference to any salts or derivatives, hydrates or solvates thereof which may exist. Examples of possible salts and derivatives of the steroids may be: alkali metal salts, such as for example sodium or potassium salts, sulfobenzoates, phosphates, isonicotinates, acetates, propionates, dihydrogen phosphates, palmitates, pivalates or furatoates thereof.

PDE4 inhibitors which may be used are preferably compounds selected from among enprofyllin, theophyllin, roflumilast, ariflo (cilomilast), tofimilast, pumafentrin, lirimilast, apremilast, arofyllin, atizoram, oglemilast, tetomilast; 5-[(N-(2,5-dichloro-3-pyridinyl)-carboxamide]-8-methoxy-Quinoline (D-4418); 5-[N-(3,5-dichloro-1-oxido-4-pyridinyl)-carboxamide]-8-methoxy-2-(trifluoromethyl)-Quinoline (D-4396 (Sch-351591)); N-(3,5-dichloropyrid-4-yl)-[1-(4-fluorobenzyl)-5-hydroxy-indol-3-yl]glyoxylic acid amide (AWD-12821 (GW-842470)); 9-[(2-fluorophenyl)methyl]-N-methyl-2-(trifluoromethyl)-9H-Purin-6-amine (NCS-613); 4-[(2R)-2-[3-(cyclopentoxy)-4-methoxyphenyl]-2-phenylethyl]-Pyridine (CDP-840); N-[3(R)-3,4,6,7-tetrahydro-9-methyl-4-oxo-1-phenylpyrrolo[3,2,1-]

PDE4 inhibitors which may be used are preferably compounds selected from among enprofyllin, theophyllin, roflumilast, ariflo (cilomilast), tofimilast, pumafentrin, lirimilast, apremilast, arofyllin, atizoram, oglemilast, tetomilast; 5-[(N-(2,5-dichloro-3-pyridinyl)-carboxamide]-8-methoxy-Quinoline (D-4418); 5-[N-(3,5-dichloro-1-oxido-4-pyridinyl)-carboxamide]-8-methoxy-2-(trifluoromethyl)-Quinoline (D-4396 (Sch-351591)); N-(3,5-dichloropyrid-4-yl)-[1-(4-fluorobenzyl)-5-hydroxy-indol-3-yl]glyoxylic acid amide (AWD-12821 (GW-842470)); 9-[(2-fluorophenyl)methyl]-N-methyl-2-(trifluoromethyl)-9H-Purin-6-amine (NCS-613); 4-[(2R)-2-[3-(cyclopentoxy)-4-methoxyphenyl]-2-phenylethyl]-Pyridine (CDP-840); N-[3(R)-3,4,6,7-tetrahydro-9-methyl-4-oxo-1-phenylpyrrolo[3,2,1-]

PDE4 inhibitors which may be used are preferably compounds selected from among enprofyllin, theophyllin, roflumilast, ariflo (cilomilast), tofimilast, pumafentrin, lirimilast, apremilast, arofyllin, atizoram, oglemilast, tetomilast; 5-[(N-(2,5-dichloro-3-pyridinyl)-carboxamide]-8-methoxy-Quinoline (D-4418); 5-[N-(3,5-dichloro-1-oxido-4-pyridinyl)-carboxamide]-8-methoxy-2-(trifluoromethyl)-Quinoline (D-4396 (Sch-351591)); N-(3,5-dichloropyrid-4-yl)-[1-(4-fluorobenzyl)-5-hydroxy-indol-3-yl]glyoxylic acid amide (AWD-12821 (GW-842470)); 9-[(2-fluorophenyl)methyl]-N-methyl-2-(trifluoromethyl)-9H-Purin-6-amine (NCS-613); 4-[(2R)-2-[3-(cyclopentoxy)-4-methoxyphenyl]-2-phenylethyl]-Pyridine (CDP-840); N-[3(R)-3,4,6,7-tetrahydro-9-methyl-4-oxo-1-phenylpyrrolo[3,2,1-]

PDE4 inhibitors which may be used are preferably compounds selected from among enprofyllin, theophyllin, roflumilast, ariflo (cilomilast), tofimilast, pumafentrin, lirimilast, apremilast, arofyllin, atizoram, oglemilast, tetomilast; 5-[(N-(2,5-dichloro-3-pyridinyl)-carboxamide]-8-methoxy-Quinoline (D-4418); 5-[N-(3,5-dichloro-1-oxido-4-pyridinyl)-carboxamide]-8-methoxy-2-(trifluoromethyl)-Quinoline (D-4396 (Sch-351591)); N-(3,5-dichloropyrid-4-yl)-[1-(4-fluorobenzyl)-5-hydroxy-indol-3-yl]glyoxylic acid amide (AWD-12821 (GW-842470)); 9-[(2-fluorophenyl)methyl]-N-methyl-2-(trifluoromethyl)-9H-Purin-6-amine (NCS-613); 4-[(2R)-2-[3-(cyclopentoxy)-4-methoxyphenyl]-2-phenylethyl]-Pyridine (CDP-840); N-[3(R)-3,4,6,7-tetrahydro-9-methyl-4-oxo-1-phenylpyrrolo[3,2,1-]

PDE4 inhibitors which may be used are preferably compounds selected from among enprofyllin, theophyllin, roflumilast, ariflo (cilomilast), tofimilast, pumafentrin, lirimilast, apremilast, arofyllin, atizoram, oglemilast, tetomilast; 5-[(N-(2,5-dichloro-3-pyridinyl)-carboxamide]-8-methoxy-Quinoline (D-4418); 5-[N-(3,5-dichloro-1-oxido-4-pyridinyl)-carboxamide]-8-methoxy-2-(trifluoromethyl)-Quinoline (D-4396 (Sch-351591)); N-(3,5-dichloropyrid-4-yl)-[1-(4-fluorobenzyl)-5-hydroxy-indol-3-yl]glyoxylic acid amide (AWD-12821 (GW-842470)); 9-[(2-fluorophenyl)methyl]-N-methyl-2-(trifluoromethyl)-9H-Purin-6-amine (NCS-613); 4-[(2R)-2-[3-(cyclopentoxy)-4-methoxyphenyl]-2-phenylethyl]-Pyridine (CDP-840); N-[3(R)-3,4,6,7-tetrahydro-9-methyl-4-oxo-1-phenylpyrrolo[3,2,1-]
[(3-cyclopentyl)oxy]-4-methoxyphenyl]-2-pyrrolidin; 3-(Cyclopentyl)oxy-4-methoxyphenyl]-1-(4-N'-[N-2-cyano-S-methyl-isothioureido]benzyl]-2-pyrrolidin; cis[4-Cyano-4-(3-cyclopentyl)oxy]-4-methoxyphenyl]cyclohexan-1-carboxylic acid; 2-carbomethoxy-4-cyano-4-(3-cyclopropylmethoxy-4-difluoromethoxyphenyl)cyclohexan-1-one; cis[4-Cyano-4-(3-cyclopropylmethoxy-4-difluoromethoxyphenyl)cyclohexan-1-ol]; (R)-(+)-Ethyl[4-(3-cyclopentyl)oxy-4-methoxyphenyl]pyrrolidin-2-yliden acetat; (S)-(-)-Ethyl[4-(3-cyclopentyl)oxy-4-methoxyphenyl]pyrrolidin-2-yliden acetat; 9-Cyclopentyl-5,6-dihydro-7-ethyl-9H-pyrazolo[3,4-c]-1,2,4-triazolo[4,3-a]pyridin; 9-Cyclopentyl-5,6-dihydro-7-ethyl-9H-pyrazolo[3,4-c]-1,2,4-triazolo[4,3-a]pyridin, optionally in the form of the racemates, enantiomers or diastereomers and optionally in the form of the pharmacologically acceptable acid addition salts, solvates and/or hydrates thereof.

By acid addition salts with pharmacologically acceptable acids which the above-mentioned PDE4-inhibitors might be in a position to form are meant, for example, salts selected from among the hydrochloride, hydrobromide, hydriodide, hydro sulphate, hydrophosphate, hydromethanesulphonate, hydronitrate, hydromaleate, hydroacetate, hydrobenzoate, hydrocitrate, hydrofumarate, hydro oxalate, hydro succinate, hydrobenzoate and hydro-p-toluensulphonate, preferably hydrochloride, hydrobromide, hydrosulphate, hydrophosphate, hydrofumarate and hydromethanesulphonate.

LTD4-antagonists which may be used are preferably compounds selected from among montelukast, pranlukast, zafirlukast; (E)-8-[2-[4-(4-Fluorophenyl)butoxy][phenyl]ethenyl]-2-(1H-tetrazol-5-yl)-4H-1-benzopyran-4-one (MEN-91507); 4-[6-Acetyl-3-[3-(4-acetyl-3-hydroxy-2-propylphenylthio)propoxy]-2-propylphenoxy]-butyric acid (MN-001); 1-(((R)-(3-(3-(2,6,7-Difluor-2-quinoliny)ethenyl)phenyl)-3-(2-2-propyl)phenylthio)methyl)cyclopropanec acid; 1-(((1 (R)-3-2,2-Dichlorothieno[3,2-b]pyridin-5-yl)-(E)-ethenyl)phenyl)-3-(2-(1-hydroxy-1-methylethyl)phenyl) propylthio)methyl)cyclopropane acetic acid; [2-[2-(4-tert-Butyl-2-thiazolyl)-5-benzofuranyl][oxymethyl]phenyl] acetic acid,

optionally in the form of the racemates, enantiomers or diastereomers, optionally in the form of the pharmacologically acceptable acid addition salts and optionally in the form of the salts and derivatives, solvates and/or hydrates thereof.

By acid addition salts with pharmacologically acceptable acids which the LTD4-antagonists may be capable of forming are meant, for example, salts selected from among the...
hydrochloride, hydrobromide, hydroiodide, hydrosulphate, hydrophosphate, hydromethanesulphonate, hydronitrate, hydromaleate, hydroacetate, hydrobenzoate, hydrocitrate, hydrofumarate, hydrotartrate, hydrooxalate, hydrosuccinate, hydrobenzoate and hydro-p-toluenesulphonate, preferably hydrochloride, hydrobromide, hydrosulphate, hydrophosphate, hydrofumarate and hydromethanesulphonate. By salts or derivatives which the LTD4-antagonists may be capable of forming are meant, for example: alkali metal salts, such as, for example, sodium or potassium salts, alkaline earth metal salts, sulphobenzoates, phosphates, isonicotinates, acetates, propionates, dihydrogen phosphates, palmitates, pivalates or furatoates.

The EGFR-inhibitors used are preferably compounds selected from among 4-[(3-chloro-4-fluorophenyl)amino]-6-[(4-morpholine-4-yl)-1-oxo-2-butene-1-yl]amino)-7-cyclopropylmethoxy-quinazoline, 4-[(3-chloro-4-fluorophenyl)amino]-6-[(4-(N,N-diethylamino)-1-oxo-2-butene-1-yl]amino)-7-cyclopropylmethoxy-quinazoline, 4-[(3-chloro-4-fluorophenyl)amino]-6-[(4-(N,N-dimethylamino)-1-oxo-2-butene-1-yl]amino)-7-cyclopropylmethoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(4-[(R)-(1-phenyl-ethyl)amino]-6-oxo-morpholine-4-yl)-1-oxo-2-butene-1-yl]amino)-7-cyclopropylmethoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(4-((R)-6-methyl-2-oxo-morpholine-4-yl)-1-oxo-2-butene-1-yl]amino)-7-cyclopropylmethoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(4-((R)-6-methyl-2-oxo-morpholine-4-yl)-1-oxo-2-butene-1-yl]amino)-7-cyclopropylmethoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(4-((R)-6-methyl-2-oxo-morpholine-4-yl)-1-oxo-2-butene-1-yl]amino)-7-cyclopropylmethoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(4-((R)-6-methyl-2-oxo-morpholine-4-yl)-1-oxo-2-butene-1-yl]amino)-7-cyclopropylmethoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(4-((R)-6-methyl-2-oxo-morpholine-4-yl)-1-oxo-2-butene-1-yl]amino)-7-cyclopropylmethoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(4-((R)-6-methyl-2-oxo-morpholine-4-yl)-1-oxo-2-butene-1-yl]amino)-7-cyclopropylmethoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(4-((R)-6-methyl-2-oxo-morpholine-4-yl)-1-oxo-2-butene-1-yl]amino)-7-cyclopropylmethoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(4-((R)-6-methyl-2-oxo-morpholine-4-yl)-1-oxo-2-butene-1-yl]amino)-7-cyclopro

yl)carbonylamino]-cyclohexan-1-yloxy]-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(trans-4-[(morpholine-4-yl)sulphonylamino]-cyclohexan-1-yloxy]-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(tetrahydropyran-4-yloxy]-7-(2-acetylamo)-thy-ethoxy)-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(tetrahydropyran-4-yloxy]-7-(2-methanesulphonylamino-ethoxy)-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(1-[(piperidine-1-yl)carbonyl]-piperidine-4-yloxy]-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(1-aminocarbonylmethyl-piperidine-4-yloxy]-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(tetrahydropyran-4-yl)carbonyl]-N-methyl-amino]-cyclohexan-1-yloxy]-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[[3-chloro-4-fluoro-phenyl]amino]-6-(cis-4-[N-[(morpholine-4-yl)sulphonyl]-N-methyl-amino]-cyclohexan-1-yloxy)-7-methoxy-quinazoline.
phenyl)amino]-6-[(3-ethynyl-phenyl)amino]-6-{1-[(morpholine-4-yl)carbonyl]-piperidine-4-yloxy]-7-methoxy-quinazoline, 4-{[(3-chloro-4-fluoro-phenyl)amino]-6-[(2-methyl-morpholine-4-yl)carbonyl]-piperidine-4-yloxy]-7-methoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-{1-[(N-methyl-N-2-methoxyethyl-aminocarbonyl]-piperidine-4-yloxy]-7-methoxy-quinazoline, 4-{[(3-chloro-4-fluoro-phenyl)amino]-6-[(1-ethyl-piperidine-4-yloxy)-7-methoxy-quinazoline, 4-{[(3-chloro-4-fluoro-phenyl)amino]-6-[(3-methoxypropyl-amino)-carbonyl]piperidine-4-yloxy]-7-methoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[cis-4-(N-methanesulphonyl-N-methyl-amino)-cyclohexan-1-yloxy]-7-methoxy-quinazoline, 4-[3-chloro-4-fluoro-phenyl]amino]-6-[cis-4-(N-acetyl-N-methyl-aminocarbonyl]-N-methyl-amino)-cyclohexan-1-yloxy]-7-methoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(trans-4-methylamino-cyclohexan-1-yloxy)-7-methoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(trans-4-{N-[(morpholine-4-yl)carbonyl]-N-methyl-amino}-cyclohexan-1-yloxy]-7-methoxy-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(2-2-dimethyl-6-oxo-morpholine-4-yl)-ethoxy]-7-[(S)-(tetrahydrofuran-2-yl)methoxy]-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-6-[(1-methanesulphonyl-piperidine-4-yloxy)-7-methoxy-quinazoline, 4-{[(3-chloro-4-fluoro-phenyl)amino]-6-(1-cyano-piperidine-4-yloxy)-7-methoxy-quinazoline, 3-Cyano-4-[3-chloro-4-fluorophenyl]amino]-6-[(N,N-dimethylamino)-1-oxo-2-butene-1-yl]amino]-7-ethoxy-quinoline, 4-{[(3-chloro-4-fluorophenyl)amino]-6-[(4-homomorpholine-4-yl)-1-oxo-2-butene-1-yl]amino]-7-[(S)-(tetrahydrofuran-3-yl)oxy]-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-7-(2-[(S)-(2-oxo-tetrahydrofuran-5-yl)carbonyl]-piperazine-1-yl)-ethoxy]-6-{[vinylcarbonyl]amino]quinazoline, 4-{[(3-chloro-4-fluoro-phenyl)amino]-7-(2-[(S)-6-methyl-2-oxo-morpholine-4-yl]-ethoxy]-6-[(vinylcarbonyl)amino]-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-7-[(S)-6-methyl-2-oxo-morpholine-4-yl]-butyloxy]-6-[(vinylcarbonyl)amino]-quinazoline, 4-{[(3-chloro-4-fluoro-phenyl)amino]-7-[(2-[(S)-(2-oxo-tetrahydrofuran-5-yl)carbonyl]-piperazine-1-yl)-ethoxy]-6-[(vinylcarbonyl)amino]-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-7-[(4-((S)-6-methyl-2-oxo-morpholine-4-yl)-butyloxy]-6-[(vinylcarbonyl)amino]-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-7-[(2-[(S)-6-methyl-2-oxo-morpholine-4-yl]-ethoxy]-6-[(vinylcarbonyl)amino]-quinazoline, 4-{[(3-chloro-4-fluoro-phenyl)amino]-7-[(2-[(S)-(2-oxo-tetrahydrofuran-5-yl)carbonyl]-piperazine-1-yl)-ethoxy]-6-[(vinylcarbonyl)amino]-quinazoline, 4-{[(3-chloro-4-fluoro-phenyl)amino]-7-[(2-((S)-6-methyl-2-oxo-morpholine-4-yl)-butyloxy]-6-[(vinylcarbonyl)amino]-quinazoline, 4-[(3-chloro-4-fluoro-phenyl)amino]-7-[(2-[(S)-6-methyl-2-oxo-morpholine-4-yl]-ethoxy]-6-[(vinylcarbonyl)amino]-quinazoline, cetuximab, trastuzumab, panitumumab (=ABX-EGF), Mab ICR-62, gefitinib,
pelitinib, canertinib and erlotinib, optionally in the form of the racemates, enantiomers or diastereomers thereof, optionally in the form of the pharmacologically acceptable acid addition salts thereof, the solvates and/or hydrates thereof.

By acid addition salts with pharmacologically acceptable acids which the EGFR-inhibitors may be capable of forming are meant, for example, salts selected from among the hydrochloride, hydrobromide, hydroiodide, hydro sulphate, hydrophosphate, hydromethanesulphonate, hydronitrate, hydromaleate, hydroacetate, hydrobenzoate, hydrocitrate, hydrofumarate, hydrotartrate, hydro oxalate, hydrosuccinate, hydrobenzoate and hydro-p-toluenesulphonate, preferably hydrochloride, hydro bromide, hydro sulphate, hydro phosphate, hydrofumarate and hydromethanesulphonate.

Examples of dopamine agonists which may be used preferably include compounds selected from among bromocriptine, cabergoline, alpha-dihydroergocryptine, lisuride, pergolide, pramipexol, roxindol, ropinirol, talipexol, terguride and viozan. Any reference to the above-mentioned dopamine agonists within the scope of the present invention includes a reference to any pharmacologically acceptable acid addition salts and optionally hydrates thereof which may exist. By the physiologically acceptable acid addition salts which may be formed by the above-mentioned dopamine agonists are meant, for example, pharmaceutically acceptable salts which are selected from the salts of hydrochloric acid, hydrobromic acid, sulphuric acid, phosphoric acid, methanesulphonic acid, acetic acid, fumaric acid, succinic acid, lactic acid, citric acid, tartaric acid and maleic acid.

Examples of H1-antihistamines preferably include compounds selected from among epinastine, cetirizine, azelastine, fexofenadine, levocabastine, loratadine, mizolastine, ketotifen, emedastine, dimetinden, clemastine, bamipin, cexchlorpheniramine, pheniramine, doxylamine, chlorphenoxamine, dimenhydrinate, diphenhydramine, promethazine, ebastine, olopatadine, desloratidine and meclozine. Any reference to the above-mentioned H1-antihistamines within the scope of the present invention includes a reference to any pharmacologically acceptable acid addition salts which may exist.

Examples of PAF-antagonists preferably include compounds selected from among lexipafant, 4-(2-chlorophenyl)-9-methyl-2-[3(4-morpholinyl)-3-propanon-1-yl]-6H-thieno-[3,2-f]-[1 ,2,4]triazolo[4,3-a][1 ,4]diazepines, 6-(2-chlorophenyl)-8,9-dihydro-1-methyl-8-[4-morpho-
linyl)carbonyl]-4H7H-cyclo-penta-[4,5]thieno-[3,2-f][1,2,4]triazolo[4,3-a][1,4]diazepines. Any reference to the above-mentioned above-mentioned PAF-antagonists includes within the scope of the present invention a reference to any pharmacologically acceptable acid addition salts thereof which may exist.

5

MRP4-inhibitors used are preferably compounds selected from among /V-acetyl-dinitrophenyl-cysteine, cGMP, cholate, diclofenac, dehydroepiandrosterone 3-glucuronide, dehydroepiandrosterone 3-sulphate, dilazep, dinitrophenyl-s-glutathione, estradiol 17-beta-glucuronide, estradiol 3,17-disulphate, estradiol 3-glucuronide, estradiol 3-sulphate, estrone 3-sulphate, flurbiprofen, folate, N5-formyl-tetrahydrofolate, glycocholate, glycolithocholic acid sulphate, ibuprofen, indomethacin, indoprofen, ketoprofen, lithocholic acid sulphate, methotrexate, ((£)-3-[[3-[2-(7-chloro-2-quinolinyl)ethenyl]]phenyl] [[3-dimethylamino]-3-oxopropyl][thio]methyl][thio]-propanoic acid), alpha-naphthyl-beta-D-glucuronide, nitrobenzyl mercaptoturine riboside, probenecid, sildenafil, sulfinpyrazone, taurochenodeoxycholate, taurocholate, taurodeoxycholate, taurolithocholate, taurolithocholic acid sulphate, topotecan, trequinsin and zaprinast, dipyridamole, optionally in the form of the racemates, enantiomers, diastereomers and the pharmacologically acceptable acid addition salts and hydrates thereof.

10

The invention relates more preferably to the use of MRP4-inhibitors for preparing a pharmaceutical composition for treating respiratory complaints, containing the Syk-inhibitors of formula 1 and MRP4-inhibitors according to the invention, the MRP4-inhibitors preferably being selected from among dehydroepiandrosterone 3-sulphate, estradiol 3,17-disulphate, flurbiprofen, indomethacin, indoprofen, taurocholate, optionally in the form of the racemates, enantiomers, diastereomers and the pharmacologically acceptable acid addition salts and hydrates thereof. The separation of enantiomers from the racemates can be carried out using methods known from the art (e.g. chromatography on chiral phases, etc.) .

20

By acid addition salts with pharmacologically acceptable acids are meant, for example, salts selected from among the hydrochlorides, hydrobromides, hydriodides, hydrosulphates, hydrophosphates, hydromethanesulphonates, hydronitrates, hydromaleates, hydroacetates, hydrobenzoates, hydrocrulates, hydrofumarates, hydrotartrates, hydroxalates, hydrosuccinates, hydrobenzoates and hydro-p-toluenesulphonates, preferably the hydrochlorides, hydrobromides, hydrosulphates, hydrophosphates, hydrofumarates and hydromethanesulphonates.
The invention further relates to pharmaceutical preparations which contain a triple combination of the Syk-inhibitors of formula 1., MRP4-inhibitors and another active substance according to the invention, such as, for example, an anticholinergic, a PDE4 inhibitor, a steroid, an LTD4-antagonist or a betamimetic, and the preparation thereof and the use thereof for treating respiratory complaints.

(2-benzo[1,3]dioxol-5-yl-ethyl)-amide (BBS-2) (Drugs Future 2004, 29, 45-52) and the pharmaceutical salts, prodrugs or solvates thereof.

Examples of iNOS-inhibitors within the scope of the present invention may also include antisense oligonucleotides, particularly those antisense oligonucleotides which bind iNOS-coding nucleic acids. For example, WO 01/52902 describes antisense oligonucleotides, particularly antisense oligonucleotides, which bind iNOS coding nucleic acids, for modulating the expression of iNOS. iNOS-antisense oligonucleotides as described particularly in WO 01/52902 may therefore also be combined with the PDE4-inhibitors of the present invention on account of their similar effect to the iNOS-inhibitors.

Suitable HMG-CoA reductase inhibitors (also called statins) which may be preferably used in double or triple combinations with the compounds of formula \( \mathbf{1} \) are selected from among Atorvastatin, Cerivastatin, Fluvastatin, Lovastatin, Pitavastatin, Pravastatin, Rosuvastatin, Simvastatin, optionally in form of their pharmaceutically available acid addition salts, prodrugs, solvates or hydrates thereof.

8. FORMULATIONS

Suitable forms for administration are for example tablets, capsules, solutions, syrups, emulsions or inhalable powders or aerosols. The content of the pharmaceutically effective compound(s) in each case should be in the range from 0.1 to 90 wt.\%, preferably 0.5 to 50 wt.\% of the total composition, i.e. in amounts which are sufficient to achieve the dosage range specified hereinafter.

The preparations may be administered orally in the form of a tablet, as a powder, as a powder in a capsule (e.g. a hard gelatine capsule), as a solution or suspension. When administered by inhalation the active substance combination may be given as a powder, as an aqueous or aqueous-ethanolic solution or using a propellant gas formulation.

Preferably, therefore, pharmaceutical formulations are characterised by the content of one or more compounds of formula \( \mathbf{1} \) according to the preferred embodiments above.
It is particularly preferable if the compounds of formula 1 are administered orally, and it is also particularly preferable if they are administered once or twice a day. Suitable tablets may be obtained, for example, by mixing the active substance(s) with known excipients, for example inert diluents such as calcium carbonate, calcium phosphate or lactose, disintegrants such as corn starch or alginic acid, binders such as starch or gelatine, lubricants such as magnesium stearate or talc and/or agents for delaying release, such as carboxymethyl cellulose, cellulose acetate phthalate, or polyvinyl acetate. The tablets may also comprise several layers.

Coated tablets may be prepared accordingly by coating cores produced analogously to the tablets with substances normally used for tablet coatings, for example collidone or shellac, gum arabic, talc, titanium dioxide or sugar. To achieve delayed release or prevent incompatibilities the core may also consist of a number of layers. Similarly the tablet coating may consist of a number of layers to achieve delayed release, possibly using the excipients mentioned above for the tablets.

Syrups containing the active substances or combinations thereof according to the invention may additionally contain a sweetener such as saccharine, cyclamate, glycerol or sugar and a flavour enhancer, e.g. a flavouring such as vanillin or orange extract. They may also contain suspension adjuvants or thickeners such as sodium carboxymethyl cellulose, wetting agents such as, for example, condensation products of fatty alcohols with ethylene oxide, or preservatives such as p-hydroxybenzoates.

Capsules containing one or more active substances or combinations of active substances may for example be prepared by mixing the active substances with inert carriers such as lactose or sorbitol and packing them into gelatine capsules. Suitable suppositories may be made for example by mixing with carriers provided for this purpose, such as neutral fats or polyethylene glycol or the derivatives thereof.

Excipients which may be used include, for example, water, pharmaceutically acceptable organic solvents such as paraffins (e.g. petroleum fractions), vegetable oils (e.g. groundnut or sesame oil), mono- or polyfunctional alcohols (e.g. ethanol or glycerol), carriers such as e.g. natural mineral powders (e.g. kaolins, clays, talc, chalk), synthetic mineral powders (e.g. highly dispersed silicic acid and silicates), sugars (e.g. cane sugar, lactose and glucose),
emulsifiers (e.g. lignin, spent sulphite liquors, methylcellulose, starch and polyvinylpyrrolidone) and lubricants (e.g. magnesium stearate, talc, stearic acid and sodium lauryl sulphate).

For oral administration the tablets may, of course, contain, apart from the abovementioned carriers, additives such as sodium citrate, calcium carbonate and dicalcium phosphate together with various additives such as starch, preferably potato starch, gelatine and the like. Moreover, lubricants such as magnesium stearate, sodium lauryl sulphate and talc may be used at the same time for the tablettng process. In the case of aqueous suspensions the active substances may be combined with various flavour enhancers or colourings in addition to the excipients mentioned above.

It is also preferred if the compounds of formula \( \text{I} \) are administered by inhalation, particularly preferably if they are administered once or twice a day. For this purpose, the compounds of formula 1 have to be made available in forms suitable for inhalation. Inhalable preparations include inhalable powders, propellant-containing metered-dose aerosols or propellant-free inhalable solutions, which are optionally present in admixture with conventional physiologically acceptable excipients.

Within the scope of the present invention, the term propellant-free inhalable solutions also includes concentrates or sterile ready-to-use inhalable solutions. The preparations which may be used according to the invention are described in more detail in the next part of the specification.

**Inhalable powders**

If the active substances of formula 1 are present in admixture with physiologically acceptable excipients, the following physiologically acceptable excipients may be used to prepare the inhalable powders according to the invention: monosaccharides (e.g. glucose or arabinose), disaccharides (e.g. lactose, saccharose, maltose), oligo- and polysaccharides (e.g. dextran), polyalcohols (e.g. sorbitol, mannitol, xylitol), salts (e.g. sodium chloride, calcium carbonate) or mixtures of these excipients with one another. Preferably, mono- or disaccharides are used, while the use of lactose or glucose is preferred, particularly, but not exclusively, in the form of their hydrates. For the purposes of the invention, lactose is the particularly preferred excipient, while lactose monohydrate is most particularly preferred. Methods of preparing the
inhaleable powders according to the invention by grinding and micronising and by finally mixing the components together are known from the prior art.

**Propellant-containing inhalable aerosols**

The propellant-containing inhalable aerosols which may be used according to the invention may contain the compounds of formula \( \text{II} \) dissolved in the propellant gas or in dispersed form. The propellant gases which may be used to prepare the inhalation aerosols according to the invention are known from the prior art. Suitable propellant gases are selected from among hydrocarbons such as n-propane, n-butane or isobutane and halohydrocarbons such as preferably fluorinated derivatives of methane, ethane, propane, butane, cyclopropane or cyclobutane. The propellant gases mentioned above may be used on their own or in mixtures thereof. Particularly preferred propellant gases are fluorinated alkane derivatives selected from TG134a (1.1.1,2-tetrafluoroethane), TG227 (1.1.1,2,3,3-heptafluoropropane) and mixtures thereof. The propellant-driven inhalation aerosols used within the scope of the use according to the invention may also contain other ingredients such as co-solvents, stabilisers, surfactants, antioxidants, lubricants and pH adjusters. All these ingredients are known in the art.

**Propellant-free inhalable solutions**

The compounds of formula \( \text{II} \) according to the invention are preferably used to prepare propellant-free inhalable solutions and inhalable suspensions. Solvents used for this purpose include aqueous or alcoholic, preferably ethanolic solutions. The solvent may be water on its own or a mixture of water and ethanol. The solutions or suspensions are adjusted to a pH of 2 to 7, preferably 2 to 5, using suitable acids. The pH may be adjusted using acids selected from inorganic or organic acids. Examples of particularly suitable inorganic acids include hydrochloric acid, hydrobromic acid, nitric acid, sulphuric acid and/or phosphoric acid. Examples of particularly suitable organic acids include ascorbic acid, citric acid, malic acid, tartaric acid, maleic acid, succinic acid, fumaric acid, acetic acid, formic acid and/or propionic acid etc. Preferred inorganic acids are hydrochloric and sulphuric acids. It is also possible to use the acids which have already formed an acid addition salt with one of the active substances. Of the organic acids, ascorbic acid, fumaric acid and citric acid are preferred. If desired, mixtures of the above acids may also be used, particularly in the case of acids which have other properties in addition to their acidifying qualities, e.g. as flavourings, antioxidants or complexing agents, such as citric acid or ascorbic acid, for example. According to the invention, it is particularly preferred to use hydrochloric acid to adjust the pH.
Co-solvents and/or other excipients may be added to the propellant-free inhalable solutions used for the purpose according to the invention. Preferred co-solvents are those which contain hydroxyl groups or other polar groups, e.g. alcohols - particularly isopropyl alcohol, glycols - particularly propyleneglycol, polyethyleneglycol, polypropyleneglycol, glycolether, glycerol, polyoxyethylene alcohols and polyoxyethylene fatty acid esters. The terms excipients and additives in this context denote any pharmacologically acceptable substance which is not an active substance but which can be formulated with the active substance or substances in the pharmacologically suitable solvent in order to improve the qualitative properties of the active substance formulation. Preferably, these substances have no pharmacological effect or, in connection with the desired therapy, no appreciable or at least no undesirable pharmacological effect. The excipients and additives include, for example, surfactants such as soya lecithin, oleic acid, sorbitan esters, such as polysorbates, polyvinylpyrrolidone, other stabilisers, complexing agents, antioxidants and/or preservatives which guarantee or prolong the shelf life of the finished pharmaceutical formulation, flavourings, vitamins and/or other additives known in the art. The additives also include pharmacologically acceptable salts such as sodium chloride as isotonic agents. The preferred excipients include antioxidants such as ascorbic acid, for example, provided that it has not already been used to adjust the pH, vitamin A, vitamin E, tocopherols and similar vitamins or provitamins occurring in the human body. Preservatives may be used to protect the formulation from contamination with pathogens. Suitable preservatives are those which are known in the art, particularly cetyl pyridinium chloride, benzalkonium chloride or benzoic acid or benzoates such as sodium benzoate in the concentration known from the prior art.

For the treatment forms described above, ready-to-use packs of a medicament for the treatment of respiratory complaints are provided, containing an enclosed description including for example the words respiratory disease, COPD or asthma, together with an imidazolyl-pyrimidine according to formula 1, and one or more combination partners selected from those described above.
Patent Claims

1. Compound of formula 1

wherein

\( R^1 \) is selected from the group consisting of hydrogen, \( C_{1-6} \)-alkyl, \( C_{1-6} \)-haloalkyl,

\( R^2 \) is selected from the group consisting of hydrogen, \( C_{1-6} \)-alkyl, \( C_{1-6} \)-haloalkyl,

\(-(C_i-5\text{-alkylene})-(C_i-3\text{-alkyl})\) three-, four-, five- or six-membered cycloalkyl, wherein this cycloalkyl may optionally be substituted by halogen

\( R^3 \) is selected from the group consisting of hydrogen, \( C_{1-6} \)-alkyl, halogen, \(-0-C_{1-6} \)-alkyl, three-, four-, five- or six-membered cycloalkyl, \(-S-(C_i-3\text{-alkylene})A\), \(-S-A\); \(-A\),

with \( A \) being a group selected from the group consisting of \(-CO-N(C_i-3\text{-alkyl})_2\), \(-CO-NH(C_i-3\text{-alkyl})\), \(-CO-NH_2\), five- or six- membered heteroaryl comprising 1, 2 or 3 heteroatoms each independently selected from the group of \( S, O \) and \( N \); five-, six- or seven-membered heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group of \( S, O \) and \( N \),

wherein \( A \) may optionally be further substituted by one, two or three groups each independently selected from \(-C_i-3\text{-alkyl}, \text{halogen, -oxo, -OH and } C_{1-3} \text{-haloalkyl},\)

\( R^4 \) is selected from the group consisting of

-CO-N(CH₃)(C₂₋₃-alkylene)-0-(Cᵢ₋₃-alkyl), -NH₂₋₆-alkylene-L, -SO₂-phenyl, -SO₂(Cᵢ₋₃-alkyl), -CO-N(Cᵢ₋₆-alkyl)₂, -CO-N(C₂₋₄-alkylene-0-Ci₋₃-alkyl)₂, or wherein R⁴ is a five- or six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, wherein said heteroaromatic group on any atom available for substitution may optionally be further substituted by one, two or three groups each independently selected from among -Ci₋₃-alkyl halogen, and C₁₋₅-haloalkyl,

with Y being a group selected from the group consisting of -NH₂₋₆-NH(CH₃), -N(CH₃)₂₋₆-alkylene-N(CH₃)₂₋₆-alkyl, -C₁₋₅-haloalkyl, -OH, -N(ethyl)₂ and -C₁₋₅-alkynyl,

or with Y being a group selected from the group consisting of a four-, five-, six- or seven-membered monocyclic fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a five- or six-membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group of N, S and O, -C₆₋₁₀-aryl and C₃₋₆-cycloalkyl,

or with Y being an 8- to 11-membered bicyclic annellated fully saturated, partially unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently from each other selected from the group N, S and O,

or with Y being an 8- to 11-membered bicyclic fully saturated spiro-heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, with the proviso that this spiro-heterocycle comprises at least one N-atom and that this heterocycle is directly attached to the molecule via this N-atom,
or with $Y$ being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, which is bridged by an additional $C_{1,3}$-alkylene-unit,

whereby each $Y$ may optionally be substituted by one, two or three groups $Z$ each independently from each other selected from the group consisting of halogen, -oxo, OH, -CN, -$C_{i,j}$-alkyl, -$C_{i,j}$-alkanol, -$O-C_{i,j}$-alkyl, a four-, five-, six- or seven-membered fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a fully saturated or partially unsaturated $C_{3,6}$-cycloalkyl, a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; -$CO-(C_{i,j}$-alkyl), -CHO, -$CO-L$, -$C_{i,j}$-alkylene-$CO-L$, -$C_{i,j}$-alkylene-0-$C_{i,j}$-alkyl, -$N(CH_{3})_{2}$ and -$N$(ethyl)$_{2}$,

whereby each group $Z$ may optionally be further substituted by one, two or three groups $T$ each independently selected from the group consisting of -oxo, OH, halogen, -$C_{i,j}$-alkyl, -$O-C_{i,j}$-alkyl, -$N$(methyl)$_{2}$, -$N$(ethyl)$_{2}$, 5- to 6-membered fully saturated, partially unsaturated or aromatic heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, a $C_{3,6}$-cycloalkyl and -CN,

wherein each group $T$ may also optionally be substituted by a group selected from the group consisting of $C_{1,3}$-alkyl, halogen, OH, oxo and -$O-C_{i,j}$-alkyl,

whereby $L$ denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, which said heterocycle may optionally be substituted by one, two or three groups independently selected from among methyl, halogen, OH and -oxo,

$R^{5}$ is selected from the group consisting of hydrogen, $C_{1,6}$-alkyl, $C_{1,3}$-haloalkyl and -(C$_{i,j}$-alkylene)-0-(C$_{i,j}$-alkyl),

and the pharmaceutically acceptable salts of the aforementioned compounds.
2. Compound of formula \_1 according to claim 1, wherein

\[ R^1 \text{ is selected from the group consisting of } \]

- \(\text{-CO-Y, } -\text{CO-N(CH}_3\text{)}_2\text{-Y, } -\text{CO-N(CH}_3\text{)(Cl}_5\text{-alkylene)-Y, } -\text{CO-N(ethyl)(Cl}_5\text{-alkylene)-Y, }\]

- \(\text{-CO-NH-Y and -CO-NH-Ci}_6\text{-alkylene-Y, }\)

\[ R^1 \text{ is a five- or six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, wherein said heteroaromatic group on any atom available for substitution may optionally be further substituted by one, two or three groups each independently selected from among -Cl}_3\text{-alkyl halogen, and C}_1\_3\text{-haloalkyl, }\]

\[ \text{with Y being a group selected from the group consisting of -NH}_2\text{, -NH(CH}_3\text{)}_2\text{, -Cl}_6\text{-alkylene-N(CH}_3\text{)}_2\text{-alkyl, -Cl}_3\text{-haloalkyl, -OH and -C}_1\_3\text{-alkinyl, }\]

or with Y being a group selected from the group consisting of a four-, five-, six- or seven-membered monocyclic fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a five- or six-membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group of N, S and O, -C}_6\text{i-aryl and a C}_3\_6\text{-cycloalkyl, }\]

or with Y being a 8-, 9-, 10- or 11-membered bicyclic annelated fully saturated, partially unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently from each other selected from the group N, S and O,

or with Y being an 8-, 9-, 10- or 11-membered bicyclic fully saturated spiro-heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, with the proviso that this spiro-heterocycle comprises at least one N-atom and that this heterocycle is directly attached to the molecule via this N-atom,

or with Y being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, which is bridged by an additional C}_1\_3\text{-alkylene-unit, }\]
whereby each \( Y \) may optionally be substituted by one, two or three groups \( Z \) each independently from each other selected from the group consisting of -F, -Cl, -Br, -I, -oxo, OH, -CN, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, pentyl, -Ci\(_5\)-alkanol, -0-CH\(_3\), -O-ethyl, -O-(n-propyl), -O-isopropyl, a four-, five-, six- or seven-membered fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a fully saturated or partially unsaturated C\(_{5,6}\)-cycloalkyl, a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; -CO-methyl, -CO-ethyl, -CO-propyl, -CHO, -CO-L, -Ci-s-alkylene-CO-L, -Ci\(_4\)-alkylene-0-Ci\(_3\)-alkyl, -N(CH\(_3\))\(_2\) and -N(ethyl)\(_2\),

whereby each group \( Z \) may optionally be further substituted by one, two or three groups \( T \) each independently selected from the group consisting of -oxo, OH, halogen, methyl, ethyl, n-propyl, isopropyl, -O-methyl, -O-ethyl, -O-(n-propyl), -O-(isopropyl), -N(methyl)\(_2\), -N(ethyl)\(_2\), 5- to 6-membered fully saturated, partially unsaturated or aromatic heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, a C\(_{3,6}\)-cycloalkyl and -CN,

whereby \( L \) denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, which said heterocycle may optionally be substituted by one, two or three groups independently selected from among methyl, halogen, OH and -oxo,

and the pharmaceutically acceptable salts of the aforementioned compounds.

3. Compounds of formula \(_\_\) according to one of claims 1 or 2, wherein

\( R^1 \) is selected from the group consisting of hydrogen or methyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

4. Compounds of formula \(_\_\) according to one of claims 1 to 3, wherein

\( R^2 \) is selected from the group consisting of methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, cyclopropyl, -methylen-O-methyl, -ethylene-O-methyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.
5. Compounds of formula 1 according to one of claims 1 to 4, wherein 
R² is selected from the group consisting of methyl, isopropyl, isobutyl, cyclopropyl, 
-ethylene-O-methyl, 
and the pharmaceutically acceptable salts of the aforementioned compounds.

6. Compounds of formula 1 according to one of claims 1 to 5, wherein 
R¹ is hydrogen, 
and the pharmaceutically acceptable salts of the aforementioned compounds.

7. Compounds of formula 1 according to one of claims 1 to 6, wherein 
R² is methyl, isopropyl or cyclopropyl, 
and the pharmaceutically acceptable salts of the aforementioned compounds.

8. Compounds of formula 1 according to one of claims 1 to 7, wherein 
R² is methyl, 
and the pharmaceutically acceptable salts of the aforementioned compounds.

9. Compounds of formula 1 according to one of claims 1 to 8, wherein 
R³ is selected from the group consisting of hydrogen, methyl, ethyl, n-propyl, isopropyl, -F, 
-Cl, -Br, -O-methyl, -O-ethyl, -O-(n-propyl), -O-(isopropyl), cyclopropyl, -S-methylene-A, -A, 
with A being a group selected from the group consisting of-CO-N(CH₃)₂, -CO-NH(CH₃)₂, 
five- or six-membered heteroaryl comprising 1, 2 or 3 heteroatoms each independently 
selected from the group of S, O and N; 
wherein A may optionally be further substituted by one, two or three groups each 
individually selected from methyl, ethyl, propyl or isopropyl, 
and the pharmaceutically acceptable salts of the aforementioned compounds.

10. Compounds of formula 1 according to one of claims 1 to 9, wherein 
R³ is selected from -Cl or methyl, 
and the pharmaceutically acceptable salts of the aforementioned compounds.
11. Compounds of formula \( \text{I} \) according to one of claims 1 to 10, wherein

\( R^5 \) is selected from the group consisting of hydrogen, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, -methylene-O-methyl and -ethylene-O-methyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

12. Compounds of formula \( \text{I} \) according to one of claims 1 to 11, wherein

\( R^5 \) is selected from the group consisting of hydrogen, methyl, isobutyl and -ethylmethyl,

and the pharmaceutically acceptable salts of the aforementioned compounds.

13. Compounds of formula \( \text{I} \) according to one of claims 1 to 12, wherein

\( R^5 \) is hydrogen,

and the pharmaceutically acceptable salts of the aforementioned compounds.

14. Compound of formula \( \text{I} \) according to one of claims 1 to 13, wherein

\( R^4 \) is selected from the group consisting of

- \( \text{-CO-Y, -CO-N(CH}_3\text{)}_2\text{-Y, -CO-N(CH}_3\text{(Cl}_3\text{)-alkylene})\text{-Y, -CO-N(ethyl)(Cl}_3\text{)-alkylene})\text{-Y, -CO-NH-Y and -CO-NH-Cl-e-alkylene-Y,} \)

\( R^4 \) is a five- or six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, wherein said heteroaromatic group on any atom available for substitution may optionally be further substituted by one, two or three groups each independently selected from among methyl, ethyl, n-propyl, isopropyl, F, Cl, Br, and -CF\(_3\),

with \( Y \) being a group selected from the group consisting of \( \text{-NH}_2\text{, -NNH}_2\text{, -N(CH}_3\text{)}_2\text{, -Cl}_3\text{-haloalkyl, -OH and} \)

alkylene-\( \text{N(CH}_3\text{)}_2\text{, -O-methyl, -O-ethyl, -O-n-propyl, -O-isopropyl, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, -Cl}_3\text{-haloalkyl, -OH and} \)
or with Y being a group selected from the group consisting of a four-, five-, six- or seven-
membered monocyclic fully saturated or partially unsaturated heterocycle comprising 1, 2 or
3 heteroatoms each independently selected from the group N, S and O; a five- or six-
membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each
independently selected from the group of N, S and O, -C₆.H₅-aryl and a C₅,₆-cycloalkyl,

or with Y being a 8-, 9-, 10- or 11-membered bicyclic annellated fully saturated, partially
unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently
from each other selected from the group N, S and O,

or with Y being an 8-, 9-, 10- or 11-membered bicyclic fully saturated spiro-heterocycle
comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O,
with the proviso that this spiro-heterocycle comprises at least one N-atom and that this
heterocycle is directly attached to the molecule via this N-atom,

or with Y being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3
heteroatoms each independently selected from the group N, S and O, which is bridged by an
additional C₁₋₃-alkylene-unit,

whereby each Y may optionally be substituted by one, two or three groups Z each
independently from each other selected from the group consisting of -F, -Cl, -Br, -I, -oxo, OH,
-CN, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, pentyl, -C₅₋₆-alkanol, -OH,
-O-ethyl, -O-(n-propyl), -O-isopropyl, a four-, five-, six- or seven-membered fully saturated or
partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently
selected from the group N, S and O; a fully saturated or partially unsaturated C₅₋₆-cycloalkyl,
a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each
independently selected from the group N, S and O; -CO-methyl, -CO-ethyl, -CO-propyl,
-CO₁₋₃-alkylene-CO₁₋₃, -CHO, -CO₁₋₃-alkylene-0-CO₁₋₃, -CHO₁₋₃-alkylene-0-CO₁₋₃, -N(CH₃)₂ and -N(ethyl)₂,

whereby each group Z may optionally be further substituted by one, two or three groups T
each independently selected from the group consisting of -oxo, OH, halogen, methyl, ethyl,
n-propyl, isopropyl, -O-methyl, -O-ethyl, -O-(n-propyl), -O-(isopropyl), -N(methyl)₂, -N(ethyl)₂,
C₃₋₆-cycloalkyl, -CN, 5- to 6-membered fully saturated, partially unsaturated or aromatic heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S,

whereby L denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, which said heterocycle may optionally be substituted by one, two or three groups independently selected from among methyl, -Cl, -Br, -F, -OH and -oxo,

and the pharmaceutically acceptable salts of the aforementioned compounds.

15. Compound of formula _ according to one of claims 1 to 14, wherein

R⁴ is selected from the group consisting of

- CO-N(CH₃)-Y, - CO-N(CH₃)(C₅₋₆-alkylene)-Y,

with Y being a group selected from the group consisting of -NH(CH₃), -N(CH₃)₂, -O-methyl, -CF₃, methyl, ethyl, OH,

or with Y being a group selected from the group consisting of a four-, five-, six- or seven-membered monocyclic fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a five- or six-membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group of N, S and O; -C₆₋₁₀-aryl, cyclopropyl, cyclobutyl, cyclopentyl and cyclohexyl,

or with Y being a 8-, 9-, 10- or 11-membered bicyclic annellated fully saturated, partially unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently from each other selected from the group N, S and O,

or with Y being an 8-, 9-, 10- or 11-membered bicyclic fully saturated spiro-heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, with the proviso that this spiro-heterocycle comprises at least one N-atom and that this heterocycle is directly attached to the molecule via this N-atom,
or with \( Y \) being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group \( N, S \) and \( O \), which is bridged by an additional \(-\text{CH}_2\)-unit,

whereby each \( Y \) may optionally be substituted by one, two or three groups \( Z \) each independently from each other selected from the group consisting of \(-\text{F}, -\text{Cl}, -\text{Br}, -\text{I}, -\text{oxo}, \text{OH}, -\text{CN}, \text{methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, pentyl, -Cl}_3\)-alkanol, \(-\text{OCH}_3\), \(-\text{O-ethyl}, -\text{O}-(\text{n-propyl}), -\text{O-isopropyl}, \text{a four-, five-, six- or seven-membered fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group \( N, S \) and \( O \); a fully saturated or partially unsaturated \( C, C_6\)-cycloalkyl, a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group \( N, S \) and \( O \); \(-\text{CO-methyl}, -\text{CO-ethyl}, -\text{CO-propyl}, -\text{CHO}, -\text{CO-L}, -\text{Cl}_3\)-alkylene-\(\text{CO-L}, -\text{Cl}_4\)-alkylene-0 \(-\text{Cl}_3\)-alkyl, \(-\text{N(CH}_3)_2\) and \(-\text{N(ethyl)}_2\),

whereby each group \( Z \) may optionally be further substituted by one, two or three groups \( T \) each independently selected from the group consisting of \(-\text{oxo}, \text{OH}, \text{halogen, methyl, ethyl, n-propyl, isopropyl, -O-methyl, -O-ethyl, -O-(n-propyl), -O-(isopropyl), -N(methyl)}_2, -\text{N(ethyl)}_2, \text{C}_5\text{-cycloalkyl, -CN}, 5\text{- to 6-membered fully saturated, partially unsaturated or aromatic heterocycle comprising 1 or 2 heteroatoms each independently selected from the group \( N, O \) and \( S \),

whereby \( L \) denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group \( N, O \) and \( S \), which said heterocycle may optionally be substituted by one, two or three groups independently selected from among methyl, \(-\text{Cl}, -\text{Br}, -\text{F}, -\text{OH} \) and \(-\text{oxo},

and the pharmaceutically acceptable salts of the aforementioned compounds.

16. Compound of formula \( 1 \) according to one of claims 1 to 14, wherein

\( R^4 \) is selected from the group consisting of

\(-\text{CO-NH-Y or -CO-NH-Ci}_3\)-alkylene-Y,

with \( Y \) being a group selected from the group consisting of \(-\text{NH(CH}_3)_3, -\text{N(CH}_3)_2, -\text{O-methyl, -CF}_3, \text{methyl, ethyl, -OH}, \)
or with Y being a group selected from the group consisting of a four-, five-, six- or seven-membered monocyclic fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a five- or six-membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group of N, S and O, -C₆-aryl, cyclopropyl, cyclobutyl, cyclopentyl and cyclohexyl,

or with Y being a 8-, 9-, 10- or 11-membered bicyclic annelated fully saturated, partially unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently from each other selected from the group N, S and O,

or with Y being an 8-, 9-, 10- or 11-membered bicyclic fully saturated spiro-heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, with the proviso that this spiro-heterocycle comprises at least one N-atom and that this heterocycle is directly attached to the molecule via this N-atom,

or with Y being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, which is bridged by an additional -CH₂-unit,

whereby each Y may optionally be substituted by one, two or three groups Z each independently from each other selected from the group consisting of -F, -Cl, -Br, -I, -oxo, OH, -CN, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, pentyl, -Ci₅-alkanol, -0-CH₃, -O-ethyl, -O-(n-propyl), -O-isopropyl, a four-, five-, six- or seven-membered fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a fully saturated or partially unsaturated C₅,₆-cycloalkyl, a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; -CO-methyl, -CO-ethyl, -CO-propyl, -CHO, -CO-L, -Ci-s-alkylene-CO-L, -Ci₄-alkylene-0-Ci₃-alkyl, -N(CH₃)₂ and -N(ethyl)₂.

whereby each group Z may optionally be further substituted by one, two or three groups T each independently selected from the group consisting of -oxo, OH, halogen, methyl, ethyl, n-propyl, isopropyl, -O-methyl, -O-ethyl, -O-(n-propyl), -O-(isopropyl), -N(methyl)₂, -N(ethyl)₂, C₅,₆-cycloalkyl, -CN, 5- to 6-membered fully saturated, partially unsaturated or aromatic
heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S,

whereby L denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, which said heterocycle may optionally be substituted by one, two or three groups independently selected from among methyl, -Cl, -Br, -F, -OH and -oxo,

and the pharmaceutically acceptable salts of the aforementioned compounds.

17. Compound of formula \( \text{I} \) according to one of claims 1 to 14, wherein

\( R^4 \) is selected from the group consisting of -CO-Y,

with Y being a group selected from the group consisting of -NH(CH\(_3\))\(_2\), -N(CH\(_3\))\(_2\), -O-methyl, -CF\(_3\), methyl, ethyl, -OH,

or with Y being a group selected from the group consisting of a four-, five-, six- or seven-membered monocyclic fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a five- or six-membered monocyclic heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group of N, S and O, -C\(_6\)H\(_4\)-aryl, cyclopropyl, cyclobutyl, cyclopentyl and cyclohexyl,

or with Y being a 8-, 9-, 10- or 11-membered bicyclic annellated fully saturated, partially unsaturated or aromatic heterocycle comprising 1, 2, 3 or 4 heteroatoms each independently from each other selected from the group N, S and O,

or with Y being an 8-, 9-, 10- or 11-membered bicyclic fully saturated spiro-heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, with the proviso that this spiro-heterocycle comprises at least one N-atom and that this heterocycle is directly attached to the molecule via this N-atom,
or with $Y$ being a six- or seven-membered fully saturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, which is bridged by an additional $-\text{CH}_2-$unit,

whereby each $Y$ may optionally be substituted by one, two or three groups $Z$ each independently from each other selected from the group consisting of -F, -Cl, -Br, -I, -oxo, OH, -CN, methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, t-butyl, pentyl, -Ci$_5$-alkanol, -O-CI$_3$, -O-ethyl, -O-(n-propyl), -O-isopropyl, a four-, five-, six- or seven-membered fully saturated or partially unsaturated heterocycle comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; a fully saturated or partially unsaturated C$_{5,6}$-cycloalkyl, a five- to six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O; -CO-methyl, -CO-ethyl, -CO-propyl, -CHO, -CO-L, -Ci-s-alkylene-CO-L, -Ci$_4$-alkylene-0-Ci$_3$-alkyl, -N(CH$_3$)$_2$ and -N(ethyl)$_2$,

whereby each group $Z$ may optionally be further substituted by one, two or three groups $T$ each independently selected from the group consisting of -oxo, OH, halogen, methyl, ethyl, n-propyl, isopropyl, -O-methyl, -O-ethyl, -O-(n-propyl), -O-(isopropyl), -N(methyl)$_2$, -N(ethyl)$_2$, C$_{5,6}$-cycloalkyl, -CN, 5- to 6-membered fully saturated, partially unsaturated or aromatic heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S,

whereby $L$ denotes a 5- or 6-membered fully saturated or partially unsaturated heterocycle comprising 1 or 2 heteroatoms each independently selected from the group N, O and S, which said heterocycle may optionally be substituted by one, two or three groups independently selected from among methyl, -Cl, -Br, -F, -OH and -oxo,

and the pharmaceutically acceptable salts of the aforementioned compounds.

18. Compound of formula $\text{L}_n$ according to one of claims 1 to 14,

wherein

$R^4$ is a five- or six-membered heteroaromatic group comprising 1, 2 or 3 heteroatoms each independently selected from the group N, S and O, wherein said heteroaromatic group on any atom available for substitution may optionally be further substituted by one, two or three groups each independently selected from among methyl, ethyl, F, Cl, Br, and -CF$_3$,

and the pharmaceutically acceptable salts of the aforementioned compounds.
19. Compound of formula 1 according to one of claims 1 to 14, wherein
R^4 is an oxadiazole group that may optionally be substituted by one, two or three groups
each independently selected from methyl, ethyl, F, Cl, and -CF₃
and the pharmaceutically acceptable salts of the aforementioned compounds.

20. Compound of formula 1 according to one of claims 1 to 5, selected from the group
consisting of
and the pharmaceutically acceptable salts of the aforementioned compounds.

21. Use of compounds of formula \( 1 \) according to one of Claims 1 to 20, for preparing a medicament for the treatment of diseases which can be treated by inhibition of the Syk enzyme.
22. Use of compounds of formula 1 according to one of Claims 1 to 20 for preparing a medicament for the treatment of diseases selected from among allergic rhinitis, asthma, COPD, adult respiratory distress syndrome, bronchitis, B-cell lymphoma, dermatitis and contact dermatitis, allergic dermatitis, allergic rhinoconjunctivitis, rheumatoid arthritis, anti-phospholipid syndrome, Berger's disease, Evans's syndrome, ulcerative colitis, allergic antibody-based glomerulonephritis, granulocytopenia, Goodpasture's syndrome, hepatitis, Henoch-Schonlein purpura, hypersensitivity vasculitis, immunohaemolytic anaemia, autoimmune haemolytic anemia, idiopathic thrombocytopenic purpura, Kawasaki syndrome, allergic conjunctivitis, lupus erythematoses, capsule cell lymphoma, neutropenia, non-familial lateral sclerosis, artheriosclerosis, Crohn's disease, multiple sclerosis, myasthenia gravis, osteoporosis, osteolytic diseases, osteopenia, psoriasis, Sjogren's syndrome, sclerodermy, T-cell lymphoma, urticaria / angioedema, Wegener's granulomatosis and coeliac disease.

23. Use of compounds of formula 1 according to one of Claims 1 to 20 for preparing a medicament for the treatment of diseases selected from among asthma, COPD, allergic rhinitis, adult respiratory distress syndrome, bronchitis, allergic dermatitis, contact dermatitis, idiopathic thrombocytopenic purpura, rheumatoid arthritis and allergic rhinoconjunctivitis.

24. Use of compounds according to one of Claims 1 to 20 for preparing a medicament for the treatment of diseases selected from among asthma, COPD, allergic rhinitis, allergic dermatitis and rheumatoid arthritis.

25. Pharmaceutical formulations, characterised in that they contain one or more compounds of formula 1 according to one of Claims 1 to 20.

26. Pharmaceutical formulations, characterised in that they contain one or more compounds of formula 1 according to one of Claims 1 to 20 in combination with an active substance selected from among anticholinergics, betamimetics, corticosteroids, PDE4-inhibitors, EGFR-inhibitors, LTD4-antagonists, CCR3-inhibitors, iNOS-inhibitors, CRTH2-antagonists and HMG-CoA reductase inhibitors.
27. Intermediate compound according to formula 7

\[
\begin{align*}
\text{HN} & \quad \text{NH} \\
\text{HN} & \quad \text{NH}_2 \\
\text{R} & \quad \text{R}^3 \\
\text{R} & \quad \text{R}^4 \\
\text{R} & \quad \text{R}^5 \\
\end{align*}
\]

wherein \( R^3, R^4 \) and \( R^5 \) are defined as in one of claims 1 to 5,

and the pharmaceutically acceptable salts of the aforementioned compounds.

28. Intermediate compound according to formula 8

\[
\begin{align*}
\text{HN} & \quad \text{N} \\
\text{HN} & \quad \text{N} \\
\text{R} & \quad \text{R}^1 \\
\text{R} & \quad \text{R}^2 \\
\text{R} & \quad \text{R}^3 \\
\text{R} & \quad \text{R}^5 \\
\text{HO} & \quad \text{CO} \\
\end{align*}
\]

wherein \( R^1, R^2, R^3 \) and \( R^5 \) are defined as in one of claims 1 to 5,

and the pharmaceutically acceptable salts of the aforementioned compounds.

29. Intermediate compound according to formula 10

\[
\begin{align*}
\text{HN} & \quad \text{N} \\
\text{HN} & \quad \text{N} \\
\text{Br} & \quad \text{N} \\
\text{R} & \quad \text{R}^1 \\
\text{R} & \quad \text{R}^2 \\
\text{R} & \quad \text{R}^4 \\
\text{R} & \quad \text{R}^5 \\
\end{align*}
\]
wherein $R_1$, $R_2$, $R_4$ and $R_5$ are defined as in one of claims 1 to 5,

and the pharmaceutically acceptable salts of the aforementioned compounds.
A. CLASSIFICATION OF SUBJECT MATTER

INV. C07D413/14 A61K31/506 A61P37/08 C07D405/14 C07D409/14
C07D417/14 C07D471/04 C07D409/14 C07D409/14 C07D413/14

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
C07D A61K A61P

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

EPO-Internal, WPI Data

C. DOCUMENTS CONSIDERED TO BE RELEVANT

<table>
<thead>
<tr>
<th>Category</th>
<th>Citation of document, with indication, where appropriate, of the relevant passages</th>
<th>Relevant to claim No.</th>
</tr>
</thead>
</table>
| X        | A. H. BINGHAM ET. AL.: “A Novel series of Potent and Selective IKK2 Inhibitors .”
          | BIOORGANIC AND MEDICINAL CHEMISTRY LETTERS, vol. 14, 1 April 2004 (2004-04-01) , pages 409-412 ; XP002682144, DOI : 10.1016/j.bcm .2003.10.047 page 410, Scheme 1;; table 1 | 27 |
| Y        | Wo 2004/087698 A2 (VERTEX PHARMACEUTICALS INC.) 14 October 2004 (2004-10-14) page 1, paragraph 3 - page 3, paragraph 12; claims; examples 1-24 | 1-29 |

[X] Further documents are listed in the continuation of Box C.  
[X] See patent family annex.

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"S" document member of the same patent family

Date of the actual completion of the international search: 7 June 2013

Date of mailing of the international search report: 17/06/2013

Name and mailing address of the ISA/ 
European Patent Office, P.B. 5818 Patentlaan 2
