# UNITED STATES PATENT OFFICE.

LOUIS LEGRAND, OF PARIS, FRANCE.

## SHAVING-BRUSH.

SPECIFICATION forming part of Letters Patent No. 611,969, dated October 4, 1898.

Application filed November 4, 1897. Serial No. 657,445. (No model.)

*To all whom it may concern:*

Be it known that I, LOUIS LEGRAND, a citizen of France, residing at 189 Rue du Temple, Paris, France, have invented certain new and useful Improvements in Shaving-Brushes; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use  
10 the same.

The present invention relates to a shaving-brush the interior of which is made hollow in order to permit the introduction of a soap stick, which is fixed by any suitable means  
15 within a suitable cover adapted to the shaving-brush.

The annexed drawing shows, as an example only, a longitudinal section of a shaving-brush embodying the above-mentioned features.  
20

The body of the brush is made in two portions A and B, screwed one upon the other. The portion A receives the brush C, which is attached by the ordinary means. The portion B forms a hollow threaded space on one end and is fitted with a base D on the other.  
25 On the threaded part a cover E is adapted to be received, which is provided with a second

screw-thread to secure the bar of soap F, the latter being so fixed to the cover E that both  
30 are removable simultaneously. This arrangement offers, in a practical point of view, the advantage of being very convenient, as the person who uses the brush can always have his soap at his disposal, and the latter being  
35 inclosed in a case will always be clean.

Having thus described my invention, I claim—

A two-part shaving-brush, comprising the brush proper, consisting of the ordinary hair  
40 bristles secured in a suitable socket provided at its upper end with interior screw-thread and adapted to receive thereon a hollow handle B provided with a removable cover or  
45 cap E having interior screw-thread to receive a stick of soap adapted to the interior of the handle, whereby when said cap is unscrewed, the cap is removable with it, substantially as described.

In testimony whereof I affix my signature  
50 in presence of two witnesses.

LOUIS LEGRAND.
