DESIGN.

C. B. ROGERS.
Casket-Handle Sockets.

No. 6,639. Patented May 6, 1873.

Witnesses.

W. Summum, A. S. Robbins.
To all whom it may concern:

Be it known that I, CEPHAS B. ROGERS, of Meriden, in the county of New Haven and State of Connecticut, have invented a new Design for Casket-Handle Sockets; and I do hereby declare the following, when taken in connection with the accompanying drawing and the letters of reference marked thereon, to be a full, clear, and exact description of the same, and which said drawing constitutes part of this specification, and represents, in—

Figure 1 a front view.

This invention relates to a design for the socket of coffin or casket handles—that is to say, the plates to which the levers are attached and by means of which the handle is secured to the casket; and it consists in the peculiar configuration or outline of the plate, as shown in the accompanying illustration, and more fully hereinafter described.

The plate is in the form of an oblong square, the four corners at right angles. Upon the two sides and ends a projecting ornament is formed, enlarging the plate at those points. The socket proper rises from the center of the plate, and may be of any desirable form, that constituting no part of this design, which relates only to the shape of the plate.

I claim as my invention—

The design for casket-handle sockets, as shown in the accompanying illustration and herein described.

CEPHAS B. ROGERS.
