(54) Title: INTRALUMINAL PROSTHESIS

(57) Abstract: An intraluminal prosthesis generally comprising a tubular graft member having a first support member secured to the first end of the graft member and a second support member secured to the second end of the graft member. One aspect of the invention comprises a stent assembly in which the graft member, secured to the support members, is attached to a stent. Due to the support members, the graft member secured thereto may be implanted in a body lumen, such as a patient's blood vessel, with or without being attached to a stent.

* Special categories of cited documents:

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
- *&* document member of the same patent family
