UNITED STATES PATENT OFFICE.

JAMES MARTIN GOLDEN, OF LOS ANGELES, CALIFORNIA.

HAIR-NET HOLDER.

1,375,381. Specification of Letters Patent. Patented Apr. 19, 1921.

Application filed February 14, 1921. Serial No. 444,749.

To all whom it may concern:

Be it known that I, JAMES M. GOLDEN, a citizen of the United States, residing at Los Angeles, in the county of Los Angeles and State of California, have invented new and useful Improvements in Hair-Net Holders, of which the following is a specification.

It is the object of this invention to provide means for holding a hair net in position, the hair net being employed when the hair is shampooed.

The invention provides a construction including a head encircling member having means thereon for engaging the edge of a hair net, and also provided with retaining means in the form of a chin strap.

The invention will be readily understood from the following description of the accompanying drawings, in which:

Figure 1 is a perspective view showing the device in use.

Fig. 2 is a similar view of the invention with the hair net detached therefrom.

The hair net holder comprises a band 1 of suitable material and arranged to encircle the head. Straps 2 depend from the opposite sides of this band, and are suitably attached thereto as shown at 3. These straps are provided with suitable connecting means shown as a buckle 4, and are arranged so as to provide a chin strap for holding band 1 in position.

The band is provided with suitable means for engaging the edge of a hair net shown at 5. This engaging means may take the form of a plurality of hooks 6 projecting from band 1, and arranged in spaced relation around the circumference of the same.

When in use the hair is arranged to hang freely, and net 5 is drawn over the same so that it may be caught upon the hooks of the retaining band which has been placed in position encircling the head. This retaining band will be held against displacement by its chin strap.

Various changes may be made without departing from the spirit of the invention as claimed.

What is claimed is:

1. The combination with a hair net of a head encircling member having means for engaging said net.

2. The combination with a hair net of a head encircling member having means for engaging said net, and retaining means for the head encircling member.

3. The combination with a hair net of a head encircling band having hooks adapted to engage said net.

4. The combination with a hair net of a head encircling member having means for engaging said net, and a chin strap connected to the head encircling member for holding the latter in position.

In testimony whereof I have signed my name to this specification.

JAMES MARTIN GOLDEN.
