Abstract

This innovation patent discloses a flower-shaped egg-frying machine, including an egg frying ring and a handle by the side of the egg frying ring; the said egg frying ring has a whole body and there are rivets at the connection point of the said handle and egg frying ring. When using, whip the egg into the egg frying ring and remove the egg frying ring with hands holding the handle after the egg is cooked. The shape of the fried egg will be the same as that of the egg frying ring. It has a simple structure and is easy to use. The shape of the fried egg is very beautiful, making the meal more beautiful and improving your appetite.

Description

A flower-shaped egg frying machine

Technical field

This innovation patent involves a flower-shaped egg frying machine.

Background technology

For ordinary people, it is very difficult to make beautiful fried eggs with various shapes. The shape of fried egg is generally round.

Invention content

The technical problem to be solved by this innovation patent is to provide an easy-to-use flower-shaped egg frying machine with a simple structure, which can make the shape of fried egg beautiful, make the meal more beautiful and improve appetite.

This innovation patent is implemented through the following technical proposals: a flower-shaped egg-frying machine, including an egg frying ring and a handle by the side of the egg frying ring; the said egg frying ring has a whole body and there are rivets at the connection point of the said handle and egg frying ring.

Beneficial effects of the flower-shaped egg frying machine of this innovation patent include: when using, whip the egg into the egg frying ring and remove the egg frying ring with hands holding the handle after the egg is cooked. The shape of the fried egg will be the same as that of the egg frying ring. It has a simple structure and is easy to use. The shape of the fried egg is very beautiful, making the meal more beautiful and improving your appetite.

Descriptions of the attached figure

For the convenience of description, this innovation patent is described in detail through the following specific implementation example and attached figure.

Fig. 1 is the structure diagram of a flower-shaped egg frying machine of this innovation patent.

Detailed implementation way

As shown in Fig. 1, a flower-shaped egg-frying machine of this innovation patent includes an egg frying ring 1 and a handle 2 by the side of the egg frying ring 1; the said egg frying ring 1 has a whole body and there are rivets 3 at the connection point of the said handle 2 and egg frying ring 1.

In this implementation example, the egg frying ring 1 is flower-shaped and can also be heart-shaped, round and square.

201210118 3 02 Aug 2012

Beneficial effects of the flower-shaped egg frying machine of this innovation patent include: when using, whip the egg into the egg frying ring and remove the egg frying ring with hands holding the handle after the egg is cooked. The shape of the fried egg will be the same as that of the egg frying ring. It has a simple structure and is easy to use. The shape of the fried egg is very beautiful, making the meal more beautiful and improving your appetite.

The above is a specific implementation way of this innovation patent. However, the scope of protection of this innovation patent is not limited to this. Any change or replacement without creative work shall be covered in the scope of protection of this innovation patent. Therefore, the scope of protection of this innovation patent shall be subject to that defined in the claim.

Claim

1. A flower-shaped egg-frying machine having the following characteristics: including an egg frying ring and a handle by the side of the egg frying ring; the said egg frying ring has a whole body and there are rivets at the connection point of the said handle and egg frying ring.
