UNITED STATES PATENT OFFICE

2,649,370

INDIUM-BISMUTH-LEAD ALLOY

Albert A. Smith, Jr., Metuchen, and John L. Everhart, Linden, N. J., assignors to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application October 7, 1950, Serial No. 189,047

1 Claim. (Cl. 75—134)

1

This invention relates to alloys and more particularly it relates to low fusing point alloys.

It is an object of the invention to provide cadmium-free low melting point alloys.

In accordance with the invention alloys are provided comprising 51–53% Bi, 21–23% In, 25–27% Pb and have fusing points of approximately 70° C.

It will be observed from the compositions that these alloys do not contain cadmium and accordingly they are suitable for certain applications as heat transfer media particularly in such applications where cadmium would be detrimental.

What is claimed is:

Low melting point alloys composed of 51–53% Bi, 21–23% In and 25–27% Pb.

ALBERT A. SMITH, JR.
JOHN L. EVERHART.
