D-80538 München (DE)(54) **Apparatus for restricting rotation of a cylinder lock relative to a vehicle body.**

(57) An apparatus including a panel (12) formed with an opening (16) which includes a hole (18) defined by a circular peripheral edge of the panel (12) and a radial cutout (20) communicating with the hole (18). Received in the hole (18) is a cylinder lock (14) which includes an outer cylinder housing (22) and a key operated inner cylinder (24) disposed in the outer cylinder housing (22). A radial projection (30) extending from the outer cylinder housing (22) is inserted into the radial cutout (20). The panel (12) has an integral flap (34) partly defining the radial cutout (20). The integral flap (34) is turnable about a hinge line at which the panel (12) abuts against the radial projection (30) to withstand stress from the radial projection (30).
