(57) The invention relates to novel 2-bromo- and 2-nitroxy derivatives of 3-bromo- and 3,3-dibromo-4-oxo-azetidines, to processes for the preparation thereof and to the use thereof wherein the novel compounds have the formula: (see formula I) | wherein R^1 and R^2 are hydrogen or bromine, R^3 is $Me_2C=C-COOR^4$ wherein R^4 is hydrogen, methyl, benzyl or some other carboxy-protective group, and X is bromine or nitroxy group ($-ONO_2$). 2-bromo- and 2-nitroxy derivatives of 3-bromo- and 3,3-dibromo-4-oxo-azetidines are prepared by reacting derivatives of protected penicillanic acid 1,1-dioxides with DBN reactant and treated with thionyl chloride, the obtained residue is passed through a silica gel column with methylene chloride as eluant or the obtained residue is dissolved in tetrahydrofuran and treated with tetrabutyl ammonium bromide and after the treatment a derivative of 2-bromo, 3-bromo or 2-bromo-3,3-dibromo-4-oxo-azetidine is isolated, which derivative may be subjected to a reaction with silver nitrate in 2-propanol and, after the treatment of the reaction mixture, derivatives of 2-nitroxy-, 3-bromo- or 2-nitroxy-3,3-dibromo-4-oxo-azetidine are isolated. The obtained substances are useful intermediates in the synthesis of beta lactam analogons or as components in formulations having antibacterial, inhibitory, antitumour or antagonistic action.

ABSTRACT

The invention relates to novel 2-bromo- and 2-nitroxy derivatives of 3-bromo- and 3,3-dibromo-4-oxo-azetidines, to processes for the preparation thereof and to the use thereof wherein the novel compounds have the formula:

I

wherein R^1 and R^2 are hydrogen or bromine, R^3 is $\text{Me}_2\text{-C}=\overset{\text{I}}{\text{C}}\text{-COOR}^4$ wherein R^4 is hydrogen, methyl, benzyl or some other carboxy-protective group, and X is bromine or nitroxy group ($-\text{ONO}_2$). 2-bromo- and 2-nitroxy derivatives of 3-bromo- and 3,3-dibromo-4-oxo-azetidines are prepared by reacting derivatives of protected penicillanic acid 1,1-dioxides with DBN reactant and treated with thionyl chloride, the obtained residue is passed through a silica gel column with methylene chloride as eluant or the obtained residue is dissolved in tetrahydrofuran and treated with tetrabutyl ammonium bromide and after the treatment a derivative of 2-bromo, 3-bromo or 2-bromo-3,3-dibromo-4-oxo-azetidine is isolated, which derivative may be subjected to a reaction with silver nitrate in 2-propanol and, after the treatment of the reaction mixture, derivatives of 2-nitroxy-, 3-bromo- or 2-nitroxy-3,3-dibromo-4-oxo-azetidine are isolated. The obtained substances are useful intermediates in the synthesis of beta lactam analogons or as components in formulations having antibacterial, inhibitory, antitumour or antagonistic action.

PROCESSES FOR THE PREPARATION THEREOF AND USE THEREOF**

Technical Field

IPC: C07D 205/08
A 61K 31/395

The invention relates to 2-bromo- and 2-nitroxy derivatives of 3-bromo- and 3,3-dibromo-4-oxo-azetidines, to processes for the preparation thereof and to the use thereof.

There are known certain 2-chloro derivatives of 3-phthalimido-alpha-(1-methyl-ethylidene)-4-oxo-1-azetidine acetic acid, which are prepared by reacting methyl-6-phthalimido penicillanate with chlorine or sulfuryl chloride (Kukolja S., J. Am. Chem. Soc. 93, (1971), 6267).

Haloazetidinones are also prepared by reacting penicillin with halogenating agents such as molecular chlorine or N-halosuccinimide (US 4,159,984). Further, there is disclosed the rearrangement of oxoazetidine sulfinic acids obtained from penicillin sulfoxide, with halogenating agents into haloazetidinones (Spitzer W. A., Kukolja S., Goodson T., Lammert J. P., Steven R., Lilly Eli Co., EP 60 120, equivalent US 4,368,156; Spitzer W. A., Goodson T., Lammert S. R. and Kukolja S. J., Org. Chem. 46, (1981) 3569). Narisada et al. disclosed the synthesis of chloroazetidinone from methylthioazetidinones obtained from penicillin (US 4,138,486).

S. Kukolja and S. R. Lammert further disclosed the preparation of the above-mentioned 2-chloro derivatives starting from trichloroethyl ester of 6-phenyl-acetamido-penicillanate (Croat. Chem. Acta 44, (1972) 299-301). The Eli Lilly Company claimed the preparation of haloazetidinones starting from 3-exomethylene cephalosporin sulfone with the acylamide group in the 7-position and reacting the

same with activated zinc or magnesium and ammonium chloride to obtain sulfinic acids, which acids with halogenating agents give sulfinyl chlorides, which are then subjected to hydrolysis (EP 132395).

3-bromo- and 3,3-dibromo-2-chloroazetidiones are also prepared by the reaction of pivaloyloxymethyl 6-bromo- or 6,6-dibromopenicillanate with chlorine or tertiary butyl hypochlorite (C. Somoza and O. A. Oreste, *Tetrahedron* 44, (1988) 7007-12.).

According to our knowledge, 2-bromo- and 2-nitroso derivatives of 3-bromo- and 3,3-dibromo-4-oxo-azetidines are not known.

The object of the present invention are 2-bromo- and 2-nitroso derivatives of 3-bromo- and 3,3-dibromo-4-oxo-azetidines of the general formula I

I

wherein

R^1 is hydrogen or bromine,

R^2 is hydrogen or bromine,

R^3 is hydrogen; $\text{Me}_2\text{-C}=\overset{1}{\text{C}}-\overset{4}{\text{COOR}}$, wherein R^4 is hydrogen, methyl, benzyl or some other carboxy-protective group, and

X is bromine or nitroso group ($-\text{ONO}_2$).

A further object of the present invention is a process for preparing 2-bromo- and 2-nitroso derivatives of 3-bromo- and 3,3-dibromo-4-oxo-azetidines of the general formula I, wherein the radicals have the above meaning, starting from derivatives of penicillanic acid 1,1-dioxides of the general formula II

II

wherein radicals R^1 and R^2 have the above meaning and R^4 is methyl or benzyl or some other protective group, by reacting with DBN (1,5-diazabicyclo/3.4.0/non-5-ene) and then the obtained DBN salt of sulfinic acid or isolated sulfinic acid is treated with thionyl chloride and, after eliminating thionyl chloride by evaporation, the obtained residue is passed through a silica gel column with methylene chloride as eluant or the obtained residue is dissolved in tetrahydrofuran and treated with tetrabutyl ammonium bromide and after the treatment a derivative of the general formula I wherein

R^1 is hydrogen or bromine,

R^2 is hydrogen or bromine,

R^3 is hydrogen; $\text{Me}_2\text{-C}=\overset{\text{I}}{\text{C}}\text{-COOR}^4$, wherein R^4 is hydrogen, methyl, benzyl or some other carboxy-protective group, and

X is bromine, is isolated.

The obtained 2-bromo derivatives of the general formula I wherein R^4 is e.g. benzyl, are converted, by eliminating the benzyl group with aluminum trichloride, into a product I wherein R^4 is hydrogen, or are subjected to the reaction with silver nitrate in isopropanol to obtain the derivative of the general formula I wherein X is nitroxy group and R^4 is benzyl.

The derivatives of 6,6-dibromopenicillanic acid are prepared from 6-amino-penicillanic acid according to known processes (R. A. Volkmann, R. D. Carrol, R. B. Drolet, M. L. Elliott and B. S. Moore, *J. Org. Chem.* 47 (1982) 3344-5; Wayne E. Barth, U.S. patent 4,234,579).

A further object of the present invention is the use of these compounds as useful intermediates in preparing various beta lactam analogons such as 1-oxapenems (Masyuki Murakami, Tsutomu Auki, Munenuri Matasura and Wataru Nagata, *J. Antibiot.* 43 (1990) 1441-49; H. R. Pfaendler, T. Neumann and R. Bartsch, *Synthesis* (1992) 1179) or penems (V. M. Girijavallabhan, A. K. Ganguly, S. W. McCombie, P.

Pinto, R. Rizvi, *Tetrahedron Lett.* 22, (1981) 3485-88; C. M. D. Beels, M. S. Abu Rabie, *J. Chem. Soc. Chem. Commun.* 1979, 665) or 1-oxacephalosporins (US 4,013,653, US 4,234,724, US 4,159,984) or the present invention offers great possibilities for transformations into other monobactams or cyclic compounds. Additionally, the corresponding 2-nitroso derivatives of azetidinones are also potential Ca^{++} antagonists such as are also nitroglycerin, nicorandil or nipradiol.

A further object of the present invention is the use of these compounds as raw materials in formulations having antibacterial, inhibitory, antitumour and antagonistic action.

Some of the compounds of the general formula I in concentrations of about 10^{-5} M inhibit the growth of tumour cells of human cervix uteri (HeLa) by as much as 70% whereas they do not exhibit any action on normal fibroblasts (WI38). Further biological investigations are in progress.

The presently disclosed knowledge about antitumour action of these as well as some other analogues (e.g. 3,3-dibromo-2-chloro- α -(1-methylethylidene)-4-oxoazetidine-1-acetic acid) represents novel knowledge about biological activity of beta lactams.

The invention is illustrated by the following Examples which are in no way limitative as to the scope thereof.

Example 1

2,3,3-tribromo- α -(1-methylethylidene)-4-oxo-1-azetidine acetic acid benzyl ester

6,6-dibromopenicillanic acid sulfone benzyl ester (4.8 g; 0.01 mole) was dissolved in methylene chloride (50 ml) and 1,5-diaza-bicyclo[4.3.0]non-5-ene (2.08 g; 2 ml; 0.0167 mole) was added. The reaction mixture was stirred for half an hour at room temperature, then cooled to 0 to 5 °C, thionyl chloride (24.5 g; 15 ml; 0.205 mole) was added drop by drop, it was stirred for half an hour at this temperature and for another hour at room temperature. The reaction mixture was evaporated to a dry residue, benzene (15 ml) was added and it was again evaporated to a dry residue. The obtained product was passed through a silica gel column with methylene chloride followed by the isolation of the substance (1.08 g; 21.8%).

Example 2

2,3,3-tribromo-alpha-(1-methylethylidene)-4-oxo-1-azetidine acetic acid benzyl ester

6,6-dibromopenicillanic acid sulfone benzyl ester (3.84 g; 0.008 mole) was dissolved in methylene chloride (40 ml) and 1.5-diaza-bicyclo[4.3.0]non-5-ene (1.66 g; 1.6 ml; 0.013 mole) was added. The reaction mixture was stirred for half an hour at room temperature. The obtained solution was treated with 0.1 N hydrochloric acid and NaCl, the layers were separated, the aqueous one was extracted two more times with methylene chloride, dried and evaporated to dryness. To the evaporated residue a solution of thionyl chloride (12 ml) in methylene chloride (40 ml) was added, it was stirred for half an hour at room temperature, evaporated to a dry residue, benzene (2 x 30 ml) was added and it was again evaporated to dryness. The obtained residue was dissolved in tetrahydrofuran (120 ml), tetrabutylammonium bromide (2.576 g; 0.008 mole) was added and it was stirred at room temperature up to the disappearance of the starting substance (TLC). The solution was then evaporated to dryness and was passed through a silica gel column with methylene chloride as eluant. Combined fractions with R_f 0.72 (methylene chloride) were evaporated and treated with n-hexane to give a product with m.p. 71-72 °C (1.48 g; 37.75%). The remaining spectroscopic data were identical as in Example 1.

Example 3

2,3,3-tribromo-alpha-(1-methylethylidene)-4-oxo-1-azetidine acetic acid methyl ester

6,6-dibromopenicillanic acid sulfone methyl ester (0.810 g; 0.002 mole) was dissolved in methylene chloride (10 ml) and 1.5-diaza-bicyclo[4.3.0]non-5-ene (0.4 g; 0.4 ml; 0.0033 mole) was added. The reaction mixture was stirred for half an hour at room temperature, then cooled to 0 to 5 °C, thionyl chloride (4.9 g; 3 ml; 0.040 mole) was added drop by drop, it was stirred for half an hour at this temperature and for another hour at room temperature. The reaction mixture was evaporated to a dry residue, benzene (15 ml) was added and it was again evaporated to a dry residue. The obtained product was passed through a silica gel column with methylene chloride followed by isolation of the substance (0.198 g; 23.6%).

Example 4

3,3-dibromo-2-chloro-alpha-(1-methylethylidene)-4-oxo-1-azetidine acetic acid
benzyl ester

6,6-dibromopenicillanic acid sulfoxide benzyl ester (6.96 g; 0.015 mole) was dissolved in toluene (750 ml), N-chlorosuccinimide (4.02 g; 0.030 mole) was added and it was heated in a nitrogen current at the boiling temperature for 1.5 hours. After the reaction was completed, hydrochloric acid (1 N, 450 ml) was added and the solution was refluxed under refluxing condenser for one hour. The layers were separated, the toluene layer was washed with water, dried (CaCl_2) and evaporated to dryness (5.76 g; 85.2% of the crude product). The obtained product was dissolved in methylene chloride (50 ml), triethylamine (1.5 g; 2.1 ml) was added to the solution and it was stirred at room temperature for 10 minutes. Water was added to the reaction mixture, the pH was adjusted to 5 to 6, the organic layer was washed with water, dried (Na_2SO_4) and evaporated to dryness. The obtained product was passed through a silica gel column with methylene chloride as eluant, followed by isolating the product (1.98 g; 30%) by means of n-hexane.

Example 6

3,3-dibromo-alpha-(1-methylethylidene)-2-nitroso-4-oxo-1-azetidine acetic acid benzyl ester

3,3-dibromo-alpha-(1-methylethylidene)-2-nitroso-4-oxo-1-azetidine acetic acid benzyl ester could be obtained in an analogous way as in Example 5 with the difference that the starting substance was 3,3-dibromo-alpha-(1-methylethylidene)-2-chloro-4-oxo-1-azetidine acetic acid benzyl ester.

Example 7

2,3,3-tribromo-alpha-(1-methylethylidene)-4-oxo-1-azetidine acetic acid

Into an ice-cooled suspension of aluminum trichloride (0.400 g; 0.003 mole) in methylene chloride (15 ml) in a nitrogen current a solution of 2,3,3-tribromo-alpha-(1-methylethylidene)-4-oxo-1-azetidine acetic acid benzyl ester (0.496 g; 0.001 mole) and anisole (0.648 g, 0.65 ml, 0.006 mole) in methylene chloride (15 ml) was added drop by drop for an hour and then it was stirred at room temperature for three more hours. To the reaction mixture ethyl acetate (15 ml) and 0.1 N hydrochloric acid (5 ml) were added and the layers were separated. The ethyl acetate layer was extracted with 5% sodium hydrogen carbonate solution (2 x 20 ml) and the layers were separated. The aqueous layer was acidified with 0.1 N hydrochloric acid to pH 7, then fresh ethyl acetate (20 ml) and sodium chloride were added and the layers were again separated. The ethyl acetate layer was washed with saturated salt solution, dried and evaporated to a dry residue which crystallized upon drying at 0.1 mm Hg (0.219 g; 54.0%).

m.p. 124-6°C

Rf = 0.50 (ethyl acetate-methanol 3:1)

IR (KBr): 1800(vs), 1700(s), 1630(m), 1430(m), 1370(m), 1285(m), 1245(m) cm^{-1} .

^1H NMR (DMSO-d_6) (90 MHz) δ : 1.89 (3H, s, Me), 2.25 (3H, s, Me) and 6.73 (1H, s, $\text{C}_2\text{-H}$) ppm.

Example 8

3,3-dibromo-2-chloro-alpha-(1-methylethylidene)-4-oxo-1-azetidine acetic acid

Into an ice-cooled suspension of aluminum trichloride (1.6 g; 0.012 mole) in methylene chloride (55 ml) in a nitrogen current a solution of 3,3-dibromo-2-chloro-alpha-(1-methylethylidene)-4-oxo-1-azetidine acetic acid benzyl ester (1.5 g; 0.003 mole) and anisole (2.79 g, 2.7 ml, 0.024 mole) in methylene chloride (55 ml) was added drop by drop for an hour and then it was stirred at room temperature for three more hours. To the reaction mixture ethyl acetate (60 ml) and 0.1 N hydrochloric acid (60 ml) were added and the layers were separated. The ethyl acetate layer was extracted with 5% sodium hydrogen carbonate solution (2 x 50 ml) and the layers were separated. The aqueous layer was acidified with 0.1 N hydrochloric acid to pH 1, then fresh ethyl acetate (60 ml) and sodium chloride were added and the layers were again separated. The ethyl acetate layer was washed with brine, dried and evaporated to a dry residue, which crystallized upon drying at 0.1 mm Hg (0.931 g; 77.0%).

m.p. 106-110°C

R_f = 0.50 (ethyl acetate-methanol 3:1)

IR (KBr): 1800(vs), 1700(s), 1630(m), 1430(m), 1370(m), 1285(m), 1245(m) cm^{-1} .

^1H NMR (CDCl_3)(300 MHz) δ : 2.065 (3H, s, Me), 2.33 (3H, s, Me) and 6.27 (1H, s, $\text{C}_2\text{-H}$) and 9.57 (1H, b, COOH) ppm.

THE EMBODIMENTS OF THE INVENTION IN WHICH AN EXCLUSIVE PROPERTY OR PRIVILEGE IS CLAIMED ARE DEFINED AS FOLLOWS:

1. 2-bromo- or 2-nitroso derivative of 3-bromo- or 3,3-dibromo-4-oxo-azetidines of the general formula I

I

wherein

- R^1 is hydrogen or bromine,
 R^2 is hydrogen or bromine, wherein at least one of R^1 and R^2 is bromine,
 R^3 is hydrogen; $\text{Me}_2\text{-C}=\overset{1}{\text{C}}\text{-COOR}^4$, wherein R^4 is hydrogen, methyl, benzyl or some other carboxy-protective group, and
 X is bromine or nitroso group ($-\text{ONO}_2$).
2. Compound according to claim 1, characterized in that R^1 is hydrogen, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{1}{\text{C}}\text{-COOR}^4$, R^4 is methyl, and X is bromine.
3. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is hydrogen, R^3 is $\text{Me}_2\text{-C}=\overset{1}{\text{C}}\text{-COOR}^4$, R^4 is methyl, and X is bromine.
4. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{1}{\text{C}}\text{-COOR}^4$, R^4 is methyl, and X is bromine.
5. Compound according to claim 1, characterized in that R^1 is hydrogen, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{1}{\text{C}}\text{-COOR}^4$, R^4 is benzyl, and X is bromine.
6. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is hydrogen, R^3 is $\text{Me}_2\text{-C}=\overset{1}{\text{C}}\text{-COOR}^4$, R^4 is benzyl, and X is bromine.
7. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{1}{\text{C}}\text{-COOR}^4$, R^4 is benzyl, and X is bromine.

8. Compound according to claim 1, characterized in that R^1 is hydrogen, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is hydrogen, and X is bromine.
9. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is hydrogen, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is hydrogen, and X is bromine.
10. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is hydrogen, and X is bromine.
11. Compound according to claim 1, characterized in that R^1 is hydrogen, R^2 is bromine, R^3 is hydrogen, and X is bromine.
12. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is hydrogen, R^3 is hydrogen, and X is bromine.
13. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is bromine, R^3 is hydrogen, and X is bromine.
14. Compound according to claim 1, characterized in that R^1 is hydrogen, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is methyl, and X is nitroxy.
15. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is hydrogen, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is methyl, and X is nitroxy.
16. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is methyl, and X is nitroxy.
17. Compound according to claim 1, characterized in that R^1 is hydrogen, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is benzyl, and X is nitroxy.
18. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is hydrogen, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is benzyl, and X is nitroxy.
19. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is benzyl, and X is nitroxy.

20. Compound according to claim 1, characterized in that R^1 is hydrogen, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is hydrogen, and X is nitroxy.
21. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is hydrogen, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is hydrogen, and X is nitroxy.
22. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is hydrogen, and X is nitroxy.
23. Compound according to claim 1, characterized in that R^1 is hydrogen, R^2 is bromine, R^3 is hydrogen, and X is nitroxy.
24. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is hydrogen, R^3 is hydrogen, and X is nitroxy.
25. Compound according to claim 1, characterized in that R^1 is bromine, R^2 is bromine, R^3 is hydrogen, and X is nitroxy.
26. 2-chloro derivatives of 3-bromo- and 3,3-dibromo-4-oxo-azetidines of the general formula I

I

wherein R^1 is hydrogen or bromine,

R^2 is hydrogen or bromine, wherein at least one of R^1 and R^2 is bromine,

R^3 is $\text{Me}_2\text{C}=\overset{|}{\text{C}}\text{-COOR}^4$ wherein R^4 is hydrogen or benzyl, and

X is chlorine,

27. Compound according to claim 26, characterized in that R^1 is bromine, R^2 is hydrogen, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is benzyl, and X is chlorine.
28. Compound according to claim 26, characterized in that R^1 is bromine, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is benzyl, and X is chlorine.
29. Compound according to claim 26, characterized in that R^1 is hydrogen, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is hydrogen, and X is chlorine.
30. Compound according to claim 26, characterized in that R^1 is bromine, R^2 is hydrogen, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is hydrogen, and X is chlorine.
31. Compound according to claim 26, characterized in that R^1 is bromine, R^2 is bromine, R^3 is $\text{Me}_2\text{-C}=\overset{|}{\text{C}}\text{-COOR}^4$, R^4 is hydrogen, and X is chlorine.
32. Process for preparing 2-bromo- or 2-nitroso derivative of 3-bromo- and 3,3-dibromo-4-oxo-azetidines of the general formula I, wherein the radicals have the meaning as in Claim 1, characterized in that derivative of penicillanic acid 1,1-dioxides of the general formula II

II

wherein

R^1 is hydrogen or bromine,

R^2 is hydrogen or bromine, wherein at least one of R^1 and R^2 is bromine,

R^4 is methyl or benzyl or some other protective group,

are reacted with DBN (1,5-diazabicyclo/3.4.0/non-5-ene) and then the obtained DBN salt of sulfinic acid or isolated sulfinic acid is treated with thionyl chloride and, after eliminating thionyl chloride by evaporation, the obtained residue is passed through a silica gel column with methylene chloride as eluant or the obtained residue is dissolved in tetrahydrofuran and treated with tetrabutyl ammonium bromide and after the treatment there is isolated a derivative of the general formula I

I

wherein R¹ is hydrogen or bromine,

R² is hydrogen or bromine,

R³ is hydrogen; Me₂-C=C-COOR⁴, wherein R⁴ is hydrogen, methyl, benzyl or some other carboxy-protective group, and

X is bromine,

or 2-bromo derivative of the general formula I are subjected to the reaction with silver nitrate in isopropanol and after treatment there is isolated derivative of the general formula I, wherein

R¹ is hydrogen or bromine,

R² is hydrogen or bromine,

R³ is hydrogen; Me₂-C=C-COOR⁴, wherein R⁴ is hydrogen, methyl, benzyl or some other carboxy-protective group, and

X is nitroxy group.

33. Use of the compound according to Claim 1 as an intermediate in syntheses of beta lactam analogons, 1-oxapenems, 1-oxacephalosporins, monobactams or novel bicyclic systems.

34. Use of the compound according to Claim 1 in a formulation having antibacterial, or antitumour action.

35. Use of the compound according to Claim 1 as an active substance in a formulation wherein the compound is present in concentrations of about 10⁻⁵ M for inhibiting the growth of tumour cells of human cervix uteri (HeLa) without exhibiting any action on normal fibroblasts (WI38).
