The invention relates to the preparation and use of new aminopyrimidine derivatives as drug candidates in free form or in pharmaceutically acceptable salt form and formulations thereof for the modulation of a disorder or disease which is mediated by the activity of the PI3K enzyme. The invention also provides pharmaceutically acceptable compositions comprising such compounds and methods of using the compositions in the treatment of disorders or diseases, such as disorders of immunity and inflammation in which PI3K enzymes play a role in leukocyte function, and hyperproliferative disorders associated with PI3K activity, including but not restricted to leukemias and solid tumors, in mammals, especially humans.
SUBSTITUTED AMINOPYRIMIDINE COMPOUNDS AND METHODS OF USE

CROSS-REFERENCE TO RELATED APPLICATIONS

[001] This application claims the benefit of U.S. Provisional Application No. 62/133,373, filed on March 15, 2015, which is hereby incorporated by reference in its entirety.

FIELD OF THE INVENTION

[002] The present invention is directed to certain novel compounds which are inhibitors of kinase activity, processes for their preparation, pharmaceutical compositions comprising the compounds, and the use of the compounds or the compositions in the treatment of various disorders. More specifically, the compounds disclosed herein are inhibitors of the activity or function of the phosphatidylinositol 3-kinase kinase family (hereinafter PI3-kinases, PI3Ks), for example PBKδ, PBKα, PI3Kβ and/or PI3Kγ.

BACKGROUND OF THE INVENTION

[003] The phosphoinositide 3-kinases (PI3 kinases or PI3Ks), a family of lipid kinases, have been found to have key regulatory roles in many cellular processes including cell survival, proliferation and differentiation. As major effectors downstream of receptor tyrosine kinases (RTKs) and G protein-coupled receptors (GPCRs), PBKs transduce signals from various growth factors and cytokines into intracellular massages by generating phospholipids, which activate the serine-threonine protein kinase AKT (also known as protein kinase B (PKB)) and other downstream effector pathways. The tumor suppressor or PTEN (phosphatase and tensin homologue) is the most important negative regulator of the PBK signaling pathway ("Small-molecule inhibitors of the PBK signaling network." Future Med Chem., 2011, 3, 5, 549-565).

[004] To date, eight mammalian PBKs have been identified, divided into three main classes (I, II and III) on the basis of their genetic sequence, structure, adapter molecules, expression, mode of activation, and preferred substrate. Among them, Class I PBKs are further divided based on signaling pathways and regulatory proteins into class IA and class IB. The class IA PBKs comprise three closely related kinases, PBKα, PBKβ, and PBKδ, which exist as heterodimers composed of a catalytic subunit (p10α, p110β, and p105 respectively) and a p85 regulatory adapter subunits (i.e., p85α, p85β, p55δ, p55α and p50α). The catalytic p10 subunit uses ATP to phosphorylate phosphatidylinositol (PI, Ptdlns), PI4P and PI (4,5) P2. These signal
responses are signaling generally transduced through receptor tyrosine kinases (RTKs). The class IB PBKγ signals are transduced through G-protein-coupled receptors (GPCRs) and are composed of a πηθγ catalytic domain that can associate with regulatory subunits distinct from the class IA isoforms.

[005] In relation to function and regulation of effector enzymes in phospholipids signaling pathways, class I PI3-kinases (e.g. PI3Kδ, PDKdelta) generate second messengers from the membrane phospholipid pools. Class I PI3Ks convert the membrane phospholipid PI(4,5)P2 into PI(3,4,5)P3, which functions as a second messenger. PI and PI(4)P are also substrates of PI3K and can be phosphorylated and converted into PI3P and PI(3,4)P2, respectively. In addition, these phosphoinositides can be converted into other phosphoinositides by 5'-specific and 3'-specific phophatases. Thus, PI3K enzymatic activity results either directly or indirectly in the generation of two 3'-phosphoinositide subtypes which function as second messengers in intracellular signal transduction pathways (Nature Reviews Molecular Cell Biology, 2010, 11, 329).

[006] Expression of the PI3Ka and PI3Kβ isoforms is ubiquitous, while the expression pattern of PI3K5 and PI3Kγ seems more restricted, with both isoforms found primarily in leukocytes. The relatively restricted expression pattern of PI3K6 and PBKγ, in addition to data accumulated from studies in mice suggests that these two isoforms play a major role in the adaptive and innate immune systems (J. Med. Chem., 2012, 55, 20, 8559-8581).

[007] In B and T cells, PI3Ks have an important role through activation of the Tec family of protein tyrosine kinases which include Bruton's tyrosine kinase (BTK) in B cells and Interleukin-2-inducible T-cell kinase (ITK) in T cells. Upon PI3K activation, BTK or ITK translocate to the plasma membrane where they are subsequently phosphorylated by Src kinases. One of the major targets of activated ITK is phospholipase C-gamma (PLCyI), which hydrolyses PI(4,5)P2 into PI(3,4,5)P3 and initiates an intracellular increase in calcium levels and diacylglycerol (DAG) which can activate Protein Kinases C in activated T cells.

[008] The PI3K5 kinase dead knock-in mice are viable and their phenotype is restricted to defects in immune signaling (Okkenhaug et al., Science, 2002, 297, p. 1031-4). These transgenic mice have offered insight into the function of PI3K5 in B-cell and T-cell signaling. In particular, PI3K5 is required for PI(3,4,5)P3 formation downstream of CD28 and/or T cell Receptor (TCR) signaling. A key effect of PI3K signaling downstream of TCR is the activation of Akt, which phosphorylates anti-apoptotic factors as well as various transcription factors for cytokine production. As a consequence, T cells with inactive PI3K5 have defects in proliferation and Th1 and Th2 cytokine secretion. Activation of T cells through CD28 lowers the threshold for
TCR activation by antigen and increases the magnitude and duration of the proliferative response. These effects are mediated by the PBKδ-dependent increase in the transcription of a number of genes including JL2, an important T cell growth factor.

Therefore, PBK inhibitors are anticipated to provide therapeutic benefit via its role in modulating T-cell mediated inflammatory responses associated to respiratory diseases such as asthma, COPD and cystic fibrosis. In addition, there is indication that T-cell directed therapies may provide corticosteroid sparing properties (Lancet, 1992, 339, p. 324-8) suggesting that it may provide a useful therapy either as a standalone or in combination with inhaled or oral glucocorticosteroids in respiratory diseases. A PBK inhibitor might also be used alongside other conventional therapies such as long acting beta-agonists (LABA) in asthma.

In the vasculature, PBKδ is expressed by endothelial cells and participates in neutrophil trafficking by modulating the proadhesive state of these cells in response to TNTalpha (Blood, 2004, 103, 9, p. 3448). A role for PBKδ in TNFalpha-induced signaling of endothelial cells is demonstrated by the pharmacological inhibition of Akt phosphorylation and PDK1 activity. In addition, PBKδ is implicated in vascular permeability and airway tissue edema through the VEGF pathway (Allergy Clin. Immunol., 2006, 118, 2, p. 403). These observations suggest additional benefits of PBKδ inhibition in asthma by the combined reduction of leukocyte extravasation and vascular permeability associated with asthma. In addition, PBKδ activity is required for mast cell function both in vitro and in vivo (Nature, 2004, 431, p. 1007; J. Immunol, 2008, 180, 4, p. 2538) further suggesting that PBK inhibition should be of therapeutic benefit for allergic indications such asthma, allergic rhinitis and atopic dermatitis.

The role of PBKδ in B cell proliferation, antibody secretion, B-cell antigen and IL-4 receptor signaling, B-cell antigen presenting function is also well established (J Immunol, 2007, 178, 4, p. 2328-35; Blood, 2006, 107, 2, p. 642-50) and indicates a role in autoimmune diseases such as rheumatoid arthritis or systemic lupus erythematosus. Therefore PBK inhibitors may also be of benefit for these indications.

Pharmacological inhibition of PBKδ inhibits fMLP-dependent neutrophil chemotaxis on an ICAM coated agarose matrix integrin-dependent biased system (J. Immunol, 2003, 170, 5, p. 2647-54). Inhibition of PBKδ regulates neutrophil activation, adhesion and migration without affecting neutrophil mediated phagocytosis and bactericidal activity over Staphylococcus aureus (Biochem. Biophys. Res. Commun., 2003, 308, 4, p. 764-9). Overall, the data suggest that PBKδ inhibition should not globally inhibit neutrophil functions required for innate immune defense. PI3Kδ's role in neutrophils offers further scope for treating inflammatory diseases involving tissue remodeling such as COPD or rheumatoid arthritis.
PI3Kγ has been identified as a mediator of G beta-gamma-dependent regulation of JNK activity, and G beta-gamma are subunits of heterotrimeric G proteins (J. Biol. Chem., 1998, 273, 5, p. 2505-8). It has been described that PI3Kγ relays inflammatory signals through various G(i)-coupled receptors and is central to mast cell function, stimuli in the context of leukocytes, and immunology including cytokines, chemokines, adenosines, antibodies, integrins, aggregation factors, growth factors, viruses or hormones for example (Immunity, 2002, 16, 3, p. 441-51; J. Cell Sci., 2001, 114 (Pt 16), p. 2903-10 and Curr. Opinion Cell Biol., 2002, 14, 2, p. 203-13).

It is now well understood that deregulation of oncogenes and tumor suppressor genes contributes to the formation of malignant tumors, for example by way of increased cell growth and proliferation or increased cell survival. It is also now known that signaling pathways mediated by the PI3K family have a central role in a number of cell processes including proliferation and survival, and deregulation of these pathways is a causative factor a wide spectrum of human cancers and other diseases (Annual Rev. Cell Dev. Biol., 2001, 17, p. 615-675 and J. Cell Science, 2003, 116, 15, p. 3037-3040).

There is good evidence that class I PI3K enzymes contribute to tumourigenesis in a wide variety of human cancers, either directly or indirectly (Nature Reviews Cancer, 2002, 2, 7, p. 489-501). For example, inhibition of PI3K6 may have a therapeutical role for the treatment of malignant haematological disorders such as acute myeloid leukaemia (Oncogene, 2006, 25, 50, p. 6648-59). Moreover, activating mutations within pi 10α (PIK3CA gene) have been associated with various other tumors such as those of the colon and of the breast and lung (Science, 2004, 304, 5670, p. 554; Nature Reviews Cancer, 2009, 9, 551).

It has also been shown that PI3K is involved in the establishment of central sensitization in painful inflammatory conditions (J. of Neuroscience, 2008, 28, 16, p. 4261-4270).

A wide variety of retroviruses and DNA based viruses activate the PI3K pathway as a way of preventing host cell death during viral infection and ultimately exploiting the host cell synthesis machinery for its replication (Virology, 2006, 344, 1, p. 131-8 and Nat. Rev. Microbiol., 2008, 6, 4, p. 265-75). Therefore PI3K inhibitors may have anti-viral properties in addition to more established oncolytic and anti-inflammatory indications. These antiviral effects raise interesting prospects in viral induced inflammatory exacerbations. For example, the common cold human rhinovirus (HRV) is responsible for more than 50% of respiratory tract infections but complications of these infections can be significant in certain populations. This is particularly the case in respiratory diseases such as asthma or chronic obstruction pulmonary disease (COPD). Rhinoviral infection of epithelial cells leads to a PI3K dependent cytokine and
chemokine secretion (J. Biol. Chem., 2005, 280, 44, p. 36952). This inflammatory response correlates with worsening of respiratory symptoms during infection. Therefore PI3K inhibitors may dampen an exaggerated immune response to an otherwise benign virus. The majority of HRV strains infect bronchial epithelial cells by initially binding to the ICAM-1 receptor. The HRV-ICAM-1 complex is then further internalised by endocytosis and it has been shown that this event requires PI3K activity (J. Immunol, 2008, 180, 2, p. 870-880). Therefore, PI3K inhibitors may also block viral infections by inhibiting viral entry into host cells.

[018] PI3K inhibitors may be useful in reducing other types of respiratory infections including the fungal infection aspergillosis (Mucosal Immunol, 2010, 3, 2, p. 193-205). In addition, PI3Kδ deficient mice are more resistant towards infections by the protozoan parasite Leishmania major (J. Immunol, 2009, 183, 3, p. 1921-1933). Taken with effects on viral infections, these reports suggest that PI3K inhibitors may be useful for the treatment of a wide variety of infections.

[019] PI3K inhibition has also been shown to promote regulatory T cell differentiation (Proc. Natl Acad. Sci. USA, 2008, 105, 22, p. 7797-7802) suggesting that PI3K inhibitors may serve therapeutic purposes in auto-immune or allergic indications by inducing immuno-tolerance towards self-antigen or allergen. Recently the PI3Kδ isoform has also been linked to smoke induced glucocorticoid insensitivity (Am. J. Respir. Crit. Care Med., 2009, 179, 7, p. 542-548). This observation suggests that COPD patients, which otherwise respond poorly to corticosteroids, may benefit from the combination of a PI3K inhibitor with a corticosteroid.

[020] PI3K has also been involved in other respiratory conditions such as idiopathic pulmonary fibrosis (IPF). IPF is a fibrotic disease with progressive decline of lung function and increased mortality due to respiratory failure. In IPF, circulating fibrocytes are directed to the lung via the chemokine receptor CXCR4. PI3K is required for both signaling and expression of CXCR4 (Int. J. Biochem. and Cell Biol, 2009, 41, p.1708-1718). Therefore, by reducing CXCR4 expression and blocking its effector function, a PI3K inhibitor should inhibit the recruitment of fibrocytes to the lung and consequently slow down the fibrotic process underlying IPF, a disease with high unmet need.

[021] PDKα and PI3Kβ play an essential role in maintaining homeostasis and pharmacological inhibition of these molecular targets has been associated with cancer therapy (Maira et al., Expert Opin. Ther. Targets, 2008, 12, 223).

[022] PI3Kα is involved in insulin signaling and cellular growth pathways (Nature, 2006, 441, 366). PI3Kδ isoform-selective inhibition is expected to avoid potential side effects such as hyperglycemia, and metabolic or growth disregulation.
Selective compounds to modulate PI3Kγ are being developed by several groups as immunosuppressive agents for autoimmune disease (Nature Reviews, 2006, 5, 903-918). Of note, AS 605240, a selective PBKgamma inhibitor, has been shown to be efficacious in a mouse model of rheumatoid arthritis (Nature Medicine, 2005, 11, 936-943) and to delay onset of disease in a model of systemic lupus erythematos (Nature Medicine, 2005, 11, 933-935).

PBKδ-selective inhibitors have also been described recently. The most selective compounds include the quinazolinone purine inhibitors (PIK39 and IC87114). IC87114 inhibits PBKδ in the high nanomolar range (triple digit) and has greater than 100-fold selectivity against PBKδ, is 52 fold selective against PBKβ but lacks selectivity against PBKγ (approx. 8-fold). It shows no activity against any protein kinases tested (Cell, 2006, 125, 733-747). Using delta-selective compounds or genetically manipulated mice (PBKδD910A), it was shown that in addition to playing a key role in B and T cell activation, PBKδ is also partially involved in neutrophil migration and primed neutrophil respiratory burst and leads to a partial block of antigen-IgE mediated mast cell degranulation (Blood, 2005, 106, 1432-1440; Nature, 2002, 431, 1007-1011). Hence PBKδ is emerging as an important mediator of many key inflammatory responses that are also known to participate in aberrant inflammatory conditions, including but not limited to autoimmune disease and allergy. To support this notion, there is a growing body of PBKδ target validation data derived from studies using both genetic tools and pharmacologic agents. Thus, using the delta-selective compound IC87114 and the PI3KδD910A mice, Ali et al. (Nature, 2002, 431, 1007-1011) have demonstrated that PBKδ plays a critical role in a murine model of allergic disease. In the absence of functional delta, passive cutaneous anaphylaxis (PCA) is significantly reduced and can be attributed to a reduction in allergen-IgE induced mast cell activation and degranulation. In addition, inhibition of delta with IC 87114 has been shown to significantly ameliorate inflammation and disease in a murine model of asthma using ovalbumin-induced airway inflammation (FASEB, 2006, 20: 455-465). These data utilizing compound were corroborated in PI3KδD910A mutant mice using the same model of allergic airway inflammation by a different group (Eur. J. Immunol, 2007, 37, 416-424).

There is a need to provide new PI3K inhibitors that are good drug candidates. In particular, compounds disclosed herein should bind potently to PBK whilst showing little affinity for other receptors and show functional activity as inhibitors. They should be well absorbed from the gastrointestinal tract, be metabolically stable and possess favorable pharmacokinetic properties. When targeted against receptors in the central nervous system they should cross the blood brain barrier freely and when targeted selectively against receptors in the peripheral nervous system they should not cross the blood brain barrier. They should be non-
toxic and demonstrate few side-effects. Furthermore, the ideal drug candidate will exist in a
physical form that is stable, non-hygroscopic and easily formulated. The compounds disclosed
herein show a certain level of selectivity against the different paralogs PI3K α, β, γ and δ. In
particular, show a certain level of selectivity for the isoform PI3K5.

SUMMARY OF THE INVENTION

[026] The compounds disclosed herein are therefore potentially useful in the treatment of
a wide range of disorders, particularly disorders including but not limited to autoimmune
disorders, inflammatory diseases, allergic diseases, disease or infection associated
immunopathologies, airway diseases, transplant rejection, cancers of hematopoietic origin or
solid tumors.

[027] The invention also relates to the treatment, either alone or in combination, with
one or more other pharmacologically active compounds, includes methods of treating conditions,
diseases or disorders in respiratory diseases including asthma, chronic obstructive pulmonary
disease (COPD) and idiopathic pulmonary fibrosis (IPF); viral infections including viral
respiratory tract infections and viral exacerbation of respiratory diseases such as asthma and
COPD; non-viral respiratory infections including aspergillosis and leishmaniasis; allergic
diseases including allergic rhinitis and atopic dermatitis; autoimmune diseases including
rheumatoid arthritis and multiple sclerosis; inflammatory disorders including inflammatory
bowel disease; cardiovascular diseases including thrombosis and atherosclerosis (Future Med.
Chem., 2013, 5, 4, 479-492; Biochemical Society Transactions, 2004, 32, 378); hematologic
malignancies; neurodegenerative diseases; pancreatitis; multiorgan failure; kidney diseases;
platelet aggregation; cancer; sperm motility; transplantation rejection; graft rejection; lung
injuries; and pain including pain associated with rheumatoid arthritis or osteoarthritis, back pain,
general inflammatory pain, post hepatic neuralgia, diabetic neuropathy, inflammatory
neuropathic pain (trauma), trigeminal neuralgia and Central pain; hematologic malignancies such
as Acute Myeloid leukaemia (AML) Myelo-dysplastic syndrome (MDS) myelo-proliferative
diseases (MPD) Chronic Myeloid Leukemia (CML) T-cell acute lymphoblastic leukaemia (T-
ALL) B-cell Acute Lymphoblastic leukaemia (B-ALL) Non Hodgkins Lymphoma (NHL) B-cell
lymphoma and solid tumors, such as breast cancer.

[028] The present inventors have discovered novel compounds which are inhibitors of
kinase activity, in particular PI3-kinase activity. Compounds which are PI3-kinase inhibitors
may be useful in the treatment of disorders associated with inappropriate kinase activity, in
particular inappropriate PI3-kinase activity, for example in the treatment and prevention of
disorders mediated by PI3-kinase mechanisms. Such disorders include respiratory diseases
including asthma, chronic obstructive pulmonary disease (COPD) and idiopathic pulmonary fibrosis (IPF); viral infections including viral respiratory tract infections and viral exacerbation of respiratory diseases such as asthma and COPD; non-viral respiratory infections including aspergillosis and leishmaniasis; allergic diseases including allergic rhinitis and atopic dermatitis; autoimmune diseases including rheumatoid arthritis and multiple sclerosis; inflammatory disorders including inflammatory bowel disease; cardiovascular diseases including thrombosis and atherosclerosis; hematologic malignancies; neurodegenerative diseases; pancreatitis; multiorgan failure; kidney diseases; platelet aggregation; cancer; sperm motility; transplantation rejection; graft rejection; lung injuries; and pain including pain associated with rheumatoid arthritis or osteoarthritis, back pain, general inflammatory pain, post hepatic neuralgia, diabetic neuropathy, inflammatory neuropathic pain (trauma), trigeminal neuralgia and central pain.

[029] In one embodiment, compounds disclosed herein may show selectivity for PI3-kinases over other kinases.

[030] In another embodiment, compounds disclosed herein may be potent inhibitors of PI3K5.

[031] In a further embodiment, compounds disclosed herein may show selectivity for PI3K5 over other PI3-kinases.

[032] In one aspect, provided herein is a compound having one of the following structures or a stereoisomer, a tautomer, an N-oxide, a solvate, a metabolite, a pharmaceutically acceptable salt or a prodrug thereof:
In one aspect of the invention, the compound disclosed herein, or the
pharmaceutically acceptable salt disclosed herein is provided for use as a medicament.

[034] In another aspect of the invention, a pharmaceutical composition is provided which comprises a pharmaceutically acceptable carrier, excipient, diluent, adjuvant, vehicle or a combination thereof, and a compound disclosed herein or a pharmaceutically acceptable salt thereof. In some embodiments, the composition comprising one or more therapeutic agents. In another embodiment, the composition is a liquid, solid, semi-solid, gel, or an aerosol form.

[035] In another aspect of the invention, provided here is the compound disclosed herein or the pharmaceutical composition disclosed herein for use in preventing, managing, treating or lessening the severity of a disorder mediated by inappropriate PI3-kinase activity in a patient.

[036] In another embodiment, the disorder is asthma, chronic obstructive pulmonary disease (COPD), viral respiratory tract infections, viral exacerbation of respiratory diseases, aspergillosis, leishmaniasis, allergic rhinitis, atopic dermatitis, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, thrombosis, atherosclerosis, hematologic malignancy, neurodegenerative disease, pancreatitis, multiorgan failure, kidney disease, platelet aggregation, cancer, sperm motility, transplantation rejection, graft rejection, lung injury, pain associated with rheumatoid arthritis or osteoarthritis, back pain, general inflammatory pain, post hepatic neuralgia, diabetic neuropathy, inflammatory neuropathic pain (trauma), trigeminal neuralgia, or central pain.

[037] In another aspect of the invention, provided herein is use of the compound disclosed herein or the pharmaceutical composition disclosed herein in the manufacture of a medicament for the treatment of a disorder or a disease selected from asthma, chronic obstructive pulmonary disease (COPD), viral respiratory tract infections, viral exacerbation of respiratory diseases, aspergillosis, leishmaniasis, allergic rhinitis, atopic dermatitis, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, thrombosis, atherosclerosis, hematologic malignancy, neurodegenerative disease, pancreatitis, multiorgan failure, kidney disease, platelet aggregation, cancer, sperm motility, transplantation rejection, graft rejection, lung injury, pain associated with rheumatoid arthritis or osteoarthritis, back pain, general inflammatory pain, post hepatic neuralgia, diabetic neuropathy, inflammatory neuropathic pain (trauma), trigeminal neuralgia, or central pain.

[038] Another aspect of the invention provides a method of modulating the activity of the PI3K enzymes, preferably of the PI3K5 isoform, in a subject, which comprises administering to the subject a therapeutically effective amount of the compound disclosed herein, the pharmaceutically acceptable salt thereof, or the pharmaceutical composition disclosed herein.
Another aspect of the invention provides a method of treating a disorder mediated by inappropriate PI3-kinase activity comprising administering a safe and effective amount of the compound disclosed herein, the pharmaceutically acceptable salt thereof, or the pharmaceutical composition disclosed herein to a patient in need thereof.

Another aspect of the invention provides a method of treating a disorder mediated by inappropriate PI3-kinase activity comprising administering a therapeutically effective amount of the compound disclosed herein or the pharmaceutical composition disclosed herein, to a patient in need thereof.

In some embodiments, the disorder mediated by inappropriate PI3-kinase activity is a respiratory disease, a viral infection, a non-viral respiratory infection, an allergic disease, an autoimmune disease, an inflammatory disorder, a cardiovascular disease, a hematologic malignancy, a neurodegenerative disease, pancreatitis, multiorgan failure, kidney disease, platelet aggregation, cancer, sperm motility, transplantation rejection, graft rejection, lung injury, or pain.

In another embodiments, the disorder mediated by inappropriate PI3-kinase activity is asthma, chronic obstructive pulmonary disease (COPD), viral respiratory tract infections, viral exacerbation of respiratory diseases, aspergillosis, leishmaniasis, allergic rhinitis, atopic dermatitis, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, thrombosis, atherosclerosis, hematologic malignancy, neurodegenerative disease, pancreatitis, multiorgan failure, kidney disease, platelet aggregation, cancer, sperm motility, transplantation rejection, graft rejection, lung injury, pain associated with rheumatoid arthritis or osteoarthritis, back pain, general inflammatory pain, post hepatic neuralgia, diabetic neuropathy, inflammatory neuropathic pain (trauma), trigeminal neuralgia or central pain.

Another aspect of the invention provides use of the compound disclosed herein, or a pharmaceutically acceptable salt thereof, or the pharmaceutical composition disclosed herein in the manufacture of a medicament for the treatment of a disorder or a disease selected from asthma, chronic obstructive pulmonary disease (COPD), viral respiratory tract infections, viral exacerbation of respiratory diseases, aspergillosis, leishmaniasis, allergic rhinitis, atopic dermatitis, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, thrombosis, atherosclerosis, hematologic malignancy, neurodegenerative disease, pancreatitis, multiorgan failure, kidney disease, platelet aggregation, cancer, sperm motility, transplantation rejection, graft rejection, lung injury, pain associated with rheumatoid arthritis or osteoarthritis, back pain, general inflammatory pain, post hepatic neuralgia, diabetic neuropathy, inflammatory neuropathic pain (trauma), trigeminal neuralgia or central pain.
In another aspect of the invention, a method of inhibiting a phosphatidyl inositol-3 kinase (PI3 kinase), is provided comprising: contacting the PI3 kinase with an effective amount of a compound disclosed herein. In some embodiments, the step of contacting comprises contacting a cell that contains said PI3 kinase. In some embodiments of the method, the inhibition takes place in a subject suffering from a disorder associated with malfunctioning of one or more types of PI3 kinase. Some exemplary diseases involving malfunctioning of one or more types of PI3 kinases are selected from the group consisting of autoimmune diseases, rheumatoid arthritis, respiratory disease, allergic reactions, and various types of cancers.

In some embodiments, the method comprises administering a second therapeutic agent to the subject.

In certain embodiments, the PI3K-mediated condition or disorder is selected from rheumatoid arthritis, ankylosing spondylitis, osteoarthritis, psoriatic arthritis, psoriasis, inflammatory diseases, and autoimmune diseases. In other embodiments, the PI3K-mediated condition or disorder is selected from cardiovascular diseases, atherosclerosis, hypertension, deep venous thrombosis, stroke, myocardial infarction, unstable angina, thromboembolism, pulmonary embolism, thrombolytic diseases, acute arterial ischemia, peripheral thrombotic occlusions, and coronary artery disease. In still other embodiments, the PI3K-mediated condition or disorder is selected from cancer, colon cancer, glioblastoma, endometrial carcinoma, hepatocellular cancer, lung cancer, melanoma, renal cell carcinoma, thyroid carcinoma, cell lymphoma, lymphoproliferative disorders, small cell lung cancer, squamous cell lung carcinoma, glioma, breast cancer, prostate cancer, ovarian cancer, cervical cancer, and leukemia. In yet another embodiment, the PI3K-mediated condition or disorder is selected from type II diabetes. In still other embodiments, the PI3K-mediated condition or disorder is selected from respiratory diseases, bronchitis, asthma, and chronic obstructive pulmonary disease. In certain embodiments, the subject is a human.

Another aspect of the invention relates to the treatment of PI3K-mediated condition or disorder in a patient comprising the step of administering a compound according to any of the above embodiments.

Another aspect of the invention relates to the treatment of rheumatoid arthritis, ankylosing spondylitis, osteoarthritis, psoriatic arthritis, psoriasis, inflammatory diseases or autoimmune diseases in a patient comprising the step of administering a compound according to any of the above embodiments.

Another aspect of the invention relates to the treatment of respiratory diseases including asthma, chronic obstructive pulmonary disease (COPD) and idiopathic pulmonary
fibrosis (IPF) in a patient comprising the step of administering a compound according to any of the above embodiments.

[050] Another aspect of the invention relates to the treatment of inflammatory bowel disorders, inflammatory eye disorders, inflammatory or unstable bladder disorders, skin complaints with inflammatory components, chronic inflammatory conditions, systemic lupus erythematosis (SLE), myasthenia gravis, acute disseminated encephalomyelitis, idiopathic thrombocytopenic purpura, multiples sclerosis, Sjoegren's syndrome and autoimmune hemolytic anemia, allergic conditions and hypersensitivity in a patient, comprising the step of administering a compound according to any of the above or below embodiments.

[051] Another aspect of the invention relates to the treatment of cancers in a patient that are mediated, dependent on or associated with PI3K activity, particularly PBKdelta activity, comprising the step of administering a compound according to any of the above or below embodiments.

[052] Another aspect of the invention relates to the treatment of cancers are selected from acute myeloid leukaemia, myelo-dysplastic syndrome, myeloproliferative diseases, chronic myeloid leukaemia, T-cell acute lymphoblastic leukaemia, B-cell acute lymphoblastic leukaemia, non-hodgkins lymphoma, B-cell lymphoma, solid tumors and breast cancer, comprising the step of administering a compound according to any of the above or below embodiments.

[053] Another aspect of the invention relates to use of the compound according to any of the above embodiments or the composition according to any of the above embodiments as a medicament.

[054] Another aspect of the invention relates to use of the compound according to any of the above embodiments or the composition according to any of the above embodiments in the manufacture of a medicament for the treatment of PI3K-mediated condition or disorder in a patient.

[055] Another aspect of the invention relates to use of the compound according to any of the above embodiments or the composition according to any of the above embodiments in the manufacture of a medicament for the treatment of rheumatoid arthritis, ankylosing spondylitis, osteoarthritis, psoriatic arthritis, psoriasis, inflammatory diseases, respiratory diseases including asthma, chronic obstructive pulmonary disease (COPD) and idiopathic pulmonary fibrosis (IPF), autoimmune diseases, and cancers.

[056] Unless otherwise stated, all stereoisomers, geometric isomers, tautomers, solvates, hydrates, metabolites, salts, and pharmaceutically acceptable prodrugs of the compounds
disclosed herein are within the scope of the invention.

[057] In certain embodiments, the salt is a pharmaceutically acceptable salt. The phrase "pharmaceutically acceptable" indicates that the substance or composition must be compatible chemically and/or toxicologically, with the other ingredients comprising a formulation, and/or the mammal being treated therewith.

[058] The compounds disclosed herein also include salts of such compounds which are not necessarily pharmaceutically acceptable salts, and which may be useful as intermediates for preparing and/or purifying compounds disclosed herein and/or for separating enantiomers of compounds disclosed herein.

[059] The compounds disclosed herein, including their salts, can also be obtained in the form of their hydrates, or include other solvents used for their crystallization. The compounds disclosed herein may inherently or by design form solvates with pharmaceutically acceptable solvents (including water); therefore, it is intended that the invention embrace both solvated and unsolvated forms.

[060] In another aspect, provided herein are methods of preparing, methods of separating, and methods of purifying compounds disclosed herein. The compounds disclosed herein may have in general several asymmetric centers and are typically depicted in the form of racemic mixtures. This invention is intended to encompass racemic mixtures, partially racemic mixtures and separate enantiomers and diastereomers.

[061] Compounds disclosed herein can be in the form of one of the possible isomers, rotamers, atropisomers, tautomers or mixtures thereof. This invention is intended to encompass mixtures of isomers, rotamers, atropisomers, tautomers, partially mixed isomers, rotamers, atropisomers, or tautomers, and separated isomers, rotamers, atropisomers, tautomers.

[062] In another aspect, the compounds disclosed herein include isotopically labeled compounds as defined herein, for example those into which radioactive isotopes, such as ³H, ¹³C and ¹⁸F, or those into which non-radioactive isotopes, such as ²H and ¹³C are present.

[063] In another aspect, provided herein are methods of preparing, methods of separating, and methods of purifying compounds disclosed herein.

[064] The foregoing merely summarizes certain aspects of the invention and is not intended to be limiting in nature. These aspects and other aspects and embodiments are described more fully below.
DETAILED DESCRIPTION OF THE INVENTION

DEFINITIONS AND GENERAL TERMINOLOGY

[065] Reference will now be made in detail to certain embodiments of the invention, examples of which are illustrated in the accompanying structures and formulas. The invention is intended to cover all alternatives, modifications, and equivalents which may be included within the scope of the present invention as defined by the claims. One skilled in the art will recognize many methods and materials similar or equivalent to those described herein, which could be used in the practice of the present invention. The present invention is in no way limited to the methods and materials described herein. In the event that one or more of the incorporated literature, patents, and similar materials differs from or contradicts this application, including but not limited to defined terms, term usage, described techniques, or the like, this application controls.

[066] Unless defined otherwise, all technical and scientific terms used herein have the same meaning as is commonly understood by one of skill in the art to which this invention belongs. All patents and publications referred to herein are incorporated by reference.

[067] As used herein, the following definitions shall apply unless otherwise indicated. For purposes of this invention, the chemical elements are identified in accordance with the Periodic Table of the Elements, CAS version, and the Handbook of Chemistry and Physics, 75th Ed. 1994. Additionally, general principles of organic chemistry are described in "Organic Chemistry", Thomas Sorrell, University Science Books, Sausalito: 1999, and "March's Advanced Organic Chemistry," by Michael B. Smith and Jerry March, John Wiley & Sons, New York: 2007, all of which are incorporated by reference in their entireties.

[068] As used in the specification and claims, the term "a," "an," "the" and similar terms used in the context of the present invention are to be construed to cover both the singular and plural unless otherwise indicated herein or clearly contradicted by the context.

[069] As used herein, the term "subject" refers to an animal. Typically the animal is a mammal. A subject also refers to for example, primates (e.g., humans, male or female), cows, sheep, goats, horses, dogs, cats, rabbits, rats, mice, fish, birds and the like. In certain embodiments, the subject is a primate. In yet other embodiments, the subject is a human.

[070] As used herein, "patient" refers to a human (including adults and children) or other animal. In one embodiment, "patient" refers to a human.

[071] The present invention also includes isotopically-labelled compounds, which are identical to those recited herein, but for the fact that one or more atoms are replaced by an atom having an atomic mass or mass number different from the atomic mass or mass number usually
found in nature. Examples of isotopes that can be incorporated into compounds disclosed herein include isotopes of hydrogen, carbon, nitrogen, oxygen, phosphorous, fluorine and chlorine, such as $^2$H, $^3$H, $^{13}$C, $^{14}$C, $^{15}$N, $^{16}$O, $^{17}$O, $^{18}$O, $^{31}$P, $^{32}$P, $^{33}$S, $^{18}$F, and $^{37}$Cl. 

[072] Compounds disclosed herein that contain the aforementioned isotopes and/or other isotopes of other atoms are within the scope of this invention. Certain isotopically-labeled compounds of the present invention, for example those into which radioactive isotopes such as $^3$H and $^{14}$C are incorporated, are useful in drug and/or substrate tissue distribution assays. Tritiated, i.e., $^3$H, and carbon-14, i.e., $^{14}$C, isotopes are particularly preferred for their ease of preparation and detection. Further, substitution with heavier isotopes such as deuterium, i.e., $^2$H, can afford certain therapeutic advantages resulting from greater metabolic stability, for example increased in vivo half-life or reduced dosage requirements and, hence, may be preferred in some circumstances.

[074] Many organic compounds exist in optically active forms, i.e., they have the ability to rotate the plane of plane-polarized light. In describing an optically active compound, the prefixes D and L, or R and S, are used to denote the absolute configuration of the molecule about its chiral center(s). The prefixes d and l or (+) and (-) are employed to designate the sign of rotation of plane-polarized light by the compound, with (-) or 1 meaning that the compound is levorotatory. A compound prefixed with (+) or d is dextrorotatory. For a given chemical structure, these stereoisomers are identical except that they are mirror images of one another. A specific stereoisomer may also be referred to as an enantiomer, and a mixture of such isomers is often called an enantiomeric mixture. A 50:50 mixture of enantiomers is referred to as a racemic mixture or a racemate, which may occur where there has been no stereoselection or stereospecificity in a chemical reaction or process.

[075] Depending on the choice of the starting materials and procedures, the compounds can be present in the form of one of the possible isomers or as mixtures thereof, for example as pure optical isomers, or as isomer mixtures, such as racemates and diastereoisomer mixtures, depending on the number of asymmetric carbon atoms. Optically active (R)- and (S)- isomers may be prepared using chiral synths or chiral reagents, or resolved using conventional techniques. If the compound contains a double bond, the substituent may be E or Z configuration. If the compound contains a disubstituted cycloalkyl, the cycloalkyl substituent
may have a cis- or frvms-configuration.

The compounds disclosed herein may contain asymmetric or chiral centers, and therefore exist in different stereoisomeric forms. It is intended that all stereoisomeric forms of the compounds disclosed herein, including but not limited to, diastereomers, enantiomers, atropisomers, and geometric (or conformational) isomers as well as mixtures thereof such as racemic mixtures, form part of the present invention.

Unless otherwise stated, structures depicted herein are also meant to include all isomeric (e.g., enantiomeric, diastereomeric, atropisomeric and geometric (or conformational)) forms of the structure; for example, the R and S configurations for each asymmetric center, (Z) and (E) double bond isomers, and (Z) and (E) conformational isomers.

The term "tautomer" or "tautomeric form" refers to structural isomers of different energies which are interconvertible via a low energy barrier. Where tautomerization is possible (e.g. in solution), a chemical equilibrium of tautomers can be reached. For example, proton tautomers (also known as prototropic tautomers) include interconversions via migration of a proton, such as keto-enol and imine-enamine isomerizations. Valence tautomers include interconversions by reorganization of some of the bonding electrons. A specific example of keto-enol tautomerization is the interconversion of pentane-2,4-dione and 4-hydroxypent-3-en-2-one tautomers. Another example of tautomerization is phenol-keto tautomerization. A specific example of phenol-keto tautomerization is the interconversion of pyridin-4-ol and pyridin-4(l H)-one tautomers. Unless otherwise stated, all tautomeric forms of the compounds disclosed herein are within the scope of the invention.

Any asymmetric atom (e.g., carbon or the like) of the compound(s) disclosed herein can be present in racemic or enantiomerically enriched, for example the (R)-, (S)- or (R,S)-configuration. In certain embodiments, each asymmetric atom has at least 50 % enantiomeric excess, at least 60% enantiomeric excess, at least 70% enantiomeric excess, at least 80% enantiomeric excess, at least 90% enantiomeric excess, at least 95% enantiomeric excess, or at least 99% enantiomeric excess in the (R)- or (S)- configuration. Substituents at atoms with unsaturated double bonds may, if possible, be present in cis- (Z)- or trans- (E)-form.

Accordingly, as used herein a compound disclosed herein can be in the form of one of the possible isomers, rotamers, atropisomers, tautomers or mixtures thereof, for example, as substantially pure geometric (cis or trans) isomers, diastereomers, optical isomers (antipodes), racemates or mixtures thereof.

Any resulting mixtures of isomers can be separated on the basis of the
physicochemical differences of the constituents, into the pure or substantially pure geometric or optical isomers, diastereomers, racemates, for example, by chromatography and/or fractional crystallization.

[083] As described herein, compounds disclosed herein may optionally be substituted with one or more substituents, such as are illustrated generally below, or as exemplified by particular classes, subclasses, and species of the invention. It will be appreciated that the phrase "optionally substituted" is used interchangeably with the phrase "substituted or unsubstituted". In general, the term "substituted" refers to the replacement of one or more hydrogen radicals in a given structure with the radical of a specified substituent. The term "optional" or "optionally" means that the subsequently described event or circumstance may but need not occur, and that the description includes instances where the event or circumstance occurs and instances in which it does not. Unless otherwise indicated, an optionally substituted group may have a substituent at each substitutable position of the group. When more than one position in a given structure can be substituted with more than one substituent selected from a specified group, the substituent may be either the same or different at each position. Some non-limiting examples of the substituents include D, F, Cl, Br, CN, N₃, OH, NH₂, N=O, oxo (=0), -C(=0)OCH₃, -C(=0)NH₂, -OC(=0)NH₂, -NHC(=0)NH₂, -NHC(=0)OCH₃, -OCH₃, -NH₂, -(C₃-C₄)alkylene-0CH₃, -(C₃-C₄)alkylene-NH₂, (C₃-C₄)alkyl, (C₃-C₆)cycloalkyl, -(C₃-C₄)alkylene-(C₃-C₆)cycloalkyl, or (C-C₆)aryl.

[084] The term "alkyl" or "alkyl group" refers to a saturated linear or branched-chain monovalent hydrocarbon radical of 1 to 20 carbon atoms, wherein the alkyl radical may be optionally substituted independently with one or more substituents described below. Unless otherwise specified, the alkyl group contains 1-20 carbon atoms. In some embodiments, the alkyl
group contains 1-12 carbon atoms. In other embodiments, the alkyl group contains 1-10 carbon atoms. In other embodiments, the alkyl group contains 1-6 carbon atoms. In still other embodiments, the alkyl group contains 1-4 carbon atoms, and in yet other embodiments, the alkyl group contains 1-3 carbon atoms.

[085] Some non-limiting examples of the alkyl group include methyl (Me, -CH₃), ethyl (Et, -CH₂CH₃), 1-propyl (n-Pr, -CH₂CH₂CH₃), 2-propyl (z-Pr, t-propyl, -CH₂(CH₃)₂), 1-butyl (n-Bu, s-butyl, -CH₂CH₂CH₂CH₃), 2-methyl-1-propyl (s-Bu, z-buty l, -CH₂CH(CH₃)₂), 2-butyl (t-Bu, i-buty l, -CH₂CH₂CH(CH₃)₂), 1-pentyl (z-z-pentyl, -CH₂CH₂CH(CH₃)₂CH₃), 2-pentyl (1-Ch(CH₃)CH₂CH₂CH₃), 3-pentyl (1-Ch(CH₃)₂CH₂CH₃), 2-methyl-2-butyl (-C(CH₃)₂CH₂CH₃), 3-methyl-2-butyl (-C(CH₃)CH₂CH₂CH₃), 3-methyl-1-butyl (-CH₂CH₂CH(CH₃)₂), 2-methyl-1-butyl (-CH₂CH(CH₃)CH₂CH₃), 1-hexyl (-CH₂CH₂CH₂CH₂CH₂CH₃), 2-hexyl (-CH₂CH₂CH₂CH₂CH₂CH₂CH₃), 3-hexyl (-CH₂CH₂CH₂CH(CH₃)₂CH₃), 2-methyl-2-pentyl (-C(CH₃)₂CH₂CH₂CH₃), 3-methyl-2-pentyl (-CH₂CH₂CH(CH₃)₂CH₂CH₃), 4-methyl-2-pentyl (-C(CH₃)CH₂CH₂CH₂CH₃), 3-methyl-3-pentyl (-CH₂CH₂CH(CH₃)₂CH₂CH₃), 2-methyl-3-pentyl (-CH₂CH₂CH₂CH(CH₃)₂CH₃), 2,3-dimethyl-2-butyl (-CH₂CH₂CH(CH₃)₂), 3,3-dimethyl-2-butyl (-CH₂CH₂CH₂CH₃), 1-heptyl, 1-octyl, and the like.

[086] The prefix "alk-" is inclusive of both straight chain and branched saturated carbon chain.

[087] The term "cycloalkyl" refers to a monovalent or multivalent saturated ring having 3 to 12 carbon atoms as a monocyclic, bicyclic, or tricyclic ring system. A bicyclic ring system includes a spiro bicycyl or a fused bicycyl. In some embodiments, the cycloalkyl group contains 3 to 10 carbon atoms. In other embodiments, the cycloalkyl group contains 3 to 8 carbon atoms. In still other embodiments, the cycloalkyl group contains 3 to 6 carbon atoms, and in yet other embodiments, the cycloalkyl group contains 5 to 6 carbon atoms. The cycloalkyl group is optionally substituted independently with one or more substituents described herein.

[088] The term "alkylene" refers to a saturated divalent hydrocarbon group derived from a straight or branched chain saturated hydrocarbon by the removal of two hydrogen atoms. Unless otherwise specified, the alky lene group contains 1-6 carbon atoms. In some embodiments, the alky lene group contains 1-4 carbon atoms. In other embodiments, the alky lene group contains 1-2 carbon atoms. Examples of the alky lene group include, but are not limited to, methylene (-CH₂-), ethyldene (-CH₂CH₂-), isopropylidene (-CH(CH₃)CH₂-), and the like.

[089] The term "n membered" where n is an integer typically describes the number of ring-forming atoms in a moiety where the number of ring-forming atoms is n. For example, piperidinyl is an example of a 6 membered heterocycloalkyl and 1,2,3,4-tetrahydro naphthalenyl
is an example of a 10 membered carbocyclyl group.

[090] The term "heteroatom" refers to one or more of oxygen, sulfur, nitrogen, phosphorus, or silicon, including any oxidized form of nitrogen, sulfur, or phosphorus; the quaternized form of any basic nitrogen; or a substitutable nitrogen of a heterocyclic ring, for example N (as in 3,4-dihydro-2H-pyrrolyl), NH (as in pyrrolidinyl) or NR (as in N-substituted pyrrolidinyl).

[091] The term "halogen" refers to Fluoro (F), Chloro (Cl), Bromo (Br), or Iodo (I).

[092] The term "aryl" used alone or as part of a larger moiety as in "aralkyl", "aryloxyalkyl" or "aryloxyalkyl" refers to monocyclic, bicyclic, and tricyclic carbocyclic ring systems having a total of 6 to 14 ring members, preferably, 6 to 12 ring members, and more preferably 6 to 10 ring members, wherein at least one ring in the system is aromatic, wherein each ring in the system contains 3 to 7 ring members and that has one or more points of attachment to the rest of the molecule. The term "aryl" may be used interchangeably with the term "aryl ring" or "aromatic." Some non-limiting examples of the aryl ring would include phenyl, naphthyl, and anthracenyl. The aryl radical is optionally substituted independently with one or more substituents described herein.

[093] The term "unsaturated" refers to a moiety having one or more units of unsaturation.

[094] As described herein, a bond drawn from a substituent to the center of one ring within a ring system (as shown below) represents substitution of the substituent at any substitutable position on the ring to which it is attached. For example, Structure a represents possible substitution in any of the positions on the A ring shown in Structure b-1, b-2 and b-3.

[095] The term "comprising" is meant to be open ended, including the indicated component but not excluding other elements.

[096] The term "prodrug" as used herein, represents a compound that is transformed in vivo into a compound disclosed herein. Such a transformation can be affected, for example, by hydrolysis in blood or enzymatic transformation of the prodrug form to the parent form in blood or tissue. Prodrugs of the compounds disclosed herein may be, for example, esters. Esters that may be utilized as prodrugs in the present invention are phenyl esters, aliphatic (C1-C24) esters,
acyloxymethyl esters, carbonates, carbamates, and amino acid esters. For example, a compound disclosed herein that contains an OH group may be acylated at this position in its prodrug form. Other prodrug forms include phosphates, such as, for example those phosphates resulting from the phosphonation of an OH group on the parent compound. A thorough discussion of prodrugs is provided in Higuchi et al., Pro-drugs as Novel Delivery Systems, Vol. 14, ACS. Symposium Series; Roche et al., Bioreversible Carriers in Drug Design, American Pharmaceutical Association and Pergamon Press, 1987; Rautio et al., Prodrugs: Design and Clinical Applications, Nat. Rev. Drug Discovery, 2008, 7, 255-270, and Hecker et al., Prodrugs of Phosphates and Phosphonates, J. Med. Chem., 2008, 51, 2328-2345, all of which are incorporated herein by reference.

[097] A "metabolite" is a product produced through metabolism in the body of a specified compound or salt thereof. The metabolite of a compound may be identified using routine techniques known in the art and their activities determined using tests such as those described herein. Such products may result for example from the oxidation, reduction, hydrolysis, amidation, deamidation, esterification, deesterification, enzymatic cleavage, and the like, of the administered compound. Accordingly, the invention includes metabolites of compounds disclosed herein, including compounds produced by a process comprising contacting a compound disclosed herein with a mammal for a period of time sufficient to yield a metabolic product thereof.

[098] A "pharmacetically acceptable salt" refers to organic or inorganic salts of a compound disclosed herein. The pharmaceutically acceptable salts are well known in the art. For example, Berge et al., describe pharmaceutically acceptable salts in detail in J. Pharm. Sci., 1977, 66, 1-19, which is incorporated herein by reference. Some non-limiting examples of the pharmaceutically acceptable salt include salts of an amino group formed with inorganic acids such as hydrochloric acid, hydrobromic acid, phosphoric acid, sulfuric acid and perchloric acid or with organic acids such as acetic acid, oxalic acid, maleic acid, tartaric acid, citric acid, succinic acid or malonic acid or by using other methods used in the art such as ion exchange.

[099] Other examples of the pharmaceutically acceptable salt include adipate, alginate, ascorbate, aspartate, benzenesulfonate, benzoate, bisulfate, borate, butyrate, camphorate, camphorsulfonate, citrate, cyclopentane-propionate, digluconate, dodecylsulfate, ethanesulfonate, formate, fumarate, glucoheptonate, glycerophosphate, gluconate, hemisulfate, heptanoate, hexanoate, hydroiodide, 2-hydroxy-ethanesulfonate, lactobionate, lactate, laurate, lauryl sulfate, malate, maleate, malonate, methanesulfonate, 2-naphthalenesulfonate, nicotinate, nitrate, oleate, oxalate, palmitate, pamoate, pectinate, persulfate, 3-phenylpropionate, phosphate, picrate,
pivalate, propionate, stearate, succinate, sulfate, tartrate, thiocyanate, p-toluenesulfonate, undecanoate, valerate salts, and the like. Salts derived from appropriate bases include alkali metal, alkaline earth metal, ammonium and $\text{N}^+$($\text{Ci-4alkyl})4$ salts. This invention also envisions the quaternization of any basic nitrogen-containing groups of the compounds disclosed herein. Water or oil-soluble or dispersible products may be obtained by such quaternization. Representative alkali or alkaline earth metal salts include sodium, lithium, potassium, calcium, magnesium, and the like. Further examples of the pharmaceutically acceptable salt include, when appropriate, nontoxic ammonium, quaternary ammonium, and amine cations formed using counterions such as halide, hydroxide, carboxylate, sulfate, phosphate, nitrate, C1-8 sulfonate and aryl sulfonate.

[100] A "solvate" refers to an association or complex of one or more solvent molecules and a compound disclosed herein. Some non-limiting examples of solvents that form solvates include water, isopropanol, ethanol, methanol, DMSO, ethyl acetate, acetic acid, and ethanolamine. The term "hydrate" refers to the complex where the solvent molecule is water.

[101] As used herein, the term "pharmaceutically acceptable carrier" includes any and all solvents, dispersion media, coatings, surfactants, antioxidants, preservatives (e.g., antibacterial agents, antifungal agents), isotonic agents, absorption delaying agents, salts, preservatives, drug stabilizers, binders, excipients, disintegration agents, lubricants, sweetening agents, flavoring agents, dyes, and the like and combinations thereof, as would be known to those skilled in the art (see, for example, Remington's Pharmaceutical Sciences, 18th Ed. Mack Printing Company, 1990, p. 1289-1329). Except insofar as any conventional carrier is incompatible with the active ingredient, its use in the therapeutic or pharmaceutical compositions is contemplated.

[102] The term "a therapeutically effective amount" of a compound disclosed herein refers to an amount of the compound disclosed herein that will elicit the biological or medical response of a subject, for example, reduction or inhibition of an enzyme or a protein activity, or ameliorate symptoms, alleviate conditions, slow or delay disease progression, or prevent a disease, etc. In one non-limiting embodiment, the term "a therapeutically effective amount" refers to the amount of the compound disclosed herein that, when administered to a subject, is effective to (1) at least partially alleviate, inhibit, prevent and/or ameliorate a condition, or a disorder or a disease (i) mediated by PI3K or (ii) associated with PI3K activity, or (iii) characterized by activity (normal or abnormal) of PI3K or (2) reduce or inhibit the activity of PI3K or (3) reduce or inhibit the expression of PI3K. In another non-limiting embodiment, the term "a therapeutically effective amount" refers to the amount of the compound disclosed herein
that, when administered to a cell, or a tissue, or a non-cellular biological material, or a medium, is effective to at least partially reducing or inhibiting the activity of PI3K; or at least partially reducing or inhibiting the expression of PI3K. The meaning of the term "a therapeutically effective amount" as illustrated in the above embodiment for PI3K also applies by the same means to any other relevant proteins/peptides/enzymes.

[103] As used herein, the term "treat", "treating" or "treatment" of any disease or disorder refers in one embodiment, to ameliorating the disease or disorder (i.e., slowing or arresting or reducing the development of the disease or at least one of the clinical symptoms thereof). In another embodiment, the term "treat", "treating" or "treatment" refers to alleviating or ameliorating at least one physical parameter including those which may not be discernible by the patient. In yet another embodiment, the term "treat", "treating" or "treatment" refers to modulating the disease or disorder, either physically, (e.g., stabilization of a discernible symptom), physiologically, (e.g., stabilization of a physical parameter), or both. In yet another embodiment, the term "treat", "treating" or "treatment" refers to preventing or delaying the onset or development or progression of the disease or disorder.

[104] The term "protecting group" or "PG" refers to a substituent that is commonly employed to block or protect a particular functionality while reacting other functional groups on the compound. For example, an "amino-protecting group" is a substituent attached to an amino group that blocks or protects the amino functionality in the compound. Suitable amino-protecting groups include acetyl, trifluoroacetyl, tert-butoxy-carbonyl (BOC, Boc), benzyloxycarbonyl (CBZ, Cbz) and 9-flourenylmethylenoxy-carbonyl (Fmoc). Similarly, a "hydroxy-protecting group" refers to a substituent of a hydroxy group that blocks or protects the hydroxy functionality. Suitable protecting groups include acetyl and silyl. A "carboxy-protecting group" refers to a substituent of the carboxy group that blocks or protects the carboxy functionality. Common carboxy-protecting groups include -CH2CH2SO2Ph, cyanoethyl, 2-[(trimethylsilyl)ethyl], 2-[(trimethylsilyl)ethoxy-methyl], 2-[(p-toluenesulfonyl)] ethyl, 2-[(?/-nitrophenylsulfenyl)]-ethyl, 2-[(diphenylphosphino)]-ethyl, nitroethyl and the like. For a general description of protecting groups and their use, see Greene et al., _Protective Groups in Organic Synthesis_, John Wiley & Sons, New York, 1991 and Kocienski et al., _Protecting Groups_, Thieme, Stuttgart, 2005.

**DESCRIPTION OF THE COMPOUNDS DISCLOSED HEREIN**

[105] The present inventors have discovered novel compounds which are inhibitors of kinase activity, in particular PI3-kinase activity. Compounds which are PI3-kinase inhibitors may be useful in the treatment of disorders associated with inappropriate kinase activity, in particular inappropriate PI3-kinase activity, for example in the treatment and prevention of disorders
mediated by PI3-kinase mechanisms. Such disorders include respiratory diseases including asthma, chronic obstructive pulmonary disease (COPD) and idiopathic pulmonary fibrosis (IPF); viral infections including viral respiratory tract infections and viral exacerbation of respiratory diseases such as asthma and COPD; non-viral respiratory infections including aspergillosis and leishmaniasis; allergic diseases including allergic rhinitis and atopic dermatitis; autoimmune diseases including rheumatoid arthritis and multiple sclerosis; inflammatory disorders including inflammatory bowel disease; cardiovascular diseases including thrombosis and atherosclerosis; hematologic malignancies; neurodegenerative diseases; pancreatitis; multiorgan failure; kidney diseases; platelet aggregation; cancer; sperm motility; transplantation rejection; graft rejection; lung injuries; and pain including pain associated with rheumatoid arthritis or osteoarthritis, back pain, general inflammatory pain, post hepatic neuralgia, diabetic neuropathy inflammatory neuropathic pain (trauma), trigeminal neuralgia and central pain.

[106] In one embodiment, compounds disclosed herein may show selectivity for PI3-kinases over other kinases.

[107] In another embodiment, compounds disclosed herein may be potent inhibitors of PBKδ.

[108] In a further embodiment, compounds disclosed herein may show selectivity for PBKδ over other PI3-kinases.

[109] In one aspect, provided herein is a compound having one of the following structures or a stereoisomer, a tautomer, an N-oxide, a solvate, a metabolite, a pharmaceutically acceptable salt or a prodrug thereof:
In one aspect of the invention, a pharmaceutical composition is provided which
comprises a pharmaceutically acceptable carrier, excipient, diluent, adjuvant, vehicle or a combination thereof, and a compound disclosed herein or a pharmaceutically acceptable salt thereof. In some embodiments, the composition is a liquid, solid, semi-solid, gel, or an aerosol form.

[III] In another aspect of the invention, a method of inhibiting a phosphatidylinositol-3 kinase (PI3 kinase), is provided comprising: contacting the PI3 kinase with an effective amount of a compound disclosed herein. In some embodiments, the step of contacting comprises contacting a cell that contains said PI3 kinase. In some embodiments of the method, the inhibition takes place in a subject suffering from a disorder associated with malfunctioning of one or more types of PI3 kinase. Some exemplary diseases involving malfunctioning of one or more types of PI3 kinases are selected from the group consisting of autoimmune diseases, rheumatoid arthritis, respiratory disease, allergic reactions, and various types of cancers.

[112] In some embodiments, the method comprises administering a second therapeutic agent to the subject.

[113] In certain embodiments, the PBK-mediated condition or disorder is selected from rheumatoid arthritis, ankylosing spondylitis, osteoarthritis, psoriatic arthritis, psoriasis, inflammatory diseases, and autoimmune diseases. In other embodiments, the PBK-mediated condition or disorder is selected from cardiovascular diseases, atherosclerosis, hypertension, deep venous thrombosis, stroke, myocardial infarction, unstable angina, thromboembolism, pulmonary embolism, thrombotic diseases, acute arterial ischemia, peripheral thrombotic occlusions, and coronary artery disease. In still other embodiments, the PBK-mediated condition or disorder is selected from cancer, colon cancer, glioblastoma, endometrial carcinoma, hepatocellular cancer, lung cancer, melanoma, renal cell carcinoma, thyroid carcinoma, cell lymphoma, lymphoproliferative disorders, small cell lung cancer, squamous cell lung carcinoma, glioma, breast cancer, prostate cancer, ovarian cancer, cervical cancer, and leukemia. In yet another embodiment, the PBK-mediated condition or disorder is selected from type II diabetes. In still other embodiments, the PBK-mediated condition or disorder is selected from respiratory diseases, bronchitis, asthma, and chronic obstructive pulmonary disease. In certain embodiments, the subject is a human.

[114] Another aspect of the invention relates to the treatment of PBK-mediated condition or disorder in a patient comprising the step of administering a compound according to any of the above embodiments.

[115] Another aspect of the invention relates to the treatment of rheumatoid arthritis, ankylosing spondylitis, osteoarthritis, psoriatic arthritis, psoriasis, inflammatory diseases or
autoimmune diseases in a patient comprising the step of administering a compound according to any of the above embodiments.

[116] Another aspect of the invention relates to the treatment of respiratory diseases including asthma, chronic obstructive pulmonary disease (COPD) and idiopathic pulmonary fibrosis (IPF) in a patient comprising the step of administering a compound according to any of the above embodiments.

[117] Another aspect of the invention relates to the treatment of inflammatory bowel disorders, inflammatory eye disorders, inflammatory or unstable bladder disorders, skin complaints with inflammatory components, chronic inflammatory conditions, systemic lupus erythematosis (SLE), myasthenia gravis, acute disseminated encephalomyelitis, idiopathic thrombocytopenic purpura, multiples sclerosis, Sjoegren's syndrome and autoimmune hemolytic anemia, allergic conditions and hypersensitivity in a patient, comprising the step of administering a compound according to any of the above or below embodiments.

[118] Another aspect of the invention relates to the treatment of cancers in a patient that are mediated, dependent on or associated with PI3K activity, particularly PBKdelta activity, comprising the step of administering a compound according to any of the above or below embodiments.

[119] Another aspect of the invention relates to the treatment of cancers are selected from acute myeloid leukaemia, myelo-dysplastic syndrome, myeloproliferative diseases, chronic myeloid leukaemia, T-cell acute lymphoblastic leukaemia, B-cell acute lymphoblastic leukaemia, non-hodgkins lymphoma, B-cell lymphoma, solid tumors and breast cancer, comprising the step of administering a compound according to any of the above or below embodiments.

[120] Another aspect of the invention relates to the use of a compound according to any of the above embodiments as a medicament.

[121] Another aspect of the invention relates to the use of a compound according to any of the above embodiments in the manufacture of a medicament for the treatment of PI3K-mediated condition or disorder in a patient.

[122] Another aspect of the invention relates to the use of a compound according to any of the above embodiments in the manufacture of a medicament for the treatment of rheumatoid arthritis, ankylosing spondylitis, osteoarthritis, psoriatic arthritis, psoriasis, inflammatory diseases, respiratory diseases including asthma, chronic obstructive pulmonary disease (COPD) and idiopathic pulmonary fibrosis (IPF), autoimmune diseases, and cancers.

[123] Unless otherwise stated, all stereoisomers, geometric isomers, tautomers, solvates,
hydrates, metabolites, salts, and pharmaceutically acceptable prodrugs of the compounds disclosed herein are within the scope of the invention.

[124] In certain embodiments, the salt is a pharmaceutically acceptable salt. The phrase "pharmaceutically acceptable" indicates that the substance or composition must be compatible chemically and/or toxicologically, with the other ingredients comprising a formulation, and/or the mammal being treated therewith.

[125] The compounds disclosed herein also include salts of such compounds which are not necessarily pharmaceutically acceptable salts, and which may be useful as intermediates for preparing and/or purifying compounds disclosed herein and/or for separating enantiomers of compounds disclosed herein.

[126] Pharmaceutically acceptable acid addition salts can be formed with inorganic acids and organic acids, e.g., acetate, aspartate, benzoate, besylate, bromide/hydrobromide, bicarbonate/carbonate, bisulfate/sulfate, camphorsulfonate, chloride/hydrochloride, chlorotheophyllonate, citrate, ethandisulfonate, fumarate, gluceptate, gluconate, glucuronate, hippurate, hydroiodide/iodide, isethionate, lactate, lactobionate, laurylsulfate, malate, maleate, malonate, mandelate, mesylate, methyl sulphate, naphthoate, napsylate, nicotinate, nitrate, octadecanoate, oleate, oxalate, palmitate, pamoate, phosphate/hydrogen phosphate/dihydrogen phosphate, polygalacturonate, propionate, stearate, succinate, subsalicylate, tartrate, tosylate and trifluoroacetate salts.

[127] Inorganic acids from which salts can be derived include, for example, hydrochloric acid, hydrobromic acid, sulfuric acid, nitric acid, phosphoric acid, and the like.

[128] Organic acids from which salts can be derived include, for example, acetic acid, propionic acid, glycolic acid, oxalic acid, maleic acid, malonic acid, succinic acid, fumaric acid, tartaric acid, citric acid, benzoic acid, mandelic acid, methanesulfonic acid, ethanesulfonic acid, toluenesulfonic acid, sulfosalicylic acid, and the like.

[129] Pharmaceutically acceptable base addition salts can be formed with inorganic and organic bases.

[130] Inorganic bases from which salts can be derived include, for example, ammonium salts and metals from columns I to XII of the periodic table. In certain embodiments, the salts are derived from sodium, potassium, ammonium, calcium, magnesium, iron, silver, zinc, and copper; particularly suitable salts include ammonium, potassium, sodium, calcium and magnesium salts.

[131] Organic bases from which salts can be derived include, for example, primary, secondary, and tertiary amines, substituted amines including naturally occurring substituted
amines, cyclic amines, basic ion exchange resins, and the like. Certain organic amines include isopropylamine, benzathine, cholinate, diethanolamine, diethylamine, lysine, meglumine, piperazine and tromethamine.

The pharmaceutically acceptable salts disclosed herein can be synthesized from a basic or acidic moiety, by conventional chemical methods. Generally, such salts can be prepared by reacting free acid forms of these compounds with a stoichiometric amount of the appropriate base (such as Na, Ca, Mg, or K hydroxide, carbonate, bicarbonate or the like), or by reacting free base forms of these compounds with a stoichiometric amount of the appropriate acid. Such reactions are typically carried out in water or in an organic solvent, or in a mixture of the two. Generally, use of non-aqueous media like ether, ethyl acetate, ethanol, isopropanol, or acetonitrile is desirable, where practicable. Lists of additional suitable salts can be found, e.g., in "Remington's Pharmaceutical Sciences," 20th ed., Mack Publishing Company, Easton, PA, 1985; and in "Handbook of Pharmaceutical Salts: Properties, Selection, and Use" by Stahl and Wermuth, Wiley-VCH, Weinheim, Germany, 2002.

Furthermore, the compounds disclosed herein, including their salts, can also be obtained in the form of their hydrates, or include other solvents used for their crystallization. The compounds disclosed herein may inherently or by design form solvates with pharmaceutically acceptable solvents (including water); therefore, it is intended that the invention embrace both solvated and unsolvated forms.

In another aspect, provided herein are methods of preparing, methods of separating, and methods of purifying compounds disclosed herein. The compounds disclosed herein may have in general several asymmetric centers and are typically depicted in the form of racemic mixtures. This invention is intended to encompass racemic mixtures, partially racemic mixtures and separate enantiomers and diastereomers.

Compounds disclosed herein can be in the form of one of the possible isomers, rotamers, atropisomers, tautomers or mixtures thereof. This invention is intended to encompass mixtures of isomers, rotamers, atropisomers, tautomers, partially mixed isomers, rotamers, atropisomers, or tautomers, and separated isomers, rotamers, atropisomers, tautomers.

Any formula given herein is also intended to represent unlabeled forms as well as isotopically labeled forms of the compounds. Isotopically labeled compounds have structures depicted by the formulas given herein except that one or more atoms are replaced by an atom having a selected atomic mass or mass number. Examples of isotopes that can be incorporated into compounds disclosed herein include isotopes of hydrogen, carbon, nitrogen, oxygen, phosphorous, fluorine, and chlorine, such as 2H, 3H, 11C, 13C, 14C, 15N, 18O, 31P, 32P, 33S, 35Cl, and
In another aspect, the compounds disclosed herein include isotopically labeled compounds as defined herein, for example those into which radioactive isotopes, such as \(^3\)H, \(^{14}\)C and \(^{18}\)F, or those into which non-radioactive isotopes, such as \(^2\)H and \(^{13}\)C are present. Such isotopically labelled compounds are useful in metabolic studies (with \(^{14}\)C), reaction kinetic studies (with, for example \(^2\)H or \(^3\)H), detection or imaging techniques, such as positron emission tomography (PET) or single-photon emission computed tomography (SPECT) including drug or substrate tissue distribution assays, or in radioactive treatment of patients. In particular, an \(^{18}\)F or labeled compound may be particularly desirable for PET or SPECT studies. Isotopically-labeled compounds disclosed herein can generally be prepared by conventional techniques known to those skilled in the art or by processes analogous to those described in the accompanying Examples and Preparations using an appropriate isotopically-labeled reagent in place of the non-labeled reagent previously employed.

Further, substitution with heavier isotopes, particularly deuterium (i.e., \(^2\)H or D) may afford certain therapeutic advantages resulting from greater metabolic stability for example increased in vivo half-life or reduced dosage requirements or an improvement in therapeutic index. It is understood that deuterium in this context is regarded as a substituent of a compound of the formula (I). The concentration of such a heavier isotope, specifically deuterium, may be defined by the isotopic enrichment factor. The term "isotopic enrichment factor" as used herein means the ratio between the isotopic abundance and the natural abundance of a specified isotope. If a substituent in a compound disclosed herein is denoted deuterium, such compound has an isotopic enrichment factor for each designated deuterium atom of at least 3500 (52.5% deuterium incorporation at each designated deuterium atom), at least 4000 (60% deuterium incorporation), at least 4500 (67.5% deuterium incorporation), at least 5000 (75% deuterium incorporation), at least 5500 (82.5% deuterium incorporation), at least 6000 (90% deuterium incorporation), at least 6333.3 (95% deuterium incorporation), at least 6466.7 (97% deuterium incorporation), at least 6600 (99% deuterium incorporation), or at least 6633.3 (99.5% deuterium incorporation). Pharmacologically acceptable solvates in accordance with the invention include those wherein the solvent of crystallization may be isotopically substituted, e.g. D2O, acetone-t/e, or DMSO-e¾.

COMPOSITION, FORMULATIONS AND ADMINISTRATION OF THE COMPOUNDS DISCLOSED HEREIN

In one aspect, featured herein are pharmaceutical compositions that include a compound disclosed herein, and a pharmaceutically acceptable carrier, adjuvant, or vehicle. The amount of compound in the pharmaceutical compositions disclosed herein is such that is
effective to detectably inhibit a protein kinase in a biological sample or in a patient.

It will also be appreciated that certain of the compounds disclosed herein can exist in free form for treatment, or where appropriate, as a pharmaceutically acceptable derivative thereof. Some non-limiting examples of pharmaceutically acceptable derivative include pharmaceutically acceptable prodrugs, salts, esters, salts of such esters, or any other adduct or derivative which upon administration to a patient in need is capable of providing, directly or indirectly, a compound as otherwise described herein, or a metabolite or residue thereof.

As described above, the pharmaceutical compositions or pharmaceutically acceptable compositions disclosed herein additionally comprise a pharmaceutically acceptable carrier, adjuvant, or vehicle, which, as used herein, includes any and all solvents, diluents, or other liquid vehicle, dispersion or suspension aids, surface active agents, isotonic agents, thickening or emulsifying agents, preservatives, solid binders, lubricants and the like, as suited to the particular dosage form desired. In Remington: The Science and Practice of Pharmacy, 21st edition, 2005, ed. D.B. Troy, Lippincott Williams & Wilkins, Philadelphia, and Encyclopedia of Pharmaceutical Technology, eds. J. Swarbrick and J. C. Boylan, 1988-1999, Marcel Dekker, New York, the contents of each of which is incorporated by reference herein, are disclosed various carriers used in formulating pharmaceutically acceptable compositions and known techniques for the preparation thereof. Except insofar as any conventional carrier medium is incompatible with the compounds disclosed herein, such as by producing any undesirable biological effect or otherwise interacting in a deleterious manner with any other component(s) of the pharmaceutically acceptable composition, its use is contemplated to be within the scope of this invention.

The pharmaceutical compositions disclosed herein may be prepared and packaged in bulk form wherein a safe and effective amount of a compound disclosed herein or a pharmaceutically acceptable salt thereof can be extracted and then given to the patient such as with powders or syrups. Alternatively, the pharmaceutical compositions disclosed herein may be prepared and packaged in unit dosage form wherein each physically discrete unit contains a compound disclosed herein or a pharmaceutically acceptable salt thereof. When prepared in unit dosage form, the pharmaceutical compositions disclosed herein typically may contain, for example, from 0.5 mg to 1 g. or from 1 mg to 700 mg, or from 5 mg to 100 mg of a compound disclosed herein or a pharmaceutically acceptable salt thereof.

The pharmaceutical compositions disclosed herein typically contain one compound disclosed herein or a pharmaceutically acceptable salt thereof.

As used herein, "pharmaceutically acceptable excipient" means a
pharmaceutically acceptable material, composition or vehicle involved in giving form or consistency to the pharmaceutical composition. Each excipient must be compatible with the other ingredients of the pharmaceutical composition when commingled such that interactions which would substantially reduce the efficacy of the compound disclosed herein or a pharmaceutically acceptable salt thereof when administered to a patient and interactions which would result in pharmaceutical compositions that are not pharmaceutically acceptable are avoided. In addition, each excipient must of course be pharmaceutically-acceptable eg of sufficiently high purity. The compound disclosed herein or a pharmaceutically acceptable salt thereof and the pharmaceutically acceptable excipient or excipients will typically be formulated into a dosage form adapted for administration to the patient by the desired route of administration. For example, dosage forms include those adapted for (1) oral administration such as tablets, capsules, caplets, pills, troches, powders, syrups, elixers, suspensions, solutions, emulsions, sachets, and cachets; (2) parenteral administration such as sterile solutions, suspensions, and powders for reconstitution; (3) transdermal administration such as transdermal patches; (4) rectal administration such as suppositories; (5) inhalation such as aerosols, solutions, and dry powders; and (6) topical administration such as creams, ointments, lotions, solutions, pastes, sprays, foams, and gels.

Suitable pharmaceutically acceptable excipients will vary depending upon the particular dosage form chosen. In addition, suitable pharmaceutically acceptable excipients may be chosen for a particular function that they may serve in the composition. For example, certain pharmaceutically acceptable excipients may be chosen for their ability to facilitate the production of uniform dosage forms. Certain pharmaceutically acceptable excipients may be chosen for their ability to facilitate the production of stable dosage forms. Certain pharmaceutically acceptable excipients may be chosen for their ability to facilitate the carrying or transporting of the compound or compounds disclosed herein or pharmaceutically acceptable salts thereof once administered to the patient from one organ, or portion of the body, to another organ, or portion of the body. Certain pharmaceutically acceptable excipients may be chosen for their ability to enhance patient compliance.

Suitable pharmaceutically acceptable excipients include the following types of excipients: diluents, fillers, binders, disintegrants, lubricants, glidants, granulating agents, coating agents, wetting agents, solvents, co-solvents, suspending agents, emulsifiers, sweeteners, flavoring agents, flavor masking agents, coloring agents, anticaking agents, hemectants, chelating agents, plasticizers, viscosity increasing agents, antioxidants, preservatives, stabilizers, surfactants, and buffering agents. The skilled artisan will appreciate that certain pharmaceutically
acceptable excipients may serve more than one function and may serve alternative functions depending on how much of the excipient is present in the formulation and what other excipients are present in the formulation.

[147] Skilled artisans possess the knowledge and skill in the art to enable them to select suitable pharmaceutically-acceptable excipients in appropriate amounts for use in the invention. In addition, there are a number of resources that are available to the skilled artisan which describe pharmaceutically acceptable excipients and may be useful in selecting suitable pharmaceutically acceptable excipients. Examples include Remington's Pharmaceutical Sciences (Mack Publishing Company), The Handbook of Pharmaceutical Additives (Gower Publishing Limited), and The Handbook of Pharmaceutical Excipients (the American Pharmaceutical Association and the Pharmaceutical Press).

[148] The pharmaceutical compositions disclosed herein are prepared using techniques and methods known to those skilled in the art. Some of the methods commonly used in the art are described in Remington's Pharmaceutical Sciences (Mack Publishing Company).

[149] Accordingly, in another aspect the invention is directed to process for the preparation of a pharmaceutical composition comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof and one or more pharmaceutically acceptable excipients which comprises mixing the ingredients. A pharmaceutical composition comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof may be prepared by, for example, admixture at ambient temperature and atmospheric pressure.

[150] In one embodiment, the compounds disclosed herein or pharmaceutically acceptable salts thereof will be formulated for oral administration. In another embodiment, the compounds disclosed herein or pharmaceutically acceptable salts thereof will be formulated for inhaled administration. In a further embodiment, the compounds disclosed herein or pharmaceutically acceptable salts thereof will be formulated for intranasal administration.

[151] In one aspect, the invention is directed to a solid oral dosage form such as a tablet or capsule comprising a safe and effective amount of a compound disclosed herein or a pharmaceutically acceptable salt thereof and a diluent or filler. Suitable diluents and fillers include lactose, sucrose, dextrose, mannitol, sorbitol, starch (e.g. corn starch, potato starch, and pre-gelatinized starch), cellulose and its derivatives (e.g. microcrystalline cellulose), calcium sulfate, and dibasic calcium phosphate. The oral solid dosage form may further comprise a binder. Suitable binders include starch (e.g. corn starch, potato starch, and pre-gelatinized starch), gelatin, acacia, sodium alginate, alginic acid, tragacanth, guar gum, povidone, and cellulose and its derivatives (e.g. microcrystalline cellulose). The oral solid dosage form may further comprise
a disintegrant. Suitable disintegrants include crospovidone, sodium starch glycolate, croscarmelose, alginic acid, and sodium carboxymethyl cellulose. The oral solid dosage form may further comprise a lubricant. Suitable lubricants include stearic acid, magnesium stearate, calcium stearate, and talc.

Where appropriate, dosage unit formulations for oral administration can be microencapsulated. The composition can also be prepared to prolong or sustain the release as for example by coating or embedding particulate material in polymers, wax or the like.

The compounds disclosed herein or pharmaceutically acceptable salts thereof may also be coupled with soluble polymers as targetable drug carriers. Such polymers can include polyvinylpyrrolidone, pyran copolymer, polyhydroxypropylmethacrylamide-phenol, polyhydroxyethylaspartamide-phenol, or polyethyleneoxypolylysine substituted with palmitoyl residues. Furthermore, the compounds disclosed herein or pharmaceutically acceptable salts thereof may be coupled to a class of biodegradable polymers useful in achieving controlled release of a drug, for example, polylactic acid, polypepsilon caprolactone, polyhydroxy butyric acid, polyorthoesters, polyacetals, polydihydropyrans, polycyanoacrylates and cross-linked or amphipathic block copolymers of hydrogels.

In another aspect, the invention is directed to a liquid oral dosage form. Oral liquids such as solution, syrups and elixirs can be prepared in dosage unit form so that a given quantity contains a predetermined amount of a compound disclosed herein or a pharmaceutically acceptable salt thereof. Syrups can be prepared by dissolving the compound disclosed herein or a pharmaceutically acceptable salt thereof in a suitably flavored aqueous solution, while elixirs are prepared through the use of a non-toxic alcoholic vehicle. Suspensions can be formulated by dispersing the compound disclosed herein or a pharmaceutically acceptable salt thereof in a non-toxic vehicle. Solubilizers and emulsifiers such as ethoxylated isostearyl alcohols and polyoxyethylene sorbitol ethers, preservatives, flavor additive such as peppermint oil or natural sweeteners or saccharin or other artificial sweeteners, and the like can also be added.

In another aspect, the invention is directed to a dosage form adapted for administration to a patient by inhalation, for example as a dry powder, an aerosol, a suspension, or a solution composition. In one embodiment, the invention is directed to a dosage form adapted for administration to a patient by inhalation as a dry powder. In a further embodiment, the invention is directed to a dosage form adapted for administration to a patient by inhalation via a nebulizer. Dry powder compositions for delivery to the lung by inhalation typically comprise a compound disclosed herein or a pharmaceutically acceptable salt thereof as a finely divided powder together with one or more pharmaceutically-acceptable excipients as finely divided
powders. Pharmaceutically-acceptable excipients particularly suited for use in dry powders are known to those skilled in the art and include lactose, starch, mannitol, and mono-, di-, and polysaccharides. The finely divided powder may be prepared by, for example, micronisation and milling. Generally, the size-reduced (eg micronised) compound can be defined by a D50 value of about 1 to about 10 microns (for example as measured using laser diffraction).

The dry powder may be administered to the patient via a reservoir dry powder inhaler (RDPI) having a reservoir suitable for storing multiple (un-metered doses) of medicament in dry powder form. RDPIs typically include a means for metering each medicament dose from the reservoir to a delivery position. For example, the metering means may comprise a metering cup, which is movable from a first position where the cup may be filled with medicament from the reservoir to a second position where the metered medicament dose is made available to the patient for inhalation.

Alternatively, the dry powder may be presented in capsules (e.g. gelatin or plastic), cartridges, or blister packs for use in a multi-dose dry powder inhaler (MDPI). MDPIs are inhalers wherein the medicament is comprised within a multi-dose pack containing (or otherwise carrying) multiple defined doses (or parts thereof) of medicament. When the dry powder is presented as a blister pack, it comprises multiple blisters for containment of the medicament in dry powder form. The blisters are typically arranged in regular fashion for ease of release of the medicament therefrom. For example, the blisters may be arranged in a generally circular fashion on a disc-form blister pack, or the blisters may be elongate in form, for example comprising a strip or a tape. Each capsule, cartridge, or blister may, for example, contain between 20 µg-10 mg of the compound disclosed herein or a pharmaceutically acceptable salt thereof.

Aerosols may be formed by suspending or dissolving a compound disclosed herein or a pharmaceutically acceptable salt thereof in a liquefied propellant. Suitable propellants include: trichlorofluoromethane (propellant 11), dichlorofluoromethane (propellant 12), dichlorotetrafluoroethane (propellant 114), tetrafluoroethane (ITFA-134a), 1,1-difluoroethane (HFA-152a), difluoromethane (HFA-32), pentfluoroethane (HFA-12), heptafluoropropane (FIFA-227a), perfluoropropane, perfluorobutane, perfluorpentane, butane, isobutane, and pentane. Aerosols comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof will typically be administered to a patient via a metered dose inhaler (MDI). Such devices are known to those skilled in the art.

The aerosol may contain additional pharmaceutically-acceptable excipients typically used with MDIs such as surfactants, lubricants, cosolvents and other excipients to
improve the physical stability of the formulation, to improve valve performance, to improve solubility, or to improve taste.

[160] There is thus provided as a further aspect of the invention a pharmaceutical aerosol formulation comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof and a fluorocarbon or hydrogen-containing chlorofluorocarbon as propellant, optionally in combination with a surfactant and/or a cosolvent.

[161] According to another aspect of the invention, there is provided a pharmaceutical aerosol formulation wherein the propellant is selected from 1,1,1,2-tetrafluoroethane, 1,1,1,2,3,3,3-heptaffuoro-w-propane and mixtures thereof.

[162] The formulations disclosed herein may be buffered by the addition of suitable buffering agents.

[163] Capsules and cartridges for use in an inhaler or insufflator, of for example gelatine, may be formulated containing a powder mix for inhalation of a compound disclosed herein or a pharmaceutically acceptable salt thereof and a suitable powder base such as lactose or starch. Each capsule or cartridge may generally contain from 20 µg to 10 mg of the compound disclosed herein or pharmaceutically acceptable salt thereof. Alternatively, the compound disclosed herein or pharmaceutically acceptable salt thereof may be presented without excipients such as lactose.

[164] The proportion of the active compound disclosed herein or pharmaceutically acceptable salt thereof in the local compositions according to the invention depends on the precise type of formulation to be prepared but will generally be within the range of from 0.001 to 10% by weight. Generally, for most types of preparations, the proportion used will be within the range of from 0.005 to 1%, for example from 0.01 to 0.5%. However, in powders for inhalation or insufflation the proportion used will normally be within the range of from 0.1% to 5%.

[165] Aerosol formulations are preferably arranged so that each metered dose or "puff" of aerosol contains from 20 µg to 10 mg, preferably from 20 µg to 2000 µg, more preferably from about 20 µg to 500 µg of a compound disclosed herein. Administration may be once daily or several times daily, for example 2, 3, 4 or 8 times, giving for example 1, 2 or 3 doses each time. The overall daily dose with an aerosol will be within the range from 100 µg to 10 mg, preferably from 200 µg to 2000 µg. The overall daily dose and the metered dose delivered by capsules and cartridges in an inhaler or insufflator will generally be double that delivered with aerosol formulations.

[166] In the case of suspension aerosol formulations, the particle size of the particulate (e.g., micronised) drug should be such as to permit inhalation of substantially all the drug into
the lungs upon administration of the aerosol formulation and will thus be less than 100 microns, desirably less than 20 microns, and in particular in the range of from 1 to 10 microns, such as from 1 to 5 microns, more preferably from 2 to 3 microns.

[167] The formulations disclosed herein may be prepared by dispersal or dissolution of the medicament and a compound disclosed herein or a pharmaceutically acceptable salt thereof in the selected propellant in an appropriate container, for example, with the aid of sonication or a high-shear mixer. The process is desirably carried out under controlled humidity conditions.

[168] The chemical and physical stability and the pharmaceutical acceptability of the aerosol formulations according to the invention may be determined by techniques well known to those skilled in the art. Thus, for example, the chemical stability of the components may be determined by HPLC assay, for example, after prolonged storage of the product. Physical stability data may be gained from other conventional analytical techniques such as, for example, by leak testing, by valve delivery assay (average shot weights per actuation), by dose reproducibility assay (active ingredient per actuation) and spray distribution analysis.

[169] The stability of the suspension aerosol formulations according to the invention may be measured by conventional techniques, for example, by measuring flocculation size distribution using a back light scattering instrument or by measuring particle size distribution by cascade impaction or by the "twin impinger" analytical process. As used herein reference to the "twin impinger" assay means "Determination of the deposition of the emitted dose in pressurised inhalations using apparatus A" as defined in British Pharmacopoeia 1988, pages A204-207, Appendix XVII C. Such techniques enable the "respirable fraction" of the aerosol formulations to be calculated. One method used to calculate the "respirable fraction" is by reference to "fine particle fraction" which is the amount of active ingredient collected in the lower impingement chamber per actuation expressed as a percentage of the total amount of active ingredient delivered per actuation using the twin impinger method described above.

[170] The term "metered dose inhaler" or MDI means a unit comprising a can, a secured cap covering the can and a formulation metering valve situated in the cap. MDI system includes a suitable channelling device. Suitable channelling devices comprise for example, a valve actuator and a cylindrical or cone-like passage through which medicament may be delivered from the filled canister via the metering valve to the nose or mouth of a patient such as a mouthpiece actuator.

[171] MDI canisters generally comprise a container capable of withstanding the vapour pressure of the propellant used such as a plastic or plastic-coated glass bottle or preferably a metal can, for example, aluminium or an alloy thereof which may optionally be anodised,
lacquer-coated and/or plastic-coated (for example incorporated herein by reference WO 96/32099 wherein part or all of the internal surfaces are coated with one or more fluorocarbon polymers optionally in combination with one or more non-fluorocarbon polymers), which container is closed with a metering valve. The cap may be secured onto the can via ultrasonic welding, screw fitting or crimping. MDIs taught herein may be prepared by methods of the art (e.g. see Byron, above and WO 96/32099). Preferably the canister is fitted with a cap assembly, wherein a drug-metering valve is situated in the cap, and said cap is crimped in place.

[172] In one embodiment of the invention the metallic internal surface of the can is coated with a fluoropolymer, more preferably blended with a non-fluoropolymer. In another embodiment of the invention the metallic internal surface of the can is coated with a polymer blend of polytetrafluoroethylene (PTFE) and polyethersulfone (PES). In a further embodiment of the invention the whole of the metallic internal surface of the can is coated with a polymer blend of polytetrafluoroethylene (PTFE) and polyethersulfone (PES). The metering valves are designed to deliver a metered amount of the formulation per actuation and incorporate a gasket to prevent leakage of propellant through the valve. The gasket may comprise any suitable elastomeric material such as, for example, low density polyethylene, chlorobutyl, bromobutyl, EPDM, black and white butadiene-acrylonitrile rubbers, butyl rubber and neoprene. Suitable valves are commercially available from manufacturers well known in the aerosol industry, for example, from Valois, France (e.g. DF10, DF30, DF60), Bespak pic, UK (e.g. BK300, BK357) and 3M-TM Neotechnic Ltd, UK (e.g. Spraymiser).

[173] In various embodiments, the MDIs may also be used in conjunction with other structures such as, without limitation, overwrap packages for storing and containing the MDIs, including those described in U.S. Patent Nos. 6,119,853; 6,179,118; 6,315,112; 6,352,152; 6,390,291; and 6,679,374, as well as dose counter units such as, but not limited to, those described in U.S. Patent Nos. 6,360,739 and 6,431,168.

[174] Conventional bulk manufacturing methods and machinery well known to those skilled in the art of pharmaceutical aerosol manufacture may be employed for the preparation of large-scale batches for the commercial production of filled canisters. Thus, for example, in one bulk manufacturing method for preparing suspension aerosol formulations a metering valve is crimped onto an aluminium can to form an empty canister. The particulate medicament is added to a charge vessel and liquefied propellant together with the optional excipients is pressure filled through the charge vessel into a manufacturing vessel. The drug suspension is mixed before recirculation to a filling machine and an aliquot of the drug suspension is then filled through the metering valve into the canister. In one example bulk manufacturing method for preparing
solution aerosol formulations a metering valve is crimped onto an aluminium can to form an empty canister. The liquefied propellant together with the optional excipients and the dissolved medicament is pressure filled through the charge vessel into a manufacturing vessel.

[175] In an alternative process, an aliquot of the liquefied formulation is added to an open canister under conditions which are sufficiently cold to ensure the formulation does not vaporise, and then a metering valve crimped onto the canister.

[176] Typically, in batches prepared for pharmaceutical use, each filled canister is check-weighed, coded with a batch number and packed into a tray for storage before release testing. Suspensions and solutions comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof may also be administered to a patient via a nebulizer. The solvent or suspension agent utilized for nebulization may be any pharmaceutically-acceptable liquid such as water, aqueous saline, alcohols or glycols, e.g., ethanol, isopropylalcohol, glycerol, propylene glycol, polyethylene glycol, etc. or mixtures thereof. Saline solutions utilize salts which display little or no pharmacological activity after administration. Both organic salts, such as alkali metal or ammonium halogen salts, e.g., sodium chloride, potassium chloride or organic salts, such as potassium, sodium and ammonium salts or organic acids, e.g., ascorbic acid, citric acid, acetic acid, tartaric acid, etc. may be used for this purpose.

[177] Other pharmaceutically-acceptable excipients may be added to the suspension or solution. The compound disclosed herein or pharmaceutically acceptable salt thereof may be stabilized by the addition of an inorganic acid, e.g., hydrochloric acid, nitric acid, sulphuric acid and/or phosphoric acid; an organic acid, e.g., ascorbic acid, citric acid, acetic acid, and tartaric acid, etc., a complexing agent such as EDTA or citric acid and salts thereof; or an antioxidant such as antioxidant such as vitamin E or ascorbic acid. These may be used alone or together to stabilize the compound disclosed herein or pharmaceutically acceptable salt thereof. Preservatives may be added such as benzalkonium chloride or benzoic acid and salts thereof. Surfactant may be added particularly to improve the physical stability of suspensions. These include lecithin, disodium dioctylsulphosuccinate, oleic acid and sorbitan esters.

[178] In a further aspect, the invention is directed to a dosage form adapted for intranasal administration.

[179] Formulations for administration to the nose may include pressurised aerosol formulations and aqueous formulations administered to the nose by pressurised pump. Formulations which are non-pressurised and adapted to be administered topically to the nasal cavity are of particular interest. Suitable formulations contain water as the diluent or carrier for
this purpose. Aqueous formulations for administration to the lung or nose may be provided with conventional excipients such as buffering agents, tonicity modifying agents and the like. Aqueous formulations may also be administered to the nose by nebulisation. The compounds disclosed herein or pharmaceutically acceptable salts thereof may be formulated as a fluid formulation for delivery from a fluid dispenser, for example a fluid dispenser having a dispensing nozzle or dispensing orifice through which a metered dose of the fluid formulation is dispensed upon the application of a user-applied force to a pump mechanism of the fluid dispenser. Such fluid dispensers are generally provided with a reservoir of multiple metered doses of the fluid formulation, the doses being dispensable upon sequential pump actuations. The dispensing nozzle or orifice may be configured for insertion into the nostrils of the user for spray dispensing of the fluid formulation into the nasal cavity. A fluid dispenser of the aforementioned type is described and illustrated in WO 05/044354, the entire content of which is hereby incorporated herein by reference. The dispenser has a housing which houses a fluid discharge device having a compression pump mounted on a container for containing a fluid formulation. The housing has at least one finger-operable side lever which is movable inwardly with respect to the housing to cam the container upwardly in the housing to cause the pump to compress and pump a metered dose of the formulation out of a pump stem through a nasal nozzle of the housing. In one embodiment, the fluid dispenser is of the general type illustrated in Figures 30-40 of WO 05/044354.

[180] Pharmaceutical compositions adapted for intranasal administration wherein the carrier is a solid include a coarse powder having a particle size for example in the range 20 to 500 microns which is administered by rapid inhalation through the nasal passage from a container of the powder held close up to the nose. Suitable compositions wherein the carrier is a liquid, for administration as a nasal spray or as nasal drops, include aqueous or oil solutions of the compound disclosed herein or a pharmaceutically acceptable salt thereof.

[181] Pharmaceutical compositions adapted for transdermal administration may be presented as discrete patches intended to remain in intimate contact with the epidermis of the patient for a prolonged period of time. For example, the active ingredient may be delivered from the patch by iontophoresis as generally described in Pharmaceutical Research, 3(6), 318 (1986).

[182] Pharmaceutical compositions adapted for topical administration may be formulated as ointments, creams, suspensions, lotions, powders, solutions, pastes, gels, sprays, aerosols or oils. Ointments, creams and gels, may, for example, be formulated with an aqueous or oily base with the addition of suitable thickening and/or gelling agent and/or solvents. Such bases may thus, for example, include water and/or an oil such as liquid paraffin or a vegetable oil
such as arachis oil or castor oil, or a solvent such as polyethylene glycol. Thickening agents and
gelling agents which may be used according to the nature of the base include soft paraffin,
aluminium stearate, cetostearyl alcohol, polyethylene glycols, woolfat, beeswax,
carboxypolymethylene and cellulose derivatives, and/or glyceryl monostearate and/or non-ionic
emulsifying agents.

Lotions may be formulated with an aqueous or oily base and will in general also
contain one or more emulsifying agents, stabilising agents, dispersing agents, suspending agents
or thickening agents.

Powders for external application may be formed with the aid of any suitable
powder base, for example, talc, lactose or starch. Drops may be formulated with an aqueous or
non-aqueous base also comprising one or more dispersing agents, solubilising agents, suspending
agents or preservatives.

Topical preparations may be administered by one or more applications per day to
the affected area; over skin areas occlusive dressings may advantageously be used. Continuous
or prolonged delivery may be achieved by an adhesive reservoir system.

For treatments of the eye or other external tissues, for example mouth and skin,
the compositions may be applied as a topical ointment or cream. When formulated in an
ointment, the compound disclosed herein or a pharmaceutically acceptable salt thereof may be
employed with either a paraffinic or a water-miscible ointment base. Alternatively, the compound
disclosed herein or pharmaceutically acceptable salt thereof may be formulated in a cream with
an oil-in-water cream base or a water-in-oil base.

Pharmaceutical compositions adapted for parenteral administration include
aqueous and non-aqueous sterile injection solutions which may contain anti-oxidants, buffers,
bacteriostats and solutes which render the formulation isotonic with the blood of the intended
recipient; and aqueous and non-aqueous sterile suspensions which may include suspending
agents and thickening agents. The compositions may be presented in unit-dose or multi-dose
containers, for example sealed ampoules and vials, and may be stored in a freeze-dried
(lyophilized) condition requiring only the addition of the sterile liquid carrier, for example water
for injections, immediately prior to use. Extemporaneous injection solutions and suspensions
may be prepared from sterile powders, granules and tablets.

The compound and pharmaceutical formulations according to the invention may
be used in combination with or include one or more other therapeutic agents, for example
selected from anti-inflammatory agents, anticholinergic agents (particularly an
M1/M2/M3 receptor antagonist), β2-adrenoreceptor agonists, antiinfective agents, such as antibiotics or antivirals, or antihistamines. The invention thus provides, in a further aspect, a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with one or more therapeutically active agents, for example selected from an anti-inflammatory agent, such as a corticosteroid or an NSAID, an anticholinergic agent, a β2-adrenoreceptor agonist, an antiinfective agent, such as an antibiotic or an antiviral, or an antihistamine. One embodiment of the invention encompasses combinations comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with a β2-adrenoreceptor agonist, and/or an anticholinergic, and/or a PDE-4 inhibitor, and/or an antihistamine.

In one embodiment, the invention encompasses a method of treating a disorder mediated by inappropriate PI3-kinase activity comprising administering a safe and effective amount of a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with one or more therapeutically active agents.

Certain compounds disclosed herein may show selectivity for PI3K5 over other PI3-kinases. The invention thus provides, in a further aspect, a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof which is selective for PI3K5 together with a compound or pharmaceutically acceptable salt thereof which is selective for another PI3-kinase, for example PI3Kγ.

One embodiment of the invention encompasses combinations comprising one or two other therapeutic agents.

It will be clear to a person skilled in the art that, where appropriate, the other therapeutic ingredient(s) may be used in the form of salts, for example as alkali metal or amine salts or as acid addition salts, or prodrugs, or as esters, for example lower alkyl esters, or as solvates, for example hydrates to optimise the activity and/or stability and/or physical characteristics, such as solubility, of the therapeutic ingredient. It will be clear also that, where appropriate, the therapeutic ingredients may be used in optically pure form.

In one embodiment, the invention provides a product comprising a compound disclosed herein and at least one other therapeutic agent as a combined preparation for simultaneous, separate or sequential use in therapy. In one embodiment, the therapy is the treatment of a disease or condition mediated by the activity of the PI3K enzymes. Products provided as a combined preparation include a composition comprising the compound disclosed herein and the other therapeutic agent(s) together in the same pharmaceutical composition, or the compound disclosed herein and the other therapeutic agent(s) in separate form, e.g. in the form...
of a kit.

In one embodiment, the invention provides a pharmaceutical composition comprising a compound disclosed herein and another therapeutic agent(s). Optionally, the pharmaceutical composition may comprise a pharmaceutically acceptable carrier, as described above.

In one embodiment, the invention provides a kit comprising two or more separate pharmaceutical compositions, at least one of which contains a compound disclosed herein. In one embodiment, the kit comprises means for separately retaining said compositions, such as a container, divided bottle, or divided foil packet. An example of such a kit is a blister pack, as typically used for the packaging of tablets, capsules and the like.

The kit of the invention may be used for administering different dosage forms, for example, oral and parenteral, for administering the separate compositions at different dosage intervals, or for titrating the separate compositions against one another. To assist compliance, the kit of the invention typically comprises directions for administration.

In the combination therapies of the invention, the compound disclosed herein and the other therapeutic agent may be manufactured and/or formulated by the same or different manufacturers. Moreover, the compound disclosed herein and the other therapeutic may be brought together into a combination therapy: (i) prior to release of the combination product to physicians (e.g. in the case of a kit comprising the compound disclosed herein and the other therapeutic agent); (ii) by the physician themselves (or under the guidance of the physician) shortly before administration; (iii) in the patient themselves, e.g. during sequential administration of the compound disclosed herein and the other therapeutic agent.

Accordingly, the invention provides the use of a compound disclosed herein for treating a disease or condition mediated by the activity of the PI3K enzymes, wherein the medicament is prepared for administration with another therapeutic agent. The invention also provides the use of another therapeutic agent for treating a disease or condition mediated by the activity of the PI3K enzymes, wherein the medicament is administered with a compound disclosed herein.

The invention also provides a compound disclosed herein for use in a method of treating a disease or condition mediated by the activity of the PI3K enzymes, wherein the compound disclosed herein is prepared for administration with another therapeutic agent. The invention also provides another therapeutic agent for use in a method of treating a disease or condition mediated by the activity of the PI3K enzymes, wherein the other therapeutic agent is
prepared for administration with a compound disclosed herein. The invention also provides a compound disclosed herein for use in a method of treating a disease or condition mediated by the activity of the PI3K enzymes wherein the compound disclosed herein is administered with another therapeutic agent. The invention also provides another therapeutic agent for use in a method of treating a disease or condition mediated by the activity of the PI3K enzymes wherein the other therapeutic agent is administered with a compound disclosed herein.

[200] The invention also provides the use of a compound disclosed herein for treating a disease or condition mediated by the activity of the PI3K enzymes, wherein the patient has previously (e.g. within 24 hours) been treated with another therapeutic agent. The invention also provides the use of another therapeutic agent for treating a disease or condition mediated by the activity of the PI3K enzymes, wherein the patient has previously (e.g. within 24 hours) been treated with a compound disclosed herein. The compounds of formula I may be administered as the sole active ingredient or in conjunction with, e.g., as an adjuvant to, other drugs e.g. immunosuppressive or immunomodulating agents or other anti-inflammatory agents, e.g. for the treatment or prevention of alio- or xenograft acute or chronic rejection or inflammatory or autoimmune disorders, or a chemotherapeutic agent, e.g. a malignant cell anti-proliferative agent.

For example, the compounds of formula I may be used in combination with a calcineurin inhibitor, e.g. cyclosporin A or FK 506; a mTOR inhibitor, e.g. rapamycin, 40-(9-(2-hydroxyethyl)rapamycin, CC1779, ABT578, AP23573, TADA-93, biolimus-7 or biolimus-9; an ascomycin having immuno-suppressive properties, e.g. ABT-281, ASM981, etc.; corticosteroids; cyclophosphamide; azathioprene; methotrexate; leflunomide; mizoribine; mycophenolic acid or salt; mycophenolate mofetil; 15-deoxypergualine or an immunosuppressive homologue, analogue or derivative thereof; a PKC inhibitor, e.g. as disclosed in WO 02/38561 or WO 03/82859, e.g. the compound of Example 56 or 70; a JAK3 kinase inhibitor, e.g. N-benzyl-3,4-dihydroxy-benzylidene-cyanoacetamide-a-cyano-(3,4-dihydroxy)-N-benzylcinnamamide (Tyrphasen AG 490), prodigiosin 25-C (PNU 156804), [4-(4’-hydroxyphenyl)-amino-6,7-dimethoxyquinazoline] (WHI-P131), [4-(3’-bromo-4’-hydroxyphenyl)-amino-6,7-dimethoxyquinazoline] (WHI-P154), [4-(3’5’-dibromo-4’-hydroxyphenyl)-amino-6,7-dimethoxyquinazline] (WHI-P97, KRX-21) 1,3-[(3i?,4i?)]-4-methyl-3-[methyl-(7H-pyrrolo[2,3-c][pyrimidin-4-yl]-amino]-piperidin-1-yl]-3-oxo-propionitrile, in free form or in a pharmaceutically acceptable salt form, e.g. mono-citrate (also called CP-690,550), or a compound as disclosed in WO 04/052359 or WO 05/066156; immunosuppressive monoclonal antibodies, e.g., monoclonal antibodies to leukocyte receptors, e.g., MHC, CD2, CD3, CD4, CD7, CD8, CD25, CD28, CD40, CD45, CD52, CD58, CD80, CD86 or their ligands; other immunomodulatory compounds, e.g. a recombinant binding molecule having at least a portion of
the extracellular domain of CTLA4 or a mutant thereof, e.g. an at least extracellular portion of
CTLA4 or a mutant thereof joined to a non-CTLA4 protein sequence, e.g. CTLA41g (for ex-
designated ATCC 68629) or a mutant thereof, e.g. LEA29Y; adhesion molecule inhibitors, e.g.
LFA-1 antagonists, ICAM-1 or -3 antagonists, VCAM-4 antagonists or VLA-4 antagonists; or
antihistamines; or antitussives, or a bronchodilatory agent; or an angiotensin receptor blockers;
or an anti-infectious agent.

[201] Where the compounds of formula (I) are administered in conjunction with other
immunosuppressive/immunomodulatory, anti-inflammatory, chemotherapeutic or anti-infectious
therapy, dosages of the co-administered immunosuppressant, immunomodulatory, anti-
inflammatory, chemotherapeutic or anti-infectious compound will of course vary depending on
the type of co-drug employed, e.g. whether it is a steroid or a calcineurin inhibitor, on the
specific drug employed, on the condition being treated and so forth.

[202] In one embodiment, the invention encompasses a combination comprising a
compound disclosed herein or a pharmaceutically acceptable salt thereof together with a β2-
adrenoreceptor agonist.

[203] Examples of β2-adrenoreceptor agonists include salmeterol (which may be a
racemate or a single enantiomer such as the i?-enantiomer), salbutamol (which may be a
racemate or a single enantiomer such as the i?-enantiomer), formoterol (which may be a racemate
or a single diastereomer such as the i?,i?-diastereomer), salmefamol, fenoterol, carmoterol,
etanerol, naminterol, clenbuterol, pirbuterol, flerbuterol, reproterol, bambuterol, indacaterol,
terbutaline and salts thereof, for example the xinafoate (l-hydroxy-2-naphthalencarboxylate)
salt of salmeterol, the sulphate salt or free base of salbutamol or the fumarate salt of formoterol.
In one embodiment, long-acting β2-adrenoreceptor agonists, for example, compounds which
provide effective bronchodilation for about 12 hrs or longer, are preferred.

[204] The β2-adrenoreceptor agonist may be in the form of a salt formed with a
pharmaceutically acceptable acid selected from sulphuric, hydrochloric, fumaric, hydroxynaphthoic
(for example 1- or 3-hydroxy -2-naphthoic), cinnamic, substituted cinnamic, triphenyl acetic,
sulphamic, sulphanilic, naphthalencrylic, benzoic, 4-methoxybenzoic, 2- or 4-
hydroxybenzoic, 4-chlorobenzoic and 4-phenylbenzoic acid.

[205] Suitable anti-inflammatory agents include corticosteroids. Suitable corticosteroids
which may be used in combination with the compounds disclosed herein or pharmaceutically
acceptable salts thereof are those oral and inhaled corticosteroids and their pro-drugs which have
anti-inflammatory activity. Examples include methyl prednisolone, prednisolone, dexamethasone,
fluticasone propionate, 6a,9a-difluoro-1 ip-hydroxy-16a-methyl-17a-[(4-methyl-1,3-thiazole-5-
carbonyl)oxy\]-3-oxo-androsta-1,4-diene-17\(p\)-carbothioic acid S-fluoromethyl ester, 6\(\alpha\),9\(\alpha\)-difluoro-17\(a\)-\{2-furanylcarbonyl)oxy\]-lip-hydroxy-16\(a\)-methyl-3-oxo-androsta-1,4-diene-17\(p\)-carbothioic ester (fluticasone furoate), 6\(\alpha\),9\(\alpha\)-difluoro-lip-hydroxy-16\(a\)-methyl-3-oxo-17\(a\)-propionyloxy-androsta-1,4-diene-17\(p\)-carbothioic acid 5\(\prime\)-(2-oxo-tetrahydrofuran-3\(S\)-yl) ester, 6\(\alpha\),9\(\alpha\)-difluoro-lip-hydroxy-16\(a\)-methyl-3-oxo-17\(a\)-(2,2,3,3-tetramethycyclopropylcarbonyl)oxy-androsta-1,4-diene-17\(p\)-carbothioic acid S-fluoromethyl ester and 6\(\alpha\),9\(\alpha\)-difluoro-l ip-hydroxy-16\(a\)-methyl-17\(a\)-(1-ethycyclopropylcarbonyl)oxy-3-oxo-androsta-1,4-diene-17\(p\)-carbothioic acid S-fluoromethyl ester, beclomethasone esters (for example the 17-propionate ester or the 17,21-dipropionate ester), budesonide, flunisolide, mometasone esters (for example mometasone furoate), triamcinolone acetonide, rolleponide, ciclesonide (16\(a\),17\(\prime\)-[(i?)-cyclohexylmethylene]bis(oxy)]-lip,21-dihydroxy-pregna-1,4-diene-3,20-dione), butixocort propionate, RPR-106541, and ST-126. Preferred corticosteroids include fluticasone propionate, 6\(\alpha\),9\(\alpha\)-difluoro- lip-hydroxy-16\(a\)-methyl-17\(a\)-[\{4-methyl-1,3-thiazole-5-carbonyl)oxy\]-3-oxo-androsta-1,4-diene-17\(p\)-carbothioic acid S-fluoromethyl ester, 6\(\alpha\),9\(\alpha\)-difluoro-17\(a\)-\{2-furanylcarbonyl)oxy\]-lip-hydroxy-16\(a\)-methyl-3-oxo-androsta-1,4-diene-17\(p\)-carbothioic acid S-fluoromethyl ester and 6\(\alpha\),9\(\alpha\)-difluoro-l ip-hydroxy-16\(a\)-methyl-3-oxo-17\(a\)-(2,2,3,3-tetramethycyclopropylcarbonyl)oxy-androsta-1,4-diene-17\(p\)-carbothioic acid S-fluoromethyl ester. In one embodiment the corticosteroid is 6\(\alpha\),9\(\alpha\)-difluoro-17\(a\)-\{2-furanylcarbonyl)oxy\]-lip-hydroxy-16\(a\)-methyl-3-oxo-androsta-1,4-diene-17\(p\)-carbothioic acid S-fluoromethyl ester.

[207] Examples of anti-inflammatory agents include non-steroidal anti-inflammatory drugs (NSAID's).

[208] Examples of NSAID's include sodium cromoglycate, nedocromil sodium, phosphodiesterase (PDE) inhibitors (for example, theophylline, PDE4 inhibitors or mixed PDE3/PDE4 inhibitors), leukotriene antagonists, inhibitors of leukotriene synthesis (for example montelukast), iNOS inhibitors, tryptase and elastase inhibitors, beta-2 integrin antagonists and...
adenosine receptor agonists or antagonists (e.g. adenosine 2a agonists), cytokine antagonists (for example chemokine antagonists, such as a CCR3 antagonist) or inhibitors of cytokine synthesis, or 5-lipoxygenase inhibitors. An iNOS (inducible nitric oxide synthase inhibitor) is preferably for oral administration. Examples of iNOS inhibitors include those disclosed in WO 93/13055, WO 98/30537, WO 02/50021, WO 95/34534 and WO 99/62875. Examples of CCR3 inhibitors include those disclosed in WO 02/26722.

[209] In one embodiment, the invention provides the use of the compounds disclosed herein in combination with a phosphodiesterase 4 (PDE4) inhibitor, especially in the case of a formulation adapted for inhalation. The PDE4-specific inhibitor useful in this aspect of the invention may be any compound that is known to inhibit the PDE4 enzyme or which is discovered to act as a PDE4 inhibitor, and which are only PDE4 inhibitors, not compounds which inhibit other members of the PDE family, such as PDE3 and PDE5, as well as PDE4. Compounds include cis-4-cyano-4-(3-cyclopentoxy-4-methoxyphenyl)cyclohexan-1-carboxylic acid, 2-carbomethoxy-4-cyano-4-(3-cyclopropylmethoxy-4-difluoromethoxyphenyl)cyclohexan-1-one and cis-[4-cyano-4-(3-cyclopropylmethoxy-4-difluoromethoxyphenyl)cyclohexan-1-ol]. Also, cw-4-cyano-4-[3-(cyclopentoxy)-4-methoxyphenyl]cyclohexane-1-carboxylic acid (also known as cilomilast) and its salts, esters, pro-drugs or physical forms, which is described in U.S. patent 5,552,438 issued 03 September, 1996; this patent and the compounds it discloses are incorporated herein in full by reference.

[210] Examples of anticholinergic agents are those compounds that act as antagonists at the muscarinic receptors, in particular those compounds which are antagonists of the M1 or M3 receptors, dual antagonists of the M1/M3 or M2/M3, receptors or pan-antagonists of the M1/M2/M3 receptors. Exemplary compounds for administration via inhalation include ipratropium (for example, as the bromide, CAS 22254-24-6, sold under the name Atrovent), oxitropium (for example, as the bromide, CAS 30286-75-0) and tiotropium (for example, as the bromide, CAS 136310-93-5, sold under the name Spiriva). Also of interest are revatropate (for example, as the hydrobromide, CAS 262586-79-8) and LAS-34273 which is disclosed in WO 01/04118. Exemplary compounds for oral administration include pirenzepine (CAS 28797-61-7), darifenac (CAS 133099-04-4, or CAS 133099-07-7 for the hydrobromide sold under the name Enablex), oxybutynin (CAS 5633-20-5, sold under the name Ditropan), terodiline (CAS 15793-40-5), tolterodine (CAS 124937-51-5, or CAS 124937-52-6 for the tartrate, sold under the name Detrol), otilonium (for example, as the bromide, CAS 26095-59-0, sold under the name Spasmomen), trospium chloride (CAS 10405-02-4) and solifenacin (CAS 242478-37-1, or CAS 242478-38-2 for the succinate also known as YM-905 and sold under the name Vesicare).
In one embodiment the invention provides a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with an H1 antagonist. Some non-limiting examples of the H1 antagonist include ameloxanox, astemizole, azatadine, azelastine, acrivastine, brompheniramine, cetirizine, levocetirizine, efletrizine, chlorpheniramine, clemastine, cyclizine, carebastine, cyproheptadine, carbinoxamine, descarboethoxyloratadine, doxylamine, dimethindene, ebastine, epinastine, efletrizine, fexofenadine, hydroxyzine, ketotifen, loratadine, levocabastine, mizolastine, mequitazine, mianserin, noberastine, meclizine, norastemizole, olopatadine, picumast, pyrilamine, promethazine, terfenadine, tripelennamine, temelastine, trimeprazine and triprolidineline, particularly cetirizine, levocetirizine, efletrizine and fexofenadine. In a further embodiment the invention provides a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with an H3 antagonist (and/or inverse agonist). Examples of H3 antagonists include, for example, those compounds disclosed in WO 2004/035556 and in WO 2006/045416. Other histamine receptor antagonists which may be used in combination with the compounds disclosed herein include antagonists (and/or inverse agonists) of the H4 receptor, for example, the compounds disclosed in Jablonowski et al., J Med. Chem., 2003, 46, 3957-3960.

The invention thus provides, in a further aspect, a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with a PDE4 inhibitor.

The invention thus provides, in a further aspect, a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with a β2-adrenoreceptor agonist.

The invention thus provides, in a further aspect, a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with a corticosteroid.

The invention thus provides, in a further aspect, a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with a non-steroidal GR agonist.

The invention thus provides, in a further aspect, a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with an anticholinergic.

The invention thus provides, in a further aspect, a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with an
antihistamine.

[218] The invention thus provides, in a further aspect, a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with a PDE4 inhibitor and a β2-adrenoreceptor agonist.

[219] The invention thus provides, in a further aspect, a combination comprising a compound disclosed herein or a pharmaceutically acceptable salt thereof together with an anticholinergic and a PDE-4 inhibitor.

[220] The combinations referred to above may conveniently be presented for use in the form of a pharmaceutical composition and thus pharmaceutical compositions comprising a combination as defined above together with a pharmaceutically acceptable diluent or carrier represent a further aspect of the invention.

[221] The individual compounds of such combinations may be administered either sequentially or simultaneously in separate or combined pharmaceutical formulations. In one embodiment, the individual compounds will be administered simultaneously in a combined pharmaceutical formulation. Appropriate doses of known therapeutic agents will readily be appreciated by those skilled in the art.

[222] The invention thus provides, in a further aspect, a pharmaceutical composition comprising a combination of a compound disclosed herein or a pharmaceutically acceptable salt thereof together with another therapeutically active agent.

[223] The invention thus provides, in a further aspect, a pharmaceutical composition comprising a combination of a compound disclosed herein or a pharmaceutically acceptable salt thereof together with a PDE4 inhibitor.

[224] The invention thus provides, in a further aspect, a pharmaceutical composition comprising a combination of a compound disclosed herein or a pharmaceutically acceptable salt thereof together with a β2-adrenoreceptor agonist.

[225] The invention thus provides, in a further aspect, a pharmaceutical composition comprising a combination of a compound disclosed herein or a pharmaceutically acceptable salt thereof together with a corticosteroid.

[226] The invention thus provides, in a further aspect, a pharmaceutical composition comprising a combination of a compound disclosed herein or a pharmaceutically acceptable salt thereof together with a non-steroidal GR agonist.

[227] The invention thus provides, in a further aspect, a pharmaceutical composition
comprising a combination of a compound disclosed herein or a pharmaceutically acceptable salt thereof together with an anticholinergic.

[228] The invention thus provides, in a further aspect, a pharmaceutical composition comprising a combination of a compound disclosed herein or a pharmaceutically acceptable salt thereof together with an antihistamine.

[229] The invention thus provides, in a further aspect, a pharmaceutical composition comprising a combination of a compound disclosed herein or a pharmaceutically acceptable salt thereof together with a PDE4 inhibitor and a β2-adrenoreceptor agonist.

[230] The invention thus provides, in a further aspect, a pharmaceutical composition comprising a combination of a compound disclosed herein or a pharmaceutically acceptable salt thereof together with an anticholinergic and a PDE4 inhibitor.

[231] A compound of the formula (I) may also be used to advantage in combination with each other or in combination with other therapeutic agents, especially other antiproliferative agents. Such antiproliferative agents include, but are not limited to, aromatase inhibitors; antiestrogens; topoisomerase I inhibitors; topoisomerase II inhibitors; microtubule active agents; alkylating agents; histone deacetylase inhibitors; compounds, which induce cell differentiation processes; cyclooxygenase inhibitors; MMP inhibitors; mTOR inhibitors; antineoplastic antimetabolites; platin compounds; compounds targeting/decreasing a protein or lipid kinase activity and further anti-angiogenic compounds; compounds which target, decrease or inhibit the activity of a protein or lipid phosphatase; gonadorelin agonists; anti-androgens; methionine aminopeptidase inhibitors; bisphosphonates; biological response modifiers; antiproliferative antibodies; heparanase inhibitors; inhibitors of Ras oncogenic isoforms; telomerase inhibitors; proteasome inhibitors; agents used in the treatment of hematologic malignancies; compounds which target, decrease or inhibit the activity of Flt-3; Hsp90 inhibitors; temozolomide (TEMODAL®); and leucovorin.

[232] The term "aromatase inhibitor", as used herein, relates to a compound which inhibits the estrogen production, i.e., the conversion of the substrates androstenedione and testosterone to estrone and estradiol, respectively. The term includes, but is not limited to, steroids, especially atamestane, exemestane and formestane; and, in particular, nonsteroids, especially aminogluthethimide, roglethimide, pyridogluthethimide, trilostane, testosterone, ketoconazole, vorozole, fadrozole, anastrozole and letrozole. Exemestane can be administered, e.g., in the form as it is marketed, e.g., under the trademark AROMASIN. Formestane can be administered, e.g., in the form as it is marketed, e.g., under the trademark LENTARON. Fadrozole can be administered, e.g., in the form as it is marketed, e.g., under the trademark
AFEMA. Anastrozole can be administered, e.g., in the form as it is marketed, e.g., under the trademark ARFMIDEX. Letrozole can be administered, e.g., in the form as it is marketed, e.g., under the trademark FEMARA or FEMAR. Aminogluthimide can be administered, e.g., in the form as it is marketed, e.g., under the trademark OPJMETEN. A combination of the invention comprising a chemotherapeutic agent which is an aromatase inhibitor is particularly useful for the treatment of hormone receptor positive tumors, e.g., breast tumors.

[233] The term "anti-estrogen", as used herein, relates to a compound which antagonizes the effect of estrogens at the estrogen receptor level. The term includes, but is not limited to, tamoxifen, fulvestrant, raloxifene and raloxifene hydrochloride. Tamoxifen can be administered, e.g., in the form as it is marketed, e.g., under the trademark NOLVADEX. Raloxifene hydrochloride can be administered, e.g., in the form as it is marketed, e.g., under the trademark EVISTA. Fulvestrant can be formulated as disclosed in U.S. Patent No. 4,659,516 or it can be administered, e.g., in the form as it is marketed, e.g., under the trademark FASLODEX. A combination of the invention comprising a chemotherapeutic agent which is an anti-estrogen is particularly useful for the treatment of estrogen receptor positive tumors, e.g., breast tumors.

[234] The term "anti-androgen", as used herein, relates to any substance which is capable of inhibiting the biological effects of androgenic hormones and includes, but is not limited to, bicalutamide (CASODEX), which can be formulated, e.g., as disclosed in U.S. Patent No. 4,636,505.

[235] The term "gonadorelin agonist", as used herein, includes, but is not limited to, abarelix, goserelin and goserelin acetate. Goserelin is disclosed in U.S. Patent No. 4, 100,274 and can be administered, e.g., in the form as it is marketed, e.g., under the trademark ZOLADEX. Abarelix can be formulated, e.g., as disclosed in U.S. Patent No. 5,843,901. The term "topoisomerase I inhibitor", as used herein, includes, but is not limited to, topotecan, gimatecan, irinotecan, camptothecian and its analogues, 9-nitrocamptothecin and the macromolecular camptothecin conjugate PNU-166148 (compound A1 in WO 99/17804). Irinotecan can be administered, e.g., in the form as it is marketed, e.g., under the trademark CAMPTOSAR. Topotecan can be administered, e.g., in the form as it is marketed, e.g., under the trademark HYCAMTIN.

[236] The term "topoisomerase II inhibitor", as used herein, includes, but is not limited to, the anthracyclines, such as doxorubicin, including liposomal formulation, e.g., CAELYX; daunorubicin; epirubicin; idarubicin; nemorubicin; the anthraquinones mitoxantrone and losoxantrone; and the podophillotoxines etoposide and teniposide. Etoposide can be administered, e.g., in the form as it is marketed, e.g., under the trademark ETOPOPHOS. Teniposide can be
administered, e.g., in the form as it is marketed, e.g., under the trademark VM 26-BRISTOL. Doxorubicin can be administered, e.g., in the form as it is marketed, e.g., under the trademark ADRIBLASTIN or ADRIAMYCIN.

[237] Epirubicin can be administered, e.g., in the form as it is marketed, e.g., under the trademark FARMORUBICIN. Idarubicin can be administered, e.g., in the form as it is marketed, e.g., under the trademark ZAVEDOS. Mitoxantrone can be administered, e.g., in the form as it is marketed, e.g., under the trademark NOVANTRON.

[238] The term "microtubule active agent" relates to microtubule stabilizing, microtubule destabilizing agents and microtubulin polymerization inhibitors including, but not limited to, taxanes, e.g., paclitaxel and docetaxel; vinca alkaloids, e.g., vinblastine, especially vinblastine sulfate; vincristine, especially vincristine sulfate and vinorelbine; discodermolides; cochicine; and epothilones and derivatives thereof, e.g., epothilone B or D or derivatives thereof. Paclitaxel may be administered, e.g., in the form as it is marketed, e.g., TAXOL. Docetaxel can be administered, e.g., in the form as it is marketed, e.g., under the trademark TAXOTERE. Vinblastine sulfate can be administered, e.g., in the form as it is marketed, e.g., under the trademark VINBLASTIN R.P. Vincristine sulfate can be administered, e.g., in the form as it is marketed, e.g., under the trademark FARMISTIN. Discodermolide can be obtained, e.g., as disclosed in U.S. Patent No. 5,010,099. Also included are epothilone derivatives which are disclosed in WO 98/10121, U.S. Patent No. 6, 194,181, WO 98/25929, WO 98/08849, WO 99/43653, WO 98/22461 and WO 00/3 1247. Especially preferred are epothilone A and/or B.

[239] The term "alkylating agent", as used herein, includes, but is not limited to, cyclophosphamide, ifosfamide, melphalan or nitrosourea (BCNU or Gliadel). Cyclophosphamide can be administered, e.g., in the form as it is marketed, e.g., under the trademark CYCLOSTIN. Ifosfamide can be administered, e.g., in the form as it is marketed, e.g., under the trademark HOLOXAN.

[240] The term "histone deacetylase inhibitors" or "HDAC inhibitors" relates to compounds which inhibit the histone deacetylase and which possess antiproliferative activity. This includes compounds disclosed in WO 02/22577, especially \( N \)-hydroxy-3-\{4-\[(2-hydroxyethyl)\]{2-\{(I H-indol-3-yl)ethyl\}-amino\}methyl\}phenyl\}-2E-2-propenamide, \( N \)-hydroxy-3-\{4-\[(2-methyl-\{I H-indol-3-yl\)-ethyl\}-amino\}methyl\}phenyl\}-2E-2-propenamide and pharmaceutically acceptable salts thereof. It further especially includes suberoylanilide hydroxamic acid (SAHA).

[241] The term "antineoplastic antimetabolite" includes, but is not limited to, 5-fluorouracil or 5-FU; capecitabine; gemcitabine; DNA demethylating agents, such as 5-
azacytidine and decitabine; methotrexate and edatrexate; and folic acid antagonists, such as pemetrexed. Capecitabine can be administered, e.g., in the form as it is marketed, e.g., under the trademark XELODA. Gemcitabine can be administered, e.g., in the form as it is marketed, e.g., under the trademark GEMZAR. Also included is the monoclonal antibody trastuzumab which can be administered, e.g., in the form as it is marketed, e.g., under the trademark HERCEPTIN.

[242] The term "platin compound", as used herein, includes, but is not limited to, carboplatin, cis-platin, cisplatinum and oxaliplatin. Carboplatin can be administered, e.g., in the form as it is marketed, e.g., under the trademark CARBOPLAT. Oxaliplatin can be administered, e.g., in the form as it is marketed, e.g., under the trademark ELOXATIN. The term "compounds targeting/decreasing a protein or lipid kinase activity; or a protein or lipid phosphatase activity; or further anti-angiogenic compounds", as used herein, includes, but is not limited to, protein tyrosine kinase and/or serine and/or threonine kinase inhibitors or lipid kinase inhibitors, e.g.,

[243] a) compounds targeting, decreasing or inhibiting the activity of the platelet-derived growth factor-receptors (PDGFR), such as compounds which target, decrease or inhibit the activity of PDGFR, especially compounds which inhibit the PDGF receptor, e.g., a N-phenyl-2-pyrimidine-amine derivative, e.g., imatinib, SU101, SU6668 and GFB-111;

[244] b) compounds targeting, decreasing or inhibiting the activity of the fibroblast growth factor-receptors (FGFR);

[245] c) compounds targeting, decreasing or inhibiting the activity of the insulin-like growth factor receptor I (IGF-IR), such as compounds which target, decrease or inhibit the activity of IGF-IR, especially compounds which inhibit the IGF-IR receptor, such as those compounds disclosed in WO 02/092599;

[246] d) compounds targeting, decreasing or inhibiting the activity of the Trk receptor tyrosine kinase family;

[247] e) compounds targeting, decreasing or inhibiting the activity of the Axl receptor tyrosine kinase family;

[248] f) compounds targeting, decreasing or inhibiting the activity of the c-Met receptor;

[249] g) compounds targeting, decreasing or inhibiting the activity of the Kit/SCFR receptor tyrosine kinase;

[250] h) compounds targeting, decreasing or inhibiting the activity of the c-kit receptor tyrosine kinases- (part of the PDGFR family), such as compounds which target, decrease or inhibit the activity of the c-Kit receptor tyrosine kinase family, especially compounds which
inhibit the c-Kit receptor, e.g., imatinib;

[251] i) compounds targeting, decreasing or inhibiting the activity of members of the c-Abl family and their gene-fusion products, e.g., BCR-Abl kinase, such as compounds which target decrease or inhibit the activity of c-Abl family members and their gene fusion products, e.g., a \(N\)-phenyl-2-pyrimidine-amine derivative, e.g., imatinib, PD180970, AG957, NSC 680410 or PD173955 from ParkeDavis; j) compounds targeting, decreasing or inhibiting the activity of members of the protein kinase C (PKC) and Raf family of serine/threonine kinases, members of the MEK, SRC, JAK, FAK, PDK and Ras/MAPK family members, or PI(3) kinase family, or of the PI(3)-kinase-related kinase family, and/or members of the cyclin-dependent kinase family (CDK) and are especially those staurosporine derivatives disclosed in U.S. Patent No. 5,093,330, e.g., midostaurin; examples of further compounds include, e.g., UCN-01; safingol; BAY 43-9006; Bryostatin 1; Perifosine; Ilofmofosine; RO 318220 and RO 320432; GO 6976; Isis 3521; LY333531/LY379196; isoquinoline compounds, such as those disclosed in WO 00/09495; FTIs; PD 184352; or QAN697 (a P13K inhibitor);

[252] k) compounds targeting, decreasing or inhibiting the activity of protein-tyrosine kinase inhibitors, such as compounds which target, decrease or inhibit the activity of protein-tyrosine kinase inhibitors include imatinib mesylate (GLEEVEC) or tyrphostin. A tyrphostin is preferably a low molecular weight (Mr < 1500) compound, or a pharmaceutically acceptable salt thereof, especially a compound selected from the benzylidenemalonitrile class or the S-arylbzenenemalonitrile or bisubstrate quinoline class of compounds, more especially any compound selected from the group consisting of Tyrphostin A23/RG-50810, AG 99, Tyrphostin AG 213, Tyrphostin AG 1748, Tyrphostin AG 490, Tyrphostin B44, Tyrphostin B44 (+) enantiomer, Tyrphostin AG 555, AG 494, Tyrphostin AG 556, AG957 and adaphostin (4-\([2,5\)-dihydroxyphenyl]methyl)amino]-benzoic acid adamatyl ester, NSC 680410, adaphostin; and

[253] l) compounds targeting, decreasing or inhibiting the activity of the epidermal growth factor family of receptor tyrosine kinases (EGFR, ErbB2, ErbB3, ErbB4 as homo- or hetero-dimers), such as compounds which target, decrease or inhibit the activity of the epidermal growth factor receptor family are especially compounds, proteins or antibodies which inhibit members of the EGF receptor tyrosine kinase family, e.g., EGF receptor, ErbB2, ErbB3 and ErbB4 or bind to EGF or EGF related ligands, and are in particular those compounds, proteins or monoclonal antibodies genetically and specifically disclosed in WO 97/02266, e.g., the compound of Example 39, or in EP 0 564 409; WO 99/03854; EP 0520722; EP 0 566 226; EP 0 787 722; EP 0 837 063; U.S. Patent No. 5,747,498; WO 98/10767; WO 97/30034; WO 97/49688; WO 97/38983 and, especially, WO 96/30347, e.g., compound known as CP 358774; WO
96/33980, e.g., compound ZD 1839; and WO 95/03283, e.g., compound ZM105180, e.g., trastuzumab (HERCEPTIN), cetuximab, Iressa, Tarceva, OSI-774, CI-1033, EKB-569, GW-2016, El.1, E2.4, E2.5, E6.2, E6.4, E2.11, E6.3 or E7.6.3; and 7H-pyrrolo-[2,3-tf]pyrimidine derivatives which are disclosed in WO 03/013541. Further anti-angiogenic compounds include compounds having another mechanism for their activity, e.g., unrelated to protein or lipid kinase inhibition, e.g., thalidomide (THALOMID) and TNP-470. Compounds which target, decrease or inhibit the activity of a protein or lipid phosphatase are, e.g., inhibitors of phosphatase 1, phosphatase 2A, PTEN or CDC25, e.g., okadaic acid or a derivative thereof.

[254] Compounds which induce cell differentiation processes are e.g. retinoic acid, α-γ- or δ-tocopherol or α-γ- or δ-tocotrienol.

[255] The term cyclooxygenase inhibitor, as used herein, includes, but is not limited to, e.g., Cox-2 inhibitors, 5-alkyl substituted 2-arylamino phenylacetic acid and derivatives, such as celecoxib (CELEBREX), rofecoxib (VIOXX), etoricoxib, valdecoxib or a 5-alkyl-2-arylamino phenylacetic acid, e.g., 5-methyl-2-(2'-chloro-6'-fluoroanilino)phenyl acetic acid or lumiracoxib.

[256] The term "bisphosphonates", as used herein, includes, but is not limited to, etridronic, clodronic, tiludronic, pamidronic, alendronic, ibandronic, risedronic and zoledronic acid. "Etridronic acid" can be administered, e.g., in the form as it is marketed, e.g., under the trademark DIDRONEL. "Clodronic acid" can be administered, e.g., in the form as it is marketed, e.g., under the trademark BONEFOS. "Tiludronic acid" can be administered, e.g., in the form as it is marketed, e.g., under the trademark SKELED. "Pamidronic acid" can be administered, e.g., in the form as it is marketed, e.g., under the trademark AREDIA™. "Alendronic acid" can be administered, e.g., in the form as it is marketed, e.g., under the trademark FOSAMAX. "Ibandronic acid" can be administered, e.g., in the form as it is marketed, e.g., under the trademark BONDRANAT. "Risedronic acid" can be administered, e.g., in the form as it is marketed, e.g., under the trademark ACTONEL. "Zoledronic acid" can be administered, e.g., in the form as it is marketed, e.g., under the trademark ZOMETA.

[257] The term "mTOR inhibitors" relates to compounds which inhibit the mammalian target of rapamycin (mTOR) and which possess antiproliferative activity, such as sirolimus (RAPAMUNE®), everolimus (CERTICAN™), CCI-779 and ABT578.

[258] The term "heparanase inhibitor", as used herein, refers to compounds which target, decrease or inhibit heparin sulphate degradation. The term includes, but is not limited to, PI-88.

[259] The term "biological response modifier", as used herein, refers to a lymphokine or
interferons, e.g., interferon γ.

The term “inhibitor of Ras oncogenic isoforms”, e.g., H-Ras, K-Ras or N-Ras, as used herein, refers to compounds which target, decrease or inhibit the oncogenic activity of Ras, e.g., a “farnesyl transferase inhibitor”, e.g., L-744832, DK8G557 or R1 15777 (Zarnestra).

The term "telomerase inhibitor", as used herein, refers to compounds which target, decrease or inhibit the activity of telomerase. Compounds which target, decrease or inhibit the activity of telomerase are especially compounds which inhibit the telomerase receptor, e.g., telomestatin.

The term "methionine aminopeptidase inhibitor", as used herein, refers to compounds which target, decrease or inhibit the activity of methionine aminopeptidase. Compounds which target, decrease or inhibit the activity of methionine aminopeptidase are, e.g., bengamide or a derivative thereof.

The term "proteasome inhibitor", as used herein, refers to compounds which target, decrease or inhibit the activity of the proteasome. Compounds which target, decrease or inhibit the activity of the proteasome include, e.g., PS-341 and MLN 341.

The term "matrix metalloproteinase inhibitor" or "MMP inhibitor", as used herein, includes, but is not limited to, collagen peptidomimetic and nonpeptidomimetic inhibitors, tetracycline derivatives, e.g., hydroxamate peptidomimetic inhibitor batimastat and its orally bioavailable analogue marimastat (BB-2516), prinomastat (AG3340), metastat (NSC 683551) BMS-279251, BAY 12-9566, TAA211, MMI270B or AAJ996.

The term "agents used in the treatment of hematologic malignancies", as used herein, includes, but is not limited to, FMS-like tyrosine kinase inhibitors, e.g., compounds targeting, decreasing or inhibiting the activity of FMS-like tyrosine kinase receptors (Flt-3R); interferon, 1-b-D-arabinofuranosylcytosine (ara-c) and bisulfan; and ALK inhibitors, e.g., compounds which target, decrease or inhibit anaplastic lymphoma kinase.

Compounds which target, decrease or inhibit the activity of FMS-like tyrosine kinase receptors (Flt-3R) are especially compounds, proteins or antibodies which inhibit members of the Flt-3R receptor kinase family, e.g., PKC412, midostaurin, a staurosporine derivative, SU1 1248 and MLN518.

The term "HSP90 inhibitors", as used herein, includes, but is not limited to, compounds targeting, decreasing or inhibiting the intrinsic ATPase activity of HSP90; degrading, targeting, decreasing or inhibiting the HSP90 client proteins via the ubiquitin proteasome pathway. Compounds targeting, decreasing or inhibiting the intrinsic ATPase activity of HSP90
are especially compounds, proteins or antibodies which inhibit the ATPase activity of HSP90, e.g., 17-allylamino, 17-demethoxygeldanamycin (17AAG), a geldanamycin derivative, other geldanamycin related compounds, radicicol and HDAC inhibitors.

[268] The term "antiproliferative antibodies", as used herein, includes, but is not limited to, trastuzumab (Herceptin™), Trastuzumab-DM1, erlotinib (Tarceva™), bevacizumab (Avastin™), rituximab (Rituxan®), PR064553 (anti-CD40) and 2C4 antibody. By antibodies is meant, e.g., intact monoclonal antibodies, polyclonal antibodies, multispecific antibodies formed from at least two intact antibodies, and antibodies fragments so long as they exhibit the desired biological activity. For the treatment of acute myeloid leukemia (AML), compounds disclosed herein can be used in combination with standard leukemia therapies, especially in combination with therapies used for the treatment of AML. In particular, compounds disclosed herein can be administered in combination with, e.g., farnesyl transferase inhibitors and/or other drugs useful for the treatment of AML, such as Daunorubicin, Adriamycin, Ara-C, VP-16, Teniposide, Mitoxantrone, Idarubicin, Carboplatinum and PKC412.

[269] A compound of the formula (I) may also be used to advantage in combination with each other or in combination with other therapeutic agents, especially other anti-malarial agents. Such anti-malarial agents include, but are not limited to proguanil, chlorproguanil, trimethoprim, chloroquine, mefloquine, lumefantrine, atovaquone, pyrimethamine-sulfadoxine, pyrimethamine-dapsone, halofantrine, quinine, quinidine, amodiaquine, amopyroquine, sulphonamides, artemisinin, arteflene, artemether, artesunate, primaquine, inhaled NO, L-arginine, Dipropylentri-amine NONOate (NO donor), Rosiglitzone (PPARy agonist), activated charcoal, Erythropoietin, Levamisole, and pyronaridine.

[270] A compound of the formula (I) may also be used to advantage in combination with each other or in combination with other therapeutic agents, such as used for the treatment of Leishmaniosis, Trypanosomiasis, Toxoplasmosis and Neurocysticercosis. Such agents include, but are not limited to chloroquine sulfate, atovaquone-proguanil, artemether-lumefantrine, quinine-sulfate, artesunate, quinine, doxycycline, clindamycin, meglumine antimoniate, sodium stibogluconate, miltefosine, ketoconazole, pentamidine, amphotericin B (AmB), liposomal-AmB, paromomycine, efomithine, nifurtimox, suramin, melarsoprol, prednisolone, benznidazole, sulfadiazine, pyrimethamine, clindamycin, trimetropim, sulfamethoxazole, azitromycin, atovaquone, dexamethasone, praziquantel, albendazole, beta-lactams, fluoroquinolones, macrolides, aminoglycosides, sulfadiazine and pyrimethamine.

[271] The structure of the active agents identified by code nos., generic or trade names may be taken from the actual edition of the standard compendium "The Merck Index" or from
databases, e.g., Patents International, e.g., IMS World Publications.

[272] The above-mentioned compounds, which can be used in combination with a compound of the formula (I), can be prepared and administered as described in the art, such as in the documents cited above.

[273] A compound of the formula (I) may also be used to advantage in combination with known therapeutic processes, e.g., the administration of hormones or especially radiation.

[274] A compound disclosed herein may in particular be used as a radiosensitizer, especially for the treatment of tumors which exhibit poor sensitivity to radiotherapy.

[275] By "combination", there is meant either a fixed combination in one dosage unit form, or a kit of parts for the combined administration where a compound of the formula (I) and a combination partner may be administered independently at the same time or separately within time intervals that especially allow that the combination partners show a cooperative, e.g., synergistic, effect or any combination thereof. The terms "coadministration" or "combined administration" or the like as utilized herein are meant to encompass administration of the selected combination partner to a single subject in need thereof (e.g. a patient), and are intended to include treatment regimens in which the agents are not necessarily administered by the same route of administration or at the same time. The term "pharmaceutical combination" as used herein means a product that results from the mixing or combining of more than one active ingredient and includes both fixed and non-fixed combinations of the active ingredients. The term "fixed combination" means that the active ingredients, e.g. a compound of formula I and a combination partner, are both administered to a patient simultaneously in the form of a single entity or dosage. The term "non-fixed combination" means that the active ingredients, e.g. a compound disclosed herein and a combination partner, are both administered to a patient as separate entities either simultaneously, concurrently or sequentially with no specific time limits, wherein such administration provides therapeutically effective levels of the two compounds in the body of the patient. The latter also applies to cocktail therapy, e.g. the administration of three or more active ingredients.

USES OF THE COMPOUNDS AND COMPOSITIONS DISCLOSED HEREIN

[276] The compounds disclosed herein are inhibitors of kinase activity, in particular PI3-kinase activity. Compounds which are PI3-kinase inhibitors may be useful in the treatment of disorders wherein the underlying pathology is (at least in part) attributable to inappropriate PI3-kinase activity, such as asthma and chronic obstructive pulmonary disease (COPD). "Inappropriate PI3-kinase activity" refers to any PI3-kinase activity that deviates from the
normal PI3-kinase activity expected in a particular patient. Inappropriate PI3-kinase may take the form of, for instance, an abnormal increase in activity, or an aberration in the timing and or control of PI3-kinase activity. Such inappropriate activity may result then, for example, from overexpression or mutation of the protein kinase leading to inappropriate or uncontrolled activation. Accordingly, in another aspect the invention is directed to methods of treating such disorders.

[277] Such disorders include, but not limited to, respiratory diseases including asthma, chronic obstructive pulmonary disease (COPD) and idiopathic pulmonary fibrosis (IPF); viral infections including viral respiratory tract infections and viral exacerbation of respiratory diseases such as asthma and COPD; non-viral respiratory infections including aspergillosis and leishmaniasis; allergic diseases including allergic rhinitis and atopic dermatitis; autoimmune diseases including rheumatoid arthritis and multiple sclerosis; inflammatory disorders including inflammatory bowel disease; cardiovascular diseases including thrombosis and atherosclerosis; hematologic malignancies; neurodegenerative diseases; pancreatitis; multiorgan failure; kidney diseases; platelet aggregation; cancer; sperm motility; transplantation rejection; graft rejection; lung injuries; and pain including pain associated with rheumatoid arthritis or osteoarthritis, back pain, general inflammatory pain, post hepatic neuralgia, diabetic neuropathy, inflammatory neuropathic pain (trauma), trigeminal neuralgia and Central pain.

[278] In one embodiment, such disorders include respiratory diseases including asthma and chronic obstructive pulmonary disease (COPD); allergic diseases including allergic rhinitis and atopic dermatitis; autoimmune diseases including rheumatoid arthritis and multiple sclerosis; inflammatory disorders including inflammatory bowel disease; cardiovascular diseases including thrombosis and atherosclerosis; hematologic malignancies; neurodegenerative diseases; pancreatitis; multiorgan failure; kidney diseases; platelet aggregation; cancer; sperm motility; transplantation rejection; graft rejection; lung injuries; and pain including pain associated with rheumatoid arthritis or osteoarthritis, back pain, general inflammatory pain, post hepatic neuralgia, diabetic neuropathy, inflammatory neuropathic pain (trauma), trigeminal neuralgia and Central pain.

[279] The methods of treatment of the invention comprise administering a safe and effective amount of a compound disclosed herein or a pharmaceutically acceptable salt thereof to a patient in need thereof. Individual embodiments of the invention include methods of treating any one of the above-mentioned disorders by administering a safe and effective amount of a compound disclosed herein or a pharmaceutically acceptable salt thereof to a patient in need thereof.
The compounds disclosed herein or pharmaceutically acceptable salts thereof may be administered by any suitable route of administration, including both systemic administration and topical administration. Systemic administration includes oral administration, parenteral administration, transdermal administration and rectal administration. Parenteral administration refers to routes of administration other than enteral or transdermal, and is typically by injection or infusion. Parenteral administration includes intravenous, intramuscular, and subcutaneous injection or infusion. Topical administration includes application to the skin as well as intraocular, otic, intravaginal, inhaled and intranasal administration. Inhalation refers to administration into the patient's lungs whether inhaled through the mouth or through the nasal passages. In one embodiment, the compounds disclosed herein or pharmaceutically acceptable salts thereof may be administered orally. In another embodiment, the compounds disclosed herein or pharmaceutically acceptable salts thereof may be administered by inhalation. In a further embodiment, the compounds disclosed herein or pharmaceutically acceptable salts thereof may be administered intranasally.

The compounds disclosed herein or pharmaceutically acceptable salts thereof may be administered once or according to a dosing regimen wherein a number of doses are administered at varying intervals of time for a given period of time. For example, doses may be administered one, two, three, or four times per day. In one embodiment, a dose is administered once per day. In a further embodiment, a dose is administered twice per day. Doses may be administered until the desired therapeutic effect is achieved or indefinitely to maintain the desired therapeutic effect. Suitable dosing regimens for a compound disclosed herein or a pharmaceutically acceptable salt thereof depend on the pharmacokinetic properties of that compound, such as absorption, distribution, and half-life, which can be determined by the skilled artisan. In addition, suitable dosing regimens, including the duration such regimens are administered, for a compound disclosed herein or a pharmaceutically acceptable salt thereof depend on the disorder being treated, the severity of the disorder being treated, the age and physical condition of the patient being treated, the medical history of the patient to be treated, the nature of concurrent therapy, the desired therapeutic effect, and like factors within the knowledge and expertise of the skilled artisan. It will be further understood by such skilled artisans that suitable dosing regimens may require adjustment given an individual patient's response to the dosing regimen or over time as individual patient needs change.

The compound disclosed herein may be administered either simultaneously with, or before or after, one or more other therapeutic agent. The compound disclosed herein may be administered separately, by the same or different route of administration, or together in the same
pharmaceutical composition as the other agents.

[283] The pharmaceutical composition or combination disclosed herein can be in unit dosage of about 1-1000 mg of active ingredient(s) for a subject of about 50-70 kg, or about 1-500 mg or about 1-250 mg or about 1-150 mg or about 0.5-100 mg, or about 1-50 mg of active ingredients. The therapeutically effective dosage of a compound, the pharmaceutical composition, or the combinations thereof, is dependent on the species of the subject, the body weight, age and individual condition, the disorder or disease or the severity thereof being treated. A physician, clinician or veterinarian of ordinary skill can readily determine the effective amount of each of the active ingredients necessary to prevent, treat or inhibit the progress of the disorder or disease. The above-cited dosage properties are demonstrable in vitro and in vivo tests using advantageously mammals, e.g., mice, rats, dogs, monkeys or isolated organs, tissues and preparations thereof. The compounds disclosed herein can be applied in vitro in the form of solutions, e.g., aqueous solutions, and in vivo either enterally, parenterally, advantageously intravenously, e.g., as a suspension or in aqueous solution. A therapeutically effective amount in vivo may range depending on the route of administration, between about 0.01-500 mg/kg, or between about 1-100 mg/kg.

[284] Additionally, the compounds disclosed herein may be administered as prodrugs. As used herein, a "prodrug" of a compound disclosed herein is a functional derivative of the compound which, upon administration to a patient, eventually liberates the compound disclosed herein in vivo. Administration of a compound disclosed herein as a prodrug may enable the skilled artisan to do one or more of the following: (a) modify the onset of the activity of the compound in vivo; (b) modify the duration of action of the compound in vivo; (c) modify the transportation or distribution of the compound in vivo; (d) modify the solubility of the compound in vivo; and (e) overcome a side effect or other difficulty encountered with the compound. Typical functional derivatives used to prepare prodrugs include modifications of the compound that are chemically or enzymatically cleavable in vivo. Such modifications, which include the preparation of phosphates, amides, esters, thioesters, carbonates, and carbamates, are well known to those skilled in the art.

[285] In one aspect, the invention provides a method of treating a disorder mediated by inappropriate PI3-kinase activity comprising administering a safe and effective amount of a compound disclosed herein or a pharmaceutically acceptable salt thereof to a patient in need thereof.

[286] In one embodiment, the conditions, diseases or disorders mediated by inappropriate PI3-kinase activity is selected from the group consisting of asthma, chronic
obstructive pulmonary disease (COPD) and idiopathic pulmonary fibrosis (IPF); viral infections including viral respiratory tract infections and viral exacerbation of respiratory diseases such as asthma and COPD; non-viral respiratory infections including aspergillosis and leishmaniasis; allergic diseases including allergic rhinitis and atopic dermatitis; autoimmune diseases including rheumatoid arthritis and multiple sclerosis; inflammatory disorders including inflammatory bowel disease; cardiovascular diseases including thrombosis and atherosclerosis; hematologic malignancies; neurodegenerative diseases; pancreatitis; multiorgan failure; kidney diseases; platelet aggregation; cancer; sperm motility; transplantation rejection; graft rejection; lung injuries; and pain including pain associated with rheumatoid arthritis or osteoarthritis, back pain, general inflammatory pain, post hepatic neuralgia, diabetic neuropathy, inflammatory neuropathic pain (trauma), trigeminal neuralgia and Central pain.

[287] Compounds disclosed herein may be useful in the treatment of conditions, diseases or disorders including disease or infection associated immunopathology in which one or more of the functions of B cells such as antibody production, antigen presentation, cytokine production or lymphoid organogenesis are abnormal or are undesirable including rheumatoid arthritis, pemphigus vulgaris and related diseases, idiopathic thrombocytopenia purpura, systemic lupus erythematosus, multiple sclerosis, myasthenia gravis, Sjogren's syndrome, autoimmune hemolytic anemia, ANCA-associated vasculitides, cryoglobulinemia, thrombotic thrombocytopenic purpura, chronic autoimmune urticaria, allergy (atopic dermatitis, contact dermatitis, allergic rhinitis), goodpasture's syndrome, AMR (antibody-mediated transplant rejection), B cell-mediated hyperacute, acute and chronic transplant rejection and cancers of haematopoietic origin including but not limited to multiple myeloma; acute myelogenous leukemia; chronic myelogenous leukemia; lymphocytic leukemia; myeloid leukemia; non-Hodgkin lymphoma; lymphomas; polycythemia vera; essential thrombocythemia; myelofibrosis with myeloid metaplasia; and Waldenstrom disease.

[288] The invention includes methods of treating conditions, diseases or disorders in which one or more of the functions of neutrophils, such as superoxide release, stimulated exocytosis, or chemoattractic migration are abnormal or are undesirable including rheumatoid arthritis, sepsis, pulmonary or respiratory disorders such as asthma, inflammatory dermatoses such as psoriasis as well as in disease or infection associated immunopathology and others.

[289] The invention includes methods of treating conditions, diseases or disorders in which one or more of the functions of basophil and mast cells such as chemoattractic migration or allergen-lgE-mediated degranulation are abnormal or are undesirable including allergic diseases (atopic dermatitis, contact dermatitis, allergic rhinitis) as well as other disorders such as COPD,
The invention includes methods of treating conditions, diseases or disorders in which one or more of the functions of T cells such as cytokine production or cell-mediated cytotoxicity abnormal or are undesirable including rheumatoid arthritis, multiple sclerosis, acute or chronic rejection of cell tissue or organ grafts or cancers of haematopoietic origin as well as in disease or infection associated immunopathology.

Further, the invention includes methods of treating neurodegenerative diseases, cardiovascular diseases and platelet aggregation.

Further, the invention includes methods of treating skin diseases such as porphyria cutanea tarda, polymorphous light eruption, dermatomyositis, solar urticaria, oral lichen planus, panniculitis, scleroderma, urticarial vasculitis.

Further, the invention includes methods of treating chronic inflammatory diseases such as sarcoidosis, granuloma annulare.

In other embodiments, the condition or disorder (e.g. PI3K-mediated) is selected from the group consisting of: polycythemia vera, essential thrombocythemia, myelofibrosis with myeloid metaplasia, asthma, COPD, ARDS, Loffler's syndrome, eosinophilic pneumonia, parasitic (in particular metazoan) infestation (including tropical eosinophilia), bronchopulmonary aspergillosis, polyarteritis nodosa (including Churg-Strauss syndrome), eosinophilic granuloma, eosinophil-related disorders affecting the airways occasioned by drug-reaction, psoriasis, contact dermatitis, atopic dermatitis, alopecia areata, erythema multiforme, dermatitis herpetiformis, scleroderma, vitiligo, hypersensitivity angiiitis, urticaria, bullous pemphigoid, lupus erythematosus, pemphigus, epidermolysis bullosa acquisita, autoimmune haematological disorders (e.g. haemolytic anaemia, aplastic anaemia, pure red cell anaemia and idiopathic thrombocytopenia), systemic lupus erythematosus, polychondritis, scleroderma, Wegener granulomatosis, dermatomyositis, chronic active hepatitis, myasthenia gravis, Steven-Johnson syndrome, idiopathic sprue, autoimmune inflammatory bowel disease (e.g. ulcerative colitis and Crohn's disease), endocrine ophthalmopathy, Grave's disease, sarcoidosis, alveolitis, chronic hypersensitivity pneumonitis, multiple sclerosis, primary biliary cirrhosis, uveitis (anterior and posterior), interstitial lung fibrosis, psoriatic arthritis, glomerulonephritis, cardiovascular diseases, atherosclerosis, hypertension, deep venous thrombosis, stroke, myocardial infarction, unstable angina, thromboembolism, pulmonary embolism, thrombotic diseases, acute arterial ischemia, peripheral thrombotic occlusions, and coronary artery disease, reperfusion injuries, retinopathy, such as diabetic retinopathy or hyperbaric oxygen-induced retinopathy, and conditions characterized by elevated intraocular pressure or secretion of ocular aqueous humor,
such as glaucoma.

[295] In one embodiment, the disorder mediated by inappropriate PI3-kinase activity is pain.

[296] In another embodiment, the compounds disclosed herein are useful in the treatment of conditions or disorders selected from the group consisting of, primary cutaneous B-cell lymphoma, immunobullous disease, pemphigus vulgaris, pemphigus foliaceus, endemic form of Brazilian pemphigus (Fogo selvagem), paraneoplastic pemphigus, bullous pemphigoid, mucous membrane pemphigoid, epidermolysis bullosa acquisita, chronic graft versus host disease, dermatomyositis, systemic lupus erythematosus, vasculitis, small vessel vasculitis, hypocomplementemic urticarial vasculitis, antineutrophil cytoplasmic antibody-vasculitis, cryoglobulinemia, Schnitzler syndrome, Waldenström's macroglobulinemia, angioedema, vitiligo, systemic lupus erythematosus, idiopathic thrombocytopenic purpura, multiple sclerosis, cold agglutinin disease, autoimmune hemolytic anemia, antineutrophil cytoplasmic antibody-associated vasculitis, graft versus host disease, cryoglobulinemia and thrombotic thrombocytopenic.

[297] In another embodiment, the compounds disclosed herein are useful in the treatment, prevention, or amelioration of autoimmune disease and of inflammatory conditions, in particular inflammatory conditions with an aetiology including an autoimmune component such as arthritis (for example rheumatoid arthritis, arthritis chronica progrediente and arthritis deformans) and rheumatic diseases, including inflammatory conditions and rheumatic diseases involving bone loss, inflammatory pain, spondyloarthropathies including ankolsing spondylitis, Reiter syndrome, reactive arthritis, psoriatic arthritis, and enteropathics arthritis, hypersensitivity (including both airways hypersensitivity and dermal hypersensitivity) and allergies. Specific auto-immune diseases for which antibodies of the invention may be employed include autoimmune haematological disorders (including e.g. hemolytic anaemia, aplastic anaemia, pure red cell anaemia and idiopa-thic thrombocytopenia), acquired hemophilia A, cold agglutinin disease, cryoglobulinemia, thrombotic thrombocytopenic purpura, Sjogren's syndrome, systemic lupus erythematosus, inflammatory muscle disorders, polychondritis, sclerodoma, anti-neutrophil cytoplasmic antibody-associated vasculitis, IgM mediated neuropathy, opsoclonus myoclonus syndrome, Wegener granulomatosis, dermatomyositis, chronic active hepatitis, myasthenia gravis, psoriasis, Steven-Johnson syndrome, pemphigus vulgaris, pemphigus foliaceus, idio-pathic sprue, autoimmune inflammatory bowel disease (including e.g. ulcerative colitis, Crohn's disease and Irritable Bowel Syndrome), endocrine ophthalmopathy, Graves' disease, sarcoidosis, multiple sclerosis, neuromyelitis optica, primary biliary cirrhosis, juvenile
diabetes (diabetes mellitus type I), uveitis (anterior, intermediate and posterior as well as panuveitis), keratoconjunctivitis sicca and vernal keratoconjunctivitis, interstitial lung fibrosis, psoriatic arthritis and glomerulonephritis (with and without nephrotic syndrome, e.g. including idiopathic nephro-tic syndrome or minimal change nephropathy), tumors, inflammatory disease of skin and cornea, myositis, loosening of bone implants, metabolic disorders, such as atherosclerosis, diabetes, and dislipidemia.

[298] In one embodiment, the present invention provides the use of a compound disclosed herein in therapy. In a further embodiment, the therapy is selected from a disease which may be treated by inhibition of PI3K. In another embodiment, the disease is selected from the afore-mentioned list, suitably from autoimmune disorders, inflammatory diseases, allergic diseases, airway diseases, such as asthma and COPD, transplant rejection; antibody production, antigen presentation, cytokine production or lymphoid organogenesis are abnormal or are undesirable including rheumatoid arthritis, pemphigus vulgaris, idiopathic thrombocytopenia purpura, systemic lupus erythematosus, multiple sclerosis, myasthenia gravis, Sjogren's syndrome, autoimmune hemolytic anemia, ANCA-associated vasculitides, cryoglobulinemia, thrombotic thrombocytopenic purpura, chronic autoimmune urticaria, allergy (atopic dermatitis, contact dermatitis, allergic rhinitis), goodpasture's syndrome, AMR (antibody-mediated transplant rejection), B cell-mediated hyperacute, acute and chronic transplant rejection and cancers of haematopoietic origin including but not limited to multiple myeloma; a leukaemia; acute myelogenous leukemia; chronic myelogenous leukemia; lymphocytic leukemia; myeloid leukemia; non-Hodgkin lymphoma; lymphomas; polycythemia vera; essential thrombocythemia; myelofibrosis with myeloid metaplasia; and Walden stroem disease; more suitably from rheumatoid arthritis (RA), pemphigus vulgaris (PV), idiopathic thrombocytopenia purpura (ITP), thrombotic thrombocytopenic purpura (TTP), autoimmune hemolytic anemia (AIHA), acquired hemophilia type A (AHA), systemic lupus erythematosus (SLE), multiple sclerosis (MS), myasthenia gravis (MG), Sjogren's syndrome (SS), ANCA-associated vasculitides, cryoglobulinemia, chronic autoimmune urticaria (CAU), allergy (atopic dermatitis, contact dermatitis, allergic rhinitis), goodpasture's syndrome, transplant rejection and cancers of haematopoietic origin as well as in disease or infection associated immunopathology, for example in severe and cerebral malaria, trypanosomiasis, leishmaniasis, toxoplasmosis and neurocyticercosis.

[299] Thus, as a further embodiment, the present invention provides the use of a compound disclosed herein for the manufacture of a medicament. In a further embodiment, the medicament is for treatment of a disease which may be treated inhibition of PI3K. In another
embodiment, the disease is selected from the afore-mentioned list, suitably from autoimmune disorders, inflammatory diseases, allergic diseases, airway diseases, such as asthma and COPD, transplant rejection; antibody production, antigen presentation, cytokine production or lymphoid organogenesis are abnormal or are undesirable including rheumatoid arthritis, pemphigus vulgaris, idiopathic thrombocytopenia purpura, systemic lupus erythematosus, multiple sclerosis, myasthenia gravis, Sjogren's syndrome, autoimmune hemolytic anemia, ANCA-associated vasculitides, cryoglobulinemia, thrombotic thrombocytopenic purpura, chronic autoimmune urticaria, allergy (atopic dermatitis, contact dermatitis, allergic rhinitis), goodpasture's syndrome, AMR (antibody-mediated transplant rejection), B cell-mediated hyperacute, acute and chronic transplant rejection and cancers of haematopoietic origin including but not limited to multiple myeloma; a leukaemia; acute myelogenous leukemia; chronic myelogenous leukemia; lymphocytic leukemia; myeloid leukemia; non-Hodgkin lymphoma; lymphomas; polycythemia vera; essential thrombocythemia; myelofibrosis with myeloid metaplasia; and Walden strom disease; more suitably from rheumatoid arthritis (RA), pemphigus vulgaris (PV), idiopathic thrombocytopenia purpura (ITP), thrombotic thrombocytopenic purpura (TTP), autoimmune hemolytic anemia (AIHA), acquired hemophilia type A (AHA), systemic lupus erythematosus (SLE), multiple sclerosis (MS), myasthenia gravis (MG), Sjogren's syndrome (SS), ANCA-associated vasculitides, cryoglobulinemia, chronic autoimmune urticaria (CAU), allergy (atopic dermatitis, contact dermatitis, allergic rhinitis), goodpasture's syndrome, transplant rejection and cancers of haematopoietic origin as well as in disease or infection associated immunopathology, for example in severe and cerebral malaria, trypanosomiasis, leishmaniasis, toxoplasmosis and neurocysticercosis.

GENERAL SYNTHETIC PROCEDURES

[300] In order to illustrate the invention, the following examples are included. However, it is to be understood that these examples do not limit the invention and are only meant to suggest a method of practicing the invention.

[301] Generally, the compounds disclosed herein may be prepared by methods described herein, except where further noted. The following non-limiting schemes and examples are presented to further exemplify the invention. Persons skilled in the art will recognize that the chemical reactions described herein may be readily adapted to prepare a number of other compounds disclosed herein, and alternative methods for preparing the compounds disclosed herein are deemed to be within the scope of this invention. For example, the synthesis of non-exemplified compounds according to the invention may be successfully performed by modifications apparent to those skilled in the art, e.g., by appropriately protecting interfering
groups, by utilizing other suitable reagents known in the art other than those described, and/or by making routine modifications of reaction conditions. Alternatively, other reactions disclosed herein or known in the art will be recognized as having applicability for preparing other compounds disclosed herein.

[302] In the examples described below, unless otherwise indicated all temperatures are set forth in degrees Celsius. Reagents were purchased from commercial suppliers such as Aldrich Chemical Company, Arco Chemical Company and Alfa Chemical Company, Shanghai Medpep. Co Ltd, Aladdin-Shanghai Jinchun Reagents, Ltd, and were used without further purification unless otherwise indicated. Common solvents were purchased from commercial suppliers such as Shantou XiLong Chemical Factory, Guangdong Guanghua Reagent Chemical Factory Co. Ltd., Guangzhou Reagent Chemical Factory, Tainjin YuYu Fine Chemical Ltd., Qingdao Tenglong Reagent Chemical Ltd., and Qingdao Ocean Chemical Factory.

[303] Anhydrous TUF, dioxane, toluene, and ether were obtained by refluxing the solvent with sodium. Anhydrous CH2Cl2 and CHCh were obtained by refluxing the solvent with CaF2, EtOAc, PE, hexanes, DMA and DMF were treated with anhydrous Na2SO4 prior use.

[304] The reactions set forth below were done generally under a positive pressure of nitrogen or argon or with a drying tube (unless otherwise stated) in anhydrous solvents, and the reaction flasks were typically fitted with rubber septa for the introduction of substrates and reagents via syringe. Glassware was oven dried and/or heat dried.

[305] Column chromatography was conducted using a silica gel column. Silica gel (300-400 mesh) was purchased from Qingdao Ocean Chemical Factory. 1H NMR spectra were recorded with a Bruker 400 MHz spectrometer or a Bruker 600 MHz spectrometer at ambient temperature. 1H NMR spectra were obtained as CDCb, DMSO-d6, CD3OD or acetone-di, solutions (reported in ppm), using TMS (0 ppm) or chloroform (7.26 ppm) as the reference standard. When peak multiplicities are reported, the following abbreviations are used: s (singlet), d (doublet), t (triplet), hept (heptet), m (multiplet), br (broadened), dd (doublet of doublets), dt (doublet of triplets). Coupling constants (J), when given, are reported in Hertz (Hz).

[306] Low-resolution mass spectral (MS) data were generally determined on an Agilent 6120 Quadrupole HPLC-MS (Zorbax SB-C18, 2.1 × 30 mm, 3.5 micron, 6 minutes run, 0.6 mL/min flow rate, 5% to 95% (0.1% formic acid in CH3CN) in (0.1% formic acid in H2O)) with UV detection at 210 nm/254 nm and electrospray ionization mode (ESI).

[307] Purities of compounds were assessed by Agilent 1260 Pre-HPLC or Calesep Pump 250 Pre-HPLC (Column NOVASEP 50/80 mm DAC) with UV detection at 210 nm/254
The following abbreviations are used throughout the specification:

ATP  adenosine triphosphate
AcOH, HAc, HOAc, CH3COOH  acetic acid
AcOK, CH3COOK  potassium acetate
BBr3  boron tribromide
BFNAP  2,2'-bis(diphenylphosphino)-1, 1'-binaphthyl
Bu4NF  tetrabutyl ammonium fluoride
Burgess Reagent (carboxysulfamoyl)triethylammonium hydroxide inner salt methyl ester
BSA  bovine serum albumin
BOC, Boc  fer^-butyloxycarbonyl
n-BuOH  «-butyl alcohol
n-BuLi  /7-butyllithium
(«-Bu)3SnCl  tri-n-butylltin chloride
Ca(S03CF3)2  calcium trifluoromethyl sulfonate
CS2CO3  cesium carbonate
CCl4  carbon tetrachloride
CH2Cl2, DCM  methylene chloride
CHCl3  chloroform
CDCh  chloroform deuterated
CH3CN  acetonitrile
CH3CHN  propionitrile
(CH3)2CHCN  isobutyronitrile
CH3Cl  methyl chloride
CH3I  methyl iodide
(COCl)2  oxalyl chloride
CsF  cesium fluoride
CH3SO2Cl, MsCl  methanesulfonyl chloride
Cu  copper
Cul  cuprous iodide
DCC  N,N '-dicyclohexylcarbodiimide
DBU  1,8-diazabicyclo[5.4.0]undec-7-ene
DIBAL  diisobutyaluminum hydride
DIAD  diisopropyl azodicarboxylate
DIEA, DIPEA, z-Pr 2 Net N,N -diisopropylethylamine
DEAD dimethyl azodicarboxylate
DMF dimethylformamide
DMAP 4-dimethylaminopyridine
DMSO dimethylsulfoxide
DMFDMA N,N -dimethylformamide dimethyl acetal
DPPA diphenylphosphoryl azide
DTT DL-Dithiothreitol
EDC, EDCI 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride
EDTA ethylenediaminetetraacetic acid
Et 3 N, TEA triethylamine
EtOAc, EA ethyl acetate
Et 2 0 diethyl ether
EtOH ethanol
FBS fetal bovine serum
Fe iron
g gram
h hour
HATU 2-(7-aza-l H-benzotriazole-l-yl)-l, 1,3,3-tetramethyluronium hexafluorophosphate
FIBr hydrobromic acid
HCl hydrochloric acid
HOAT 1-hydroxy-7-azabenzotriazole
HOBT 1-hydroxybenzotriazole hydrate
HPTLC high performance thin layer chromatography
H 2 hydrogen
H 2 0 water
H 2 0 2 hydrogen peroxide
H 3 PO 4 orthophosphoric acid
H 2 SO 4 sulphuric acid
HNO 3 nitric acid
HCOOK potassium formate
HCOONH 4 ammonium formate
HMDS hexamethyldisilazane
HPLC high performance liquid chromatography or high pressure liquid chromatography
I 2 iodine
LiHMDS  lithium bis(trimethylsilyl)-amide
LDA  lithium diisopropylamide
MBP  myelin basic protein
MCPBA  meta-chloroperbenzoic acid
MeCN, CH₃CN  acetonitrile
MgSO₄  magnesium sulfate
MeOH, CH₃OH  methanol
Me  methyl iodide
MOPS  3-((N-morpholino)propanesulfonic acid
2-MeTHF  2-methyl tetrahydrofuran
mL, ml  milliliter
min  minute
N₂  nitrogen
NMP  N-methylpyrrolidinone
NaHCO₃  sodium bicarbonate
NaBH₄  sodium borohydride
**NaBHiCN**  sodium cyanoborohydride
NaOiBu  sodium tert-butoxide
NaOMe, CH₃ONA, NaOCH₃  sodium methoxide
NaOH  sodium hydroxide
NaClO₂  sodium chlorite
NaClO  sodium hypochlorite
NaCl  sodium chloride
Na₃P0₄  sodium biphosphate
NaH  sodium hydride
NaI  sodium iodide
Na₂SO₄  sodium sulfate
Na₂S₂O₃  sodium thiosulfate
NBS  N-bromosuccinimide
NIS  N-iodosuccinimide
NCS  N-chlorosuccinimide
NEt₃  triethylamine
NH₃  ammonia
NH₄Cl  ammonium chloride
NH₂OH·HCl  hydroxylamine hydrochloride
Representative synthetic procedures for the preparation of compounds disclosed herein are outlined below in following schemes. Unless otherwise indicated, each of R\(^1\) and R\(^2\) is independently H, F, Cl, -(Ci-C4)alkylene-NH2, (Ci-C3)alkyl, (C3-C6) cycloalkyl, or phenyl; each of R\(^3\) and R\(^4\) is independently H or (C\(_1\)-C\(_5\))alkyl; W is N or CH.
The intermediate (7) can be prepared in a general method illustrated in Scheme 1. Benzoic acid £ 1 is firstly reacted with SOCb at refluxed temperature in a nonpolar solvent such as toluene, followed by treating with amino compound (2) to provide amide (3). Compound £ 0 is firstly reacted with SOCb at refluxed temperature in a nonpolar solvent such as toluene, followed by treating with compound (4) to provide compound (5). The reduction and cyclization of the nitro compound (5) in the presence of Zn powder and an acid (such as acetic acid) provides compound (6). Deprotection of the amino group of compound (6) under standard conditions known to those skilled in the art such as, but not limited to, treatment with an acid to give the intermediate (7).

Scheme 2

[311] Scheme 2 shows another method to prepare the intermediate (7). The reduction of compound £ 0 affords compound (8). Coupling of compound (8) with a i?oc-protected acid (4) in the presence of a coupling reagent such as EDCI or HATU furnishes compound (9). The cyclization of compound (9) in the presence of N,O-bis(trimethylsilyl)acetamide (10), DMAP and a base affords compound (6). Deprotection of the amino group of compound (6) under standard conditions known to those skilled in the art such as, but not limited to, treatment with an acid to give the intermediate (7).

Scheme 3
The intermediate (16) can be prepared in a general method illustrated in Scheme 3. Benzoic acid (11) is firstly reacted with SOCl₂ or (COCI)₂ at refluxed temperature in a nonpolar solvent such as toluene, followed by treating with amino compound (2) to provide amide (12). Condensation of compound £4) with compound (13) in the presence of a base, such as triethylamine, yields compound (14). Compound (14) is reacted with compound (15) under N₂ atmosphere to give mixture A. Compound (12) is reacted with a base, such as w-BuLi under N₂ atmosphere to give mixture B. Then mixture A is firstly reacted with mixture B, followed by treating with an acid to give the intermediate (16).

Scheme 4

Some compounds with structures disclosed herein can also be prepared in a general method illustrated in Scheme 4. Compound (17) is firstly converted to acyl chloride (19) in the presence of SOCl₂. Acyl chloride (19) is then reacted with compound (20) to yield compound (21). Subsequently, compound (21) is treated with N₄ to form compound (22) substituted with amine, followed by a cyclization reaction under the appropriate conditions, such as using Burgess reagent or trifluoromethanesulfonic anhydride and pyridine gives compound (23). Compound (23) is reacted with the intermediate (24) in the presence of a base such as DIPEA at refluxed temperature to afford the desired kinase inhibitor (25).

Scheme 5
Scheme 5 shows another method to prepare the desired kinase inhibitor. Acetonitrile (26) is firstly treated with hydroxylamine hydrochloride to give \((Z)-N'\)-hydroxyacetimidamide (27), which is further reacted with acyl chloride (19) to yield compound (28). Compound (28) is then treated with NH₃ to form compound (29), followed by a cyclization reaction under the condition using \(\text{Bu}_4\text{NF}\) at room temperature furnishes compound (30). The desired kinase inhibitor (31) is obtained by the reaction of compound (30) and the intermediate (24) in the presence of a base such as DIPEA.

Scheme 6

The desired kinase inhibitor disclosed herein can also be prepared in a general method illustrated in Scheme 6. Compound (32) is firstly treated with \(\text{CH}_3\text{ONa}\) at refluxed temperature to give compound (33). Compound (33) is then reacted with \(\text{NIT}_2\text{OH} - \text{HCl}\) to provide compound (34). Subsequently the cyclization of compound (34) with compound (35) under the condition using \((\text{NH}_4)\text{Ce(NO}_3\text{)}_6\) gives compound (36). Compound (36) is firstly converted to chloro compound (37) using a chlorinating agent such as POCb or SOCh under heating conditions, then compound (37) is treated with \(\text{N}\text{H}_3\) to form compound (38) substituted with...
amine. Compound (38) is reacted with the intermediate (24) in the presence of a base such as DIPEA at refluxed temperature to afford the desired kinase inhibitor (39).

Scheme 7

The desired kinase inhibitor disclosed herein can also be prepared in a general method illustrated in Scheme 7. Compound (40) is firstly treated with an alcohol derivative (41) in the presence of an acid to give compound (42). Compound (42) is then reacted with (n-Bu)₂SnCl to provide compound (43). Subsequently, compound (43) is coupled with compound (44) to give compound (45). Compound (45) is then treated with an acid to provide compound (46). Compound (46) is firstly converted to chloro compound (47) using a chlorinating agent such as POCh or SOCb under heating conditions, then compound (47) is treated with NEt₃ to form compound (48) substituted with amine. Finally, Compound (48) is reacted with the intermediate (24) in the presence of a base such as DIPEA at refluxed temperature to afford the desired kinase inhibitor (49).

Scheme 8
The desired kinase inhibitor disclosed herein can also be prepared in a general method illustrated in Scheme 8. Compound (50) is first treated with compound (51) to give compound (52). Compound (52) is then reacted with compound (53) to provide compound (54). Subsequently, compound (54) is reacted with acyl chloride (19) to give compound (55). Compound (55) is then treated with a solution of N4 in isopropanol to provide compound (56) substituted with amine. The cyclization of compound (56) with a base and PPI13 gives compound (57). Deprotection of the amino group of compound (57) under standard conditions known to those skilled in the art such as, but not limited to, treatment with an acid to give compound (58). Finally, Compound (58) is reacted with the intermediate (24) in the presence of a base such as DIPEA at refluxed temperature to afford the desired kinase inhibitor (59).

EXAMPLES

Example 1 (j’)-2-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-5-fluoro-3-phenylquinazolin-4(3H)-one

A mixture of (S)-2-(l-aminoethyl)-5-fluoro-3-phenylquinazolin-4(3H)-one (53.5 mg, 0.189 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (58.7 mg, 0.277 mmol) and DIPEA (53.5 mg, 0.414 mmol) in w-BuOH (2 mL) was heated to 125 °C and stirred further for 26 hours, then cooled to room temperature, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 50/1) to give the title compound as a white solid (59 mg, 68.2%).

MS (ESI, pos. ion) m/z: 459.2 [M+H]+;
NMR (400 MHz, DMSO-δ) δ (ppm): 8.75 (d, J = 6.8 Hz, 1H), 7.96 (s, 1H), 7.89-7.81 (m, 1H), 7.59 (s, 2H), 7.57 (d, J = 4.9 Hz, 3H), 7.50 (d, J = 8.2 Hz, 1H), 7.36-7.22 (m, 3H), 4.88 (dd, J = 13.3, 6.6 Hz, 1H), 2.62 (s, 3H), 1.38 (d, J = 6.6 Hz, 3H).

Example 2 (5V2-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)p- yrimidin-4-yl)amino)ethyl)-3-cyclopropyl-5-fluoroquinazolin-4(3 H)-one

Step 1) (S)-tert-butyl (1-(2-fluoro- N-cyclopropyl-6-nitrobenzamido)-1-oxopropan-2-vOcarbamate

To a suspension of 2-fluoro- N-cyclopropyl-6-nitrobenzamide (2.0 g, 8.9 mmol) in toluene (20 mL) was added SOCl (2.46 g, 20.7 mmol) in one portion at room temperature. The reaction mixture was stirred at 120 °C overnight and concentrated in vacuo to give the pale brown oil, which was dissolved in anhydrous DCM (30 mL) to give a yellow solution. A solution of (S)-2-((tert-butoxycarbonyl)amino)propanoic acid (1.86 g, 9.83 mmol) and DIPEA (2.5 g, 19 mmol) in anhydrous DCM (20 mL) was added to the above yellow solution slowly at 0 °C. The resulted reaction mixture was stirred at room temperature for 24 hours, and then washed with water (30 mL) and brine (30 mL). The separated organic phases were dried over anhydrous Na2SO4 and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 8/1) to give the title compound as a yellow solid (1.63 g, 48%).

MS (ESI, pos. ion) m/z: 296.2 [M-Boc+2H]+;

NMR (400 MHz, CDCl3) δ (ppm): 8.03 (s, 1H), 7.57-7.47 (m, 1H), 7.42 (t, J = 8.3 Hz, 1H), 5.3 (t, 1H), 1.40 (d, J = 8.1 Hz, 12H), 1.29-0.75 (m, 5H).

Step 2) (S)-tert-butyl (1-(5-fluoro-3-cyclopropyl-4-oxo-3,4-dihydroquinazolin-2-yl) ethDcarbamate

To a solution of (S)-tert-butyl (1-(2-fluoro- N-cyclopropyl-6-nitrobenzamido)-1-oxopropan-2-yl)carbamate (1.63 g, 4.12 mmol) in acetic acid (12 mL) was added zinc powder (1.14 g, 17.4 mmol) in one portion with stirring. The reaction mixture was stirred at 35 °C for 24 hours, then filtered and the filtrate was concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 10/1) to give the title compound as a pale yellow solid (0.6 g, 40%).
MS (ESI, pos. ion) m/z: 348.2 [M+H]^+;

¾ NMR (400 MHz, CDCl3) δ (ppm): 7.60 (dt, J = 8.1, 4.1 Hz, 1H), 7.39 (d, J = 8.2 Hz, 1H), 7.06 (dd, J = 10.4, 8.4 Hz, 1H), 5.72-5.54 (m, 2H), 2.96-2.91 (1 m, 1H), 1.47 (d, J = 6.3 Hz, 3H), 1.45 (s, 8H), 1.37 (t, J = 11.1 Hz, 2H), 1.31-1.18 (m, 2H).

Step 3) (S)-2-[(l-aminoethyl)-5-fluoro-3-cyclopropylquinazolin-4(3 H )-one

[321] To a solution of (S)-tert-butyl(l-(5-fluoro-3-cyclopropyl-4-oxo-3,4-dihydroquinazolin-2-yl)ethyl)carbamate (0.6 g, 2 mmol) in EtOAc (1.5 mL) was added a solution of HCl in EtOAc (4 M, 1.25 mL) in one portion at room temperature. The mixture was stirred at room temperature overnight. The resulted suspension was dissolved in water (30 mL). The aqueous phase was washed with EtOAc (40 mL x 2), neutralized to pH = 8 with Na2CO3 powder, and the resulted mixture was extracted with EtOAc (100 mL x 3). The combined organic phases were washed with brine (200 mL), dried over anhydrous Na2SO4, and concentrated in vacuo to give the title compound as a pale yellow solid (0.16 g, 40%).

MS (ESI, pos. ion) m/z: 248.2 [M+H]^+;

¾ NMR (400 MHz, CDCl3) δ (ppm): 7.61 (td, J = 8.2, 5.5 Hz, 1H), 7.40 (d, J = 8.2 Hz, 1H), 7.05 (dd, J = 10.5, 8.3 Hz, 1H), 4.76 (dd, J = 6.6 Hz, 1H), 2.99-2.83 (m, 1H), 1.45 (d, J = 6.6 Hz, 3H), 1.40-1.28 (m, 2H), 0.94-0.87 (m, 2H).

Step 4) ffl-2-[(l-((6-amino-5-(5-methyl-L3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-3-cyclopropyl-5-fluorquinazolin-4(3 H )-one

[322] A mixture of (5)-2(1-aminoethyl)-5-fluoro-3-cyclopropylquinazolin-4(3 H )-one (150 mg, 0.607 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (14.15 mg, 0.669 mmol) and DIPEA (256 mg, 2.05 mmol) in t-BuOH (5 ml) was heated to reflux and stirred further for 17 hours, then cooled to rt, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 100/1) to give the title compound as a yellowish solid (100 mg, 39%).

MS (ESI, pos. ion) m/z: 423.2 [M+H]^+;

¾ NMR (400 MHz, CDCl3) δ (ppm): 8.64 (d, J = 7.2 Hz, 1H), 8.14 (s, 1H), 7.62 (td, J = 8.1, 5.4 Hz, 1H), 7.41 (d, J = 8.2 Hz, 1H), 7.07 (dd, J = 10.4, 8.3 Hz, 1H), 6.31 (p, J = 6.7 Hz, 1H), 3.12-2.97 (m, 1H), 2.72 (s, 3H), 1.65 (d, J = 6.6 Hz, 3H), 1.43 (dt, J = 6.9, 3.4 Hz, 2H), 1.15-1.05 (m, 1H), 1.01-0.91 (m, 1H).

Example 3) (S)-2-((6-amino-5-(5-methyl-L3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-3-cyclopropyl-5-methylquinazolin-4(3 H )-one
Step 1) \((S)-N-(2\text{-aminopropanoyl})-N\text{-cyclopropyl}-2\text{-methyl}-6\text{-nitrobenzamide}\)

To a suspension of \(N\text{-cyclopropyl}-2\text{-methyl}-6\text{-nitrobenzamide} \) (4.6 g, 21 mmol) in toluene (50 mL) was added SOCh (6.4 mL, 88.4 mmol) in one portion at room temperature. The reaction mixture was stirred at 120 °C overnight and concentrated in vacuo to give the pale brown oil, which was dissolved in anhydrous DCM (50 mL) to give a pale yellow solution. To a solution of (25)-2-(ter/-butoxycarbonylamino)propanoic acid (4.18 g, 22.1 mmol,) and DIPEA (5.71 g, 44.2 mmol) in 100 mL of anhydrous DCM was added the above pale yellow solution slowly at 0 °C. The resulted reaction mixture was stirred at room temperature for 24 hours, then washed with water (100 mL) and brine (100 mL). The organic phase was dried over anhydrous Na\(_2\)SO\(_4\) and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 7/1) to give the title compound as a yellow solid (6.58 g, 72.4%).

MS (ESI, pos. ion) m/z: 292.0 [M+H]⁺;

\(\frac{1}{4} \text{NMR} \) (400 MHz, DMSO-\(d_6\)) \(\delta \) (ppm): 8.06 (s, 1H), 7.68 (s, 1H), 7.54 (s, 1H), 7.28 (s, 1H), 5.02 (s, 1H), 2.96 (s, 1H), 2.27 (d, \(J = 46.8 \text{ Hz} \)), 1.99 (s, 1H), 1.34 (s, 9H), 1.26 (d, \(J = 11.4 \text{ Hz} \)), 1.18 (t, \(J = 7.1 \text{ Hz} \)), 2H).

Step 2) \((S)-\text{tert-butoxycarbonylamino})propanoic acid\)}

\((1-(3\text{-cyclopropyl-5-methyl-4-oxo-3,4-dihydroquinazolin-2-yl})\text{ethvDcarbamate\)}}

To a solution of \((\phi)-N-(2\text{-aminopropanoyl})-N\text{-cyclopropyl}-2\text{-methyl}-6\text{-nitrobenzamide} \) (7.8 g, 27 mmol) in acetic acid (54 mL) was added Zn (7 g, 107.7 mmol) in one portion. The reaction mixture was stirred at 35 °C for 24 hours, then filtered, and the filtrate was concentrated in vacuo. The residue was dissolved in EtOAc (300 mL) and the resulted mixture was washed with saturated NaHC\(\text{OH}\) aqueous solution (100 mL × 2) and brine (200 mL). The separated organic layer was dried over anhydrous sodium sulfate and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 8/1) to give the title compound as a pale yellow solid (6 g, 65%).

MS (ESI, pos. ion) m/z: 344.0 [M+H]⁺;
¾NMR (400 MHz, DMSO-d6) δ (ppm): 7.58 (t, $J = 7.7$ Hz, 1H), 7.37 (d, $J = 8.0$ Hz, 1H), 7.29 (d, $J = 7.5$ Hz, 1H), 7.21 (d, $J = 7.4$ Hz, 1H), 5.33 (p, $J = 6.6$ Hz, 1H), 3.02-2.92 (m, 1H), 2.73 (s, 3H), 1.40 (d, $J = 6.8$ Hz, 3H), 1.37 (s, 9H), 1.26-1.20 (m, 2H), 1.00-0.77 (m, 2H).

Step 3) (y)-2-(1-aminoethyl)-3-cyclopropyl-5-methylquinazolin-4(3H)-one

[325] To a solution of (S)-tert-butyl (1-(3-cyclopropyl-5-methyl-4-oxo-3,4-dihydroquinazolin-2-yl)ethyl)carbamate (0.32 g, 1.3 mmol) in EtOAc (10 mL) was added of a solution of HCl in EtOAc (4 M, 10 mL) in one portion at room temperature. The mixture was stirred at room temperature overnight. The resulted suspension was dissolved in water (150 mL), the aqueous phase was washed with EtOAc (30 ml $\times$ 3), neutralized to pH = 8 with NaOH powder, and the resulted mixture was extracted with EtOAc (100 mL $\times$ 4). The combined organic phases were washed with brine (200 mL), dried over anhydrous Na2SO4, and concentrated in vacuo to give the title compound as a pale white solid, which would be used directly in next step without further purification.

MS (ESI, pos. ion) m/z: 244.0 [M+H]+;

¾NMR (400 MHz, DMSO-d6) δ (ppm): 7.44 (t, $J = 7.7$ Hz, 1H), 7.26 (d, $J = 8.0$ Hz, 1H), 7.06 (d, $J = 7.3$ Hz, 1H), 2.91-2.84 (m, 1H), 2.59 (s, 3H), 2.36 (s, 1H), 1.22 (d, $J = 6.5$ Hz, 3H), 1.12-0.99 (m, 2H), 0.80-0.55 (m, 2H).

Step 4) (y)-2-(1-(6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-3-cyclopropyl-5-methylquinazolin-4(3 H)-one

[326] To a mixture of (S)-2-(1-aminoethyl)-3-cyclopropyl-5-methylquinazolin-4(3 H)-one (121 mg, 0.5 mmol) and 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (119 mg, 0.5 mmol) in 10 mL of $\alpha$-BuOH was added DIPEA (129 mg, 0.99 mmol). The mixture was stirred at 120 °C overnight, concentrated in vacuo, and the residue was purified by a flash silica gel column chromatography (PE/EtOAc (v/v) = 1/3) to give the title compound as an off-white solid (100 mg, 45%).

MS (ESI, pos. ion) m/z: 419.3 [M+H]+;

¾ NMR (400 MHz, DMSO-d6) δ (ppm): 8.91 (d, $J = 7.1$ Hz, 1H), 8.07 (s, 1H), 7.61 (t, $J = 7.7$ Hz, 1H), 7.39 (d, $J = 8.1$ Hz, 1H), 7.24 (d, $J = 7.3$ Hz, 1H), 3.18-3.07 (m, 1H), 2.74 (s, 3H), 2.62 (s, 3H), 2.51 (s, 1H), 1.58 (d, $J = 6.6$ Hz, 3H), 1.25 (d, $J = 7.8$ Hz, 2H), 1.11-1.076 (m, 2H).

Example 4) (S<sup>+</sup>-2-(l-(6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-5-methyl-3-phenylquinazolin-4(3 H)-one

80
Step 1) 2-amino-6-methyl-N-phenylbenzamide

[327] To a mixture of 2-methyl-6-nitro-N-phenylbenzamide (1.97 g, 7.69 mmol), activated carbon (0.22 g) and ferric chloride (11.0 mg, 0.0678 mmol) in ethanol (15 mL, 258 mmol) was added hydrazine hydrate (1.35 g, 27.0 mmol) dropwise at room temperature. And then the reaction was stirred at 80 °C for 2.5 hours, then hydrazine hydrate (2.7 g, 54.0 mmol) was added to the reaction mixture again and the resulted mixture was stirred at 80 °C for 1 hour. The mixture was filtered and the filter cake was wash with EtOH (30 mL). The filtrate was concentration in vacuo, and the residue was diluted directly with water/acetone (20 mL/2 mL) and the suspension was stirred at rt for 1 hour. The brown solid was collected by filtration and washed with water (20 mL), dried in oven at 65 °C to give the title compound as a pale white solid (1.01 g, 55.6%).

MS (ESI, pos. ion) m/z: 227.1 [M+H]+;

\[ \frac{3}{4} \text{NMR} \quad (400 \text{ MHz}, \text{CDCl}_3) \delta \text{ (ppm):} \quad 7.64 \text{ (d, } J = 8.0 \text{ Hz, 2 H)}, \quad 7.49 \text{ (s, 1 H)}, \quad 7.40 \text{ (t, } J = 8.0 \text{ Hz, 2 H)}, \quad 7.19 \text{ (t, } J = 8.0 \text{ Hz, 1 H)}, \quad 7.11 \text{ (t, } J = 6.0 \text{ Hz, 1 H)}, \quad 6.65 \text{ (d, } J = 8.0 \text{ Hz, 1 H)}, \quad 6.60 \text{ (d, } J = 8.0 \text{ Hz, 1 H)}, \quad 4.21 \text{ (s, 2 H)}, \quad 2.43 \text{ (s, 3 H)}. \]

Step 2) (S)-2-tert-butyl\_l-(3-methyl-2-(phenylcarbamoyl)phenylamino)-1-oxopropan-2-yPcarbamate

[328] To a solution of 2-amino-6-methyl-N-phenylbenzamide (1.0 g, 4.4 mmol), (2S)-2-(teri-butoxycarbonylamino)propanoic acid (1.0 g, 5.3 mmol) and HATU (2.0 g, 5.39 mmol) in DCM (6 mL) was added N,N-diisopropylethylamine (1.16 g, 8.89 mmol) dropwise at 0 °C. The mixture was stirred at 0 °C for 1 hour, then heated to 45 °C and stirred further for 20 hours. The reaction mixture was cooled to room temperature and then concentrated in vacuo. The residue was dissolved in EtOAc (30 mL), and the resulted mixture was washed with water (25 mL x 2), NaOH aqueous solution (2.5 M, 25 mL x 2), HCl aqueous solution (1.0 M, 25 mL x 2), brine (25 mL x 2). The separated organic phase was dried over anhydrous sodium sulfate and concentrated in vacuo to afford the title compound as a white solid (1.59 g, 91%).

MS (ESI, pos. ion) m/z: 396.20 [M-H]−;
¾ NMR (400 MHz, CDCl₃) δ (ppm): 8.75 (s, 1 H), 7.94 (s, 1 H), 7.65 (d, J = 8.0 Hz, 3 H), 7.39 (t, J = 8.0 Hz, 2 H), 7.33 (t, J = 8.0 Hz, 1 H), 7.19 (t, J = 6.0 Hz, 1 H), 7.12 (d, J = 8.0 Hz, 1 H), 4.93 (d, J = 4.0 Hz, 1 H), 4.26 (s, 1 H), 2.47(s, 3 H), 1.42 (s, 9 H), 1.33-1.28 (m, 3 H).

Step 3) (S)-tert-butyl (1-(5-methyl-4-oxo-3-phenyl-3,4-dihydroquinazolin-2-yl)ethyl)carbamate

[329] To a solution of (S)-tert-butyl (1-(5-methyl-4-oxo-3-phenyl-3,4-dihydroquinazolin-2-yl)ethyl)carbamate (1.0 g, 2.5 mmol), DMAP (304.3 mg, 2.491 mmol) and DIPEA (648.7 mg, 5.019 mmol) in CH₃CN (5 mL) was added BSA (2.55 g, 12.5 mmol) at room temperature. The reaction mixture was heated to reflux and stirred further for 5 hours. TLC showed the raw material was not reacted completely, then BSA (2.55 g, 12.5 mmol) was added to and the mixture was heated to reflux and stirred further for 1.5 hours. The reaction was completed in TLC and cooled to room temperature. The reaction mixture was added into EtOAc (50 mL), and the resulted mixture was washed with HCl aqueous solution (1 M, 30 mL x 2), followed by brine (30 mL x 2). The separated organic phase was dried over anhydrous sodium sulfate and concentrated in vacuo to afford the title compound as a yellow solid (610 mg, 64%).

MS (ESI, pos. ion) m/z: 380.3 [M+H]+;
¾ NMR (400 MHz, DMSO-δ6) δ (ppm): 7.70-7.24 (m, 9 H), 4.13 (t, J = 6.0 Hz, 1 H), 2.71 (s, 3 H), 1.32 (s, 9 H), 1.18 (d, J = 8.0 Hz, 3 H).

Step 4) (S)-2-(l-aminoethyl)-5-methyl-3-phenylquinazolin-4(3 H)-one

[330] To a solution of (S)-tert-butyl (1-(5-methyl-4-oxo-3-phenyl-3,4-dihydroquinazolin-2-yl)ethyl)carbamate (500 mg, 1.318 mmol) in EtOAc (12 mL) was added a solution of HCl in EtOAc (4 M, 4 mL) in one portion. The mixture was stirred at room temperature for 4 hours. The aqueous phase was washed with EtOAc (30 mL), neutralized to pH = 8 with Na2CO₃ powder, and the resulted mixture was extracted with EtOAc (20 mL x 3). The combined organic phases were washed with brine (20 mL), dried over anhydrous Na₂SO₄, and concentrated in vacuo to give the title compound as a white solid (320 mg, 86.42%).

MS (ESI, pos. ion) m/z: 280.2 [M+H]+;
¾NMR (400 MHz, CDCl₃) δ (ppm): 7.65-7.52 (m, 5 H), 7.31 (d, J = 4.0 Hz, 2 H), 7.25 (d, J = 8.0 Hz, 1 H), 3.73-3.68 (m, 1 H), 2.84 (s, 3 H), 1.30 (d, J = 8.0 Hz, 3 H).

Step 5) (S)-2-(l-((6-amino-5-(5-methyl-L3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-5-methyl-3-phenylquinazolin-4(3 H)-one

[331] To a solution of (S)-2-(l-aminoethyl)-5-methyl-3-phenylquinazolin-4(3 H)-one (100.0 mg, 0.3559 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (75.8
mg, 0.358 mmol) in «-BuOH (2 mL) was added DIPEA (92.6 mg, 0.716 mmol) in one portion. The mixture was heated to reflux and stirred further for 23 hours, then cooled to room temperature, and filtered. The solid was dissolved in EtOAc, and the solution was concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 1/1) to give the title compound as a white solid (102.0 mg, 62.82%).

MS (ESI, pos. ion) m/z: 455.3 [M+H]+;

$^1$H NMR (400 MHz, DMSO-$d_6$) δ (ppm): 7.79 (d, $J = 8.0$ Hz, 5 H), 7.95 (s, 1 H), 7.70 (t, $J = 8.0$ Hz, 1 H), 7.60-7.50 (m, 6 H), 7.31 (d, $J = 8.0$ Hz, 1 H), 7.26 (s, 2 H), 4.92-4.85 (m, 1 H), 2.73 (s, 3 H), 2.62 (s, 3 H), 1.37 (d, $J = 4.0$ Hz, 3 H), 1.24 (s, 1 H).

Example 5 (S)-2-1-((6-amino-5-(5-methyl-1.3.4-oxadiazol-2-vnpyrimidin-4-yl)-amino)propyl)-3-cyclopropylquinazolin-4(3 $H$)-one

Step 1) $N$-cyclopropyl-2-nitrobenzamide

[332] To a mixture of 2-nitrobenzoic acid (3.2 g, 19 mmol) and $N$,$N$-dimethylformamide (0.17 g, 2.3 mmol) in tetrahydrofuran (25 mL) was added SOCb (4.92 g, 41.4 mmol) in one portion with stirring at room temperature. The reaction mixture was heated to 60 °C and stirred further for 6 hours, then concentrated in vacuo to provide the yellow oil for the next step, which was dissolved in DCM (6 mL) to give a pale yellow suspension. The pale yellow suspension was added dropwise to a suspension of cyclopropanamine (1.18 g, 20.5 mmol) and Et$_3$N (3.56 g, 35.2 mmol) in DCM (4 mL) at 0 °C. The reaction mixture was stirred at 0 °C for 2 hours, and concentrated in vacuo. The residue was beaten with water (50 mL) for 20 minutes, then filtered, the precipitate was washed with water (10 mL), and dried in vacuo at 50 °C to give the title compound as a pale yellow solid (3.4 g, 96%).

$^3$NMR (400 MHz, CDCl3) δ (ppm): 8.02 (d, $J = 8.1$ Hz, 1 H), 7.64 (dd, $J = 9.2$, 5.4 Hz, 1 H), 7.54 (t, $J = 7.5$ Hz, 1 H), 7.47 (d, $J = 7.4$ Hz, 1 H), 6.1 1 (s, 1 H), 2.97-2.70 (m, 1 H), 0.85 (m, 2 H), 0.66 (m, 2 H).

Step 2) (S)-tert-butyl((1-(N-cyclopropyl-2-nitrobenzamido)-1-oxobutan-2-yl)carbamate

[333] To a solution of $N$-cyclopropyl-2-nitrobenzamide (1.5 g, 7.3 mmol) in toluene (15 mL) was added thionyl chloride (1.73 g, 14.5 mmol) in one portion. The mixture was stirred at
120 °C for 6 hours, and concentration in vacuo to give the yellow liquid.

A solution of (2S)-2-(tert-butoxycarbonylamino)butanoic acid (1.50 g, 7.38 mmol) and DIPEA (1.90 g, 14.7 mmol) in DCM (32 mL) was stirred at 0 °C for 15 minutes, then a solution of the above yellow liquid in DCM (16 mL) was added to the above solution slowly at 0 °C. The mixture was stirred at room temperature for 18 hours. The reaction mixture was washed with water (30 mL) and brine (30 mL). The separated organic phase was dried over anhydrous Na2SC4, and concentration in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 7/1) to give the title compound as a yellow solid (1.83 g, 64%).

MS (ESI, pos. ion) m/z: 292.2 [M-Boc+2H]+;

¾NMR (400 MHz, CDCl3) δ (ppm): 8.19 (d, J = 8.0 Hz, 1H), 7.71 (t, J = 8.0 Hz, 1H), 7.59 (t, J = 8.0 Hz, 1H), 7.33 (d, J = 8.0 Hz, 1H), 5.40-5.19 (m, 1H), 4.95 (d, J = 8.0 Hz, 1H), 4.17-4.12 (m, 1H), 2.86 (s, 1H), 1.97-1.91 (m, 1H), 1.44 (s, 9H), 1.28 (t, J = 8.0 Hz, 2H), 1.10-0.96 (m, 5H).

Step 3) (S)-tert-butyl\([(l-(3-cyclopropyl-4-oxo-3^-dihydroquinazolin-2-yl)propyl)O\] propylo carbamate

[334] To a solution of (S)-tert-butyl\([(l-(N-cyclopropyl-2-nitrobenzamido)-l-oxobutan-2-yl)carbamate\] (1.8 g, 4.4 mmol) in acetic acid glacial (10 mL) was added Zn power (1.22 g, 18.7 mmol) in one portion. The mixture was stirred at 35 °C for 15 hours, then concentration in vacuo, and the residue was dissolved in EtOAc (50 mL). The resulted mixture was filtered, and the filtrate was washed with saturated NaHCCb aqueous solution (30 mL x 2) and brine (50 mL). The organic layer was dried over anhydrous Na2S04 and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 8/1) to give the title compound as yellow liquid (0.6 g, 40%).

MS (ESI, pos. ion) m/z: 344.0 [M+H]+;

¾NMR (400 MHz, CDCl3) δ (ppm): 8.23 (d, J = 8.0 Hz, 1H), 7.72 (t, J = 8.0 Hz, 1H), 7.62 (d, J = 8.0 Hz, 1H), 7.45 (t, J = 8.0 Hz, 1H), 3.01 (t, J = 4.0 Hz, 1H), 1.98-1.92 (m, 1H), 1.79-1.63 (m, 2H), 1.47 (s, 9H), 1.42 (t, J = 4.0 Hz, 2H), 0.95-0.86 (m, 5H).

Step 4) (S)-2-[(l-aminopropl)-3-cyclopropylquinazolin-4(3 H)-one

[335] To a solution of (S)-tert-butyl\([(l-(3-cyclopropyl-4-oxo-3,4-dihydroquinazolin-2-yl)propyl)carbamate\] (509.1 mg, 1.483 mmol) in ethyl acetate (9 mL) was added a solution of HCl in EtOAc (4 M, 4.5 mL) in one portion at room temperature. The mixture was stirred at room temperature for 5 hours.
The resulted suspension was neutralized to pH = 8 with saturated Na₂CO₃ aqueous solution, and the aqueous phase was extracted with EtOAc (50 mL x 4). The combined organic phases were washed with brine (50 mL x 2), dried over anhydrous Na₂SO₄, and concentrated *in vacuo* to give the title product as yellow liquid (212 mg, 58.77%).

MS (ESI, pos. ion) m/z: 244.2 [M+H]⁺;

¾ NMR (400 MHz, CDCb) δ (ppm): 8.06 (t, J = 8.0 Hz, 1 H), 7.79-7.75 (m, 1 H), 7.60 (d, J = 8.0 Hz, 1 H), 7.46 (t, J = 8.0 Hz, 1 H), 4.43 (q, J = 8.0 Hz, 1 H), 3.08-3.02 (m, 1 H), 1.91-1.79 (m, 1 H), 1.61-1.54 (m, 1 H), 1.24-1.21 (m, 2 H), 0.98-0.93 (m, 4 H), 0.79-0.75 (m, 1 H).

Step 5) (γ)-2-(l-(6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)amino)propyn-3-one)]cyclopropylquinazolin-4(3 H)-one

[336] To a solution of (5)-2-(l-aminopropyl)-3-cyclopropylquinazolin-4(3 H)-one (200 mg, 0.8220 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (178 mg, 0.84 mmol) in 1-butanol (5 mL) was added DIPEA (215 mg, 1.6636 mmol) in one portion. The mixture was stirred at 120 °C for 12 hours, and concentration *in vacuo* gave a white solid (206 mg, 58.32%).

MS (ESI, pos. ion) m/z: 419.3 [M+H]⁺;

¾NMR (400 MHz, CDCb) δ (ppm): 8.52 (d, J = 8.0 Hz, 1 H), 8.25 (t, J = 8.0 Hz, 1 H), 8.17 (s, 1 H), 7.74-7.70 (m, 1 H), 7.62 (d, J = 8.0 Hz, 1 H), 7.45 (t, J = 8.0 Hz, 1 H), 6.42-6.37 (m, 1 H), 4.15 (q, J = 8.0 Hz, 1 H), 3.16-3.11 (m, 1 H), 2.75 (s, 3 H), 2.16-1.98 (m, 3 H), 1.48-1.44 (m, 2 H), 1.04 (t, J = 8.0 Hz, 3 H), 0.97-0.89 (m, 2 H).

Example 6 (γ)-2-(l-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)propyl)-3-phenylquinazolin-4(3 H)-one

Step 1) 2-nitro-N-phenylbenzamide

[337] To a suspension of 2-nitrobenzoic acid (6.2 g, 37.1 mmol) and N,N-dimethylformamide (0.25 mL) in dichloromethane (40 mL) was added oxalyl dichloride (6.5 mL, 77 mmol) dropwise at rt. The reaction was stirred at rt for 5 hours, then concentrated *in vacuo*, and the residue was dissolved in 1,4-dioxane (10 mL) which was added to a mixture of aniline
(3.47 g, 37.3 mmol) and sodium bicarbonate (7.86 g, 490 mmol) in dioxane (30 mL) and water (40 mL) dropwise at 0 °C over 5 minutes. The resulted mixture was moved to rt and stirred further for 2 hours, then water (100 mL) was added, filtered, and the light yellowish solid was dried in vacuo to give the title compound as a light yellowish solid (8.1 g, 90%).

MS (ESI, pos. ion) m/z: 243.0 [M+H]+;

¾ NMR (400 MHz, CDCl₃) δ (ppm): 8.07-8.05 (d, J = 8.0 Hz, 1H), 7.69-7.65 (t, J = 7.4 Hz, 1H), 7.60-7.55 (m, 4H), 7.33-7.29 (t, J = 7.6 Hz, 2H), 7.13-7.11 (t, J = 7.2 Hz, 1H).

Step 2) (S)-tert-butyl (l-(2-nitro-N-phenylbenzamido)-1-oxobutan-2-yl)carbamate

[338] To a suspension of 2-nitro-N-phenylbenzamide (1.50 g, 6.19 mmol) in toluene (10 mL) was added thionyl chloride (2.25 mL, 31.2 mmol). The mixture was heated to reflux and stirred overnight, then concentrated in vacuo, and the residue was dissolved in DCM (2 mL). The resulted solution was added to a mixture of (2,5)-2-(fer-t-butoxycarbonylamino)butanoic acid (1.01 g, 4.97 mmol) and N,N-diethylethanamine (628 mg, 6.2061 mmol) in DCM (2 mL) at 0°C. The mixture was stirred at 0 °C for 2 hours, then moved to rt and stirred further for 24 hours. The mixture was washed with H₂O (20 mL), saturated NaHCO₃ aqueous solution (20 mL), and then saturated brine (20 mL). The separated organic phase was concentrated in vacuo, and the residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 10/1) to give the title compound as a yellowish solid (1.8 g, 68%).

MS (ESI, pos. ion) m/z: 328.0 [M-Boc+2H]+;

¾ NMR (400 MHz, CDCl₃) δ (ppm): 8.16-8.14 (d, J = 8.0 Hz, 1H), 7.70-7.66 (dd, J = 7.6, 7.2 Hz, 1H), 7.54-7.42 (m, 7H), 4.90-4.98 (d, J = 7.2 Hz, 1H), 4.54 (m, 1H), 1.87-1.79 (m, 1H), 1.47-1.40 (m, 1H), 1.40 (s, 9H), 0.83-0.79 (t, J = 7.2 Hz, 3H).

Step 3) (S)-tert-butyl\ (1-(4-oxo-3-phenyl-3,4-dihydroquinazolin-2-yl)propyl)carbamate

[339] To a suspension of (S)-tert-butyl (l-(2-nitro-N-phenylbenzamido)-1-oxobutan-2-yl)carbamate (1.80 g, 4.21 mmol) in acetic acid (10 mL) was added zinc power (1.42 g, 21.7 mmol) at rt, the reaction was stirred at rt for 22 hours, then filtered through a CELITE® pad, and the filtrate was concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 10/1) to give title compound as a yellowish solid (1.18 g, 74%).

MS (ESI, pos. ion) m/z: 380.0 [M+H]+;

¾ NMR (400 MHz, CDC1₃) δ (ppm): 8.28-8.26 (d, J = 7.2 Hz, 1H), 7.79-7.75 (dt, J = 1.2, 8.4 Hz, 1H), 7.72-7.70 (d, J = 7.6 Hz, 1H), 7.61-7.46 (m, 4H), 7.38-7.36 (d, J = 6.8 Hz, 1H), 7.30-
7.26 (m, 1H), 5.55-5.53 (d, J = 8.0 Hz, 1H), 4.45-4.40 (m, 1H), 1.77-1.69 (m, 1H), 1.55-1.48 (m, 1H), 1.42 (s, 9H), 0.77-0.73 (t, J = 7.4 Hz, 3H).

Step 4) (SV2-(l-aminopropyl)-3-phenylquinazolin-4(3 H)-one

[340] To a solution of (S)-tert-butyl (l-(4-oxo-3 -phenyl-3,4-dihy droquinazolin-2-yl)propyl)carbamate (1.18 g, 3.11 mmol) in ethyl acetate (4 mL) was added a solution of hydrogen chloride in EtOAc (4 M, 10 mL). The reaction was stirred at rt for 1 day, and concentrated in vacuo. The residue was dissolved in H2O (30 mL), and then the resulted mixture was extracted with EtOAc/PE (1/1, 20 mL x 2). The aqueous phase was basified to pH = 8.5 with NaHCCb powder, and the mixture was extracted with DCM (20 mL x 2). The combined organic phases were washed with saturated brine (30 mL), dried over anhydrous Na2S04, and concentrated in vacuo to give the title compound as a white solid (566 mg, 65%).

MS (ESI, pos. ion) m/z: 280.0 [M+H]+;

¾ NMR (400 MHz, CDCb) δ (ppm): 8.28-8.26 (d, J = 8.0 Hz, 1H), 7.79-7.71 (m, 2H), 7.660-7.45 (m, 4H), 7.29-7.26 (m, 2H), 3.44 (m, 1H), 1.82-1.75 (m, 1H), 1.57-1.46 (m, 1H), 0.81-0.78 (t, J = 7.4 Hz, 3H).

Step 5) (S)-2-(l-(6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)propyl)-3-phenylquinazolin-4(3 H)-one

[341] A mixture of (S)-2-(l-aminopropyl)-3-phenylquinazolin-4(3 H)-one (51.0 mg, 0.183 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (41.7 mg, 0.197 mmol) and DIPEA (45.4 mg, 0.351 mmol) in «-BuOH (2 mL) was heated to 125 °C and stirred further overnight, then cooled to rt, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (DCM/MeOH = 200/3) to give the title compound as a white solid (43 mg, 52%).

MS (ESI, pos. ion) m/z: 455.0 [M+H]+;

¾ NMR (400 MHz, CDCb) δ (ppm): 8.40 (d, J = 7.6 Hz, 1H), 8.28-8.27 (d, J = 7.6 Hz, 1H), 8.00 (s, 1H), 7.77-7.73 (t, J = 7.2 Hz, 1H), 7.69-7.67 (d, J = 8.0 Hz, 1H), 7.607.54 (m, 3H), 7.49-7.42 (m, 2H), 7.34-7.32 (m, 1H), 5.19-5.14 (m, 1H), 2.72 (s, 3H), 1.95-1.90 (m, 1H), 1.83-1.77 (m, 1H), 0.87-0.83 (m, 3H).

Example 7 ffl-2-(l-(6-amino-5-(5-methyl-L3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-3-cyclopropylquinazolin-4(3 H)-one

87
Step 1) (S)-tert-butyl (1-(N-cyclopropyl-2-nitrobenzamido)-l-oxopropan-2-yl) carbamate

To a solution of N-cyclopropyl-2-nitrobenzamide (1.91 g, 9.26 mmol) in toluene (20 mL) was added SOCb (4.1 g, 41.0 mmol) in one portion with stirring at room temperature. The reaction mixture was heated to 120 °C overnight and concentrated *in vacuo* to give the pale brown oil, which was dissolved in anhydrous DCM (40 mL) to give a pale yellow solution. To a solution of (5)-2-((ter^-butoxycarbonyl)amino)propanoic acid (1.85 g, 9.78 mmol) and DIPEA (2.6 g, 20.0 mmol) in anhydrous DCM (20 mL) was added the above pale yellow solution slowly at 0 °C. The resulted reaction mixture was stirred at room temperature overnight. The reaction mixture was washed with water (40 mL) and brine (40 mL). The organic phase was dried over anhydrous Na₂SO₄ and concentrated *in vacuo*. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 10/1) to give the title compound as a yellow solid (2.72 g, 81%).

MS (ESI, pos. ion) m/z: 278.2 [M-Boc+2H]^+;

^1^H NMR (400 MHz, CDCh) δ (ppm): 8.18 (d, *J* = 8.2 Hz, 1H), 7.69 (t, *J* = 7.4 Hz, 1H), 7.56 (t, *J* = 7.5 Hz, 1H), 7.32 (dd, *J* = 7.6, 0.9 Hz, 1H), 5.32-5.11 (m, 1H), 5.00 (d, *J* = 7.8 Hz, 1H), 2.83 (s, 1H), 1.40 (s, 9H), 1.37 (d, *J* = 7.0 Hz, 3H), 1.10 (d, *J* = 6.7 Hz, 2H), 0.91 (dd, *J* = 9.0, 5.4 Hz, 2H).

Step 2) (S)-tert-butyl (1-(3-cyclopropyl-4-oxo-3,4-dihydroquinazolin-2-yl)ethyl)carbamate

To a solution of (S)-tert-butyl (1-(N-cyclopropyl-2-nitrobenzamido)-l-oxopropan-2-yl)carbamate (2.72 g, 7.21 mmol) in acetic acid (10 mL) was added zinc powder (1.89 g, 28.9 mmol) in one portion with stirring. The reaction mixture was stirred at 35 °C for 16 hours, then filtered, and the filtrate was concentrated *in vacuo*. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 8/1) to give the title compound as a pale yellow solid (1.2 g, 50%).

MS (ESI, pos. ion) m/z: 330.0 [M+H]^+;

^1^H NMR (400 MHz, CDCh) δ (ppm): 8.16 (dd, *J* = 7.9, 1.0 Hz, 1H), 7.66-7.62(m, 1H), 7.56 (d, *J* = 8.0 Hz, 1H), 7.37 (t, *J* = 7.5 Hz, 1H), 5.80 (d, *J* = 8.4 Hz, 1H), 5.61 (t, 1H), 2.95 (m, *J* = 10.9,
3.6 Hz, 1H), 1.46 (d, J = 6.7 Hz, 3H), 1.41 (s, 9H), 1.35 (d, 2H), 1.04 (dd, J = 9.7, 4.3 Hz, 1H),
0.89 (dd, J = 10.0, 4.2 Hz, 1H).

Step 3) (SV2-(l-aminoethyl)-3-cyclopropylquinazolin-4(3H)-one

[344] To a solution of (S)-tert-buty|yl (l-(3-cyclopropyl-4-oxo-3,4-dihydroquinazolin-2-yl)ethyl)carbamate (1.2 g, 3.6 mmol) in EtOAc (3.0 mL) was added a solution of HC1 in EtOAc (4 M, 3 mL) in one portion at room temperature. The mixture was stirred at room temperature overnight. The resulting suspension was dissolved in water (60 mL). The aqueous phase was washed with EtOAc (40 mL x 2), neutralized to pH = 8 with Na2CO3 powder, and the resulting mixture was extracted with EtOAc (50 mL x 3). The combined organic phases were washed with brine (100 mL), dried over anhydrous Na2SO4, and concentrated in vacuo to give the title compound as a pale yellow solid (270 mg, 25%).

MS (ESI, pos. ion) m/z: 230.2 [M+H]+;
¾ NMR (400 MHz, CDCl3) δ (ppm): 8.20 (d, J = 7.9 Hz, 1H), 7.69 (t, J = 11.1, 4.1 Hz, 1H),
7.60 (d, J = 8.0 Hz, 1H), 7.40 (t, J = 7.5 Hz, 1H), 4.78 (d, J = 5.4 Hz, 1H), 3.06-2.66 (m, 1H),
1.45 (d, J = 6.5 Hz, 3H), 1.41-1.25 (m, 2H), 1.00-0.82 (m, 2H).

Step 4) (y)-2-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-y1)pyrimidin-4-yl)amino)ethyl)-3-
cyclopropylquinazolin-4(3H)-one

[345] A mixture of (S)-2-(l-aminoethyl)-3-cyclopropylquinazolin-4(3H)-one (153 mg, 0.667 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (155.6 mg, 0.733 mmol) and DIPEA (236.0 mg, 1.402 mmol) in «BuOH (5 mL) was heated to reflux and stirred further for 11 hours, then cooled to rt, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 100/1) to give the title compound as a white solid (30 mg, 11%).

MS (ESI, pos. ion) m/z: 405.3 [M+H]+;
¾NMR (400 MHz, CDCl3) δ (ppm): 8.61 (d, J = 7.2 Hz, 1H), 8.23 (t, J = 7.9 Hz, 1H), 8.15 (s,
1H), 7.71 (t, J = 7.6 Hz, 1H), 7.61 (d, J = 8.0 Hz, 1H), 7.44 (t, J = 7.5 Hz, 1H), 6.34 (p, J = 6.7
Hz, 1H), 3.20-2.92 (m, 1H), 2.74 (s, 3H), 1.64 (d, J = 6.6 Hz, 6H), 1.49-1.38 (m, 4H), 1.13-1.03
(m, 1H), 1.03-0.90 (m, 1H).

Example 8 fl÷2-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-3-
phenylquinazolin-4(3i H)-one
Step 1) 2-amino-N-phenylbenzamide

To a solution of 2-nitro-N-phenylbenzamide (1.0 g, 4.1 mmol) in THF (10 mL) was added Pd/C (150 mg, 10%) and a solution of HCOOK (2.5 g, 30 mmol) in water (3 mL). The mixture was heated at 50 °C overnight, then filtered over a pad of CELITE, and the filtrate was washed with water (10 mL x 3), and HCl aqueous solution (1 M, 10 mL x 2). The separated organic phase was dried over anhydrous Na2SO₄ and concentrated in vacuo to give the title compound as an off-white solid (840 mg, 96%).

MS (ESI, pos. ion) m/z: 213.1 [M+H]+.

Step 2) (S)-tert-butyl (l-oxo-l-(2-(phenylcarbamoyl)phenynamino)propan-2-yncarbamate

To a solution of 2-amino-N-phenylbenzamide (840 mg, 3.96 mmol), (2S)-2-(tert-butoxycarbamoylamino)propanoic acid (786 mg, 4.15 mmol) and DIPEA (2 mL, 10 mmol) in DCM (20 mL) was added HATU (1.81 g, 4.76 mmol) portionwise at -10 °C. After addition, the mixture was stirred at -10 °C for 1 hour, then moved to rt and heated at 45 °C overnight. The mixture was washed with water (50 mL x 2) and saturated NaHCO₃ aqueous solution (50 mL x 2). The organic phase was dried over anhydrous Na₂SO₄ and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 5/1) to give the title compound a yellow solid (1.3 g, 86%).

MS (ESI, neg. ion) m/z: 282.9 [M-Boc+H]-;

1H NMR (600 MHz, DMSO-δ6) δ (ppm): 8.51 (d, J = 8.3 Hz, 1 H), 7.86 (d, J = 7.6 Hz, 1 H), 7.75 (d, J = 7.9 Hz, 2 H), 7.56 (dd, J = 11.7, 4.2 Hz, 2H), 7.36 (t, J = 7.9 Hz, 2 H), 7.23 (i, J = 7.6 Hz, 1 H), 7.14 (t, J = 7.4 Hz, 1 H), 4.00 (m, 1 H), 1.31 (s, 9 H), 1.29 (d, J = 7.3 Hz, 3 H).

Step 3) (S)-tert-butyl (l-(4-oxo-3-phenyl-3,4-dihydroquinazolin-2-yl)ethynycarbamate

To a solution of (S)-tert-butyl (l-oxo-l-(2-(phenylcarbamoyl)phenylamino)propan-2-yl)carbamate (1.3 g, 3.4 mmol), DIPEA (1.0 mL, 6.80 mmol) and DMAP (410 mg, 3.35 mmol) in CH₂CN (11 mL) was added BSA (7.0 g, 34 mmol), the mixture was then heated to 80 °C and stirred further for 5 hours, then cooled to rt and diluted with EtOAc (150 mL). The resulted mixture was washed with water (100 mL x 3), and HCl aqueous solution (1 M, 100 mL x 2). The separated organic phase was dried over anhydrous...
Na2SO4, and concentrated *in vacuo* to give the title compound as a gray solid (1.15 g, 93%).

MS (ESI, pos. ion) m/z: 366.3 [M+H]⁺;

¾NMR (400 MHz, CDCb) δ (ppm): 8.30 (d, J = 7.8 Hz, 1 H), 7.83-7.73 (m, 2 H), 7.56 (m, 4 H), 7.41 (d, J = 7.2 Hz, 1 H), 7.34-7.27 (m, 2 H), 4.63-4.50 (m, 1 H), 1.44 (s, 9 H), 1.29 (d, J = 6.7 Hz, 3 H).

Step 4) (S)-2-(l-aminoethyl)-3-phenylquinazolin-4(3 H)-one

[349] To a solution of (S)-2-(l-aminoethyl)-3-phenylquinazolin-4(3 H)-one (1.15 g, 3.15 mmol) in EtOAc (10 mL) was added a solution of HCl in EtOAc (4 M, 5 mL). The mixture was stirred at rt overnight, then filtered and the solid was dissolved in 15 mL of saturated NaHCO3 aqueous solution. The resulted mixture was extracted with EtOAc (20 mL × 3). The combined organic phases were dried over anhydrous Na2SO4, and concentrated *in vacuo* to give the title compound as an earthy yellow solid (580 mg, 69.5%).

MS (ESI, pos. ion) m/z: 266.3 [M+H]⁺;

¾NMR (400 MHz, CD3OD) δ (ppm): 8.12 (dd, J = 7.9, 1.1 Hz, 1 H), 7.90-7.83 (m, 1 H), 7.73 (d, J = 8.0 Hz, 1 H), 7.63-7.44 (m, 6 H), 3.45 (q, J = 6.6 Hz, 1 H), 1.90 (s, 2 H), 1.17 (d, J = 6.6 Hz, 3 H).

Step 5) (S)-2-(l-aminoethyl)-6-chloro-3-phenylquinazolin-4(3 H)-one

[350] To a suspension of (S)-2-(l-aminoethyl)-3-phenylquinazolin-4(3 H)-one (100 mg, 0.38 mmol) and 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amine (83 mg, 0.39 mmol) in w-BuOH (4 mL) was added DIPEA (0.1 mL, 0.5 mmol). The mixture was stirred at 120 °C overnight, then concentrated *in vacuo* and the residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 1/5) to give the title compound as a white solid (83 mg, 49%).

MS (ESI, pos. ion) m/z: 441.9 [M+H]⁺;

¾NMR (400 MHz, CDCb) δ (ppm): 8.53 (d, J = 6.9 Hz, 1 H), 8.29 (d, J = 7.8 Hz, 1 H), 8.02 (s, 1 H), 7.77 (dd, J = 11.7, 4.8 Hz, 1 H), 7.71 (d, J = 8.0 Hz, 1 H), 7.63-7.52 (m, 3 H), 7.49 (m, 1 H), 7.42 (d, J = 7.2 Hz, 1 H), 7.37-7.32 (m, 1 H), 5.20 (m, 1 H), 2.74 (s, 3 H), 1.46 (d, J = 6.6 Hz, 3 H).

Example 9 (S)-2-(l-(6-amino-5-(3-ethyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-yl)amino)propyl)-5-chloro-3-phenylquinazolin-4(3 H)-one
To a suspension of (5)-2-(1-aminopropyl)-5-chloro-3-phenylquinazolin-4(3H)-one (50.3 mg, 0.16 mmol) and 6-chloro-5-(3-ethyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-amine (37.8 mg, 0.17 mmol) in «-BuOH (4 mL) was added DIPEA (35.1 mg, 0.27 mmol). After addition, the reaction mixture was stirred at reflux for 3 hours and concentrated in vacuo. The residue was purified by a silica gel column chromatography (MeOH/DCM (v/v) = 1/100) to give the title compound as a white solid (24.3 mg, 30.1%).

MS (ESI, pos. ion) m/z: 503.3 [M+H]+;

³¹ NMR (400 MHz, CDCb) δ (ppm): 8.76 (s, 1H), 8.04 (s, 1H), 7.60 (m, 5H), 7.48 (s, 2H), 7.34 (d, J = 4.6 Hz, 2H), 5.12 (s, 1H), 3.51 (s, 1H), 2.90 (d, J = 7.0 Hz, 2H), 2.04 (s, 1H), 1.94 (s, 1H), 1.80 (m, 1H), 1.45 (m, 5H).

Example 10 (S)-2-((6-amino-5-(3-ethyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-yl)amino)ethyl)-5-chloro-3-phenylquinazolin-4(3H)-one

To a solution of (S)-2-((6-amino-5-(3-ethyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-yl)amino)ethyl)-5-chloro-3-phenylquinazolin-4(3H)-one (55 mg, 0.18 mmol) in 1-butanol (1 mL) was added 6-chloro-5-(3-ethyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-amine (45 mg, 0.2 mmol) and DIPEA (0.06 mL, 0.37 mmol). After being stirred at 110 °C overnight, the reaction mixture was concentrated in vacuo. The residue was partitioned between CH2Cl2 (50 mL) and H2O (5 mL). The aqueous phase was extracted with CH2Cl2 (50 mL). The combined organic layers were washed with brine (5 mL), dried over anhydrous Na2SCl4, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (MeOH/CH2Cl2 (v/v) = 1/20) to give the title compound as a yellow solid (70 mg, 78%).

MS (ESI, pos. ion) m/z: 489.3 [M+H]+;
Example 11 (S)-2-((6-amino-5-(3-isopropyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-yl)amino)ethyl)-5-chloro-3-phenylquinazolin-4(3H)-one

A mixture of (S)-2-(1-aminoethyl)-5-chloro-3-phenylquinazolin-4(3H)-one (50.6 mg, 0.17 mmol), 6-chloro-5-(3-isopropyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-amine (42.2 mg, 0.17 mmol) and DIPEA (49 mg, 0.38 mmol) in «-BuOH (1 mL) was heated to reflux and stirred further for 15 hours, then cooled to rt, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 100/1) to give the title compound as a yellowish solid (43 mg, 51%).

MS (ESI, pos. ion) m/z: 502.8 [M+H]+;

3¼NMR (400 MHz, CDCl3) δ (ppm): 8.80 (d, J = 6.5 Hz, 1H), 8.05 (s, 1H), 7.71-7.53 (m, 5H), 7.52-7.44 (m, 2H), 7.36 (d, J = 9.2 Hz, 1H), 5.17 (p, J = 6.8 Hz, 1H), 2.91 (q, J = 7.6 Hz, 2H), 1.48 (d, J = 6.7 Hz, 3H), 1.45 (t, J = 7.6 Hz, 3H).

Example 12 (y)-2-((6-amino-5-(3-ethyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-yl)amino)propyl)-5-fluoro-3-phenylquinazolin-4(3H)-one

A mixture of (S)-2-(1-aminopropyl)-5-fluoro-3-phenylquinazolin-4(3H)-one (50.4 mg, 0.17 mmol), 6-chloro-5-(3-ethyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-amine (40.2 mg, 0.17 mmol) and DIPEA (44.8 mg, 0.34 mmol) in n-BuOH (1 mL) was heated at 120 °C and stirred further 2.5 hours, then cooled to rt, and concentrated in vacuo. The residue was purified by a preparative TLC (PE/EtOAc (v/v) = 3/7) to give the title compound as an off-white solid (40 mg, 48%).

MS (ESI, pos. ion) m/z: 486.9 [M+H]+;
\[ \text{MR (400 MHz, DMSO-d}_2\text{)} \delta (ppm): 9.08-9.07 \text{ (d, } J = 7.0 \text{ Hz, 1H)}, 7.98 \text{ (s, 1H), 7.88-7.82} \text{ (m, 1H), 7.61-7.48} \text{ (m, 6H), 7.33-7.28} \text{ (dd, } J = 8.0 \text{, 10.4 Hz, 1H)}, 4.96-4.91 \text{ (m, 1H), 2.89-2.84} \text{ (q, } J = 7.2 \text{ Hz, 2H)}, 1.93-1.88 \text{ (m, 1H), 1.68-1.63} \text{ (m, 1H), 1.36-1.32} \text{ (t, } J = 7.6 \text{ Hz, 3H)}, 0.78-0.74 \text{ (t, } J = 7.6 \text{ Hz, 3H).}

Example 13 (S)-2-(1-((6-amino-5-(2-isopropyl-2H-tetrazol-5-ynpyrimidin-4-yl)amino)ethyn-5-chloro-3-cyclopropylquinazolin-4(3H)-one

Step 1) 2-isopropyl-2 \text{H-tetrazole}

[355] \text{To a solution of tetrazole (1.75 g, 25.0 mmol) in sulfuric acid (18 mL) was added propan-2-ol (2.3 mL, 30 mmol) dropwise over 10 minutes, while maintaining the temperature at 20-25 °C. Then the reaction mixture was stirred at 20-25 °C for 1 hour. Poured the reaction mixture to an ice-water (100 mL), and the resulted mixture was extracted with DCM (35 mL x 3). The combined organic extracts were dried over anhydrous Na}_2\text{SO}_4, and concentrated in vacuo to get the crude product as yellow oil (1.87 g, 67%).}

MS (ESI, pos. ion) m/z: 113.2 [M+H]^+;

\[ \text{¾NMR (400 MHz, CDCb) } \delta (ppm): 8.45 \text{ (s, 1H), 5.08} \text{ (hept, } J = 6.7 \text{ Hz, 1H), 1.63} \text{ (d, } J = 6.7 \text{ Hz, 6H).}

Step 2) 2-isopropyl-5-(tributylstannvP-2 \text{H-tetrazole}

[356] \text{To a solution of 2-isopropyl-2 \text{H-tetrazole (1.67 g, 14.9 mmol) in anhydrous tetrahydrofuran (40 mL, 100 mass%) was added } \text{«-BuLi in hexane (2.4 M, 7.5 mL, 18 mmol) at -78 °C over 45 minutes. Then tributylchlorostannane (5.3 mL, 20 mmol) was added dropwise to the mixture. The mixture was stirred at -60 °C overnight, then quenched with saturated NH}_4\text{Cl aqueous solution, and the resulted mixture was then extracted with EtOAc (35 mL x 3). The combined organic phase was washed with brine (10 mL), dried over anhydrous Na}_2\text{SO}_4, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (EtOAc/PE (v/v) = 1/50) to give the title compound as colorless oil (4.84 g, 81.0%).}

MS (ESI, pos. ion) m/z: 403.3 [M+H]^+;

\[ \text{¾NMR (400 MHz, CDCb) } \delta (ppm): 5.06 \text{ (hept, } J = 6.7 \text{ Hz, 1H), 1.64-1.50} \text{ (m, 12H), 1.38-1.25} \text{ (m, 7H), 1.21-1.13} \text{ (m, 5H), 0.83} \text{ (t, } J = 7.4 \text{ Hz, 9H).} \]
Step 3) 5-(2-isopropyl-2 H-tetrazol-5-yl)-4,6-dimethoxypyrimidine

[357] A mixture of 5-bromo-4,6-dimethoxypyrimidine (3.5 g, 16 mmol), 2-isopropyl-5-(tributylstannyl)-2 H-tetrazole (7.9 g, 20 mmol), Pd(dppf)Cl2-CH2Cl2 (1.3 g, 1.6 mmol) in N,N-dimethylformamide (80 mL) was heated to 125 °C and stirred further for 24 hours under N2 atmosphere, then cooled down to room temperature, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (EtOAc/PE (v/v) = 1/4) to give the title compound as a white solid (2.36 g, 59%).

MS (ESI, pos. ion) m/z: 251.1 [M+H]+;

31P NMR (400 MHz, CDCl3) δ (ppm): 8.52 (s, 1H), 5.96-4.70 (m, 1H), 3.98 (s, 6H), 1.72 (d, J = 6.7 Hz, 6H).

Step 4) 4,6-dichloro-5-(2-isopropyl-2 H-tetrazol-5-yl)pyrimidine

[358] A solution of 5-(2-isopropyltetrazol-5-yl)-4,6-dimethoxypyrimidine (2.36 g, 9.43 mmol) in a mixture of hydrogen chloride (12 mol/L, 15 mL, 180 mmol) and acetic acid (15 mL) was heated to reflux and stirred further for 6 hours, then cooled down to room temperature, and concentrated in vacuo to give the product 5-(2-isopropyltetrazol-5-yl)pyrimidine-4,6-diol (2.1 g, 9.5 mmol, 100%) as a white solid.

Then the product was dissolved in phosphoryl trichloride (25 mL). The reaction mixture was heated to 120 °C and stirred further for 12 hours, then cooled to room temperature, and concentrated in vacuo. To the residue was added ice-water (30 mL), and the resulted mixture was extracted with CH2Cl2 (30 mL × 3). The combined organic extracts were dried over anhydrous Na2SO4, and concentrated in vacuo to give the title product as a yellow solid (2.4 g, 98%).

Step 5) 6-chloro-5-(2-isopropyl-2 H-tetrazol-5-yl)pyrimidin-4-amine

[359] A solution of 4,6-dichloro-5-(2-isopropyltetrazol-5-yl)pyrimidine (2.4 g, 9.3 mmol) in a mixture of ammonia (7 mol/L, 40 mL, 280 mmol) and propan-2-ol (40 mL) was stirred at room temperature for 12 hours, then concentrated in vacuo, and the residue was purified by a silica gel column chromatography (EtOAc/PE (v/v) = 2/5) to give the product as a white solid (1.16 g, 52%).

MS (ESI, pos. ion) m/z: 240.2 [M+H]+;

1H NMR (400 MHz, CDCl3) δ (ppm): 8.37 (s, 1H), 5.18 (hept, J = 6.7 Hz, 1H), 1.74 (d, J = 6.7 Hz, 6H).

Step 6) (S)-2-(1-((6-amino-5-(2-isopropyl-2 H-tetrazol-5-yl)pyrimidin-4-vnamino)ethyn-5-chloro-3-cyclopropylquinazolin-4(3 H)one

95
A solution of (i)-2-(l-aminoethyl)-5-chloro-3-cyclopropylquinazolin-4(3 H)-one (100.5 mg, 0.3811 mmol), DIPEA (102.6 mg, 0.7939 mmol) and 6-chloro-5-(2-isopropyltetrazol-5-yl)pyrimidin-4-amine (91.6 mg, 0.382 mmol) in «-BuOH (4 mL) was heated to reflux and stirred overnight. The reaction solution was concentrated in vacuo and the residue was purified by a prep-TLC to give the title compound as a white solid (140 mg, 78%).

MS (ESI, pos. ion) m/z: 467.3 [M+H]+;

¾ NMR (600 MHz, CDCb) δ (ppm): 9.12 (d, J = 7.5 Hz, 1H), 8.15 (s, 1H), 7.55-7.49 (m, 2H), 7.40 (dd, J = 5.6, 3.4 Hz, 1H), 6.41-6.34 (m, 1H), 5.19 (dt, J = 13.4, 6.7 Hz, 1H), 3.48 (s, 1H), 3.11 (ddd, J = 11.1, 7.1, 4.2 Hz, 1H), 2.04 (d, J = 6.7 Hz, 1H), 1.76 (t, J = 6.7 Hz, 6H), 1.66 (d, J = 6.7 Hz, 3H), 1.46-1.39 (m, 2H), 1.19-1.12 (m, 1H), 0.95-0.88 (m, 1H).

Example 14 (y)-2-(l-((6-amino-5-(2-isopropyl-2 H-tetrazol-5-yl)pyrimidin-4-yl)amino)ethyl)-5-fluoro-3-phenylquinazolin-4(3H)-one

[361] To a suspension of (5)-2-(l-aminoethyl)-5-fluoro-3-phenylquinazolin-4(3 H)-one (50 mg, 0.18 mmol) and 6-chloro-5-(2-isopropyl-2 H-tetrazol-5-yl)pyrimidin-4-amine (43 mg, 0.18 mmol) in w-BuOH (5 mL) was added DIPEA (0.1 mL, 0.5 mmol). The mixture was stirred at 120 °C overnight, then cooled to rt and filtered. The filter cake was washed with water/ethanol (10/1 v/v, 2 mL), dried in vacuo to give the title compound as a white solid (25 mg, 29.1%).

MS (ESI, pos. ion) m/z: 487.1 [M+H]+;

¾ NMR (400 MHz, DMSO-<&>) δ (ppm): 8.94-8.93 (d, J = 6.9 Hz, 1H), 7.97 (s, 1H), 7.87-7.82 (m, 1H), 7.61-7.55 (m, 5 H), 7.51-7.49 (d, J = 8.2 Hz, 3 H), 7.33-7.28 (dd, J = 10.8, 8.3 Hz, 1H), 5.29 (m, 1H), 4.97-4.94 (m, 1H), 1.70-1.69 (d, J = 6.6 Hz, 6 H), 1.41-1.39 (d, J = 6.6 Hz, 3 H).

Example 15 (Sl-2-(l-((6-amino-5-(5-isopropyl-1,3.4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-5-chloro-3-phenylquinazolin-4(3 H)-one

Step 1) tert-butyl 2-isobutyrylhydrazinecarboxylate
To a mixture of tert-butyl N-aminocarbamate (1.24 g, 9.38 mmol) and N,N-diethylethanamine (1.80 g, 18.0 mmol) in dichloromethane (10 mL) was added 2-methylpropanoyl chloride (1 mL, 9.48 mmol) at 0 °C. The mixture then moved to rt and stirred overnight, then quenched with H₂O (30 mL) and DCM (30 mL). The aqueous phase was extracted with DCM (20 mL), and the combined organic phases were washed with saturated brine (15 mL), dried over anhydrous Na₂SO₄, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 2/1) to give the title compound as a white solid (645 mg, 34%).

MS (ESI, pos. ion) m/z: 147.0 (M+1-56);

¾ NMR (400 MHz, CDCl₃) δ (ppm): 7.30 (br s, 1H), 6.51 (br s, 1H), 2.45-2.38 (tt, J = 6.8, 6.8 Hz, 1H), 1.47 (s, 9H), 1.20-1.18 (d, J = 6.8 Hz, 6H).

Step 2) isobutyrohydrazide hydrochloride

To a solution of tert-butyl 2-isobutyrylhydrazinecarboxylate (645 mg, 3.19 mmol) in EtOAc (4 mL) was added a solution of hydrogen chloride in EtOAc (4 M, 10 mL) at 17 °C. The resulted solution was stirred at 30 °C for 4 hours, and concentrated in vacuo to give the title compound as a white solid (442 mg, 100%) which was used for the next step without further purification.

MS (ESI, pos. ion) m/z: 103.0 [M+H]⁺.

Step 3) 4,6-dichloro -N'-isobutyrylpyrimidine-5-carbohydrazide

A solution of 4,6-dichloropyrimidine-5-carboxylic acid (590.0 mg, 3.05 mmol) and DMF (50.0 mg, 0.68 mmol) in tetrahydrofuran (3 mL) was heated to reflux and stirred further for 1.5 hours, then cooled to rt, and concentrated in vacuo. The residue was dissolved in DCM (4 mL) and the resulted solution was added to a mixture of isobutyrohydrazide hydrochloride (442 mg, 3.19 mmol) and N,N-diethylethanamine (1 mL) in dichloromethane (12 mL) at 0 °C. The resulted mixture was stirred at this temperature overnight, then concentrated in vacuo at 30 °C to give a yellowish solid, which was stirred with a mixed solvent of H₂O (3 mL), EtOAc (4 mL) and PE (6 mL) at rt for 1 hour, then the light yellowish solid (980 mg, 115%) was collected through filtration.

MS (ESI, pos. ion) m/z: 277.0 [M+H]⁺.

Step 4) 4-amino-6-chloro -N'-isobutyrylpyrimidine-5-carbohydrazide

To a suspension of 4,6-dichloro -N'-isobutyrylpyrimidine-5-carbohydrazide (980 mg, 3.5365 mmol) in isopropanol (10 mL) was bubbled with ammonia. The mixture was heated
to 50 °C in sealed tube and stirred overnight, then cooled to rt, and »-hexane (10 mL) was added to the system. The resulted mixture was stirred at rt for 2 hours, and the title compound as a light yellowish solid (600 mg, 66%) was collected by filtration.

MS (ESI, pos. ion) m/z: 258.0 [M+H]+;

¾ NMR (400 MHz, DMSO-d6) δ (ppm): 8.27 (s, 1H), 7.51 (br s, 4H), 2.54-2.47 (q, J = 6.8 Hz, 1H), 1.08-1.06 (d, J = 6.8 Hz, 6H).

Step 5) 6-chloro-5-(5-isopropyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine

[366] To a suspension of 4-amino-6-chloro-N′-isobutyrylpyrimidine-5-carbohydrazide (600 mg, 2.32 mmol) and pyridine (408 mg, 5.12 mmol) in dichloromethane (20 mL) was added trifluoromethanesulfonic anhydride (1 mL, 5.92 mmol) at -10 °C. The resulting solution was stirred at this temperature for another 1 hour, then warmed to 0 °C gradually and stirred overnight, then quenched with saturated NaHCO₃ aqueous solution (20 mL), and the aqueous phase was extracted with DCM (20 mL). The combined organic phases was washed with saturated brine (20 mL), concentrated in vacuo, and the residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 2/1) to give the title compound as a light yellowish solid (15 mg, 3%).

MS (ESI, pos. ion) m/z: 240.0 [M+H]+;

¾ NMR (400 MHz, CDCl₃) δ (ppm): 8.68 (br s, 1H), 8.38 (s, 1H), 6.05 (br s, 1H), 3.32 (dt, J = 14.0, 7.2 Hz, 1H), 1.48 (d, J = 6.8 Hz, 6H).

Step 6) (j′)-2-(l-(6-amino-5-(5-isopropyl-L3,4-oxadiazol-2-yl)pyrimidin-4-yl)aminoethyl)-5-chloro-3-phenylquinazolin-4(3 H)-one

[367] A mixture of (S)-2-(l-aminoethyl)-5-chloro-3-phenylquinazolin-4(3 H)-one (19.1 mg, 0.06 mmol), DIPEA (20.1 mg, 0.15 mmol) and 6-chloro-5-(5-isopropyl-L3,4-oxadiazol-2-yl)pyrimidin-4-amine (13 mg, 0.05 mmol) in »-BuOH (1 mL) was heated to 120 °C and stirred further for 5 hours, then cooled to rt, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 50/1) to give the title compound as an off-white solid (19 mg, 59%).

MS (ESI, pos. ion) m/z: 502.8 [M+H]+;

¾ NMR (400 MHz, DMSO-^) δ (ppm): 8.65-8.63 (d, J = 6.8 Hz, 1H), 7.96 (s, 1H), 7.80-7.76 (dd, J = 8.0, 8.0 Hz, 1H), 7.61-7.75 (m, 7H), 7.24 (br s, 2H), 4.88-4.83 (dt, J = 6.4, 6.4 Hz, 1H), 3.40-3.29 (m, 1H), 1.39-1.36 (m, 9H).
Example 16 H-2-(l-((6-amino-5-(5-ethyl-L3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyn-5-
chloro-3-phenylquinazolin-4(3H)-one

Step 1) propionohydrazide

To a mixture of ethyl propionate (10 g, 97.9 mmol) in 25 mL of anhydrous EtOH was added hydrazine hydrate (4.5 mL, 93.0 mmol, 80%). The mixture was refluxed at 90 °C for 8 hours, then cooled down to rt and concentrated in vacuo to give the title compound as a white solid (4.37 g, 54%).

MS (ESI, pos. ion) m/z: 89.2 [M+H]+.

Step 2) 4,6-dichloropyrimidine-5-carbonyl chloride

To a mixture of 4,6-dichloropyrimidine-5-carboxylic acid (2.0 g, 10.0 mmol) in 10 mL of THF was added DMF (0.1 mL, 1.0 mmol) and SOCl (1.2 mL, 16 mmol). The mixture was heated at 80 °C for 7 hours, and concentrated in vacuo to give the title compound was yellow oil (2.12 g, 97%), which was used directly in the next step.

Step 3) 4,6-dichloro-N'-propionylpyrimidine-5-carbodrazide

To a 0 °C stirred mixture of propionohydrazide (1.0 g, 11.0 mmol) and triethylamine (3 mL, 21.0 mmol) in DCM (6 mL) was added a solution of 4,6-dichloropyrimidine-5-carbonyl chloride (2.12 g, 10.0 mmol) in DCM (15 mL) slowly. The mixture was continued to stir at this temperature for 2 hours, and then concentrated in vacuo. The residue was stirred with a mixed solvent of PE/EtOAc/H2O (9 mL/10 mL/10mL) at rt for 3 hours, then filtered to give the title compound as a yellow solid (1.48 g, 54%).

MS (ESI, pos. ion) m/z: 263.0 [M+H]+.

Step 4) 4-amino-6-chloro -N'-propionylpyrimidine-5-carbodrazide

To a sealed tube was added 4,6-dichloro -N'-propionylpyrimidine-5-carbodrazide (1.48 g, 5.63 mmol) and a solution of NH3 in isopropanol (30 mL, 3.0 M). The mixture was stirred in a sealed tube at 90 °C overnight, then cooled to rt and filtered to give the title compound as a yellow solid (1.1 g, 81.0%).

MS (ESI, pos. ion) m/z: 244.2 [M+H]+;
$\frac{3}{4}$ NMR (600 MHz, DMSO-$d_{6}$) $\delta$ (ppm): 8.28 (s, 1 H), 7.87 (s, 2 H), 7.47 (s, 2 H), 2.23 (q, $J = 7.6$ Hz, 2 H), 1.06 (t, $J = 7.6$ Hz, 3 H).

Step 5) 6-chloro-5-(5-ethyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine

[372] To a suspension of 4-amino-6-chloro-$N'$-propionylpyrimidine-5-carboxyhydrazide (500 mg, 2.05 mmol) in 20 mL of toluene was added Burguess reagent (978 mg, 4.10 mmol). The mixture was heated to 110 °C and stirred further for 2 hours, then cooled to rt, and concentrated in vacuo. The residue was dissolved in a mixed solvent of EtOAc/water (15 mL/5 mL), and the aqueous phase was extracted with EtOAc (10 mL). The combined organic phase was washed with brine (10 mL), dried over anhydrous Na$_2$SO$_4$ and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 4/1) to give the title compound as a pale yellow solid (60 mg, 13.0%).

MS (ESI, pos. ion) m/z: 226.0 [M+H]$^+$;

$\frac{3}{4}$ NMR (600 MHz, DMSO-$d_{6}$) $\delta$ (ppm): 8.38 (s, 1 H), 7.76 (s, 2 H), 2.95 (q, $J = 7.5$ Hz, 2 H), 1.33 (t, $J = 7.6$ Hz, 3 H).

Step 6) (s)-2-(l-(6-amino-5-(5-ethyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-5-chloro-3-phenylquinazolin-4(3 $H$)-one

[373] To a suspension of 6-chloro-5-(5-ethyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (30 mg, 0.13 mmol) and (5)-2-(l-aminoethyl)-5-chloro-3-phenylquinazolin-4(3 $H$)-one (39.0 mg, 0.13 mmol) in «-BuOH (5 mL) was added 0.1 mL of DIPEA. The mixture was stirred at 120 °C overnight, then cooled to rt and concentrated in vacuo. The residue was purified by a preparative TLC (DCM/MeOH (v/v) = 20/1) to give the title compound as a pale yellow solid (33.1 mg, 53%).

MS (ESI, pos. ion) m/z: 489.8 [M+H]$^+$;

$\frac{3}{4}$ NMR (400 MHz, CDCl$_3$) $\delta$ (ppm): 8.49 (d, $J = 7.0$ Hz, 1 H), 8.02 (s, 1 H), 7.60 (d, $J = 4.3$ Hz, 2 H), 7.55 (m, 3 H), 7.47 (dd, $J = 8.8$, 4.5 Hz, 2 H), 7.33 (d, $J = 9.1$ Hz, 1 H), 6.40 (s, 2 H), 5.14 (m, 1 H), 3.09-3.00 (m, 2H), 1.51 (d, $J = 7.6$ Hz, 3H), 1.49-1.44 (t, $J = 4.28$ Hz, 3H).

Example 17 (5$^3$-3-(l-(6-amino-5-(5-methyl-1,3 .4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-2-cyclopropyl-8-fluoroisoquinolin-l(2 $H$)-one
Step 1) N-cyclopropyl-2-fluoro-6-methylbenzamide

[374] To a suspension of 2-fluoro-6-methylbenzoic acid (4.0 g, 25.95 mmol) in toluene (26 mL) was added SOCb (7.5 mL, 103.80 mmol) at rt. The reaction was stirred at 90 °C overnight, then cooled to rt, and concentrated in vacuo. The residue was dissolved in 30 mL of THF and to the resulted solution was added triethylamine (10.85 mL, 77.85 mmol) and then cyclopropanamine (1.89 mL, 27.25 mmol) dropwise at 0 °C. The resulted mixture was stirred at rt for 5 hours, then concentrated in vacuo, and the residue was suspended between H2O (200 mL) and EtOAc (200 mL). The organic phase was washed with saturated NaHCCb aqueous solution (200 mL) and then saturated brine (200 mL), dried over anhydrous Na2S04, and concentrated in vacuo to give the title compound as an off-white solid (4.25 g, 85%).

¾ NMR (400 MHz, CDCb) δ (ppm): 7.23-7.17 (dd, J = 8.0, 8.0, 6.0 Hz, 1H), 6.97-6.95 (d, J = 7.6 Hz, 1H), 6.89-6.85 (dd, J = 8.8, 8.8 Hz, 1H), 6.00 (br s, 1H), 2.92-2.85 (m, 1H), 2.36 (s, 3H), 0.88-0.83 (m, 2H), 0.62-0.58 (m, 2H).

Step 2) flf-3-(l-aminoethyl)-2-cyclopropyl-8-fluoroisoquinolin-l(2 __H)-one

[375] To a solution of N-cyclopropyl-2-fluoro-6-methylbenzamide (3.00 g, 15.53 mmol) in THF (22 mL) was added «-BuLi (2.4 M in hexane, 16.2 mL, 38.82 mmol) dropwise over 30 minutes at -30 °C under N2 atmosphere, the resulted dark yellowish solution was stirred at this temperature for 30 minutes.

To a solution of (S)-tert-butyl (1-(methoxy(methyl)amino)-1-oxopropan-2-yl)carbamate (5.41 g, 23.29 mmol) in THF (110 mL) was added /-PrMgCl (2M, 12.8 mL, 25.6 mmol) dropwise over 30 minutes at -30 °C under N2 atmosphere, and stirred at -30 °C for another 30 minutes. Then the resulted solution was added to the above system dropwise at -30 °C. The resulted mixture was stirred at -15 °C for 2 hours, quenched with H2O (5 mL), acidified to pH = 1 with cone. HC1 aqueous solution at 0 °C, and concentrated in vacuo. The residue was dissolved in 45 mL of MeOH and then was added cone. HC1 (22 mL). The resulted solution was stirred at 80 °C for 1 hour, then cooled to rt, and concentrated in vacuo. The residue was dissolved in a mixed solvent of DCM (40 mL) and MeOH (20 mL), and to the resulted solution was basified to pH = 8.5 by adding NaHCCb powder. The mixture was stirred at rt for 4 hours, then concentrated in vacuo, and the residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 10/1) to give the title compound as yellowish colloid (4.5 g, 80%).

MS (ESI, pos. ion) m/z: 247.0 [M+H]+;
(400 MHz, CDC$_b$) δ (ppm): 7.53-7.48 (ddd, $J = 8.0, 8.0, 4.8$ Hz, 1H), 7.22 (d, $J = 8.0$ Hz, 1H), 7.06-7.01 (ddd, $J = 0.8, 8.0, 11.6$ Hz, 1H), 6.63-6.62 (d, $J = 2.0$ Hz, 1H), 4.82 (q, $J = 6.4$ Hz, 1H), 2.95-2.92 (m, 1H), 1.46-1.45 (d, $J = 6.4$ Hz, 3H), 1.34-1.25 (m, 2H), 0.95-0.82 (m, 2H).

Step 3) (S,V3-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-2-cyclopropyl-8-fluoroisoquinolin-l(2 $H$)-one

[376] A mixture of (S)-3-((l-aminopropyl)-2-cyclopropyl-8-fluoroisoquinolin-l(2 $H$)-one (51.5 mg, 0.209 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (47.1 mg, 0.223 mmol) and DIPEA (52.6 mg, 0.407 mmol) in «-BuOH (2 mL) was refluxed at 125 °C for 20 hours, then cooled to rt, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 50/1) to give crude product which was further purified by a preparative TLC (pure EtOAc) to give the title compound as a yellowish solid (53 mg, 60%).

MS (ESI, pos. ion) m/z: 421.9 [M+H]$^+$;

EF

[377] A mixture of (S)-3-((l-aminopropyl)-2-cyclopropyl-8-fluoroisoquinolin-l(2 $H$)-one (47.7 mg, 0.183 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (44.8 mg, 0.212 mmol) and DIPEA (51.9 mg, 0.402 mmol) in «-BuOH (2 mL) was refluxed at 120 °C for 12 hours, then cooled to rt, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 50/1) to give the crude product which was further purified by a preparative TLC (pure EtOAc) to give the title compound as an off-white solid (11 mg, 14%).

MS (ESI, pos. ion) m/z: 435.9 [M+H]$^+$;
\[ ^1 \text{HNMR} \ (600 \text{ MHz, CDCl}_3) \delta \text{ (ppm): } 8.82-8.81 \ (d, J = 7.2 \text{ Hz, } 1\text{H}), 8.10 \ (s, 1\text{H}), 7.45-7.41 \ (\text{ddd, } J = 8.4, 8.4, 4.8 \text{ Hz, } 1\text{H}), 7.09-7.07 \ (d, J = 7.8 \text{ Hz, } 1\text{H}), 7.00-6.97 \ (\text{dd, } J = 11.4, 7.8 \text{ Hz, } 1\text{H}), 6.36 \ (s, 1\text{H}), 6.02-5.99 \ (m, 3\text{H}), 3.02-2.98 \ (m, 1\text{H}), 2.69 \ (s, 3\text{H}), 2.07-2.00 \ (m, 1\text{H}), 1.88-1.80 \ (m, 1\text{H}), 1.52-1.47 \ (m, 1\text{H}), 1.41-1.36 \ (m, 1\text{H}), 1.33-1.27 \ (m, 1\text{H}), 1.12-1.10 \ (t, J = 7.2 \text{ Hz, } 3\text{H}), 0.94-0.90 \ (m, 1\text{H}). \]

**Example 19**

(S)-3-(1-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)propyl)-8-methyl-2-phenylisoquinolin-1(2H)-one

![Chemical structure](image)

[378] A mixture of (>S)-3-(1-aminopropyl)-8-methyl-2-phenylisoquinolin-1(2H)-one (50.3 mg, 0.172 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (40.6 mg, 0.192 mmol) and Et$_3$N (87.1 mg, 0.816 mmol) in BuOH (2.5 ml) was heated to reflux and stirred further for 18 hours, then cooled to rt, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 50/1) to give the title compound as a yellowish solid (60 mg, 75%).

**MS** (ESI, pos. ion) m/z: 468.3 [M+H$^+$];

\[ ^1 \text{H NMR} \ (400 \text{ MHz, DMSO-d}_6) \delta \text{ (ppm): } 8.34 \ (d, J = 6.7 \text{ Hz, } 1\text{H}), 7.97 \ (s, 1\text{H}), 7.59-7.44 \ (m, 5\text{H}), 7.40 \ (dd, J = 7.2, 4.7 \text{ Hz, } 2\text{H}), 7.20 \ (d, J = 7.2 \text{ Hz, } 2\text{H}), 6.55 \ (s, 1\text{H}), 4.56 \ (dd, J = 10.9, 8.5 \text{ Hz, } 1\text{H}), 2.72 \ (s, 3\text{H}), 2.59 \ (s, 3\text{H}), 1.84-1.79 \ (m, 1\text{H}), 1.66-1.61 \ (m, 1\text{H}), 0.74 \ (t, J = 7.2 \text{ Hz, } 3\text{H}). \]

**Example 20**

(j')-3-1-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-8-methyl-2-phenylisoquinolin-1(2H)-one

![Chemical structure](image)

**Step 1) 2,6-dimethyl-N-phenylbenzamide**

[379] To a mixture of 2,6-dimethylbenzoic acid (1.99 g, 13.3 mmol) and N,N-dimethylformamide (103 mg, 1.409 mmol) in dichloromethane (15 mL) was added oxalyl dichloride (2.25 mL) at rt. The reaction was stirred at rt for 4 hours, then concentrated in vacuo,
and the residue was dissolved in 4 mL of 1,4-dioxane. The resulted solution was added to a mixture of aniline (1.28 g, 13.7 mmol) and sodium bicarbonate (2.80 g, 175 mmol) in 1,4-dioxane (11 mL) and water (7 mL) at 0°C, then moved to rt, and stirred overnight. The mixture was poured into ¾ 0 (100 mL), and extracted with EtOAc (50 mL × 2). The combined organic phase was concentrated in vacuo, and the residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 10/1) to give the title compound as an off-white solid (740 mg, 25%).

MS (ESI, pos. ion) m/z: 226.0 [M+H]+;

¾NMR (400 MHz, CDCl3) δ (ppm): 7.63-7.61 (d, J = 8.0 Hz, 2H), 7.39-7.36 (dd, J = 8.0, 8.0 Hz, 2H), 7.36 (br s, 1 H), 7.23-7.13 (m, 2H), 7.08-7.06 (d, J = 7.6 Hz, 2H), 2.40 (s, 6H).

Step 2) (S)-3-(l-aminoethyl)-8-methyl-2-phenylisoquinolin-1(2H)-one

[380] To a solution of 2,6-dimethyl-N-phenylbenzamide (730 mg, 3.240 mmol) in 25 mL of THF was added n-BuLi (2.4 M in hexane, 4 mL) at -30 °C, then the solution was stirred at this temperature for 30 minutes.

To a solution of (S)-tert-butyl (l-(methoxy(methyl)amino)-l-oxopropan-2-yl)carbamate (1.14 g, 4.91 mmol) in 15 mL of THF was added t-PrMgCl (3 mL) at -30 °C, after addition, the mixture was stirred at this temperature for 30 minutes, and then added to the above system at -30 °C. The resulted mixture was stirred at -15 °C for 1 hour, and quenched with 20 mL of saturated NH4Cl aqueous solution. The separated organic phase was washed with 20 mL of saturated brine, concentrated in vacuo, and the residue was dissolved in 10 mL of MeOH. To the resulted solution was added 5 mL of HCl aqueous solution (36%). The mixture was heated to 90 °C and stirred further for 2 hours, then cooled to rt, and concentrated in vacuo. The residue was dissolved in 20 mL of EtOAc and 35 mL of H2O. The aqueous phase was extracted with a mixed solvent of PE/EtOAc (5 mL/5mL), and basified to pH = 8.5 with NaHCO3 powder. The yellowish solid was collected by filtration, dried in oven at 60 °C under vacuum for 4 hours to afford the title compound (329 mg, 36% for two steps).

MS (ESI, pos. ion) m/z: 279.0 [M+H]+;

¾ NMR (400 MHz, CDCl3) δ (ppm): 7.56-7.52 (m, 2H), 7.50-7.44 (m, 2H), 7.38-7.36 (d, J = 8.0 Hz, 1H), 7.29-7.26 (m, 2H), 7.21-7.19 (d, J = 7.2 Hz, 1H), 6.68 (s, 1H), 3.70-3.65 (q, J = 6.4 Hz, 1H), 2.86 (s, 3H), 1.27-1.25 (d, J = 6.4 Hz, 3H).

Step 3) (S)-3-[[6-amino-5-(5-methyl-1.3.4-oxadiazol-2-vnpyrimidin-4-yl)amino]ethvn-8-methyl-2-phenylisoquinolin- l(2H)-one
A mixture of (i)-3-(l-aminoethyl)-8-methyl-2-phenylisoquinolin-l(2 H)-one (55.0 mg, 0.198 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (42.0 mg, 0.198 mmol) and DIPEA (47.4 mg, 0.367 mmol) in «-BuOH (2 mL) was refluxed at 125 °C for 13 hours, then cooled to rt, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 1/4) to give the title compound as a light yellowish solid (57 mg, 64%).

MS (ESI, pos. ion) m/z: 454.0 [M+H]+;

\[ \delta (ppm): 8.57-8.55 (d, J = 6.4 Hz, 1H), 7.99 (s, 1H), 7.53-7.48(m, 1H), 7.46-7.38 (m, 4H), 7.32-7.27 (m, 2H), 7.19-7.17 (d, J = 7.6 Hz, 1H), 6.53 (s, 1H), 5.96 (br s, 2H), 5.03-4.96 (dq, J = 6.8, 6.8 Hz, 1H), 2.85 (s, 3H), 2.67 (s, 3H), 1.46-1.44 (d, J = 6.8 Hz, 3H). \]

Example 21 (y)-3-(l-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)propyl)-8-fluoro-2-phenylisoquinolin-l(2 H)-one

[382] To a suspension of (i)-3-(l-aminopropyl)-8-fluoro-2-phenylisoquinolin-l(2 H)-one (150 mg, 0.51 mmol) and 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (108 mg, 0.51 mmol) in «-BuOH (6 mL) was added DIPEA (0.3 mL, 1.72 mmol), the mixture was stirred at 120 °C overnight, then concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 1/5) to give the title compound as an off-white solid (62 mg, 25.7%).

MS (ESI, pos. ion) m/z: 472.9 [M+H]+;

\[ \delta (ppm): 8.76 (d, J = 6.6 Hz, 1H), 8.05 (s, 1H), 7.57-7.43 (m, 1H), 7.33-7.31 (d, J = 7.6 Hz, 1H), 7.19-7.17 (d, J = 7.9 Hz, 1H), 7.05-7.01 (dd, J = 11.3, 8.1 Hz, 1H), 6.47 (s, 1H), 6.05 (s, 2H), 4.84-4.79 (m, 1H), 2.68 (s, 3H), 1.84 (m, 2 H), 0.84 (t, J = 7.4 Hz, 3H). \]

Example 22 (y)-3-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-8-fluoro-2-phenylisoquinolin-l(2H)-one
[383] To a stirred solution of 2-fluoro-6-methyl-N-phenyl-benzamide (2.0 g, 8.7 mmol) in anhydrous THF (20 mL) was added BuLi (9.2 mL, 22.1 mmol, 2.4 M in hexane) dropwise over 30 minutes. The mixture was stirred at -30 °C for 35 minutes to give a red brown solution (i-1) which was used directly in the next step without further purification.

To a -30 °C stirred suspension of tert-butyl (1-(methoxy(methyl)amino)-1-oxopropan-2-yl)carbamate (3.04 g, 13.1 mmol) in dried THF (25 mL) was added PrMgCl (2.0 M in THF, 7.2 mL, 14.4 mmol) dropwise over 30 minutes, after addition, the mixture was stirred at this temperature for 35 minutes to give the pale yellow liquid (i-2).

To the above resulted solution (i-1) was added the above pale yellow liquid (i-2) dropwise at -30 °C. The mixture was stirred at -15 °C for 3.5 hours, then quenched with water (50 mL), and partitioned between saturated NH4Cl aqueous solution (100 mL) and EtOAc (100 mL). The aqueous phase was extracted with EtOAc (100 mL x 2). The combined organic phases were washed with saturated NH4Cl aqueous solution (100 mL), brine (100 mL), dried over anhydrous Na2SO4 and concentrated in vacuo to give the title compound as a pale yellow solid, which was directly used in the next step.

[384] To a solution of (S)-tert-butyl (4-(3-fluoro-2-(phenylcarbamoyl)phenyl)-3-oxobutan-2-yl)carbamate (4.0 g, 10 mmol) in MeOH (20 mL) was added concentrated HCl (20 mL). The mixture was heated at 95 °C overnight, then cooled to it and concentrated in vacuo. The residue was partitioned in PE/EtOAc (50 mL/25 mL) and water (20 mL). The aqueous phase was basified with NaHCCb powder and the resulted mixture was extracted with DCM (100 mL x 3). The combined organic phases were washed brine (150 mL) and concentrated in vacuo. The residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 50/1) to give the title compound as an off-white solid (1.8 g, 64%).

MS (ESI, pos. ion) m/z: 283.1 [M+H]+.

Step 3) (y)-3-((6-amino-5-(5-methyl-L3,4-oxadiazol-2-vnpyrimidin-4-yl)amino)ethyl)-8-fluoro-2-phenyli soquinolin- 1(2H)-one
To a suspension of (i)-3-(l-aminoethyl)-8-fluoro-2-phenylisoquinolin-1(2 \( H \))-one (100 mg, 0.35 mmol) and 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (75 mg, 0.35 mmol) in \( \text{CH}_2\text{Cl}_2 \) (5 mL) was added DIPEA (0.3 mL, 1.72 mmol). The mixture was stirred at 125 °C for 5 hours, then concentrated \textit{in vacuo}, and the residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 1/5) to give the title compound as an off-white solid (62 mg, 38.2%).

MS (ESI, pos. ion) m/z: 458.1 [M+H]⁺;

\(^1\)H NMR (400 MHz, CDCl\(_3\)) \( \delta \) (ppm): 8.64 (d, \( J = 6.5 \) Hz, 1 H), 8.01 (s, 1H), 7.55-7.47 (m, 3H), 7.44-7.40 (m, 2H), 7.32-7.30 (d, \( J = 7.4 \) Hz, 1H), 7.21-7.20 (d, \( J = 7.9 \) Hz, 1H), 7.06-7.01 (dd, \( J = 11.3, 8.1 \) Hz, 1H), 6.55-6.54 (d, \( J = 1.6 \) Hz, 1H), 5.99 (s, 2 H), 5.02-4.95 (m, 1 H), 2.67 (s, 3H), 1.45-1.44 (d, \( J = 6.8 \) Hz, 3H).

**Example 23** (5)-3-(l-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-vnpyrimidin-4-yl)amino)ethyl)-2-cyclopropyl-8-methylisoquinolin-1(2 \( H \))-one

![Chemical structure](image)

**Step 1) \textit{N}-cyclopropyl-2,6-dimethylbenzamide**

To a solution of 2,6-dimethylbenzoic acid (2.06 g, 13.7 mmol) in DCM (10 mL) was added oxalyl dichloride (2.3 mL, 27 mmol) at room temperature, the reaction was stirred at 45 °C for 5 hours, then cooled to room temperature, and concentrated \textit{in vacuo}. The residue was dissolved in DCM (20 mL) and to the resulted solution was added Et\(_3\)N (5.5 mL, 40 mmol) and cyclopropylanamine (1 mL, 14.4 mmol) at room temperature. The resulted solution was stirred at room temperature overnight. The reaction was washed with H\(_2\)O (100 mL x 2), saturated NaHCO\(_3\) aqueous solution (100 mL x 2) and saturated brine (100 mL). The separated organic phase was dried over anhydrous sodium sulfate and concentrated \textit{in vacuo}. The residue was purified by a silica gel column chromatography (EtOAc/PE (v/v) = 1/4) to give the title compound as a white solid (1.35 g, 52%).

MS (ESI, pos. ion) m/z: 190.1 [M+H]⁺;

\(^3\)N NMR (400 MHz, DMSO-\(d_6\)) \( \delta \) (ppm): 8.30 (s, 1H), 7.19-7.09 (m, 1H), 7.02 (d, \( J = 7.5 \) Hz, 2H), 2.81 (m, 1H), 2.18 (s, 6H), 0.72-0.61 (m, 2H), 0.52-0.43 (m, 2H).

**Step 2) (\( \gamma \))-3-(1-aminoethyl)-2-cyclopropyl-8-methylisoquinolin-1(2\( H \))-one**
To a solution of \(N\)-cyclopropyl-2,6-dimethylbenzamide (1.2 g, 6.3 mmol) in THF (10 mL) was added \(n\)-BuLi (2.4 M in hexane, 6.6 mL, 15.84 mmol) dropwise over 0.5 hour at -30 °C under \(N_2\) atmosphere, the resulted yellowish solution was stirred at this temperature for 2 hours (solution 1).

To a solution of \((S)\)-i-ert-butyl \((1-(methoxy(methyl)amino)-1-\text{oxopropan-2-yl})\)carbamate (2.202 g, 9.480 mmol) in THF (15 mL) was added \(\text{-PrMgCl}\) (2M, 5.2 mL, 10.4 mmol) dropwise over 0.5 hour at -30 °C under \(N_2\) atmosphere and the resulted solution was stirred at -30 °C for 2 hours (solution 2).

To the solution 1 was added solution 2 dropwise at -30 °C over 0.5 hour. The resulted solution was stirred at -15 °C for 2.5 hours, quenched with 40 mL of H2O, and the resulted mixture was dispersed in 100 mL of EtOAc and 100 mL of saturated NH4Cl aqueous solution. The aqueous phase was extracted with EtOAc (100 mL \(\times\) 2). The combined organic phases were washed with 100 mL of saturated NH4Cl aqueous solution and 100 mL of saturated brine, and concentrated in vacuo to give a yellowish solid. The yellowish solid was dissolved in 20 mL of MeOH and to the resulted solution was added concentration HCl (20 mL) at room temperature. The solution was stirred at 95 °C for 3 hours, then cooled to room temperature, and concentrated in vacuo. The residue was extracted with PE/EtOAc (50 mL/25 mL), the aqueous phase was basified with Na2CO3 powder to pH = 8.5, and then extracted with DCM (100 mL \(\times\) 3). The combined organic phases were washed with 100 mL of saturated brine, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (EtOAc/PE \((v/v) = 4/1\)) to give the title compound as yellowish oil (1 g, 65%).

MS (ESI, pos. ion) m/z: 243.1 [M+H]+;

\(\text{\(3/4\) NMR (400 MHz, DMSO-\text{d6}) \(\delta\) (ppm): 8.24 (s, 1H), 7.24 (d, \(J = 9.4\) Hz, 4H), 2.90-2.72 (m, 1H), 2.31 (s, 3H), 0.67 (m, 2H), 0.54-0.49 (m, 2H).}

Step 3) \((-\text{fll-3-1-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyn-2-}
\text{cyclopropyl-8-methylisoquinolin-l(2 \(H\)-one)

A mixture of \((-\text{i-3-(1-aminoethyl)-2-cyclopropyl-8-methylisoquinolin-l(2 \(H\)-one)}\) (100 mg, 0.3592 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (83.9 mg, 0.396 mmol) and DIPEA (0.12 mL,0.73 mmol) in w-BuOH (4 mL) was heated to 125 °C and stirred further for 4 hours, then cooled to room temperature, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (EtOAc/PE \((v/v) = 2/1\)) to give the title compound as a white solid (97.4 mg, 64.9%).

MS (ESI, pos. ion) m/z: 417.9 [M+H]+;
¾NMR (400 MHz, DMSO-đ) δ (ppm): 7.44 (d, J = 7.5 Hz, 1H), 7.34 (d, J = 7.8 Hz, 1H), 7.14 (d, J = 12 Hz, 1H), 6.66 (s, 1H), 4.60 (dd, J = 6.5 Hz, J = 6.5 Hz, 1H), 2.93 (m, 1H), 2.75 (s, 3H), 1.32 (d, J = 6.5 Hz, 3H), 1.16 (dd, J = 6.7, 2.6 Hz, 2H), 0.82-0.72 (m, 1H), 0.70-0.60 (m, 1H).

Example 24 (S)-3-((6-amino-5-f5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)propylV2-cyclopropylosoquinolin-l(2 _H)-one

Step 1) N-cyclopropyl-2-methylbenzamide

[389] To a solution of 2-methylbenzoic acid (3.04 g, 22.3 mmol) in DCM (20 mL) was added oxalyl dichloride (3.7 mL, 44 mmol) at room temperature, the reaction was stirred at 45 °C for 5.5 hours, then cooled to room temperature, and concentrated in vacuo. The residue was dissolved in DCM (20 mL) and to the resulted mixture was added Et3N (9.3 mL, 66 mmol) and cyclopropanamine (1.6 mL, 23 mmol) at room temperature. The resulted mixture was stirred at room temperature for 3 hours, then washed with H2O (100 mL x 2), saturated NaHCCb aqueous solution (100 mL x 2) and saturated brine (100 mL). The separated organic phase was dried over anhydrous sodium sulfate and concentrated in vacuo. The residue was purified by a silica gel column chromatography (EtOAc/PE (v/v) = 1/4) to give the title compound as a white solid (1.77 g, 45.1%).

MS (ESI, pos. ion) m/z: 176.1 [M+H]+;

¾ NMR (400 MHz, DMSO-đ) δ (ppm): 8.24 (s, 1H), 7.24 (d, J = 9.4 Hz, 4H), 2.90-2.72 (m, 1H), 2.31 (s, 3H), 0.67 (m, 2H), 0.54-0.49 (m, 2H).

Step 2) (S)-3-(1-aminopropyn-2-cyclopropylosoquinolin-l(2 _H)-one

[390] To a solution of N-cyclopropyl-2-methylbenzamide (808.2 mg, 4.612 mmol) in THF (10 mL) was added w-BuLi (2.4 M in hexane, 4.8 mL, 12 mmol) dropwise at -30 °C over 0.5 hour under N2 atmosphere, the resulted yellowish solution was stirred at this temperature for 1 hour (solution 1).

To a solution of (S)-tert-buty\(\backslash \) (l-(methoxy(methyl)amino)-1-oxobutan-2-yl)carbamate (1.688 g, 6.853 mmol) in THF (15 mL) was added z-PrMgCl (2M, 3.8 mL, 7.6 mmol) dropwise at -30 °C under N2 atmosphere over 0.5 hour and the resulted solution was stirred at -30 °C for 1 hour
To the solution 1 was added solution 2 dropwise at -30 °C over 0.5 hour. The resulted solution was stirred at -15 °C for 3.5 hours, quenched with 40 mL of H2O, and the resulted mixture was dispersed in 100 mL of EtOAc and 100 mL of saturated NH4Cl aqueous solution. The aqueous phase was extracted with EtOAc (100 mL x 2). The combined organic phases were washed with 100 mL of saturated NH4Cl aqueous solution, 100 mL of saturated brine and concentrated in vacuo to give the yellowish oil. The yellowish oil was dissolved in 20 mL of MeOH and to the resulted solution was added 20 mL of cone HCl at room temperature. The solution was stirred at 95 °C overnight, then cooled to room temperature, and concentrated in vacuo. The residue was extracted with EtOAc (100 mL x 2), and the aqueous phase was basified to pH = 8.5 with Na2CO3 powder. The resulted mixture was extracted with DCM (100 mL x 3), and the combined organic phases were washed with 100 mL of saturated brine, and concentrated in vacuo to give the title compound as yellowish oil (837 mg, 74.9%).

MS (ESI, pos. ion) m/z: 243.05 [M+H]^+;

¾NMR  (400 MHz, DMSO-d_6) δ (ppm): 8.11 (d, J = 8.0 Hz, 1H), 7.68-7.59 (m, 1H), 7.54 (d, J = 7.7 Hz, 1H), 7.45-7.34 (m, 1H), 6.73 (s, 1H), 4.42 (dd, J = 7.4, 5.4 Hz, 1H), 2.96 (m, 1H), 1.80-1.66 (m, 1H), 1.53 (m, 1H), 1.22-1.10 (m, 2H), 0.93 (t, J = 7.4 Hz, 3H), 0.89-0.84 (m, 1H), 0.73-0.63 (m, 1H).

Step 3) (S)-3-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)propyl)-2-cyclopropylisoquinolin-l(2 H)-one

[391] A mixture of (S)-3-(1-aminopropyl)-2-cyclopropylisoquinolin-l(2 H)-one (110 mg, 0.45 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (131.7 mg, 0.62 mmol) and DIPEA (0.14 mL, 0.85 mmol) in η-BuOH (4 mL) was heated to 125 °C and stirred further for 10 hours, then cooled to room temperature, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (EtOAc/PE (v/v) = 2/1) to give the title compound as a white solid (110.1 mg, 58.9%).

MS (ESI, pos. ion) m/z: 417.9 [M+H]^+;

¾NMR  (400 MHz, DMSO-d_6) δ (ppm): 8.48 (d, J = 6.9 Hz, 1H), 8.12 (d, J = 7.9 Hz, 1H), 8.01 (s, 1H), 7.60 (t, J = 7.1 Hz, 1H), 7.49 (d, J = 7.8 Hz, 1H), 7.41 (t, J = 7.5 Hz, 1H), 7.25 (s, 2H), 6.51 (s, 1H), 5.88 (m, 1H), 3.07 (m, 1H), 2.61 (s, 3H), 2.09-2.01 (m, 1H), 1.85-1.74 (m, 1H), 1.26 (m, 2H), 1.05 (t, J = 7.3 Hz, 3H), 0.82 (m, 1H), 0.80 (m, 1H).

Example 25 (S)-3-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)propyl)-2-phenylisoquinolin-l(2 H)-one
Step 1) 2-methyl-N-phenylbenzamide

[392] To a solution of 2-methylbenzoic acid (3.3 g, 24 mmol) in DCM (30 mL) and DMF (0.2 mL, 3 mmol) was added oxaly dichloride (5.5 mL, 64 mmol) dropwise at rt. The mixture was stirred at rt for 3 hours, then concentrated in vacuo, and the residue was dissolved in DCM (40 mL). The resulted solution was stirred at 0 °C, then TEA (10 mL, 70 mmol) was added to thereto, followed by aniline (2.02 g, 21.7 mmol). The mixture was stirred at rt overnight, then washed with water (100 mL), saturated NaHCCb aqueous solution (100 mL) and brine (100 mL). The separated organic phase was dried over anhydrous Na2SO4 and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 10/1) to give the title compound as a yellow solid (1.61 g, 31.7%).

MS (ESI, pos. ion) m/z: 212.2 [M+H]⁺;

¾  NMR (400 MHz, CDCh) δ (ppm): 7.64 (d, J = 7.4 Hz, 2 H), 7.58 (s, 1 H), 7.49 (d, J = 7.4 Hz, 1 H), 7.38 (t, J = 7.8 Hz, 3 H), 7.31-7.23 (m, 2 H), 7.18 (t, J = 7.4 Hz, 1 H), 2.52 (s, 3 H).

Step 2) (S)-3-(l-aminopropyl)-2-phenylisoquinolin-l(2 H)-one

[393] To a solution of 2-methyl-N-phenylbenzamide (1.605 g, 7.596 mmol) in THF (15 mL) was added -BuLi (2.4 M in hexane, 7.9 mL, 19 mmol) dropwise at -30 °C over 0.5 hour under N2 atmosphere, the resulted yellowish solution was stirred at this temperature for 1.5 hours (solution 1).

To a solution of (S)-tert-butyl (l-(methoxy(methyl)amino)-1-oxobutan-2-yl)carbamate (2.81 g, 11.39 mmol) in THF (20 mL) was added z-PrMgCl (2M, 6.2 mL, 12 mmol) dropwise at -30 °C over 0.5 hour under N2 atmosphere and the resulted mixture was stirred at -30 °C for 1.5 hours (solution 2).

To the solution 1 was added solution 2 dropwise at -30 °C 0.5 hour. The resulted solution was stirred at -15 °C for 3.5 hours, quenched with 40 mL of H2O, dispersed in 100 mL of EtOAc and 100 mL of saturated NH4Cl aqueous solution. The aqueous phase was extracted with EtOAc (100 mL × 2). The combined organic phases were washed with 100 mL of saturated NH4Cl aqueous solution and then 100 mL of saturated brine, and concentrated in vacuo to give the yellowish oil. The yellowish oil was dissolved in 20 mL of MeOH and to the resulted solution
was added 20 mL of cone. HCl at room temperature. The resulted solution was stirred at 95 °C overnight, then cooled to room temperature, and concentrated in vacuo. The residue was dissolved in 100 mL of H2O, and the resulted mixture was extracted with EtOAc (100 mL × 2). The aqueous phase was basified to pH = 8.5 with Na2CO3 powder, and then extracted with DCM (100 mL × 3). The combined organic phases were washed with 100 mL of saturated brine, and concentrated in vacuo to give the title compound as a yellowish solid (1.73 g, 81.75%).

MS (ESI, pos. ion) m/z: 279.0 [M+H]^+;

¾NMR (400 MHz, DMSO-d6) δ (ppm): 8.15 (d, J = 8.0 Hz, 1H), 7.78-7.70 (m, 1H), 7.67 (d, J = 7.6 Hz, 1H), 7.55 (t, J = 7.5 Hz, 2H), 7.52-7.41 (m, 2H), 7.36 (d, J = 7.6 Hz, 1H), 7.33-7.21 (m, 1H), 6.87 (s, 1H), 3.20 (dd, J = 7.4, 4.9 Hz, 1H), 1.67-1.50 (m, 1H), 1.40-1.27 (m, 1H), 0.66 (t, J = 7.3 Hz, 3H).

Step 3) (S)-3-[(6-amino-5-(5-methyl-1.3.4-oxadiazol-2-ynpyrimidin-4-yl)amino)propyl]-2-phenylisoquinolin-1(2 H)-one

[394] A mixture of (5)-3-(1-aminopropyl)-2-phenylisoquinolin-l(2 H)-one (107.6mg, 0.3865 mmol), 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (114.3 mg, 0.54 mmol) and DIPEA (0.12 mL,0.73 mmol) in n-BuOH (4 mL) was heated to 125 °C and stirred further for 16 hours, then cooled to room temperature, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (EtOAc/PE (v/v) = 2/1) to give the title compound as a white solid (104.3 mg, 59.5%).

MS (ESI, pos. ion) m/z: 453.9 [M+H]^+;

¾NMR (400 MHz, DMSO-δ6) δ (ppm): 8.37 (d, J = 6.7 Hz, 1H), 8.15 (d, J = 7.8 Hz, 1H), 7.98 (s, 1H), 7.70 (t, J = 7.6 Hz, 1H), 7.62 (d, J = 7.8 Hz, 1H), 7.57 (t, J = 7.0 Hz, 1H), 7.49 (m, 4H), 7.43 (d, J = 8.0 Hz, 1H), 7.22 (s, 1H), 6.65 (s, 1H), 4.60 (m, 1H), 2.60 (s, 3H), 1.69-1.59 (m, 1H), 1.42 (m,lH), 0.75 (t, J = 7.3 Hz, 3H).

Example 26 (S)-3-[(6-amino-5-(5-methyl-1,3,4-oxadiazol-2-ynpyrimidin-4-yl) amino)ethyl]-2-phenyl isoquinolin-1(2H)-one

Step 1) (S)-**tert-butoxy** (3-oxo-4-(2-(phenylcarbamoyl)phenyl)butan-2-yl)carbamate

[395] To a -30 °C stirred solution of 2-methyl-N-phenylbenzamide (1.6 g, 7.6 mmol) in
dried THF (15 mL) was added (-BuLi (2.4 M in hexane, 8 mL, 2.5 eq) dropwise over 30 minutes, after addition, the mixture was stirred at -30 °C for 35 minutes to give a red brown solution (solution 1), which was used directly in the next step without further purification.

To a -30 °C stirred suspension of (S)-tert-butyl (1-((methoxy(methyl)amino)-1-oxopropan-2-yl)carbamate (2.65 g, 11.4 mmol) in anhydrous THF (20 mL) was added i-PrMgCl (2.0 M in THF, 6.3 mL) dropwise over 30 minutes, after addition, the mixture was stirred at this temperature for 35 minutes to give the pale yellow solution (solution 2).

To the resulting solution 1 was added the pale yellow solution 2 dropwise at -30 °C, after addition, the mixture was stirred at -15 °C for 4 hours. The reaction was quenched with saturated NH4Cl aqueous solution (100 mL), and extracted with EtOAc (100 mL × 3). The combined organic phases were washed with saturated NH4Cl aqueous solution (100 mL), brine (100 mL), then dried over anhydrous Na2SO4 and concentrated in vacuo to give a pale yellow solid (2.9 g, 100%), which was used directly in the next step without further purification.

Step 2) (S)-(3-((1-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-2-phenylisoquinolin-1(2H)-one

[396] To a solution of (S)-tert-butyl (3-oxo-4-(2-(phenylcarbamoyl)phenyl)butan-2-yl)carbamate (2.9 g, 7.6 mmol in MeOH (20 mL) was added cone. HCl (20 mL). The mixture was heated to 95 °C and stirred overnight, then cooled to it, and concentrated in vacuo. The residue was dispersed in a mixed solvent PE/EtOAc (50 mL/25 mL) and water (20 mL). The aqueous phase was basified to pH = 8 with Na2CO3 powder, and extracted with DCM (100 mL × 3). The combined organic phases were washed brine (150 mL) and concentrated in vacuo to give the title compound as a yellow solid (1.32 g, 66%).

M.S (ESI, pos. ion) m/z: 265.0 [M+H] +.

Step 3) (S)-3-((1-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-2-phenylisoquinolin-1(2H)-one

[397] To a suspension of (S)-(3-((1-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-2-phenylisoquinolin-1(2H)-one (100 mg, 0.38 mmol) and 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (80 mg, 0.38 mmol) in n-BuOH (4 mL) was added DIPEA (0.1 mL, 0.6 mmol). The mixture was stirred at 120 °C overnight, then cooled to rt and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v = 1/5) to give the title compound as an off-white solid (48 mg, 28.8%).

M.S (ESI, pos. ion) m/z: 440.9 [M+H] +;
¾ NMR (400 MHz, CDCl₃) δ (ppm): 8.64-8.62 (d, J = 6.6 Hz, 1 H), 8.39 (d, J = 8.0 Hz, 1 H), 8.02 (s, 1 H), 7.64 (t, J = 7.1 Hz, 1 H), 7.57-7.52 (m, 1 H), 7.51-7.47 (m, 2 H), 7.47-7.41 (m, 3 H), 7.35 (d, J = 7.8 Hz, 1 H), 6.64 (s, 1 H), 6.02 (s, 2 H), 5.07 (m, 1 H), 2.69 (s, 3 H), 1.49 (d, J = 6.8 Hz, 3 H).

Example 27 5-(3-((6-amino-5-(5-methyl-1,3,4-oxadiazol-2-yl)carbamoyl)phenyl)-3-oxobutan-2-yl)isoquinolin-1(2H)-one

Step 1) (S)-tert-butyl (4-(2-(cyclopropylcarbamoyl)phenyl)-3-oxobutan-2-yl)carbamate

[398] To a stirred solution of N-cyclopropyl-2-methylbenzamide (820 mg, 4.68 mmol) in anhydrous THF (10 mL) was added w-BuLi (2.4 M in hexane, 5 mL, 2.5 eq) dropwise at -30 °C over 30 minutes. After addition, the mixture was stirred at -30 °C for 35 minutes to give the red brown solution (solution 1) which was used directly in the next step without further purification.

To a stirred suspension of (S)-tert-butyl (1-(methoxy(methyl)amino)-1-oxopropan-2-yl)carbamate (1.63 g, 7.02 mmol) in anhydrous THF (15 mL) was added t-PrMgCl (4 mL, 2.0 M in THF) dropwise at -30 °C over 30 minutes, after addition, the mixture was stirred at this temperature for 35 minutes to give the pale yellow solution (solution 2).

To the resulted solution 1 was added the pale yellow solution 2 dropwise at -30 °C, after addition, the mixture was stirred at -15 °C for 4 hours, then quenched with saturated NH₄Cl aqueous solution (100 mL), and the resulted mixture was extracted with EtOAc (100 mL × 3). The combined organic phases were washed with saturated NH₄Cl aqueous solution (100 mL), brine (100 mL), then dried over anhydrous Na₂SO₄ and concentrated in vacuo to give the title compound as a pale yellow solid (1.6 g, 99%) which was used directly in the next step without further purification.

M.S (ESI, pos. ion) m/z: 247.2 [M-Boc+2H]⁺.

Step 2) (S’)-3-(1-aminoethyl)-2-cyclopropylisoquinolin-1(2H)-one

[399] To a solution of (S)-tert-butyl (4-(2-(cyclopropylcarbamoyl)phenyl)-3-oxobutan-2-yl) carbamate (1.6 g, 4.6 mmol) in MeOH (15 mL) was added cone. HCl (15 mL). The mixture was heated at 95 °C overnight, then cooled to rt and concentrated in vacuo. The residue was
dispersed in a mixed solvent of PE/EtOAc (50 mL/25 mL) and water (20 mL). The aqueous phase was basified to pH = 8 with Na₂C₃O₃ powder, and extracted with DCM (100 mL × 3). The combined organic phases were washed brine (150 mL) and concentrated in vacuo to give the title compound as a yellow oil (832 mg, 79%).

MS (ESI, pos. ion) m/z: 229.1 [M+H]⁺.

Step 3) (γ)-3-(l-((6-amino-5-(5-methyl-L3,4-oxadiazol-2-vl)pyrimidin-4-yl)amino)ethvl-2-cyclopropylisoquinolin-l(2 H )-one

[400] To a suspension of (5)-3-(l-aminoethyl)-2-cyclopropylisoquinolin-l(2 H )-one (100 mg, 0.44 mmol) and 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (93 mg, 0.44 mmol) in «-BuOH (4 mL) was added DIPEA (0.1 mL, 0.6 mmol). The mixture was stirred at 120 °C overnight, then cooled to rt and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 1/5) to give the title compound as a yellow solid (83 mg, 47%).

MS (ESI, pos. ion) m/z: 404.9 [M+H]⁺;

¼NMR (400 MHz, CDCb) δ (ppm): 8.69-8.68 (d, J = 6.9 Hz, 1 H), 8.33-8.31 (d, J = 7.9 Hz, 1 H), 8.11 (s, 1 H), 7.56-7.52 (t, J = 7.5 Hz, 1 H), 7.41-7.26 (m, 2 H), 6.50 (s, 1 H), 6.22-6.15 (m, 3 H), 3.07-3.01 (m, 1 H), 2.67 (s, 3 H), 1.66-1.65 (d, J = 6.8 Hz, 3 H), 1.34-1.27 (m, 2 H), 1.19-1.07 (m, 1 H), 0.99-0.90 (m, 1 H).

Example 28 (5)-3-(l-((6-amino-5-(3-ethyl-L2,4-oxadiazol-5-yl)pyrimidin-4-yl)amino)ethyl)-8-chloro-2-phenylisoquinolin-l(2i J)-one

[401] To a suspension of (5)-3-(l-aminoethyl)-8-chloro-2-phenylisoquinolin-l(2 H )-one (51.3 mg, 0.172 mmol), 6-chloro-5-(3-ethyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-amine (46.3 mg, 0.205 mmol) and DIPEA (29.9 mg, 0.231 mmol) in propan-l-ol (2.0 mL), and then the mixture was heated at 100 °C with stirring for 5 hours. The mixture was concentrated in vacuo and the residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 100/1) to give the title compound as a pale yellow solid (54 mg, 65%).

MS (ESI, pos. ion) m/z: 487.8 [M+H]⁺;
¾ NMR (400 MHz, CDCl₃) δ (ppm): 8.32 (d, J = 5.8 Hz, 1H), 8.02 (s, 1H), 7.55-7.39 (m, 6H), 7.33 (t, J = 8.4 Hz, 2H), 6.51 (s, 1H), 5.10-4.83 (m, 1H), 2.85 (q, J = 7.5 Hz, 2H), 1.44 (d, J = 6.7 Hz, 3H), 1.38 (t, J = 7.5 Hz, 3H).

Example 29 (51-3-((6-amino-5-(3-ethyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-yl)amino)ethyl)-8-chloro-2-cyclopropylisoquinolin-1(2H)-one

[402] A solution of 6-chloro-5-(3-ethyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-amine (41.0 mg, 0.194 mmol) in n-BuOH (2 mL) was added to a solution of (S)-3-((l-aminopropyl)-8-chloro-2-cyclopropylisoquinolin-1(2H)-one (50.0 mg, 0.190 mmol), then DIPEA (0.05 mL, 0.25 mmol) was added dropwise to the above mixture. The resulting mixture was stirred at 100 °C for 4 hours, then cooled to rt, and concentrated in vacuo. The residue was dissolved in MeOH (1 mL), then DCM was added dropwise to the solution to recrystallize. Filtrated and the filtrate was concentrated in vacuo to give a yellow solid. The solid was dissolved in DCM and purified by a HPTLC to give the title compound as a white solid (28.2 mg, 33.8%).

MS (ESI, pos. ion) m/z: 451.9 [M+H]^+;

¾ NMR (400 MHz, CDCl₃) δ (ppm): 8.53 (d, J = 4.0 Hz, 1H), 8.15 (s, 1H), 7.40 (t, J = 4.0 Hz, 2H), 7.38-7.37 (dd, J = 8.0, 4.0 Hz, 1H), 6.40 (s, 1H), 6.18-6.11 (m, 1H), 3.05-2.99 (m, 1H), 2.85 (q, J = 8.0 Hz, 2H), 1.65 (d, J = 8.0 Hz, 3H), 1.43-1.28 (m, 7H), 0.96-0.91 (m, 2H).

Example 30 (S)-3-((l-((6-amino-5-(3-ethyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-yl)amino)propyl)-8-chloro-2-phenylisoquinolin-1(2H)-one

[403] A mixture of (S)-3-((l-aminopropyl)-8-chloro-2-phenylisoquinolin-1(2H)-one (50.5 mg, 0.16 mmol), 6-chloro-5-(3-ethyl-1,2,4-oxadiazol-3-yl)pyrimidin-4-amine (37.4 mg, 0.16 mmol) and DIPEA (40.4 mg, 0.31 mmol) in n-BuOH (1 mL) was heated to reflux and stirred further for 18 hours, then cooled to rt, and concentrated in vacuo. The residue was
purified by a silica gel column chromatography (DCM/MeOH (v/v) = 100/1) to give the title compound as a yellowish solid (32 mg, 40%).

[404] A mixture of 6-chloro-5-(2-isopropyltetrazol-5-y1)pyrimidin-4-amine (30.7 mg, 0.128 mmol), (S)-3-(l-aminoethyl)-8-fluoro-2-phenylisoquinolin-l(2 H)-one (47 mg, 0.1665 mmol) and DIPEA (35 mg, 0.27081 mmol) in w-BuOH (3 mL) was stirred and heated at 110 °C for 20 hours, then cooled to room temperature and concentrated in vacuo. The residue was purified by a silica gel column chromatography (EtOAc/PE (v/v) = 2/5) to give the title compound as a white solid (37 mg, 56.9%).

MS (ESI. pos. ion) m/z: 486.1 [M+H]⁺;

³¹ NMR (400 MHz, CDCl₃) δ (ppm): 8.63 (d, J = 5.7 Hz, 1H), 8.02 (s, 1H), 7.71 (s, 1H), 7.58-7.46 (d, J = 4.5 Hz, 4H), 7.43 (s, 2H), 7.33 (d, J = 7.3 Hz, 1H), 7.19 (d, J = 7.8 Hz, 1H), 7.10-6.96 (m, 1H), 6.57 (s, 1H), 5.23-5.09 (m, 1H), 5.05-4.94 (m, 1H), 1.74 (d, J = 6.2 Hz, 6H), 1.25 (d, J = 7.1 Hz, 3H).

Example 3.2 (y)-3-(l-((6-amino-5-(2-isopropyl-2 H-tetrazol-5-yl)pyrimidin-4-yl)amino)ethyn-8-chloro-2-cyclopropylisoquinolin-1(2H)-one

[405] A mixture of 6-chloro-5-(2-isopropyltetrazol-5-y1)pyrimidin-4-amine (100 mg, 0.41726 mmol), (<5)-3-(l-aminoethyl)-8-chloro-2-cyclopropylisoquinolin-l(2 H)-one (112 mg, 0.4263 mmol) and DIPEA (0.15 mL, 0.91 mmol) in w-BuOH (5 mL) was stirred and heated at
110 °C for 20 hours, then cooled down to room temperature, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (EtOAc/PE (v/v) = 2/5) to give the title compound as a white solid (182 mg, 93.62%).

MS (ESI, pos. ion) m/z: 466.3 [M+H]^+;

¾ NMR (400 MHz, CDCl₃) δ (ppm): 8.70 (d, J = 6.7 Hz, 1H), 8.15 (s, 1H), 7.41-7.34 (m, 2H), 7.26-7.21 (m, 1H), 6.45 (s, 1H), 6.17 (p, J = 6.7 Hz, 1H), 5.19 (hept, J = 6.7 Hz, 1H), 3.06-2.98 (m, 1H), 1.77 (d, J = 6.7 Hz, 3H), 1.75 (d, J = 6.7 Hz, 3H), 1.67 (d, J = 6.8 Hz, 3H), 1.50-1.30 (m, 4H).

Example 33 (5)-3-(l-(6-amino-5-(5-ethyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-8-chloro-2-cyclopropylisoquinolin-1(2H)-one

To a suspension of 6-chloro-5-(5-ethyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (30 mg, 0.13 mmol) and (5)-3-(l-aminoethyl)-8-chloro-2-cyclopropylisoquinolin-1(2H)-one (34.0 mg, 0.13 mmol) in 5 mL of w-BuOH was added 0.1 mL of DIPEA. The mixture was heated at 120 °C overnight, then cooled to rt and concentrated in vacuo. The residue was purified by a preparative TLC (DCM/MeOH (v/v) = 20/1) to give the title compound as a pale yellow solid (31.0 mg, 53%).

MS (ESI, pos. ion) m/z: 452.9 [M+H]^+;

¾ NMR (400 MHz, CDCl₃) δ (ppm): 8.71 (d, J = 6.6 Hz, 1H), 8.11 (s, 1H), 7.37 (dd, J = 6.8, 3.6 Hz, 2H), 7.22 (dd, J = 5.9, 3.2 Hz, 1H), 6.40 (s, 1H), 6.18-6.09 (m, 1H), 6.03 (s, 2 H), 3.05-2.97 (q, J=7.2 Hz, 2 H), 1.64 (d, J = 6.8 Hz, 3H), 1.47 (t, J = 7.6 Hz, 3 H), 1.44-1.35 (m, 2 H), 1.35-1.23 (m, 3 H).

Example 34 (S)-2-(l-((6-amino-5-(5-aminom ethyl)-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-5-chloro-3-phenylquinazolin-4(3 H)-one
Step 1) tert-butyl (2-hydrazinyl-2-oxoethyl)carbamate

[407] To a suspension of methyl 2-aminoacetate hydrochloride (28.1 g, 224 mmol) and sodium hydrogen carbonate (36.4 g, 433 mmol) in acetonitrile (400 mL) was added \(\text{di(tert-butyl)carbonate} \) (45 mL, 200 mmol) at 0 °C with stirring under \(\text{N}_2\) atmosphere. The mixture was stirred at room temperature for 21 hours, and then concentrated in vacuo. The residue was diluted with \(\text{H}_2\text{O}\) (40 mL), and the resulted mixture was extracted with DCM (50 mL \(\times\) 3). The combined organic phases were washed with saturated brine (50 mL), dried over anhydrous \(\text{Na}_2\text{SO}_4\), and concentrated in vacuo to give the white solid for the next step. The white solid was dissolved in 100 mL of EtOH, and then to the solution was added hydrazine hydrate (27 mL) at rt. The resulted solution was stirred at room temperature for 24 hours, the concentrated in vacuo.

The residue was diluted with \(\text{H}_2\text{O}\) (50 mL), and the resulted mixture was extracted with DCM (100 mL \(\times\) 3). The combined organic phases were washed with saturated brine (60 mL), dried over anhydrous \(\text{Na}_2\text{SO}_4\), and concentrated in vacuo to give the white solid which was used for the next step without further purification (31 g, 73%).

MS (ESI, pos. ion) \(m/z\): 90.3 [M-Boc+2H] \(^+\).

Step 2) tert-butyl (2-(2-(4,6-dichloropyrimidine-5-carbonyl)hydrazinyl)-2-oxoethyl)carbamate

[408] To a mixture of 4,6-dichloropyrimidine-5-carboxylic acid (9.01 g, 46.7 mmol) and \(\text{N,N-dimethylformamide} \) (0.33 g, 4.5 mmol) in tetrahydrofuran (30 mL) was added \(\text{SOCl}_2\) (8.20 g, 68.9 mmol) in one portion with stirring at room temperature. The reaction mixture was stirred at 45 °C for 3 hours, and then concentrated in vacuo to provide the yellow oil for the next step.

The yellow oil was dissolved in DCM (20 mL) to give a pale yellow suspension. The pale yellow suspension was added dropwise to a solution of tert-butyl (2-hydrazinyl-2-oxoethyl)carbamate (8.45 g, 44.7 mmol) and \(\text{Et}_3\text{N} \) (9.0 g, 65 mmol) in DCM (40 mL) at 0-2 °C. The reaction mixture was stirred at -2 °C for 4 hours. PE (40 mL) was added to the reaction mixture with stirring for 30 minutes. The suspension was filtered and the filter cake was washed with (DCM/PE (v/v=3/2), 15 mL \(\times\) 2) to give the title compound as a white solid (14.1 g, 92 %).

MS (ESI, Neg. ion) \(m/z\): 362.2 [M-H] \(^-\);

\(\text{^1H NMR} \) (400 MHz, \(\text{OMSO-d}_6\)) \(\delta\) (ppm): 11.05 (d, \(J = 66.1\ Hz, \ 1\ H\)), 10.43 (d, \(J = 24.2\ Hz, \ 1\ H\)), 9.02 (s, 1 H), 7.04 (t, \(J = 6.0\ Hz, \ 1\ H\)), 3.65 (t, \(J = 10.9\ Hz, \ 2\ H\)), 1.38 (s, 9 H).

Step 3) tert-butyl (2-(2-(4-amino-6-chloropyrimidine-5-carbonyl)hydrazinyl)-2-oxoethyl)carbamate

[409]
To a mixture of tert-butyl (2-(2-(4,6-dichloropyrimidine-5-carbonyl)hydrazinyl)-2-oxoethyl)carbamate (1.03 g, 2.83 mmol) in isopropanol (2 mL) was added a solution of N\textsubscript{3/4} in isopropanol (2.0 M, 15.0 mL), the mixture was stirred at 35 °C for 24 hours. The mixture was concentrated \textit{in vacuo} and the residue was purified by a silica gel column chromatography (DCM/MeOH \textit{(v/v)} = 100/1-20/1) to give the title compound as a white solid (840 mg, 84%).

\[\text{MS (ESI, pos. ion) m/z: 345.0 } [\text{M+H}]^+;\]

\[\text{\textfrac{3}{4} NMR (400 MHz, CDC1\textsubscript{3}) } \delta \text{ (ppm): 10.50 (s, 1H), 10.36 (s, 1H), 8.28 (s, 1H), 7.84 (s, 1H), 7.30 (s, 1H), 7.13 (t, } J = 6.0 \text{ Hz, 1H), 3.68 (d, } J = 6.1 \text{ Hz, 2H), 1.39 (s, 9H).}\]

Step 4) tert-butyl ((5-(4-amino-6-chloropyrimidin-5-yl)-L3,4-oxadiazol-2-yl)methylenecarbamate

To a solution of tert-butyl (2-(2-(4-amino-6-chloropyrimidine-5-carbonyl)hydrazinyl)-2-oxoethyl)carbamate (820 g, 2.4 mmol) in acetonitrile was added triphenylphosphane (812 mg, 3.1 mmol) and N,N-diethylethanamine (0.50 mL, 3.6 mmol), the mixture was stirred at room temperature under N\textsubscript{2} atmosphere for 20 minutes. Then the carbon tetrachloride (0.35 mL, 3.6 mmol) was added to the mixture in one portion, and the reaction mixture was heated to 50 °C and stirred further for 2 hours. The mixture was concentrated \textit{in vacuo} and the residue was purified by a silica gel column chromatography DCM/MeOH \textit{(v/v)} =100/1 to give the title compound as a white solid (880 mg, 88%).

\[\text{MS (ESI, pos. ion) m/z: 327.3 } [\text{M+H}]^+;\]

\[\text{\textfrac{3}{4}NMR (400 MHz, CDCh) } \delta \text{ (ppm): 8.38 (s, 1H), 8.28 (s, 1H), 7.75 (s, 1H), 7.63 (t, } J = 5.8 \text{ Hz, 1H), 4.45 (d, } J = 5.8 \text{ Hz, 2H), 1.39 (s, 9H).}\]

Step 5) 5-(5-(aminomethyl)-L3,4-oxadiazol-2-yl)-6-chloropyrimidin-4-amine

To a solution of tert-butyl ((5-(4-amino-6-chloropyrimidin-5-yl)-L3,4-oxadiazol-2-yl) methyl)carbamate (680 mg, 2.1 mmol) in EtOAc (2 mL) was added a solution of HCl in EtOAc (2.0 M, 15.0 mL), the mixture was stirred at 35 °C overnight. The resulting suspension was dissolved in water (20 mL). The aqueous phase was washed with DCM (10 mL x 3), neutralized to pH = 9 with Na\textsubscript{2}CO\textsubscript{3} powder, and extracted with DCM (15 mL x 3). The combined organic phases were washed with brine (20 mL), dried over anhydrous Na\textsubscript{2}SO\textsubscript{4}, and concentrated \textit{in vacuo} to give the title compound as a yellowish solid (210 mg, 21%).

\[\text{MS (ESI, pos. ion) m/z: 227.2 } [\text{M+H}]^+;\]

\[\text{\textfrac{3}{4}NMR (400 MHz, CDCh) } \delta \text{ (ppm): 8.37 (s, 1H), 8.24 (s, 1H), 7.72 (s, 1H), 3.97 (s, 2H), 2.16 (s, 2H).}\]
Step 6) (^-2-(l-(6-amino-5-(5-(aminomethyl)-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-5-chloro-3-phenylquinazolin-4(3 H)-one

[412] To a suspension of (S)-2-(l-aminoethyl)-5-chloro-3-phenylquinazolin-4(3 H)-one (60.4 mg, 0.201 mmol), 5-(5-(aminomethyl)-1,3,4-oxadiazol-2-yl)-6-chloro-pyrimidin-4-amine (51.3 mg, 0.266 mmol) and DIPEA (44.2 mg, 0.342 mmol) in propan-2-ol (2.5 mL), and then the mixture was heated at 120 °C with stirring for 6.5 hours. The mixture was concentrated in vacuo and the residue was purified by a silica gel column chromatography (DCM/MeOH (v/v) = 50/1-20/1) to give the title compound as a pale yellow solid (50 mg, 50.7%).

MS (ESI, pos. ion) m/z: 490.2 [M+H]+;

¾ NMR (400 MHz, CDCl₃) δ (ppm): 8.56 (s, 1H), 8.02 (s, 1H), 7.60 (d, J = 20.3 Hz, 5H), 7.47 (s, 2H), 7.40-7.31 (m, 1H), 6.63 (d, J = 8.5 Hz, 2H), 4.29 (s, 2H), 3.75-3.60 (m, 1H), 3.11 (d, J = 7.6 Hz, 1H), 2.00 (s, 2H), 1.45 (s, 3H).

Example 35 (^-2-(l-((6-amino-5-(5-(aminomethyl)-1,3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-6-fluoro-3-phenylquinazolin-4(3 H)-one

Step 1) 5-fluoro-2-nitro-N-phenylbenzamide

[413] To a solution of 5-fluoro-2-nitrobenzoic acid (10.0 g, 54.0 mmol) in THF (108 mL) were added DMF (0.5 mL) and SOCl₂ (5.88 mL, 81.1 mmol), the mixture was heated to 60 °C and stirred further for 5 hours, then cooled down to 0 °C, and triethylamine (18.8 mL, 140.0 mmol) and aniline (6.4 mL, 70.0 mmol) were added to the 0 °C stirred mixture. The resulting mixture was continued to stir at this temperature overnight, then diluted with water (300 mL), and the resulting mixture was extracted with EtOAc (200 mL × 2). The organic phase was washed with HCl aqueous solution (1.0 M, 100 mL × 2) and saturated Na₂CO₃ solution (100 mL × 2). The organic phase was dried over anhydrous Na₂SO₄, and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 5/1) to give the title compound as a yellow solid (12.0 g, 85.3%).

MS (ESI, pos. ion) m/z: 261.1 [M+H]+;
¾ NMR (400 MHz, DMSO-^e) δ (ppm): 10.69 (s, 1 H), 8.28 (dd, J = 9.1, 4.8 Hz, 1 H), 7.76 (dd, J = 8.4, 2.8 Hz, 1 H), 7.70-7.58 (m, 3 H), 7.38 (t, J = 7.9 Hz, 2 H), 7.14 (t, J = 7.4 Hz, 1 H).

Step 2) 2-amino-5-fluoro -N-phenylbenzamide

[414] To a mixture of 5-fluoro-2-nitro -N-phenylbenzamide (5.0 g, 19.2 mmol) in ethanol (60 mL) were added Fe dust (5.4 g, 95.0 mmol) and a solution of HCOONa (4.9 g, 78.0 mmol) in water (12.0 mL), the mixture was heated to 90 °C and stirred overnight. The mixture was cooled to rt and diluted with EtOAc (50 mL). The mixture was added to the mixture was filtered through a CELITE®. The filtrate was concentrated in vacuo, and the residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 6/1) to give the title compound as a light pink solid (3.0 g, 68.0%).

MS (ESI, pos. ion) m/z: 231.2 [M+H]^+;
¾ NMR (400 MHz, DMSO-d6) δ (ppm): 10.02 (s, 1 H), 7.71-7.69 (d, J = 7.7 Hz, 2 H), 7.51-7.48 (dd, J = 10.1, 2.9 Hz, 1 H), 7.36-7.32 (t, J = 7.9 Hz, 2 H), 7.14-7.08 (m, 2 H), 6.79-6.77 (dd, J = 9.0, 5.0 Hz, 1 H), 6.21 (s, 2 H).

Step 3) (S)-tert-butyl (l-((4-fluoro-2-(phenylcarbamoyl)phenyl)amino)-l-oxopropan-2-yl)carbamate

[415] To a 0 °C stirred mixture of 2-amino-5-fluoro -N-phenylbenzamide (1.0 g, 4.35 mmol) and (2S)-2-(tert-butoxycarbonylamino)propanoic acid (987 mg, 5.22 mmol) in DCM (8 mL) were added DIPEA (1.5 mL, 8.6 mmol) and HATU (1.99 g, 5.23 mmol), the mixture was stirred at 45 °C overnight. Water (30 mL) was added to the above mixture, and the resulting mixture was extracted with EtOAc (50 mL x 2). The combined organic phases were concentrated in vacuo, and the residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 5/1) to give the title compound as an off-white solid (1.6 g, 92.0%).

MS (ESI, neg. ion) m/z: 400.2 [M-H]^−;
¾NMR (400 MHz, DMSO-d6) δ (ppm): 11.08 (s, 1 H), 10.49 (s, 1 H), 8.47 (dd, J = 9.1, 5.3 Hz, 1 H), 7.73 (d, J = 7.7 Hz, 3 H), 7.52 (d, J = 6.5 Hz, 1 H), 7.44 (td, J = 8.8, 3.0 Hz, 1 H), 7.36 (t, J = 7.9 Hz, 2 H), 7.15 (t, J = 7.4 Hz, 1 H), 4.08-3.93 (m, 1 H), 1.30 (s, 9 H), 1.28-1.27 (d, J=4.0 Hz, 3 H).

Step 4) (S)-tert-butyl (l-((6-fluoro-4-oxo-3-phenyl-3,4-dihydroquinazolin-2-yl)ethynyl)carbamate

[416] To a solution of (S)-tert-butyl (l-((4-fluoro-2-(phenylcarbamoyl)phenyl)amino)-l-oxopropan-2-yl)carbamate (501 mg, 1.25mmol) in CH3CN (5 mL) were added DIPEA (0.45 mL, 2.60mmol), DMAP (153 mg, 1.25 mmol) and BSA (1.0 mL, 4.1 mmol), the mixture was heated to 80 °C and stirred overnight. The mixture was cooled to rt and diluted with EtOAc (50
mL). The resulted mixture was washed with saturated NaCl aqueous solution (30 mL χ 2), dried over anhydrous Na2SC>4 and concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 8/1) to give the title compound as brown oil (490 mg, 102%).

MS (ESI, pos. ion) m/z: 384.2 [M+H]+.

Step 5) (S)-2-(1-aminoethyl)-6-fluoro-3-phenylquinazolin-4(3 H)-one

[417] To a solution of (S)-tert-butyl (1-(6-fluoro-4-oxo-3-phenyl-3,4-dihydroquinazolin-2-yl)ethyl)carbamate (490 mg, 1.278 mmol, 100 mass%) in EtOAc (3 mL) was added cone. HCl solution (2 mL, 22 mmol), the mixture was stirred at rt for 1.5 hours, then diluted with EtOAc (10 mL). The resulted mixture was neutralized with saturated Na2CO3 solution, and extracted with EtOAc (10 mL χ 2). The combined organic phases were dried over anhydrous Na2SO4 and concentrated in vacuo to give the title compound as pale brown oil (360 mg, 99.4%).

Step 6) (S)-2-(1-((6-amino-5-(3-methyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-yl)amino)ethyl)-6-fluoro-3-phenylquinazolin-4(3 H)-one

[418] To a mixture of (S)-2-(1-aminoethyl)-6-fluoro-3-phenylquinazolin-4(3H)-one (50.0 mg, 0.18 mmol) and 6-chloro-5-(3-methyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-amine (41.0 mg, 0.19 mmol) in n-BuOH (1.5 mL) was added DIPEA (0.07 mL, 0.4mmol), the mixture was stirred at 110 °C for 5 hours, and then concentrated in vacuo. The residue was purified by a flash preparative chromatography (PE/EtOAc (v/v) = 2/1) to give the title compound as an off-white solid (59 mg, 72.9%).

MS (ESI, pos. ion) m/z: 459.2 [M+H]+;

¾ NMR (600 MHz, CDCl3) δ (ppm): 8.84 (d, J = 6.4 Hz, 1 H), 8.05 (s, 1 H), 7.93 (dd, J = 8.3, 2.7 Hz, 1 H), 7.77 (dd, J = 8.9, 4.8 Hz, 1H), 7.67-7.56 (m, 3H), 7.52 (td, J = 8.6, 2.8 Hz, 1H), 7.46 (d, J = 7.5 Hz, 1 H), 7.37 (d, J = 6.6 Hz, 1 H), 5.84 (s, 2 H), 5.24-5.16 (m, 1 H), 2.55 (s, 3 H), 1.49 (d, J = 6.7 Hz, 3 H).

Example 36 (y)-2-(l-((6-amino-5-(5-methyl-L3,4-oxadiazol-2-yl)pyrimidin-4-yl)amino)ethyl)-6-fluoro-3-phenylquinazolin-4(3 H)-one
[419] To a mixture of (S)-2-(l-aminoethyl)-6-fluoro-3-phenylquinazolin-4(3 H)-one (50.0 mg, 0.18 mmol) and 6-chloro-5-(5-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (41.0 mg, 0.19 mmol) in «-BuOH (1.5 mL) was added DIPEA (0.07 mL, 0.4mmol), and the mixture was stirred at 120 °C overnight. The mixture was concentrated in vacuo and the residue was purified by a flash preparative chromatography (PE/EtOAc (v/v) = 1/1) to give the title compound as a pale yellow solid (69 mg, 85.2%).

MS (ESI, pos. ion) m/z: 459.2 [M+H]+;

3H NMR (600 MHz, CDCl₃) δ (ppm): 8.59 (d, J = 6.7 Hz, 1 H), 8.03 (s, 1 H), 7.93 (dd, J = 8.2, 2.6 Hz, 1 H), 7.74 (dd, J = 8.9, 4.7 Hz, 1H), 7.60 (m, 3H), 7.51 (td, J = 8.5, 2.7 Hz, 1 H), 7.46 (d, J = 7.3 Hz, 1 H), 7.36 (d, J = 7.4 Hz, 1 H), 5.24-5.14 (m, 1 H), 2.74 (s, 3 H), 1.49 (d, J = 6.6 Hz, 3 H).

Example 37 (S)-2-((3-cyclopropyl-6-fluoroquinazolin-4(3 H)-one

Step 1) N-cyclopropyl-5-fluoro-2-nitrobenzamide

[420] To a flask were added 5-fluoro-2-nitrobenzoic acid (5.0 g, 27.0 mmol) and SOCb (13 mL), then the mixture was heated to 80 °C and stirred further for 5.0 hours. The mixture was cooled down to rt and concentrated in vacuo. The residue was dissolve in DCM (20 mL), and the resulted solution was added into the stirred solution of triethylamine (7.5 mL, 54.0 mmol) and cyclopropanamine (2.3 mL, 32.0 mmol) in DCM (10 mL) at 0 °C. After addition, the mixture was continued to stir at this temperature for 5.5 hours, then concentrated in vacuo, and the residue was dissolved in water (30 mL) and EtOAc (100 mL). The organic phase was separated and the aqueous phase was extracted with EtOAc (50 mL). The combined organic phases were washed with HCl aqueous solution (1.0 M, 100 mL × 2) and saturated Na2CO3 aqueous solution
(100 mL × 2), dried over anhydrous Na2SC>4, and concentrated in vacuo to give the title compound as a pale yellow solid (4.26 g, 70.3%).

MS (ESI, pos. ion) m/z: 225.0 [M+H]+;

1H NMR (400 MHz, DMSO-d6) δ (ppm): 8.69 (d, J = 2.8 Hz, 1 H), 8.17 (dd, J = 8.9, 4.8 Hz, 1 H), 7.58-7.47 (m, 2 H), 2.77 (m, 1 H), 0.76-0.67 (m, 2 H), 0.57-0.49 (m, 2 H).

Step 2) (S)-tert-butyl (1-(N-cyclopropyl-5-fluoro-2-nitrobenzamido)-1-oxopropan-2-yl)d carbamate

[421] To a mixture of N-cyclopropyl-5-fluoro-2-nitrob enamide (4.2 g, 18.7 mmol) in toluene (25 mL) was added SOCh (7 mL, 96.5 mmol). The mixture was stirred at 120 °C for 10 hours, then concentrated in vacuo and the residue was dissolved in DCM (20 mL). The resulting mixture was added into a 0 °C stirred mixture of (2S)-2-(tert-butoxycarbonylamino)propanoic acid (3.55 g, 18.8 mmol) and DIPEA (6.5 mL, 37 mmol) in DCM (10 mL). After addition, the mixture was moved to rt and continued to stir overnight, then diluted with DCM (30 mL), and washed with water (100 mL x 2). The separated organic phase was dried over anhydrous Na2SO4, concentrated in vacuo, and the residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 10/1) to give the title compound as yellow oil (4.15 g, 56.0%).

MS (ESI, neg. ion) m/z: 296.2 [M-99]-;

¾ NMR (400 MHz, CDCl3) δ (ppm): 8.23 (dd, J = 9.1, 4.7 Hz, 1 H), 7.25-7.17 (m, 1 H), 6.99 (dd, J = 7.7, 2.6 Hz, 1 H), 5.26-5.19 (m, 1 H), 4.98 - 4.97 (d, J = 7.3 Hz, 1 H), 2.88-2.87 (m, 1 H), 1.42 (s, 9 H), 1.38-1.37 (d, J = 7.0 Hz, 3 H), 1.19-1.16 (m, 2 H), 1.04-1.02 (m, 1 H), 0.96-0.86 (m, 1 H).

Step 3) (S)-tert-butyl (1-(3-cyclopropyl-6-fluoro-4-oxo-3,4-dihydroquinazolin-2-yl)carbamate

[422] To a solution of (S)-tert-butyl (1-(N-cyclopropyl-5-fluoro-2-nitrobenzamido)-1-oxopropan-2-yl)carbamate (4.15 g, 10.5 mmol) in AcOH (20 mL) was added Zn dust (2.78 g, 42.5 mmol). The mixture was stirred at 35 °C overnight, then filtered and the filtrate was concentrated in vacuo. The residue was purified by a silica gel column chromatography (PE/EtOAc (v/v) = 10/1) to give the title compound as pale brown oil (1.14 g, 31.3%).

MS (ESI, pos. ion) m/z: 348.2 [M+H]+;

¾ NMR (400 MHz, DMSO-d6) δ (ppm): 7.74 (d, J = 8.7 Hz, 1 H), 7.67-7.62 (m, 2 H), 7.32 (d, J = 7.4 Hz, 1 H), 5.43-5.33 (m, 1 H), 3.08-2.99 (m, 1 H), 1.41 (d, J = 6.7 Hz, 3 H), 1.37 (s, 9 H), 1.23 (m, 2H), 1.07-0.97 (m, 1H), 0.94-0.86 (m, 1H).
Step 4) \(-\text{H})-2-(\text{aminoethyl})-3\text{-cyclopropyl}-6\text{-fluoroquinazolin-4(3 \text{H})-one}

[423] To a solution of \((S)\)-\text{tert-buty}l-(\text{3-cyclopropyl-6-fluoro-4-oxo-3,4-dihydroquinazolin-2-yl})\text{ethyl} \text{carbamate} (1.10 g, 3.17 mmol) in \text{EtOAc} (5 mL) was added cone. \text{HCl} solution (3.0 mL). The mixture was stirred at rt for 1.5 hours, diluted with \text{EtOAc} (20 mL), and then adjusted to \(\text{pH} = 8\) with \text{Na2CO3} powder. The aqueous phase was extracted with \text{EtOAc} (30 mL). The organic phase was dried over anhydrous \text{Na2SO4}, and concentrated \text{in vacuo} to give the title compound as brown oil (584 mg, 74.6%).

\(\frac{3}{4}\) \text{NMR} (400 MHz, DMSO-\text{d6}) \(\delta\) (ppm): 7.73 (dd, \(J = 8.8, 2.6\) Hz, 1 H), 7.70-7.60 (m, 2 H), 4.66 (m, H), 3.09 (m, 1 H), 1.36 (d, \(J = 6.6\) Hz, 3 H), 1.22 (m, 2 H), 0.99-0.89 (m, 1 H), 0.88-0.78 (m, 1 H).

Step 5) \(-\text{H})-2-(\text{aminoethyl})-3\text{-cyclopropyl}-6\text{-fluoroquinazolin-4(3 \text{H})-one}

[424] To a mixture of \((\text{S})-2-(\text{aminoethyl})-3\text{-cyclopropyl-6-fluoroquinazolin-4(3 \text{H})-one} (50 mg, 0.20 mmol) and 6-chloro-5-(3-methyl-1,3,4-oxadiazol-2-yl)pyrimidin-4-amine (47.0 mg, 0.22 mmol) in \text{BuOH} (1.5 mL) was added DIPEA (0.07 mL, 0.4 mmol). The mixture was stirred at 120 \(^\circ\)C overnight, then concentrated \text{in vacuo} and the residue was purified by a silica gel column chromatography (\text{PE/EtOAc} \(v/v = 3/1\)) to give the title compound as a pale yellow solid (57 mg, 66.7%).

\text{MS (ESI, pos. ion) m/z: 423.2} \text{[M+H]}^+;\n
\(\frac{3}{4}\) \text{NMR} (400 MHz, DMSO-\text{d6}) \(\delta\) (ppm): 8.87 (d, \(J = 7.1\) Hz, 1 H), 8.06 (s, 1 H), 7.76 (dd, \(J = 8.6, 2.7\) Hz, 1 H), 7.72-7.60 (m, 2 H), 7.29 (s, 2 H), 6.15 (m, 1 H), 3.24-3.18 (m, 1 H), 2.62 (s, 3 H), 1.59 (d, \(J = 6.6\) Hz, 3 H), 1.32-1.25 (m, 2 H), 1.18-1.08 (m, 1 H), 0.95 - 0.92 (m, 1 H).

Example 38 \(-\text{H})-2-(\text{aminoethyl})-3\text{-cyclopropyl-6-fluoroquinazolin-4(3 \text{H})-one}

\[\text{Figure}\]

[425] To a mixture of \((\text{S})-2-(\text{aminoethyl})-3\text{-cyclopropyl-6-fluoroquinazolin-4(3 \text{H})-one} (50 mg, 0.20 mmol) and 6-chloro-5-(3-methyl-1,2,4-oxadiazol-5-yl)pyrimidin-4-amine (47.0 mg, 0.22 mmol) in \text{BuOH} (1.5 mL) was added DIPEA (0.07 mL, 0.4 mmol). The mixture was stirred at 110 \(^\circ\)C for 2.0 hours, then concentrated \text{in vacuo} and the residue was purified by a
silica gel column chromatography (PE/EtOAc (v/v) = 1/1) to give the title compound as a pale yellow solid (60 mg, 70.2%).

MS (ESI, pos. ion) m/z: 423.2 [M+H]^+.

³¹ NMR (400 MHz, CDCl₃) δ (ppm): 9.07 (d, J = 7.0 Hz, 1 H), 8.18 (s, 1 H), 7.88 (dd, J = 8.5, 2.9 Hz, 1 H), 7.69 (dd, J = 8.9, 4.8 Hz, 1 H), 7.45 (m, 1 H), 6.39-6.28 (m, 1 H), 3.13 (m, 1 H), 2.55 (s, 3 H), 1.68 (d, J = 6.6 Hz, 3 H), 1.52-1.41 (m, 2 H), 1.17-1.09 (m, 1 H), 1.05-0.95 (m, 1 H).

BIOLOGICAL TESTING

[426] The LC/MS/MS system used in the analysis consists of an Agilent 1200 Series vacuum degasser, binary pump, well-plate autosampler, thermostatted column compartment, the Agilent G6430 Triple Quadrupole Mass Spectrometer with an electrosprayionization (ESI) source. Quantitative analysis was carried out using MRM mode. The parameters for MRM transitions are in the Table A.

[427] An Agilent XDB-C18, 2.1 x 30 mm, 3.5 µM column was used for the analysis. 5 µL of the samples were injected. Analysis condition: The mobile phase was 0.1% formic acid in water (A) and 0.1% formic acid in methanol (B). The flow rate was 0.4 mL/min. And the gradient of Mobile phase was in the Table B.

[428] Alternatively, an Agilent 6330 series LC/MS/MS spectrometer equipped with G1312A binary pumps, a G1367A autosampler and a G1314C UV detector were used in the analysis. An ESI source was used on the LC/MS/MS spectrometer. The analysis was done in
positive ion mode as appropriate and the MRM transition for each analyte was optimized using standard solution. A Capcell MP-C18 100 x 4.6 mm ID., 5 µM column (Phenomenex, Torrance, California, USA) was used during the analysis. The mobile phase was 5 mM ammonia acetate, 0.1% MeOH in water (A): 5 mM ammonia acetate, 0.1% MeOH in acetonitrile (B) (70/30, v/v). The flow rate was 0.6 mL/min. Column was maintained at ambient temperature. 20 µL of the samples were injected.

Example A: Compound Stability In Human and Rat Liver Microsomes

Human or rat liver microsomes incubations were conducted in duplicate in polypropylene tubes. The typical incubation mixtures consisted of human or rat liver microsomes (0.5 mg protein/mL), compounds of interest (5 µM) and NADPH (1.0 mM) in a total volume of 200 µL potassium phosphate buffer (PBS, 100 mM, pH 7.4). Compounds were dissolved in DMSO and diluted with PBS such that the final concentration of DMSO was 0.05%. The enzymatic reactions were commenced with the addition of protein after a 3-min preincubation and incubated in a water bath open to the air at 37 °C. Reactions were terminated at various time points (0, 5, 10, 15, 30, 60 min) by adding equal volume of ice-cold acetonitrile. The samples were stored at -80 °C until LC/MS/MS assays.

The concentrations of compounds in the incubation mixtures of human or rat liver microsomes were determined by a LC/MS/MS method. The ranges of the linearity in the concentration range were determined for each tested compounds.

A parallel incubation was performed using denatured microsomes as the negative control, and reactions were terminated at various time points (0, 15, 60 min) after incubation at 37 °C.

Dextromethorphan (70 µM) was selected as the positive control, and reactions were terminated at various time points (0, 5, 10, 15, 30, 60 min) after incubation at 37 °C. Both positive and negative control samples were included in each assay to ensure the integrity of the microsomal incubation system.

Data Analysis

The concentrations of compounds in human or rat liver microsome incubations were plotted as a percentage of the relevant zero time point control for each reaction. The in vivo CLint were extrapolated (ref: Naritomi, Y.; Terashita, S.; Kimura, S.; Suzuki, A.; Kagayama, A.; and Sugiyama, Y.; Prediction of human hepatic clearance from in vivo animal experiments and in vitro metabolic studies with liver microsomes from animals and humans. Drug Metab. Dispos., 2001, 29: 1316-1324).
Example B: Evaluation of Pharmacokinetics After Intravenous and Oral Administration of The Compounds Disclosed Herein In Mice, Rats, Dogs and Monkeys

The compounds disclosed herein are assessed in pharmacokinetic studies in mice, rats, dogs or monkeys. The compounds are administered as a water solution, 2% HPMC + 1% TWEEN®80 in water solution, 5% DMSO + 5% solutol in saline, 4% MC suspension or capsule. For the intravenous administration, the animals are generally given at 1 or 2 mg/kg dose. For the oral (p.o.) dosing, mice and rats are generally given 5 or 10 mg/kg dose, and dogs and monkeys are generally given 10 mg/kg dose. The blood samples (0.3 mL) are drawn at 0.25, 0.5, 1.0, 2.0, 3.0, 4.0, 6.0, 8.0, 12 and 24 h time points or 0.083, 0.25, 0.5, 1.0, 2.0, 4.0, 6.0, 8.0 and 24 h time points and centrifuged at 3,000 or 4000 rpm for 2 to 10 min. The plasma solutions are collected, stored at -20 °C or -70 °C until analyzed by LC/MS/MS as described above.

Example C: Kinase Activity Assay

The efficacy of the compounds disclosed herein as inhibitors of PI3 kinases and mTOR kinases can be evaluated as follows.

General Description for Kinase Assays

Kinase assays can be performed by measurement of incorporation of γ-32P ATP into immobilized myelin basic protein (MBP). High binding white 384 well plates (Greiner) are coated with MBP (Sigma #M-1891) by incubation of 60 µL/well of 20 µg/mL MBP in Tris-buffered saline (TBS; 50 mM Tris pH 8.0, 138 mM NaCl, 2.7 mM KCl) for 24 hours at 4 °C. Plates are washed 3 x with 100 µL TBS. Kinase reactions are carried out in a total volume of 34 µL in kinase buffer (5 mM Hapes pH 7.6, 15 mM NaCl, 0.01% bovine gamma globulin (Sigma #1-5506), 10 mM MgCl, 1 mM DTT, 0.02% TritonX-100). Compound dilutions are performed in DMSO and added to assay wells to a final DMSO concentration of 1%. Each data point is measured in duplicate, and at least two duplicate assays are performed for each individual compound determination. Enzyme is added to final concentrations of 10 nM or 20 nM, for example. A mixture of unlabeled ATP and γ-32P ATP is added to start the reaction (2 x 10^6 cpm of γ-32P ATP per well (3000 Ci/mmmole) and 10 µM unlabeled ATP, typically. The reactions are carried out for 1 h at rt with shaking. Plates are washed 7x with TBS, followed by the addition of 50 µL/well scintillation fluid (Wallac). Plates are read using a Wallac Trilux counter. This is only one format of such assays; various other formats are possible, as known to one skilled in the art.
The above assay procedure can be used to determine the IC50 for inhibition and/or the inhibition constant, Ki. The IC50 is defined as the concentration of compound required to reduce the enzyme activity by 50% under the condition of the assay. The IC50 value is estimated by preparing a 10 point curve using a ½ log dilution series (for example, a typical curve may be prepared using the following compound concentrations: 10 µM, 3 µM, 1 µM, 0.3 µM, 0.1 µM, 0.03 µM, 0.01 µM, 0.003 µM, 0.001 µM and 0 µM).

PI3 KIANSE GENERAL ASSAY PROTOCOL

PI3K (p110α/p85α) (h) [Non-radioactive assay]

PI3K (p110α/p85α) (h) is incubated in assay buffer containing 10 µM phosphatidylinositol-4,5-bisphosphate and MgATP (concentration as required). The reaction is initiated by the addition of the ATP solution. After incubation for 30 minutes at room temperature, the reaction is stopped by the addition of stop solution containing EDTA and biotinylated phosphatidylinositol-3,4,5-trisphosphate. Finally, detection buffer is added, which contains europium-labelled anti-GST monoclonal antibody, GST-tagged GRP1 PH domain and streptavidin-allophycocyanin. The plate is then read in timeresolved fluorescence mode and the homogenous time-resolved fluorescence (HTRF) signal is determined according to the formula HTRF = 10000 × (Em665nm/Em620nm).

PI3K (p110β/p85α) (h) [Non-radioactive assay]

PI3K (p110β/p85α) (h) is incubated in assay buffer containing 10 µM phosphatidylinositol-4, 5-bisphosphate and MgATP (concentration as required). The reaction is initiated by the addition of the MgATP mix. After incubation for 30 minutes at room temperature, the reaction is stopped by the addition of stop solution containing EDTA and biotinylated phosphatidylinositol-3,4,5-trisphosphate. Finally, detection buffer is added, which contains europium-labelled anti-GST monoclonal antibody, GST-tagged GRP1 PH domain and streptavidin-allophycocyanin. The plate is then read in timeresolved fluorescence mode and the homogenous time-resolved fluorescence (HTRF) signal is determined according to the formula HTRF = 10000 × (Em665nm/Em620nm).

PI3K (p110δ/p85α) (h) [Non-radioactive assay]

PI3K (p110δ/p85α) (h) is incubated in assay buffer containing 10 µM phosphatidylinositol-4, 5-bisphosphate and MgATP (concentration as required). The reaction is initiated by the addition of the MgATP mix. After incubation for 30 minutes at room temperature, the reaction is stopped by the addition of stop solution containing EDTA and biotinylated phosphatidylinositol-3,4,5-trisphosphate. Finally, detection buffer is added, which contains
europium-labelled anti-GST monoclonal antibody, GST-tagged GRP1 PH domain and streptavidin-allophycocyanin. The plate is then read in timeresolved fluorescence mode and the homogenous time-resolved fluorescence (HTRF) signal is determined according to the formula $HTRF = 10000 \times (\text{Em}665\text{nm}/\text{Em}620\text{nm})$.

PI3K (ρ120γ) (h) [Non-radioactive assay]

[441] PI3K (ρ120γ) (h) is incubated in assay buffer containing 10 μM phosphatidylinositol-4, 5-bisphosphate and MgATP (concentration as required). The reaction is initiated by the addition of the MgATP mix. After incubation for 30 minutes at room temperature, the reaction is stopped by the addition of stop solution containing EDTA and biotinylated phosphatidylinositol-3,4,5-trisphosphate. Finally, detection buffer is added, which contains europium-labelled anti-GST monoclonal antibody, GST-tagged GRP1 PH domain and streptavidin-allophycocyanin. The plate is then read in timeresolved fluorescence mode and the homogenous time-resolved fluorescence (HTRF) signal is determined according to the formula $HTRF = 10000 \times (\text{Em}665\text{nm}/\text{Em}620\text{nm})$.

mTOR (h)

[442] mTOR (h) is incubated with 50 mM HEPES pH 7.5, 1 mM EDTA, 0.01% TWEEN®20, 2 mg/mL substrate, 3 mM Manganese Chloride and [γ-33P-ATP] (specific activity approx. 500 cpm/pmol, concentration as required). The reaction is initiated by the addition of the MnATP mix. After incubation for 40 minutes at room temperature, the reaction is stopped by the addition of 3% phosphoric acid solution. 10 μL of the reaction is then spotted onto a P30 filtermat and washed three times for 5 minutes in 75 mM phosphoric acid and once in methanol prior to drying and scintillation counting.

[443] The kinase assays described herein were performed at Millipore UK Ltd, Dundee Technology Park, Dundee DD2 1SW, UK.

Alternatively, the kinase activities of the compounds can be measured using KINOMEScan™, which is based on a competition binding assay that quantitatively measures the ability of a compound to compete with an immobilized, active-site directed ligand. The assay was performed by combining three components: DNA-tagged kinase; immobilized ligand; and a test compound. The ability of the test compound to compete with the immobilized ligand was measured via quantitative PCR of the DNA tag.

For most assays, kinase-tagged T7 phage strains were prepared in an E. coli host derived from the BL21 strain. E. coli were grown to log-phase and infected with T7 phage and incubated with shaking at 32 °C until lysis. The lysates were centrifuged and filtered to remove cell debris. The remaining kinases were produced in HEK-293 cells and subsequently tagged with DNA for qPCR detection. Streptavidin-coated magnetic beads were treated with biotinylated small molecule ligands for 30 minutes at room temperature to generate affinity resins for kinase assays. The liganded beads were blocked with excess biotin and washed with blocking buffer (SEABLOCK™ (Pierce), 1% BSA, 0.05% TWEEN®20, 1 mM DTT) to remove unbound ligand and to reduce nonspecific binding. Binding reactions were assembled by combining kinases, liganded affinity beads, and test compounds in 1× binding buffer (20% SEABLOCK™, 0.17 × PBS, 0.05% TWEEN®20, 6 mM DTT). All reactions were performed in polystyrene 96-well plates in a final volume of 0.135 mL. The assay plates were incubated at room temperature with shaking for 1 hour and the affinity beads were washed with wash buffer (1x PBS, 0.05% TWEEN®20). The beads were then re-suspended in elution buffer (1 × PBS, 0.05% TWEEN®20, 0.5 μM non-biotinylated affinity ligand) and incubated at room temperature with shaking for 30 minutes. The kinase concentration in the eluates was measured by qPCR.

The kinase assays described herein were performed using KINOMEScan™ Profiling Service at DiscoveRx Corporation, 42501 Albrae St. Fremont, CA 94538, USA.

Finally, it should be noted that there are alternative ways of implementing the present invention. Accordingly, the present embodiments are to be considered as illustrative and not restrictive and the invention is not be limited to the details given herein, but may be modified within the scope and equivalents of the appended claims. All publications and patents cited herein are incorporated by reference.
WHAT IS CLAIMED IS:

1. A compound having one of the following structures or a stereoisomer, a tautomer, an $N$-oxide, a solvate, a metabolite, a pharmaceutically acceptable salt or a prodrug thereof:
2. A pharmaceutical composition comprising the compound according to claim 1, and one or more pharmaceutically acceptable carriers, excipients, diluents, adjuvants, vehicles, or a combination thereof.

3. The pharmaceutical composition according to claim 2 further comprising one or more therapeutic agents.

4. A method of modulating the activity of the PI3-kinase, preferably of the PI3K5 isoform, in a subject, wherein the method comprises administering to the subject a therapeutically effective amount of a compound according to claim 1, or a pharmaceutically acceptable salt thereof.

5. A method of treating a disorder mediated by inappropriate PI3-kinase activity comprising
administering a safe and effective amount of a compound according to claim 1, or a pharmaceutically acceptable salt thereof, to a patient in need thereof.

6. A method of treating a disorder mediated by inappropriate PI3-kinase activity comprising administering a pharmaceutical composition according to any one of claims 2 to 3, to a patient in need thereof.

7. The method according to claim 5 or claim 6, wherein the disorder mediated by inappropriate PI3-kinase activity is a respiratory disease, a viral infection, a non-viral respiratory infection, an allergic disease, an autoimmune disease, an inflammatory disorder, a cardiovascular disease, a hematologic malignancy, a neurodegenerative disease, pancreatitis, multiorgan failure, kidney disease, platelet aggregation, cancer, sperm motility, transplantation rejection, graft rejection, lung injury, or pain.

8. The method according to claim 5 or claim 6, wherein the disorder mediated by inappropriate PI3-kinase activity is asthma, chronic obstructive pulmonary disease (COPD), viral respiratory tract infections, viral exacerbation of respiratory diseases, aspergillosis, leishmaniasis, allergic rhinitis, atopic dermatitis, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, thrombosis, atherosclerosis, hematologic malignancy, neurodegenerative disease, pancreatitis, multiorgan failure, kidney disease, platelet aggregation, cancer, sperm motility, transplantation rejection, graft rejection, lung injury, pain associated with rheumatoid arthritis or osteoarthritis, back pain, general inflammatory pain, post hepatic neuralgia, diabetic neuropathy, inflammatory neuropathic pain (trauma), trigeminal neuralgia or central pain.

9. Use of a compound according to claim 1, or a pharmaceutically acceptable salt thereof, or a composition according to any one of claims 2 to 3 in the manufacture of a medicament for the treatment of a disorder or a disease selected from asthma, chronic obstructive pulmonary disease (COPD), viral respiratory tract infections, viral exacerbation of respiratory diseases, aspergillosis, leishmaniasis, allergic rhinitis, atopic dermatitis, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, thrombosis, atherosclerosis, hematologic malignancy, neurodegenerative disease, pancreatitis, multiorgan failure, kidney disease, platelet aggregation, cancer, sperm motility, transplantation rejection, graft rejection, lung injury, pain associated with rheumatoid arthritis or osteoarthritis, back pain, general inflammatory pain, post hepatic neuralgia, diabetic neuropathy, inflammatory neuropathic pain (trauma), trigeminal neuralgia or central pain.

Further documents are listed in the continuation of Box C. See patent family annex.

* "A" document defining the general state of the art which is not considered to be of particular relevance

**E** earlier application or patent but published on or after the international filing date

**L** document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

**O** document referring to an oral disclosure, use, exhibition or other means

**P** document published prior to the international filing date but later than the priority date claimed

**T** later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

**X** document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

**Y** document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

**A** document member of the same patent family

INTERNATIONAL SEARCH REPORT

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. □ Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:

2. □ Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

3. □ Claims Nos.: 7, 8 because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

This International Searching Authority found multiple inventions in this international application, as follows:

1. ○ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.

2. □ As all searchable claims could be searched without effort justifying additional fees, this Authority did not invite payment of additional fees.

3. □ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:

4. □ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

H The additional search fees were accompanied by the applicant’s protest and, where applicable, the payment of a protest fee.

☐ The additional search fees were accompanied by the applicant’s protest but the applicable protest fee was not paid within the time limit specified in the invitation.

☐ No protest accompanied the payment of additional search fees.
