UNITED STATES PATENT OFFICE.

JOSEPH KINDELAN, OF LEADVILLE, COLORADO.

CANDLESTICK.

No. 814,456.

Specification of Letters Patent.

Patented March 6, 1906.

Application filed October 14, 1905. Serial No. 282,734.

To all whom it may concern:

Be it known that I, JOSEPH KINDELAN, a citizen of the United States, and a resident of the city of Leadville, in the county of Lake and State of Colorado, have invented a new and Improved Candlestick, of which the following is a full, clear, and exact description.

This invention relates to improvements in miners' candlesticks, the object being to provide a candlestick of simple construction and so arranged that the candle may be readily adjusted.

I will describe a candlestick embodying my invention and then point out the novel features in the appended claim.

Reference is to be had to the accompanying drawings, forming a part of this specification, in which similar characters of reference indicate corresponding parts in both figures.

Figure 1 is a perspective view of a candlestick embodying my invention, and Fig. 2 is a plan view thereof.

The candlestick comprises a single length of spring-steel bent to form a bow 1, having at one end a semicircular portion 2 and at the other end a semicircular portion 3 these portions 2 and 3 forming practically a holder

for the candle. The member 3 as here shown has a spike extension 4, and also on this member 3 is a hook 5. Attached to the members 2 and 3 are segmental plates 6 and 7, which form a socket for receiving the candle.

As the members 6 and 7 may be readily moved apart, it is obvious that a candle may be readily adjusted upward or downward therein, and upon releasing the body position 1 the candle will be firmly clamped.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

A miner's candlestick comprising a body portion consisting of a single length of spring-steel bent to form a loop terminating in segmental portions; a spike extended from one of the segmental portions; a hook on one of the segmental portions and segmental plates secured to said segmental portions.

In testimony whereof I have signed my name to this specification in the presence of two subscribing witnesses.

JOSEPH KINDELAN.
