(54) Title: SYSTEM AND METHOD FOR FACILITATING SHOPPING

(57) Abstract: Purchase of items is facilitated through use of a wireless device (20). The wireless device (20) connects to a server (10) via a global communications network. The consumer's shopping list is maintained on the server (10) and displayed on the wireless device(20). Using the wireless device (20) and the shopping list, a checkout list is created by entering or scanning codes on selected items at locations proximate the selected items in a store (80). One or more of the locations proximate the selected items corresponds to a location that is different from a point of sale in the store (80), the point of sale corresponding to a location in the store (80) where goods on the checkout list are purchased using the wireless device (20).
