(57) Abstract:

A flat panel cardboard packaging for protecting a flat panel (FP) comprises a base part (2), first and second side walls (6, 10) extending along parallel first and second sides of the base part (2), at least a first lid part (14, 18) adapted for covering the flat panel (FP) placed on the base part (2) between the side walls (6, 10), and at least a first cushioning part (24). The first side wall (6) is supported at a first angle ( $\alpha_1$ ), which is different from  $0^\circ$  to a plane perpendicular to the base part (2), to form a first side deformation zone. The first cushioning part (24) comprises an outer gable portion (28) and an inner gable portion (30) which is arranged at a free inner distance (IS) from the outer gable portion (28), thereby forming an end deformation zone between the outer and inner gable portions (28, 30).
