(54) Refrigerating appliance

(57) The invention relates to a refrigerating appliance, in particular for domestic use, the refrigerated compartment (2) of which contains a cell (9) thermally insulated by a separating septum (7).

The cell thus prearranged can contain hot items, such as cooked foods in plates, saucepans or the like, having a temperature significantly higher than room temperature, without making the temperature in the refrigerated compartment (2) rise above a preset level.

In double-door "no-frost" type refrigerators, the cell (9) is cooled internally by air coming from the freezer compartment (3).

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document
