United States Plant Patent

Diascia Plant Named ‘Sunjodiora’

Applicants: Jimmy Jones, Netherwent (GB); David Jones, Netherwent (GB)

Inventors: Jimmy Jones, Netherwent (GB); David Jones, Netherwent (GB)

Assignee: Suntory Flowers, Ltd, Tokyo (JP)

Notice: Subject to any disclaimer, the term of this patent is extended or adjusted under 35 U.S.C. 154(b) by 114 days.

Filed: Sep. 27, 2012

Botanical designation: Diascia hybrida.
Cultivar denomination: ‘SUNJODIORA’.

BACKGROUND OF THE INVENTION

The present invention relates to a new and distinct cultivar of Diascia plant, botanically known as Diascia hybrida, and hereinafter referred to by the name ‘Sunjodiora’.

The new Diascia plant is a product of a planned breeding program conducted by the Inventors in St. Brides, Netherwent, Monmouthshire, United Kingdom. The objective of the breeding program is to create new Diascia plants with long and strong flowering stems and large attractive flowers.

The new Diascia plant originated from a cross-pollination conducted by the Inventors on Jun. 7, 2008 in St. Brides, Netherwent, Monmouthshire, United Kingdom with a proprietary selection of Diascia hybrida identified as code number 8792, not patented, as the female, or seed, parent and with a proprietary selection of Diascia hybrida identified as code number 714, not patented, as the male, or pollen, parent. The new Diascia plant was discovered and selected by the Inventors as a single flowering plant from within the progeny of the stated cross-pollination in a controlled greenhouse environment in St. Brides, Netherwent, Monmouthshire, United Kingdom on Aug. 20, 2008.

Asexual reproduction of the new Diascia plant by vegetative cuttings in a controlled greenhouse environment in St. Brides, Netherwent, Monmouthshire, United Kingdom since Aug. 20, 2008 has shown that the unique features of this new Diascia plant are stable and reproduced true to type in successive generations.

SUMMARY OF THE INVENTION

Plants of the new Diascia have not been observed under all possible environmental conditions. The phenotype may vary somewhat with variations in environment and cultural practices such as temperature and light intensity without, however, any variance in genotype.

The following traits have been repeatedly observed and are determined to be the unique characteristics of ‘Sunjodiora’. These characteristics in combination distinguish ‘Sunjodiora’ as a new and distinct cultivar of Diascia plant:

1. Upright and mounding plant habit.
2. Long and strong flowering stems.
3. Early and long flowering period.
4. Numerous large orange red-colored flowers.
5. Good garden performance.

Plants of the new Diascia can be compared to plants of the female parent selection. Plants of the new Diascia differ primarily from plants of the female parent selection in the following characteristics:

1. Plants of the new Diascia have longer flowering stems than plants of the female parent selection.
2. Plants of the new Diascia have larger flowers than plants of the female parent selection.
3. Plants of the new Diascia and the female parent selection differ in flower color as plants of the female parent selection have pink-colored flowers.
4. Plants of the new Diascia can be compared to plants of the male parent selection. Plants of the new Diascia differ primarily from plants of the male parent selection in cold hardiness as plants of the new Diascia are more cold hardy than plants of the male parent selection.

Plants of the new Diascia can be compared to plants of the Diascia barbara ‘Diaspritwo’, disclosed in U.S. Plant Pat. No. 17,017, in side-by-side comparisons conducted in St. Brides, Netherwent, Monmouthshire, United Kingdom, plants of the new Diascia differed primarily from plants of ‘Diaspritwo’ in the following characteristics:

1. Plants of the new Diascia were upright whereas plants of ‘Diaspritwo’ were outwardly spreading.
2. Plants of the new Diascia were larger than plants of ‘Diaspritwo’.
3. Plants of the new Diascia had thicker flowering stems than plants of ‘Diaspritwo’.
4. Plants of the new Diascia had larger leaves than plants of ‘Diaspritwo’.

ABSTRACT

A new and distinct cultivar of Diascia plant named ‘Sunjodiora’, characterized by its upright and mounding plant habit; long and strong flowering stems; early and long flowering period; numerous large orange red-colored flowers; and good garden performance.
5. Plants of the new *Diascia* had longer inflorescences than plants of "Diaspirtwo".
6. Plants of the new *Diascia* and "Diaspirtwo" differed in flower spur color.

**BRIEF DESCRIPTION OF THE PHOTOGRAPHS**

The accompanying colored photographs illustrate the overall appearance of the new *Diascia* plant showing the colors as true as it is reasonably possible to obtain in colored reproductions of this type. Colors in the photographs may differ slightly from the color values cited in the detailed botanical description which accurately describe the colors of the new *Diascia* plant.

The photograph at the top of the sheet is a side perspective view of a typical flowering plant of ‘Sunjodiora’ grown in a container.

The photograph at the bottom of the sheet is a close-up view of a typical inflorescence of ‘Sunjodiora’.

**DETAILED BOTANICAL DESCRIPTION**

The aforementioned photographs and following observations, measurements and values describe plants grown in 15-cm containers in an outdoor nursery in Higashioni, Shiga, Japan and under cultural practices typical of commercial *Diascia* production. During the production of the plants, day temperatures averaged 23°C and night temperatures averaged 13°C. Plants were four months old when the description was taken and five months old when the photographs were taken. In the following description, color references are made to The Royal Horticultural Society Colour Chart, 2007 Edition, except where general terms of ordinary dictionary significance are used.

Botanical classification: *Diascia hybrida* ‘Sunjodiora’.

Parentage:

Female, or seed, parent.—Proprietary selection of *Diascia hybrida* identified as code number d8792, not patented.

Male or pollen parent.—Proprietary selection of *Diascia hybrida* identified as code number d714, not patented.

Propagation:

Type.—By vegetative cuttings.

Time to initiate roots, summer.—About two weeks at 18°C.

Time to initiate roots, winter.—About 18 days at 18°C.

Time to produce a rooted young plant, summer.—About two weeks at 18°C.

Time to produce a rooted young plant, winter.—About 18 days at 18°C.

Root description.—Fibrous; white in color.

Rooting habit.—Freely branching.

Plant description:

Plant form and growth habit.—Upright plant habit; vigorous growth habit; freely branching habit with numerous lateral branches developing per plant.

Plant height.—About 38.5 cm.

Plant diameter (area of spread).—About 48.5 cm.

Lateral branch description:

Length.—About 31.6 cm.

Diameter.—About 4.4 mm.

Internode length.—About 3.1 cm.

Texture.—Glabrous; longitudinally ridged.

Color.—Close to 144A tinted with close to 183C.

Foliage description:

Arrangement.—Opposite, simple.

Length.—About 4.1 cm.

Width.—About 3 cm.

Shape.—Deltoid.

Apex.—Obtuse.

Base.—Coriaceous.

Margin.—Serrate.

Texture, upper and lower surfaces.—Smooth, glabrous.

Venation pattern.—Pinnate.

Color.—Developing and fully expanded leaves, upper surface: Close to N137B; venation, close to N137B. Developing and fully expanded leaves, lower surface: Close to 138B; venation, close to 138B.

Petiole.—Length: About 2.1 mm. Diameter: About 3.7 mm. Texture, upper and lower surfaces: Smooth, glabrous. Color, upper and lower surfaces: Close to 144C.

Flower description:

Flower arrangement and habit.—Large single flowers arranged on terminal racemes; flowers zygomorphic with five lobes fused at the base and spurred; freely flowering habit with about 20 flowers per raceme; flowers face outwardly.

Fragrance.—None detected.

Flowering response and natural flowering season.—Early flowering habit, plants begin flowering about three weeks after planting; plants flower freely and continuously from the spring into the fall in Japan.

Flower longevity.—Flowers last about five days on the plant; flowers not persistent.

Inflorescence height.—About 8.1 cm.

Inflorescence diameter.—About 2.9 cm.

Flower diameter.—About 1.8 cm by 1.9 cm.

Flower depth.—About 4 mm.

Flower buds.—Length: About 4.2 mm. Diameter: About 4.9 mm. Shape: Spherical. Color: Close to 318B.

Pedicels.—Length: About 7.1 mm. Diameter: About 0.3 mm. Angle: About 45° from the peduncle axis. Texture: Sparsely pubescent. Color: Close to 138B tinted with close to 179A.

Seeds and fruits.—Seed and fruit production have not been observed on plants of the new Diascia. Garden performance: Plants of the new Diascia have been observed to have good garden performance and to tolerate wind, rain and temperatures ranging from about 5° C. to about 35° C.

Pathogen & pest resistance: Plants of the new Diascia have not been observed to be resistant to pests and pathogens common to Diascia plants.

It is claimed:
1. A new and distinct Diascia plant named ‘Sunjodiora’ as illustrated and described.
