UNITED STATES PATENT OFFICE.

AMELIA C. FELSBERG, OF NEWARK, NEW JERSEY.

SPOON.

SPECIFICATION forming part of Letters Patent No. 256,989, dated April 25, 1882.

Application filed March 2, 1882. (No model.)

To all whom it may concern:

Be it known that I, AMELIA C. FELSBERG, of Newark, in the county of Essex and State of New Jersey, have invented a new and Improved Spoon, of which the following is a specification.

Figure 1 is a plan view of my improved spoon. Fig. 2 is a side elevation.

Similar letters of reference indicate corresponding parts.

My invention consists in an inclined lip formed on the edge of the larger portion of the spoon-bowl and extending to the tip of the bowl, more on one side than upon the other, the object being to provide a spoon that may be used by invalids and children without spilling its contents.

In the drawings, A is a spoon of ordinary form having attached to or formed upon the edge of the larger portion of its bowl a lip, B, that is inclined toward the tip of the bowl, and is highest opposite the handle and tapered each way toward the end of the spoon. The lip extends farther on one side of the bowl than upon the other, so that, when the spoon is carried, as it usually is, by children with the bowl higher than the handle and tipped somewhat to one side, the contents of the spoon are not spilled.

The lip B may be made outwardly convex or similar in form to a section of an inverted spoon-bowl. It may be made separately and attached to the spoon, or it may be formed together with the spoon from a single piece of metal.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

A spoon, A, provided with the lip B, when the same extends farther upon one side of the spoon-bowl than the other, substantially as shown and described.

AMELIA C. FELSBERG.
