UNITED STATES PATENT OFFICE.

EDWIN O. BLANCHARD, OF RANDOLPH, VERMONT.

SANITARY SHAVING-CUP.

1,063,644.

Specification of Letters Patent.

Patented June 3, 1913.

Application filed February 1, 1913. Serial No. 745,683.

To all whom it may concern:

Be it known that I, EDWIN O. BLANCHARD, a citizen of the United States, residing at Randolph, in the county of Orange and State of Vermont, have invented certain new and useful Improvements in Sanitary Shaving-Cups, of which the following is a specification, reference being had to the accompanying drawings.

This invention relates to new and useful improvements in shaving mugs and more particularly to a sanitary mug and my object is to provide a device of this character which will be highly sanitary and hygienic in every respect.

A further object of the invention resides in providing a cup or mug in which the soap for forming a lather forms a part and parcel thereof and a still further object resides in providing a cup formed preferably of paper, the bottom and walls of which are lined or coated with a layer of soap.

A still further object of the invention resides in providing a device which is simple in construction, inexpensive to manufacture and one which will be very efficient and useful in operation.

With these and other objects in view, the invention consists in the novel features of construction, combination and arrangement of parts as will be hereinafter referred to and more particularly pointed out in the specification and claim.

In the accompanying drawings forming a part of this application, Figure 1 is a perspective view of one of my sanitary shaving mugs; and Fig. 2 is a vertical section therethrough.

In describing my invention, I shall refer to the drawing in which similar reference characters designate corresponding parts throughout the several views and in which 1 indicates a cup or mug formed preferably of paraffin paper, such as is used in the manufacture of the well known sanitary cup, the same being of any desired shape

and size. The inner face of the side walls adjacent the bottom of the cup and the bottom thereof, are coated or lined with a layer of soap 2 which may be applied thereto by any of the well known processes for this purpose. When it is desired to use the cup, for shaving purposes, a small amount of water is drawn in the cup and the same is washed or worked around the bottom and side walls of the cup with the shaving brush, which action will, obviously, form the desired lather necessary for shaving. This lather may be quickly and readily formed and after one has finished shaving, the cup may be thrown away entirely or, if desired, may be saved for another use. As it is the object of the invention to provide a cup which is sanitary in every respect, this idea, of course, can only be carried out by disposing of the cup after having once used the same.

From the foregoing it will be seen that I have provided a simple, inexpensive and efficient means for carrying out the object of the invention and while I have particularly described the elements best adapted to perform the functions set forth, it is obvious that various changes in form, proportion and in the minor details of construction may be resorted to without departing from the spirit or sacrificing any of the principles of the invention as set forth in the appended claim.

Having thus described this invention, what I claim is:—

A sanitary device of the class described comprising a receptacle, the inner face of the walls and bottom thereof being coated with a thin layer of soap.

In testimony whereof I hereunto affix my signature in the presence of two witnesses.

EDWIN O. BLANCHARD.
