(54) Sunblind

(57) The invention relates to a sunblind mainly composed of a framework or a system of tubes, respectively, which can be mounted before a window, whereof the top of the framework is formed by a casing in which a heat-resistant material, such as a prepared cloth or screen, is wrapped into a roll of which its free end is secured in a bottom lath, as a so-called, cloth string on which a relatively heavy tube is attached and whereof said bottom lath at its ends is provided with elements which stick into lateral guides of the framework and wherein they can move as such being part of the system for locking or unlocking the heat-resistant cloth which can be lowered or raised manually or otherwise from resp. into said casing.

According to the invention the locking/unlocking system (8a,8b) comprises at each end of the bottom lath (5) a pen-like element (10) which can be moved in the lateral guide (7) and whereby each element (10) inside said lateral guide is connected to a movable plate (11) which for functioning of the system will co-operate with a cam-like element (16) as arranged in said lateral guides.

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document
