United States Patent Office.

A. GRUSHUS, OF ST. PAUL, MINNESOTA.

Letters Patent No. 70,834, dated November 12, 1867.

IMPROVEMENT IN TAG-HOLDERS.

The Schedule referred to in these Letters Patent and making part of the same.

TO ALL WHOM IT MAY CONCERN:

Be it known that I, A. GRUSHUS, of St. Paul, in the county of Ramsey, and State of Minnesota, have invented a new and improved Tag-Holder; and I do hereby declare that the following is a full, clear, and exact description thereof, which will enable others skilled in the art to make and use the same, reference being had to the accompanying drawings, forming part of this specification.

The present invention relates to a holder for tags to cloth and other material, which holder is made of spring wire in a peculiar shape, whereby it can be fastened to and detached from the cloth, &c., with great facility. In the accompanying plate of drawings my improved tag-holder is illustrated—

Figure 1 being a view of the same detached from a tag, and

Figure 2 a view showing its application.

Similar letters of reference indicate corresponding parts.

A, in the drawings, represents my improved tag-holder, which is made of spring wire, bent so as to cross itself at B, with the outer end C to each arm D thus formed, made sharp-pointed, as shown at E, so as to be susceptible of being forced through the cloth, &c., the tag being hung at its two-ends, F, as shown.

Among the many advantages of my improved tag-holder may be here mentioned that it can be easily attached and detached, and will hold with great firmness and security, it holding by pressure both points passing through the cloth, &c.

I claim as new, and desire to secure by Letters Patent—

The tag-holder, made substantially as herein described.

A. GRUSHUS.
