

UNITED STATES PATENT OFFICE.

DOMINICK CARDULLO, OF TITUSVILLE, PENNSYLVANIA.

IMPROVEMENT IN LIQUID SOAPS.

Specification forming part of Letters Patent No. 121,930, dated December 19, 1871.

To all whom it may concern:

Be it known that I, DOMINICK CARDULLO, of Titusville, in the county of Crawford and State of Pennsylvania, have invented a certain Compound called "Sicilian Liquid Soap," of which the following is a specification:

To prepare the said compound, take of pure Castile soap four ounces, scrape it into thin sheets or shavings, and add of oil of sweet almonds and pure glycerine two ounces each, together with half an ounce of any essential oil to scent the mixture. Mix well and allow it to stand about twenty-four hours, then add four ounces of distilled water, shake or beat it till the whole is well mixed, and allow it to stand until the sediment has separated from the liquid; draw off the water and filter it through cotton. In cold weather the sediment will not separate from the liquid without it is slightly warmed by means of a warm-

water "bath" or other convenient appliance. After the first filtration, to each seven or eight ounces add one ounce of alcohol and filter again through cotton, when it will become clear and ready for use.

This compound is very convenient and efficacious for cleansing the hair and scalp; for chapped face or hands; for improving the complexion; and in all cases where a soothing cleansing compound is desired.

I claim as my invention—

A liquid soap compounded of the within-named ingredients, substantially in the proportions and for the purposes set forth.

DOMINICK CARDULLO.
