(54) **Method of covering a wall employing an adhesive-containing, paintable composite sheet**

(57) An interior decoration method capable of hiding imperfections of the wall's surface and having a decorative capability, consists in directly gluing to the wall a composite sheet covering composed of a substrate cellulosic sheet having a screen printed or similarly defined layer of an aggregate of an inert powder material and of

a binder (glue) and subsequently applying a finishing coat to the covered wall. The patterns defined in relief over the surface of the sheet may have a different tonality from the tonality of the substrate sheet thus creating ornamental designs that remain visible because of being in relief as well as retaining a distinguishable tonality after painting.

The present search report has been drawn up for all claims			
Place of search		Date of completion of the search	Examiner
THE HAGUE		4 April 1996	Doolan, G
CATEGORY OF CITED DOCUMENTS			
X : particularly relevant if taken alone		T : theory or principle underlying the invention	
Y : particularly relevant if combined with another document of the same category		E : earlier patent document, but published on, or after the filing date	
A : technological background		D : document cited in the application	
O : non-written disclosure		L : document cited for other reasons	
P : intermediate document		.....	
		& : member of the same patent family, corresponding document
