(54) Title: GROUP DELIVERY SYSTEMS AND RELATED METHODS

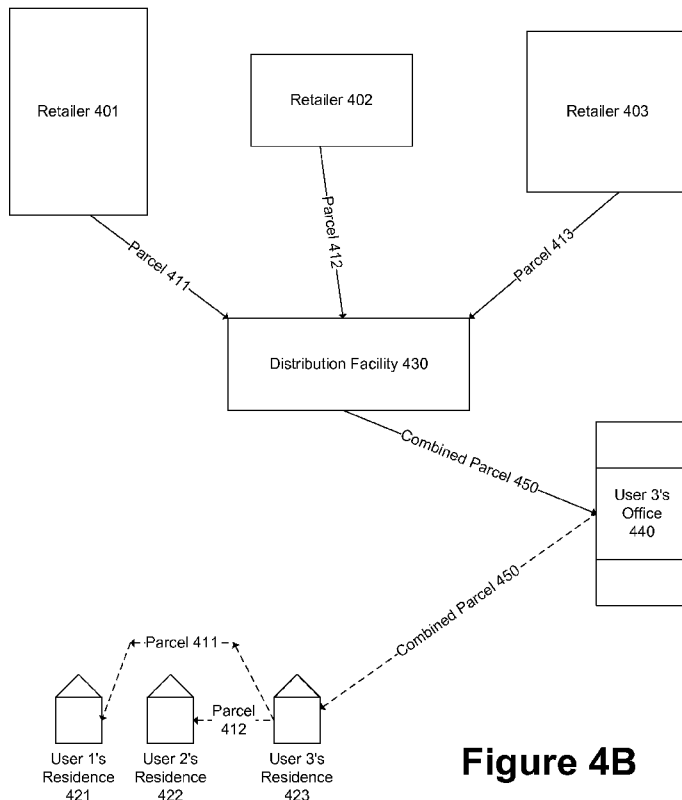

Figure 4B

(57) Abstract: Various embodiments of a system for creating delivery groups are disclosed. In various embodiments, the system is configured to collect purchase history data about users and determine if they have common characteristics. For example, the system may be configured to determine if two users live in the same neighborhood, have similar purchasing habits, etc. According to a particular embodiment, the system suggests to users with common characteristics to form delivery groups for package aggregation (e.g., to aggregate deliveries to a single location at the same time). The system may offer an incentive to the users to form the delivery group, such as a discount, incentive points, etc.
