(54) Title: SUPPORT TOWER, PARTICULARLY FOR A WIND TURBINE

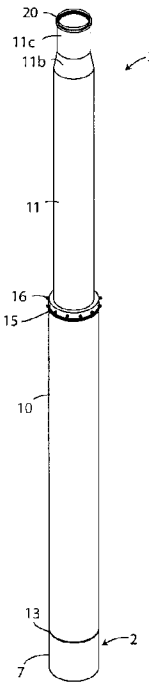

Fig. 8

(57) Abstract: The present invention relates to a support tower (3, 30), particularly for a wind turbine (1), wherein said support tower (3, 30) comprises: at least a first elongated component (10, 31), which is internally hollow; at least a second elongated component (11, 32), which is slidably coupled to said at least a first elongated component (10, 31) and movable relative to said at least a first elongated component (10, 31) at least between a retracted position, where said second elongated component (11, 32) is at least partially inserted in said at least a first elongated component (10, 31), and an extracted position, where said at least a second elongated component (11, 32) is substantially extracted from said at least a first elongated component (10, 31); moving means (22a, 22b, 22c, 22d; 36, 39, 40) for moving said second elongated component (11, 32) from said retracted position to said extracted position, and vice versa; and blocking means (15, 41) configured to allow said at least a second elongated component (11, 32) to be blocked in said extracted position.
