(54) **Title:** COLLABORATIVE DUE DILIGENCE REVIEW SYSTEM

FIG. 1

(57) **Abstract:** A system for providing a virtual data room for conducting due diligence on a plurality of documents that are remotely located and accessible over a computer network by a plurality of users using client computer systems. Documents are retrieved from the remote system and presented to a user on their local computing system for review and conducting due diligence tasks thereon. Based on the interaction the user has with the displayed document, due diligence status values that are associated with the display document are updated and stored with the virtual data room system. A display request is received and based on the request a display characteristic is calculated for a folder that includes a set of documents. The display characteristic is determined based on the due diligence status values of all of the documents within the folder.
