SUBSTITUTED 1H-PYRAZOL-1,2,4-OXADIAZOLE DERIVATIVES AS SPHINGOSINE RECEPTOR MODULATORS

By inventors: Janet A. Takeuchi, Ling Li, Ken Chow and Wha-Bin Im

RELATED APPLICATIONS

This application claims the benefit of United States Provisional Patent Application Serial No. 61/765,516 filed February 15, 2013, the disclosure of which is hereby incorporated in its entirety herein by reference.

FIELD OF THE INVENTION

The present invention relates to substituted 1H-pyrazol-1,2,4-oxadiazole derivatives, processes for preparing them, pharmaceutical compositions containing them and their use as pharmaceuticals as modulators of sphingosine-1-phosphate receptors. The invention also relates to the use of these compounds and their pharmaceutical compositions to treat disorders associated with sphingosine-1-phosphate (S1P) receptor modulation.

BACKGROUND OF THE INVENTION

Sphingosine-1 phosphate is stored in relatively high concentrations in human platelets, which lack the enzymes responsible for its catabolism, and it is released into the blood stream upon activation of physiological stimuli, such as growth factors, cytokines, and receptor agonists and antigens. It may also have a critical role in platelet aggregation and thrombosis and could aggravate cardiovascular diseases. On the other hand the relatively high concentration of the metabolite in high-density lipoproteins (HDL) may have beneficial implications for atherogenesis. For example, there are recent suggestions that sphingosine-1-phosphate, together with other lysolipids such as sphingosylphosphorylcholine and lysosulfatide, are responsible for the beneficial clinical effects of HDL by stimulating the production of the potent antiatherogenic signaling molecule nitric oxide by the vascular endothelium. In addition, like lysophosphatidic acid, it is a marker for certain types of cancer, and there is evidence that its role in cell division or

proliferation may have an influence on the development of cancers. These are currently topics that are attracting great interest amongst medical researchers, and the potential for therapeutic intervention in sphingosine-1-phosphate metabolism is under active investigation.

SUMMARY OF THE INVENTION

We have now discovered a group of novel compounds which are potent sphingosine-1-phosphate modulators. As such, the compounds described herein are useful in treating a wide variety of disorders associated with modulation of sphingosine-1-phosphate receptors. The term “modulator” as used herein, includes but is not limited to: receptor agonist, antagonist, inverse agonist, inverse antagonist, partial agonist, partial antagonist.

This invention describes compounds of **Formula I**, which have sphingosine-1-phosphate receptor biological activity. The compounds in accordance with the present invention are thus of use in medicine, for example in the treatment of humans with diseases and conditions that are alleviated by S1P modulation.

In one embodiment of the invention, there are provided compounds represented by **Formula I** below and pharmaceutically accepted salts thereof, its enantiomers, diastereoisomers, hydrates, solvates, crystal forms and individual isomers, tautomers or a pharmaceutically acceptable salt thereof,

Formula I

wherein:

R^1 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^2 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^3 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^4 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^5 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^6 is H, halogen or optionally substituted C_{1-6} alkyl;

R^7 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^8 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^9 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{10} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{11} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{12} is H, OH or optionally substituted C_{1-6} alkyl;

R^{13} is H or optionally substituted C_{1-6} alkyl;

R^{14} is H or optionally substituted C_{1-6} alkyl; and

R^{15} is H or optionally substituted C_{1-6} alkyl.

In another embodiment of the invention, there are provided compounds represented by **Formula II** below and pharmaceutically accepted salts thereof, its enantiomers, diastereoisomers, tautomers or a pharmaceutically acceptable salt thereof:

**Formula II**

wherein:

R^1 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^2 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^3 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^4 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^5 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^6 is H or optionally substituted C_{1-6} alkyl;

R^7 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^8 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^9 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{10} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{11} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{12} is H, OH or optionally substituted C_{1-6} alkyl;

R^{13} is H or optionally substituted C_{1-6} alkyl;

R^{14} is H or optionally substituted C_{1-6} alkyl;

R^{15} is H or optionally substituted C_{1-6} alkyl;

W is PO_3H_2 or $COOH$; and

a is 0 or 1.

In another embodiment of the invention, there are provided compounds represented by **Formula II**, wherein:

R^1 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^2 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^3 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^4 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^5 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^6 is H, halogen or optionally substituted C_{1-6} alkyl;

R^7 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^8 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^9 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{10} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{11} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{12} is H, OH or optionally substituted C_{1-6} alkyl;

R^{13} is H or optionally substituted C_{1-6} alkyl;

R^{14} is H or optionally substituted C_{1-6} alkyl;

R^{15} is H or optionally substituted C_{1-6} alkyl;

W is PO₃H₂; and
a is 1.

In another embodiment of the invention, there are provided compounds represented by **Formula II**, wherein:

R¹ is H, halogen or optionally substituted C₁₋₆ alkyl, CN, NO₂, C(O)R¹², NR¹³R¹⁴ or OR¹⁵;

R² is H, halogen or optionally substituted C₁₋₆ alkyl, CN, NO₂, C(O)R¹², NR¹³R¹⁴ or OR¹⁵;

R³ is H, halogen or optionally substituted C₁₋₆ alkyl, CN, NO₂, C(O)R¹², NR¹³R¹⁴ or OR¹⁵;

R⁴ is H, halogen or optionally substituted C₁₋₆ alkyl, CN, NO₂, C(O)R¹², NR¹³R¹⁴ or OR¹⁵;

R⁵ is H, halogen or optionally substituted C₁₋₆ alkyl, CN, NO₂, C(O)R¹², NR¹³R¹⁴ or OR¹⁵;

R⁶ is H, halogen or optionally substituted C₁₋₆ alkyl;

R⁷ is H, halogen or optionally substituted C₁₋₆ alkyl, CN, NO₂, C(O)R¹², NR¹³R¹⁴ or OR¹⁵;

R⁸ is H, halogen or optionally substituted C₁₋₆ alkyl, CN, NO₂, C(O)R¹², NR¹³R¹⁴ or OR¹⁵;

R⁹ is H, halogen or optionally substituted C₁₋₆ alkyl, CN, NO₂, C(O)R¹², NR¹³R¹⁴ or OR¹⁵;

R¹⁰ is H, halogen or optionally substituted C₁₋₆ alkyl, CN, NO₂, C(O)R¹², NR¹³R¹⁴ or OR¹⁵;

R¹¹ is H, halogen or optionally substituted C₁₋₆ alkyl, CN, NO₂, C(O)R¹², NR¹³R¹⁴ or OR¹⁵;

R¹² is H, OH or optionally substituted C₁₋₆ alkyl;

R¹³ is H or optionally substituted C₁₋₆ alkyl;

R¹⁴ is H or optionally substituted C₁₋₆ alkyl;

R¹⁵ is H or optionally substituted C₁₋₆ alkyl;

W is COOH; and

a is 0.

In another embodiment of the invention, there are provided compounds represented by **Formula II**, wherein:

R¹ is H, halogen or optionally substituted C₁₋₆ alkyl;

R² is H, halogen or optionally substituted C₁₋₆ alkyl;

R³ is H, halogen or optionally substituted C₁₋₆ alkyl;

R⁴ is H, halogen or optionally substituted C₁₋₆ alkyl;

R⁵ is H, halogen or optionally substituted C₁₋₆ alkyl;

R⁶ is optionally substituted C₁₋₆ alkyl;

R⁷ is H, halogen or optionally substituted C₁₋₆ alkyl;

R⁸ is H, halogen or optionally substituted C₁₋₆ alkyl;

R⁹ is H, halogen or optionally substituted C₁₋₆ alkyl;

R¹⁰ is H, halogen or optionally substituted C₁₋₆ alkyl;

R¹¹ is H, halogen or optionally substituted C₁₋₆ alkyl;

W is PO₃H₂ or COOH; and

a is 0 or 1.

In another embodiment of the invention, there are provided compounds represented by **Formula II**, wherein:

R¹ is H or optionally substituted C₁₋₆ alkyl;

R² is H or optionally substituted C₁₋₆ alkyl;

R³ is H or optionally substituted C₁₋₆ alkyl;

R⁴ is H or optionally substituted C₁₋₆ alkyl;

R⁵ is H or optionally substituted C₁₋₆ alkyl;

R⁶ is methyl, ethyl, n-propyl or iso-propyl;

R⁷ is H or optionally substituted C₁₋₆ alkyl;

R⁸ is H or optionally substituted C₁₋₆ alkyl;

R⁹ is H or optionally substituted C₁₋₆ alkyl;

R¹⁰ is H or optionally substituted C₁₋₆ alkyl;

R¹¹ is H or optionally substituted C₁₋₆ alkyl;

W is PO₃H₂ or COOH; and

a is 0 or 1.

In another embodiment of the invention, there are provided compounds represented by **Formula II**, wherein:

R¹ is H;

R² is H;

R³ is H;

R⁴ is H;

R⁵ is H;

R⁶ is methyl;

R⁷ is H;

R⁸ is H;

R⁹ is H;

R¹⁰ is H;

R¹¹ is H;

W is PO₃H₂ or COOH; and

a is 0 or 1.

The term "alkyl", as used herein, refers to saturated, monovalent hydrocarbon moieties having linear or branched moieties or combinations thereof and containing 1 to 6 carbon atoms. One methylene (-CH₂-) group, of the alkyl can be replaced by oxygen, sulfur, sulfoxide, nitrogen, carbonyl, carboxyl, sulfonyl, or by a divalent C₃₋₆ cycloalkyl. Alkyl groups can be substituted by halogen, amino, hydroxyl, cycloalkyl, amino, carboxylic acid, phosphonic acid groups, sulphonic acid groups, phosphoric acid.

The term "cycloalkyl", as used herein, refers to a monovalent or divalent group of 3 to 8 carbon atoms, derived from a saturated cyclic hydrocarbon. Cycloalkyl groups can be monocyclic or polycyclic. Cycloalkyl can be substituted by 1 to 3 C₁₋₃ alkyl groups or 1 or 2 halogens.

The term "halogen", as used herein, refers to an atom of chlorine, bromine, fluorine, iodine.

The term "hydroxyl" as used herein, represents a group of formula "-OH".

The term "carbonyl" as used herein, represents a group of formula "-C=O".

The term "carboxyl" as used herein, represents a group of formula $-\text{C}(\text{O})\text{O}-$.

The term "sulfonyl" as used herein, represents a group of formula $-\text{SO}_2$.

The term "sulfate" as used herein, represents a group of formula $-\text{O}-\text{S}(\text{O})_2-\text{O}-$.

The term "carboxylic acid" as used herein, represents a group of formula $-\text{C}(\text{O})\text{OH}$.

The term "sulfoxide" as used herein, represents a group of formula $-\text{S}=\text{O}$.

The term "phosphonic acid" as used herein, represents a group of formula $-\text{P}(\text{O})(\text{OH})_2$.

The term "phosphoric acid" as used herein, represents a group of formula $-(\text{O})\text{P}(\text{O})(\text{OH})_2$.

The term "sulphonic acid" as used herein, represents a group of formula $-\text{S}(\text{O})_2\text{OH}$.

The term "amino" as used herein, represents a group of formula $-\text{NH}_2$.

The formula "H", as used herein, represents a hydrogen atom.

The formula "O", as used herein, represents an oxygen atom.

The formula "N", as used herein, represents a nitrogen atom.

The formula "S", as used herein, represents a sulfur atom.

Compounds of the invention are:

3-({4-[5-(1-methyl-5-phenyl-1H-pyrazol-3-yl)-1,2,4-oxadiazol-3-yl]benzyl} amino)propyl]phosphonic acid;

3-({4-[5-(1-methyl-5-phenyl-1H-pyrazol-3-yl)-1,2,4-oxadiazol-3-yl]benzyl}amino)propanoic acid.

Some compounds of Formula II and some of their intermediates have at least one stereogenic center in their structure. This stereogenic center may be present in an R or S configuration, said R and S notation is used in correspondence with the rules described in Pure Appl. Chem. (1976), 45, 11-13.

The term "pharmaceutically acceptable salts" refers to salts or complexes that retain the desired biological activity of the above identified compounds and exhibit minimal or no undesired toxicological effects. The "pharmaceutically acceptable salts" according to the invention include

therapeutically active, non-toxic base or acid salt forms, which the compounds of Formula II are able to form.

The acid addition salt form of a compound of Formula II that occurs in its free form as a base can be obtained by treating the free base with an appropriate acid such as an inorganic acid, for example, an inorganic acid, such as hydrochloric acid, hydrobromic acid, sulfuric acid, phosphoric acid, nitric acid and the like; or an organic acid such as for example, acetic, hydroxyacetic, propanoic, lactic, pyruvic, malonic, fumaric acid, maleic acid, oxalic acid, tartaric acid, succinic acid, malic acid, ascorbic acid, benzoic acid, tannic acid, pantoic acid, citric, methylsulfonic, ethanesulfonic, benzenesulfonic, formic and the like (Handbook of Pharmaceutical Salts, P. Heinrich Stahl & Camille G. Wermuth (Eds), Verlag Helvetica Chimica Acta-Zürich, 2002, 329-345).

Compounds of Formula II and their salts can be in the form of a solvate, which is included within the scope of the present invention. Such solvates include for example hydrates, alcoholates and the like.

With respect to the present invention reference to a compound or compounds, is intended to encompass that compound in each of its possible isomeric forms and mixtures thereof unless the particular isomeric form is referred to specifically.

Compounds according to the present invention may exist in different polymorphic forms. Although not explicitly indicated in the above formula, such forms are intended to be included within the scope of the present invention.

The compounds of the invention are indicated for use in treating or preventing conditions in which there is likely to be a component involving the sphingosine-1-phosphate receptors. In another embodiment, there are provided pharmaceutical compositions including at least one compound of the invention in a pharmaceutically acceptable carrier.

In a further embodiment of the invention, there are provided methods for treating disorders associated with modulation of sphingosine-1-phosphate receptors. Such methods can be performed, for example, by administering to a subject in need thereof a pharmaceutical composition containing a therapeutically effective amount of at least one compound of the invention.

These compounds are useful for the treatment of mammals, including humans, with a range of conditions and diseases that are alleviated by S1P modulation: not limited to the treatment of diabetic retinopathy, other retinal degenerative conditions, dry eye, angiogenesis and wounds.

Therapeutic utilities of S1P modulators are ocular diseases, such as but not limited to: wet and dry age-related macular degeneration, diabetic retinopathy, retinopathy of prematurity, retinal edema, geographic atrophy, glaucomatous optic neuropathy, chorioretinopathy, hypertensive retinopathy, ocular ischemic syndrome, prevention of inflammation-induced fibrosis in the back of the eye, various ocular inflammatory diseases including uveitis, scleritis, keratitis, and retinal vasculitis; or systemic vascular barrier related diseases such as but not limited to: various inflammatory diseases, including acute lung injury, its prevention, sepsis, tumor metastasis, atherosclerosis, pulmonary edemas, and ventilation-induced lung injury; or autoimmune diseases and immunosuppression such as but not limited to: rheumatoid arthritis, Crohn's disease, Graves' disease, inflammatory bowel disease, multiple sclerosis, Myasthenia gravis, Psoriasis, ulcerative colitis, autoimmune uveitis, renal ischemia/perfusion injury, contact hypersensitivity, atopic dermatitis, and organ transplantation; or allergies and other inflammatory diseases such as but not limited to: urticaria, bronchial asthma, and other airway inflammations including pulmonary emphysema and chronic obstructive pulmonary diseases; or cardiac protection such as but not limited to: ischemia reperfusion injury and atherosclerosis; or wound healing such as but not limited to: scar-free healing of wounds from cosmetic skin surgery, ocular surgery, GI surgery, general surgery, oral injuries, various mechanical, heat and burn

injuries, prevention and treatment of photoaging and skin ageing, and prevention of radiation-induced injuries; or bone formation such as but not limited to: treatment of osteoporosis and various bone fractures including hip and ankles; or anti-nociceptive activity such as but not limited to: visceral pain, pain associated with diabetic neuropathy, rheumatoid arthritis, chronic knee and joint pain, tendonitis, osteoarthritis, neuropathic pains; or central nervous system neuronal activity in Alzheimer's disease, age-related neuronal injuries; or in organ transplant such as renal, corneal, cardiac or adipose tissue transplant; inflammatory skin diseases, scleroderma, dermatomyositis, atopic dermatitis, lupus erythematosus, epidermolysis bullosa, and bullous pemphigoid. Topical use of S1P (sphingosine) compounds is of use in the treatment of various acne diseases, acne vulgaris, and rosacea.

In still another embodiment of the invention, there are provided methods for treating disorders associated with modulation of sphingosine-1-phosphate receptors. Such methods can be performed, for example, by administering to a subject in need thereof a therapeutically effective amount of at least one compound of the invention, or any combination thereof, or pharmaceutically acceptable salts, hydrates, solvates, crystal forms and individual isomers, enantiomers, and diastereoisomers thereof.

The present invention concerns the use of a compound of Formula II or a pharmaceutically acceptable salt thereof, for the manufacture of a medicament for the treatment of ocular disease, wet and dry age-related macular degeneration, diabetic retinopathy, retinopathy of prematurity, retinal edema, geographic atrophy, glaucomatous optic neuropathy, chorioretinopathy, hypertensive retinopathy, ocular ischemic syndrome, prevention of inflammation-induced fibrosis in the back of the eye, various ocular inflammatory diseases including uveitis, scleritis, keratitis, and retinal vasculitis; or systemic vascular barrier related diseases, various inflammatory diseases, including acute lung injury, its prevention, sepsis, tumor metastasis, atherosclerosis, pulmonary edemas, and ventilation-induced lung injury; or

autoimmune diseases and immunosuppression , rheumatoid arthritis, Crohn's disease, Graves' disease, inflammatory bowel disease, multiple sclerosis, Myasthenia gravis, Psoriasis, ulcerative colitis, autoimmune uveitis, renal ischemia/perfusion injury, contact hypersensitivity, atopic dermatitis, and organ transplantation; or allergies and other inflammatory diseases , urticaria, bronchial asthma, and other airway inflammations including pulmonary emphysema and chronic obstructive pulmonary diseases; or cardiac protection , ischemia reperfusion injury and atherosclerosis; or wound healing, scar-free healing of wounds from cosmetic skin surgery, ocular surgery, GI surgery, general surgery, oral injuries, various mechanical, heat and burn injuries, prevention and treatment of photoaging and skin ageing, and prevention of radiation-induced injuries; or bone formation, treatment of osteoporosis and various bone fractures including hip and ankles; or anti-nociceptive activity , visceral pain, pain associated with diabetic neuropathy, rheumatoid arthritis, chronic knee and joint pain, tendonitis, osteoarthritis, neuropathic pains; or central nervous system neuronal activity in Alzheimer's disease, age-related neuronal injuries; or in organ transplant such as renal, corneal, cardiac or adipose tissue transplant; inflammatory skin diseases, scleroderma, dermatomyositis, atopic dermatitis, lupus erythematosus, epidermolysis bullosa, and bullous pemphigoid.

The actual amount of the compound to be administered in any given case will be determined by a physician taking into account the relevant circumstances, such as the severity of the condition, the age and weight of the patient, the patient's general physical condition, the cause of the condition, and the route of administration.

The patient will be administered the compound orally in any acceptable form, such as a tablet, liquid, capsule, powder and the like, or other routes may be desirable or necessary, particularly if the patient suffers from nausea. Such other routes may include, without exception, transdermal, parenteral, subcutaneous, intranasal, via an implant stent, intrathecal,

intravitreal, topical to the eye, back to the eye, intramuscular, intravenous, and intrarectal modes of delivery. Additionally, the formulations may be designed to delay release of the active compound over a given period of time, or to carefully control the amount of drug released at a given time during the course of therapy.

In another embodiment of the invention, there are provided pharmaceutical compositions including at least one compound of the invention in a pharmaceutically acceptable carrier thereof. The phrase "pharmaceutically acceptable" means the carrier, diluent or excipient must be compatible with the other ingredients of the formulation and not deleterious to the recipient thereof.

Pharmaceutical compositions of the present invention can be used in the form of a solid, a solution, an emulsion, a dispersion, a patch, a micelle, a liposome, and the like, wherein the resulting composition contains one or more compounds of the present invention, as an active ingredient, in admixture with an organic or inorganic carrier or excipient suitable for enteral or parenteral applications. Invention compounds may be combined, for example, with the usual non-toxic, pharmaceutically acceptable carriers for tablets, pellets, capsules, suppositories, solutions, emulsions, suspensions, and any other form suitable for use. The carriers which can be used include glucose, lactose, gum acacia, gelatin, mannitol, starch paste, magnesium trisilicate, talc, corn starch, keratin, colloidal silica, potato starch, urea, medium chain length triglycerides, dextrans, and other carriers suitable for use in manufacturing preparations, in solid, semisolid, or liquid form. In addition auxiliary, stabilizing, thickening and coloring agents and perfumes may be used. Invention compounds are included in the pharmaceutical composition in an amount sufficient to produce the desired effect upon the process or disease condition.

Pharmaceutical compositions containing invention compounds may be in a form suitable for oral use, for example, as tablets, troches, lozenges, aqueous or oily suspensions, dispersible powders or granules, emulsions, hard or soft capsules, or syrups or elixirs. Compositions intended for oral use may

be prepared according to any method known in the art for the manufacture of pharmaceutical compositions and such compositions may contain one or more agents selected from the group consisting of a sweetening agent such as sucrose, lactose, or saccharin, flavoring agents such as peppermint, oil of wintergreen or cherry, coloring agents and preserving agents in order to provide pharmaceutically elegant and palatable preparations. Tablets containing invention compounds in admixture with non-toxic pharmaceutically acceptable excipients may also be manufactured by known methods. The excipients used may be, for example, (1) inert diluents such as calcium carbonate, lactose, calcium phosphate or sodium phosphate; (2) granulating and disintegrating agents such as corn starch, potato starch or alginic acid; (3) binding agents such as gum tragacanth, corn starch, gelatin or acacia, and (4) lubricating agents such as magnesium stearate, stearic acid or talc. The tablets may be uncoated or they may be coated by known techniques to delay disintegration and absorption in the gastrointestinal tract and thereby provide a sustained action over a longer period. For example, a time delay material such as glyceryl monostearate or glyceryl distearate may be employed.

In some cases, formulations for oral use may be in the form of hard gelatin capsules wherein the invention compounds are mixed with an inert solid diluent, for example, calcium carbonate, calcium phosphate or kaolin. They may also be in the form of soft gelatin capsules wherein the invention compounds are mixed with water or an oil medium, for example, peanut oil, liquid paraffin or olive oil.

The pharmaceutical compositions may be in the form of a sterile injectable suspension. This suspension may be formulated according to known methods using suitable dispersing or wetting agents and suspending agents. The sterile injectable preparation may also be a sterile injectable solution or suspension in a non-toxic parenterally-acceptable diluent or solvent, for example, as a solution in 1,3-butanediol. Sterile, fixed oils are conventionally employed as a solvent or suspending medium. For this purpose any bland fixed oil may be

employed including synthetic mono- or diglycerides, fatty acids (including oleic acid), naturally occurring vegetable oils like sesame oil, coconut oil, peanut oil, cottonseed oil, etc., or synthetic fatty vehicles like ethyl oleate or the like. Buffers, preservatives, antioxidants, and the like can be incorporated as required.

Pharmaceutical compositions containing invention compounds may be in a form suitable for topical use, for example, as oily suspensions, as solutions or suspensions in aqueous liquids or nonaqueous liquids, or as oil-in-water or water-in-oil liquid emulsions. Pharmaceutical compositions may be prepared by combining a therapeutically effective amount of at least one compound according to the present invention, or a pharmaceutically acceptable salt thereof, as an active ingredient with conventional ophthalmically acceptable pharmaceutical excipients and by preparation of unit dosage suitable for topical ocular use. The therapeutically efficient amount typically is between about 0.001 and about 5% (w/v), preferably about 0.001 to about 2.0% (w/v) in liquid formulations.

For ophthalmic application, preferably solutions are prepared using a physiological saline solution as a major vehicle. The pH of such ophthalmic solutions should preferably be maintained between 4.5 and 8.0 with an appropriate buffer system, a neutral pH being preferred but not essential. The formulations may also contain conventional pharmaceutically acceptable preservatives, stabilizers and surfactants. Preferred preservatives that may be used in the pharmaceutical compositions of the present invention include, but are not limited to, benzalkonium chloride, chlorobutanol, thimerosal, phenylmercuric acetate and phenylmercuric nitrate. A preferred surfactant is, for example, Tween 80. Likewise, various preferred vehicles may be used in the ophthalmic preparations of the present invention. These vehicles include, but are not limited to, polyvinyl alcohol, povidone, hydroxypropyl methyl cellulose, poloxamers, carboxymethyl cellulose, hydroxyethyl cellulose cyclodextrin and purified water.

Tonicity adjustors may be added as needed or convenient. They include, but are not limited to, salts, particularly sodium chloride, potassium chloride,

mannitol and glycerin, or any other suitable ophthalmically acceptable tonicity adjustor.

Various buffers and means for adjusting pH may be used so long as the resulting preparation is ophthalmically acceptable. Accordingly, buffers include acetate buffers, citrate buffers, phosphate buffers and borate buffers. Acids or bases may be used to adjust the pH of these formulations as needed.

In a similar manner an ophthalmically acceptable antioxidant for use in the present invention includes, but is not limited to, sodium metabisulfite, sodium thiosulfate, acetylcysteine, butylated hydroxyanisole and butylated hydroxytoluene.

Other excipient components which may be included in the ophthalmic preparations are chelating agents. The preferred chelating agent is edentate disodium, although other chelating agents may also be used in place of or in conjunction with it.

The ingredients are usually used in the following amounts:

Ingredient	Amount (% w/v)
active ingredient	about 0.001 to about 5
preservative	0-0.10
vehicle	0-40
tonicity adjustor	0-10
buffer	0.01-10
pH adjustor	q .s. pH 4.5-7.8
antioxidant	as needed
surfactant	as needed
purified water	to make 100%

The actual dose of the active compounds of the present invention depends on the specific compound, and on the condition to be treated; the selection of the appropriate dose is well within the knowledge of the skilled artisan.

The ophthalmic formulations of the present invention are conveniently packaged in forms suitable for metered application, such as in containers equipped with a dropper, to facilitate application to the eye. Containers suitable for drop wise application are usually made of suitable inert, non-toxic plastic material, and generally contain between about 0.5 and about 15 ml solution. One package may contain one or more unit doses. Especially preservative-free solutions are often formulated in non-resalable containers containing up to about ten, preferably up to about five units doses, where a typical unit dose is from one to about 8 drops, preferably one to about 3 drops. The volume of one drop usually is about 20-35 μ l.

Invention compounds may also be administered in the form of suppositories for rectal administration of the drug. These compositions may be prepared by mixing the invention compounds with a suitable non-irritating excipient, such as cocoa butter, synthetic glyceride esters of polyethylene glycols, which are solid at ordinary temperatures, but liquefy and/or dissolve in the rectal cavity to release the drug.

Since individual subjects may present a wide variation in severity of symptoms and each drug has its unique therapeutic characteristics, the precise mode of administration and dosage employed for each subject is left to the discretion of the practitioner.

The compounds and pharmaceutical compositions described herein are useful as medicaments in mammals, including humans, for treatment of diseases and/or alleviations of conditions which are responsive to treatment by agonists or functional antagonists of sphingosine-1-phosphate receptors. Thus, in further embodiments of the invention, there are provided methods for treating a disorder associated with modulation of sphingosine-1-phosphate receptors. Such methods can be performed, for example, by administering to a subject in need thereof a pharmaceutical composition containing a therapeutically effective amount of at least one invention compound. As used herein, the term "therapeutically effective amount" means the amount of the

pharmaceutical composition that will elicit the biological or medical response of a subject in need thereof that is being sought by the researcher, veterinarian, medical doctor or other clinician. In some embodiments, the subject in need thereof is a mammal. In some embodiments, the mammal is human.

The present invention concerns also processes for preparing the compounds of Formula II. The compounds of Formula II according to the invention can be prepared analogously to conventional methods as understood by the person skilled in the art of synthetic organic chemistry. The synthetic schemes set forth below, illustrate how compounds according to the invention can be made.

Scheme 1

The following abbreviations are used in **Scheme 1** and in the examples:

RT	room temperature
CD ₃ OD	deuterated methanol
CDCl ₃	deuterated chloroform
MPLC	medium pressure liquid chromatography
DMSO	dimethylsulfoxide
EtOH	ethanol
DMF	dimethylformamide
HCl	hydrochloric acid
CH ₂ Cl ₂	dichloromethane
EDC	N-(3-dimethylaminopropyl)-N'-ethylcarbodiimide hydrochloride
HOBt	1-hydroxybenzotriazole
H ⁺	acid
NaOH	sodium hydroxide
HPLC	high pressure liquid chromatography
EtOAc	ethyl acetate
TLC	thin layer chromatography
LiOH	lithium hydroxide

Those skilled in the art will be able to routinely modify and/or adapt the following scheme to synthesize any compounds of the invention covered by Formula II.

DETAILED DESCRIPTION OF THE INVENTION

It is to be understood that both the foregoing general description and the following detailed description are exemplary and explanatory only and are not restrictive of the invention claimed. As used herein, the use of the singular includes the plural unless specifically stated otherwise.

It will be readily apparent to those skilled in the art that some of the compounds of the invention may contain one or more asymmetric centers, such that the compounds may exist in enantiomeric as well as in diastereisomeric forms. Unless it is specifically noted otherwise, the scope of the present invention includes all enantiomers, diastereoisomers and racemic mixtures. Some of the compounds of the invention may form salts with pharmaceutically acceptable acids or bases, and such pharmaceutically acceptable salts of the compounds described herein are also within the scope of the invention.

The present invention includes all pharmaceutically acceptable isotopically enriched compounds. Any compound of the invention may contain one or more isotopic atoms enriched or different than the natural ratio such as deuterium ^2H (or D) in place of protium ^1H (or H) or use of ^{13}C enriched material in place of ^{12}C and the like. Similar substitutions can be employed for N, O and S. The use of isotopes may assist in analytical as well as therapeutic aspects of the invention. For example, use of deuterium may increase the in vivo half-life by altering the metabolism (rate) of the compounds of the invention. These compounds can be prepared in accord with the preparations described by use of isotopically enriched reagents.

The following examples are for illustrative purposes only and are not intended, nor should they be construed as limiting the invention in any manner. Those skilled in the art will appreciate that variations and modifications of the following examples can be made without exceeding the spirit or scope of the invention.

As will be evident to those skilled in the art, individual isomeric forms can be obtained by separation of mixtures thereof in conventional manner. For example, in the case of diastereoisomeric isomers, chromatographic separation may be employed.

Compound names were generated with ACDLabs version 8.00 or 12.5 and in some cases Chem Bio Draw Ultra version 12.0; and Intermediates and reagent names used in the examples were generated with software such as ACD version 12.05, Chem Bio Draw Ultra version 12.0 or Auto Nom 2000 from MDL ISIS Draw 2.5 SP1.

In general, characterization of the compounds is performed according to the following methods: NMR spectra are recorded on 300 and/or 600 MHz Varian and acquired at room temperature; or at 60 MHz on a Varian T-60 spectrometer or at 300 MHz on a Varian Inova system. Chemical shifts are given in ppm referenced either to internal TMS or to the solvent signal. All the reagents, solvents, catalysts for which the synthesis is not described are purchased from chemical vendors such as Sigma Aldrich, Fluka, Bio-Blocks, Combi-blocks, TCI, VWR, Lancaster, Oakwood, Trans World Chemical, Alfa, AscentScientific LLC., Fisher, Maybridge, Frontier, Matrix, Ukrorgsynth, Toronto, Ryan Scientific, SiliCycle, Anaspec, Syn Chem, Chem-Impex, MIC-scientific, Ltd; however some known intermediates, were prepared according to published procedures. Compounds of the invention were purified according to either of the following methods below: Added amino modified silica gel to organic solution (MeOH/CHCl₃) and concentrated. Auto column on a silica gel-amine column with 70% MeOH, 0.5% acetic acid in dichloromethane gave

product after removal of solvents, and drying under vacuum. Product titration with methanol, filtered, and washed with methanol to give product after removal of solvents, and drying under vacuum. Column chromatography (Auto-column) on a Teledyne-ISCO CombiFlash with a silica column, unless noted otherwise.

Example 1

Intermediate 1

Ethyl 1-methyl-5-phenyl-1H-pyrazole-3-carboxylate

To a solution of ethyl 2,4-dioxo-4-phenylbutanoate (5.4 g, 0.025 mol) in ethanol (40 mL) was added a solution of 1-methylhydrazine (1.15 g, 0.025 mol) in ethanol (10 mL) over 15 min under argon. The resulting solution was refluxed for 2 hr, cooled to room temperature and concentrated under reduced pressure. TLC (EtOAc:Hexanes 1:1) showed two spots for two isomers. The residue was flash chromatographed over silica gel (50 g) with anhydrous sodium sulfate (5 g) on top packed with hexanes and the two isomers were separated. The column was eluted with 25% ethyl acetate in hexanes to give 2.7 g of **Intermediate 1** as an oil (47%).

^1H NMR (60 MHz, CDCl_3): δ 7.3 (s, 5H), 6.1 (s, 1H), 4.3 (q, 2H), 3.9 (s, 3H), 1.4 (t, 3H) ppm.

Example 2**Intermediate 2****1-Methyl-5-phenyl-1H-pyrazole-3-carboxylic acid**

To a solution of **Intermediate 1** (2.53 g, 0.011 mol) in ethanol (20 mL) was added a solution of lithium hydroxide (1.4 g, 0.033 mol) in water (20 mL). The reaction mixture was stirred and heated at 65 °C for 30 min. HPLC analysis showed the reaction was complete. The reaction mixture was concentrated under reduced pressure. To the residue was added water (50 mL), acidified to pH 3 with 1M HCl and extracted with dichloromethane (2 × 50 mL). The combined organic layers were washed with brine (50 mL), dried over magnesium sulfate (5 g) and concentrated under reduced pressure to give 2.0 g of **Intermediate 2** as a tan solid (91%).

¹H NMR (60 MHz, CDCl₃): δ 10.7 (s, 1H), 7.4 (s, 5H), 6.2 (s, 1H), 3.9 (s, 3H) ppm.

Example 3**Intermediate 3****(4-(5-(1-Methyl-5-phenyl-1H-pyrazol-3-yl)-1,2,4-oxadiazol-3-yl)phenyl)methanol**

A mixture of **Intermediate 2** (2.0 g, 0.01 mol), N-hydroxy-4-(hydroxymethyl) benzimidamide (1.65 g, 0.01 mol), EDC (1.92 g, 0.01 mol) and

HOBt (1.53 g, 0.01 mol) in N,N-dimethylformamide (20 mL) was heated at 140 °C for 2 hr under argon. The reaction mixture was cooled to room temperature and poured into water (100 mL). The mixture was stirred for 30 min, the tan solid was collected, washed with water (50 mL) and air dried to give 1.9 g of **Intermediate 3** as a tan solid (57%).

¹H NMR (60 MHz, d₆-DMSO): δ 7.7 (m, 9H), 7.0 (s, 1H), 5.2 (t, 1H), 4.6 (d, 2H), 4.0 (s, 3H) ppm.

Example 4

Intermediate 4

4-(5-(1-Methyl-5-phenyl-1H-pyrazol-3-yl)-1,2,4-oxadiazol-3-yl)benzaldehyde

To a solution of Dess-Martin periodinane (2.71 g, 0.0064 mol) in dichloromethane (20 mL) was added a solution of **Intermediate 3** (1.69 g, 0.0051 mol) in dimethyl sulfoxide (5 mL) and dichloromethane (20 mL) over 30 min at room temperature under argon. A milky mixture was formed and after 90 min, HPLC analysis showed the reaction was complete. The reaction mixture was diluted with dichloromethane (60 mL), washed with 1N NaOH solution (3 × 25 mL), brine (50 mL), dried over anhydrous magnesium sulfate, and concentrated under reduce pressure to give a tan solid. The solid was triturated with 50% dichloromethane in hexane (10 mL). The tan solid was collected, washed with 50% dichloromethane in hexane to give 1.27 g of **Intermediate 4** as a white solid (75%).

¹H NMR (300 MHz, CDCl₃): δ 10.1 (s, 1H), 8.4 (d, 2H), 8.0 (d, 2H), 7.6 (brd, 5H), 7.1 (s, 1H), 4.0 (s, 3H) ppm.

Example 5

Compound 1**[3-({4-[5-(1-Methyl-5-phenyl-1H-pyrazol-3-yl)-1,2,4-oxadiazol-3-yl]benzyl}amino)propyl]phosphonic acid**

To a solution of **Intermediate 4**, (150 mg, 0.45 mmol) and (3-aminopropyl) phosphonic acid (63 mg, 0.45 mmol) in methanol (10 mL) was added tetrabutylammonium hydroxide (1M in MeOH, 0.45 mL). The reaction mixture was heated to 50 °C for 1 h with stirring, cooled to RT, then sodium borohydride (26 mg, 0.67 mmol) was added. After the reaction mixture was stirred at RT for 3 h, the mixture was concentrated and purified by MPLC (100% methanol in ethyl acetate) to give 164 mg of **Compound 1** as a colorless solid.

¹H NMR (300 MHz, CD₃OD) δ (ppm) 8.21-8.30 (m, 2H), 7.69 (d, *J*=8.20 Hz, 2H), 7.57 (d, *J*=4.98 Hz, 5H), 7.14 (s, 1H), 4.31 (s, 2H), 4.03 (s, 3H), 3.16-3.28 (m, 2H), 1.95-2.16 (m, 2H), 1.76-1.92 (m, 2H)

Compound 2 was prepared from **Intermediates 4** in a similar manner to the procedure described in **Example 5** for **Compound 1** using β-Alanine (CAS 107-95-9). The results are tabulated below in **Table 1**

Table 1

Cmpd No.	Structure IUPAC Name	¹ H NMR δ (ppm)
2	 3-({4-[5-(1-Methyl-5-phenyl-1H-pyrazol-3-yl)-	¹ H NMR (300 MHz, CD ₃ OD) δ 8.15 (d, <i>J</i> =8.50 Hz, 2H), 7.46-7.61 (m, 7H), 7.10 (s, 1H), 4.12 (s, 2H), 4.01 (s, 3H), 3.90-3.98 (m, 2H), 3.79-3.88 (m, 2H)

	1,2,4-oxadiazol-3-yl]benzyl}amino) propanoic acid

Biological examples

In vitro assay

Compounds of the invention were tested for S1P1 activity using the GTP $\gamma^{35}\text{S}$ binding assay. These compounds may be assessed for their ability to activate or block activation of the human S1P1 receptor in cells stably expressing the S1P1 receptor.

GTP $\gamma^{35}\text{S}$ binding was measured in the medium containing (mM) HEPES 25, pH 7.4, MgCl_2 10, NaCl 100, dithiothreitol 0.5, digitonin 0.003%, 0.2 nM GTP $\gamma^{35}\text{S}$, and 5 μg membrane protein in a volume of 150 μl . Test compounds were included in the concentration range from 0.08 to 5,000 nM unless indicated otherwise. Membranes were incubated with 100 μM 5'-adenylylimidodiphosphate for 30 min, and subsequently with 10 μM GDP for 10 min on ice. Drug solutions and membrane were mixed, and then reactions were initiated by adding GTP $\gamma^{35}\text{S}$ and continued for 30 min at 25 °C. Reaction mixtures were filtered over Whatman GF/B filters under vacuum, and washed three times with 3 mL of ice-cold buffer (HEPES 25, pH7.4, MgCl_2 10 and NaCl 100). Filters were dried and mixed with scintillant, and counted for ^{35}S activity using a β -counter. Agonist-induced GTP $\gamma^{35}\text{S}$ binding was obtained by subtracting that in the absence of agonist. Binding data were analyzed using a non-linear regression method. In case of antagonist assay, the reaction mixture contained 10 nM S1P in the presence of test antagonist at concentrations ranging from 0.08 to 5000 nM.

Table 2: Activity potency: S1P1 receptor from GTP $\gamma^{35}\text{S}$: nM, (EC_{50})

IUPAC name Structure	S1P1 EC_{50} (nM)
[3-({4-[5-(1-methyl-5-phenyl-1H-pyrazol-3-yl)-1,2,4-oxadiazol-3-yl]benzyl}amino)propyl]phosphonic acid	32

3-({4-[5-(1-methyl-5-phenyl-1H-pyrazol-3-yl)-1,2,4-oxadiazol-3-yl]benzyl}amino)propanoic acid	658

What is claimed is:

1. A compound represented by Formula II, its enantiomers, diastereoisomers, tautomers, or a pharmaceutically acceptable salt thereof,

Formula II

wherein:

R^1 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^2 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^3 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^4 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^5 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^6 is H or optionally substituted C_{1-6} alkyl;

R^7 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^8 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^9 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{10} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{11} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{12} is H, OH or optionally substituted C_{1-6} alkyl;

R^{13} is H or optionally substituted C_{1-6} alkyl;

R^{14} is H or optionally substituted C_{1-6} alkyl;

R^{15} is H or optionally substituted C_{1-6} alkyl;

W is PO_3H_2 or $COOH$; and

a is 0 or 1.

2. The compound according to claim 1, wherein:

R^1 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^2 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^3 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^4 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^5 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^6 is H or optionally substituted C_{1-6} alkyl;

R^7 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^8 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^9 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{10} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{11} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{12} is H, OH or optionally substituted C_{1-6} alkyl;

R^{13} is H or optionally substituted C_{1-6} alkyl;

R^{14} is H or optionally substituted C_{1-6} alkyl;

R^{15} is H or optionally substituted C_{1-6} alkyl;

W is PO_3H_2 ; and

a is 1.

3. The compound according to claim 1, wherein:

R^1 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^2 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^3 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^4 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^5 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^6 is H or optionally substituted C_{1-6} alkyl;

R^7 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^8 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^9 is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{10} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{11} is H, halogen or optionally substituted C_{1-6} alkyl, CN, NO_2 , $C(O)R^{12}$, $NR^{13}R^{14}$ or OR^{15} ;

R^{12} is H, OH or optionally substituted C_{1-6} alkyl;

R^{13} is H or optionally substituted C_{1-6} alkyl;

R^{14} is H or optionally substituted C_{1-6} alkyl;

R^{15} is H or optionally substituted C_{1-6} alkyl;

W is COOH; and

a is 0.

4. The compound according to claim 1, wherein:

R^1 is H, halogen or optionally substituted C_{1-6} alkyl;

R^2 is H, halogen or optionally substituted C_{1-6} alkyl;

R^3 is H, halogen or optionally substituted C_{1-6} alkyl;

R^4 is H, halogen or optionally substituted C_{1-6} alkyl;

R^5 is H, halogen or optionally substituted C_{1-6} alkyl;

R^6 is optionally substituted C_{1-6} alkyl;

R^7 is H, halogen or optionally substituted C_{1-6} alkyl;

R^8 is H, halogen or optionally substituted C_{1-6} alkyl;

R^9 is H, halogen or optionally substituted C_{1-6} alkyl;

R^{10} is H, halogen or optionally substituted C_{1-6} alkyl;

R^{11} is H, halogen or optionally substituted C_{1-6} alkyl;

W is PO_3H_2 or COOH; and

a is 0 or 1.

5. The compound according to claim 1, wherein:

R^1 is H or optionally substituted C_{1-6} alkyl;

R^2 is H or optionally substituted C_{1-6} alkyl;

R^3 is H or optionally substituted C_{1-6} alkyl;

R^4 is H or optionally substituted C_{1-6} alkyl;

R^5 is H or optionally substituted C_{1-6} alkyl;

R^6 is methyl, ethyl, n-propyl or iso-propyl;

R^7 is H or optionally substituted C_{1-6} alkyl;

R^8 is H or optionally substituted C_{1-6} alkyl;

R^9 is H or optionally substituted C_{1-6} alkyl;

R^{10} is H or optionally substituted C_{1-6} alkyl;

R^{11} is H or optionally substituted C_{1-6} alkyl;

W is PO_3H_2 or COOH; and

a is 0 or 1.

6. The compound according to claim 1, wherein:

R¹ is H;

R² is H;

R³ is H;

R⁴ is H;

R⁵ is H;

R⁶ is methyl;

R⁷ is H;

R⁸ is H;

R⁹ is H;

R¹⁰ is H;

R¹¹ is H;

W is PO₃H₂ or COOH; and

a is 0 or 1.

7. A compound according to claim 1 selected from:

3-({4-[5-(1-Methyl-5-phenyl-1H-pyrazol-3-yl)-1,2,4-oxadiazol-3-yl]benzyl}amino)propyl] phosphonic acid; and

3-({4-[5-(1-Methyl-5-phenyl-1H-pyrazol-3-yl)-1,2,4-oxadiazol-3-yl]benzyl}amino)propanoic acid.

8. A pharmaceutical composition comprising as active ingredient a therapeutically effective amount of a compound according to claim 1 and a pharmaceutically acceptable adjuvant, diluents or carrier.

9. A pharmaceutical composition according to claim 8 wherein the compound is selected from:

3-({4-[5-(1-Methyl-5-phenyl-1H-pyrazol-3-yl)-1,2,4-oxadiazol-3-yl]benzyl}amino)propyl]phosphonic acid; and

3-({4-[5-(1-Methyl-5-phenyl-1H-pyrazol-3-yl)-1,2,4-oxadiazol-3-yl]benzyl}amino)propanoic acid.

INTERNATIONAL SEARCH REPORT

International application No
PCT/US2014/016280

A. CLASSIFICATION OF SUBJECT MATTER
INV. C07D413/04 A61K31/422 A61K31/66 C07F9/38 A61P35/00
ADD.

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
C07D A61K C07F A61P

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

EPO-Internal

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
Y	WO 2009/080663 A1 (MERCK SERONO SA [CH]; QUATTROPANI ANNA [CH]; CLEVA CHRISTOPHE [FR]; SE) 2 July 2009 (2009-07-02) example 127 Pharmaceutical compositions, use for treatment of sphingosine-1-phosphate associated disorders ;; claims 6, 10	1-9
A	WO 2010/085584 A1 (SQUIBB BRISTOL MYERS CO [US]; DYCKMAN ALARIC J [US]; PITTS WILLIAM J []) 29 July 2010 (2010-07-29) example 14 Use as sphingosine-1-phosphate agonists;; page 1, paragraph 1 ----- -/-	1-9

Further documents are listed in the continuation of Box C.

See patent family annex.

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family

Date of the actual completion of the international search

13 May 2014

Date of mailing of the international search report

26/05/2014

Name and mailing address of the ISA/

European Patent Office, P.B. 5818 Patentlaan 2
