(54) Title: LIGHT OUTPUT DEVICE

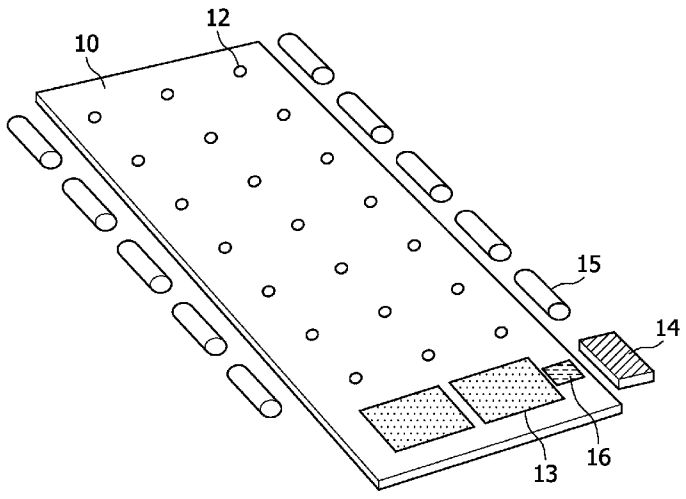

FIG. 3

(57) Abstract: A light output device comprises a substrate arrangement comprising first (1) and second (2) substantially transparent substrates and a substantially transparent lamination layer (5) between the substrates. One or more light source devices (4) are integrated into the lamination layer as well as at least one photovoltaic cell (13). Substantially transparent conductors (3) provide connections between the light source device or devices and the cell or cells, and a rechargeable battery arrangement (15) is charged by the at least one photovoltaic cell and for providing power to the light source device or devices.

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier document but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
"&" document member of the same patent family
