UNITED STATES PATENT OFFICE.

HULL CHANDLER, OF BENNINGTON, VERMONT.

IMPROVEMENT IN BED-SPRINGS.

Specification forming part of Letters Patent No. 118,906, dated September 12, 1871.

To all whom it may concern:

Be it known that I, HULL CHANDLER, of Bennington, in the county of Bennington and State of Vermont, have invented a new and Improved Bed-Spring; and I do hereby declare that the following is a full, clear, and exact description thereof, which will enable others skilled in the art to make and use the same, reference being had to the accompanying drawing forming part of this specification, in which—

Figure 1 represents a side view of my improved bed-spring, showing the mode of application. Fig. 2 is a plan or top view of the same.

Similar letters of reference indicate corresponding parts.

This invention relates to a new construction of springs placed into bedsteads for the support of the slats; and consists in applying to the spring a semi-cylindrical block and projecting guide-pin, as hereinafter more fully described.

A in the drawing represents the semi-elliptic spring placed upon the frame B of the bedstead to support one end of the slat C. The lower end of the spring has a hook, *a*, bent down into a recess provided for its reception in the supporting-plate *b*. To the upper face of the spring is secured a transverse block, *c*, of semi-cylindrical form, as is clearly shown in Fig. 1. The slat rests on this block, and can freely rock thereon, thereby giving more play and greater flexibility to the bed-bottom. From the block *c* projects a pin, *d*, through a slot of the slat, to guide the same and prevent it from falling off.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

The bed-spring A provided with the hook *a*, block *c*, and pin *d*, as described.
