UNITED STATES PATENT OFFICE.

SAMUEL L. BACHRACH, OF NEW YORK, N. Y.

TAG FOR NECKWEAR AND THE LIKE.

No. 893,969. Specification of Letters Patent. Patented July 21, 1908.

Application filed October 4, 1907. Serial No. 395,837.

To all whom it may concern:

Be it known that I, SAMUEL L. BACHRACH, a citizen of the United States, and a resident of the city, county, and State of New York, have invented a new and useful Improvement in Tags for Neckwear and the Like, of which the following is a specification.

The object of my invention is to provide a tag which will display or give information of price, etc., while the article is on sale and which is intended to be removed when the article has been sold. This object is accomplished by my invention, certain embodiments of which are hereinafter disclosed.

For a more particular description of my invention, reference is to be had to the accompanying drawing forming a part hereof, in which,

Figure 1 shows a tie provided with my improvement. Fig. 2 is an enlarged perspective view of the end of the tie, showing the application of my improvement. Fig. 3 is a sectional view taken on the line 3—3 of Fig. 1, looking in the direction of the arrows. Figs. 4, 5 and 6 are perspective views of various forms of tags.

Throughout the various views, similar reference characters designate similar parts.

Any suitable tie 1 is provided with the usual label 2, which is generally sewed thereon and on one of the near faces thereof. This label generally gives the name of the maker or the dealer who is responsible for the goods and is intended to remain on the tie permanently and is customarily found on all articles of this class.

The lower edge 2^a of the label is not secured to the tie. This leaves a pocket between the label and the tie into which the tag may be inserted, as hereinafter described. My improved tag 3 which may be given any of the shapes shown in Figs. 4, 5 and 6, or any other suitable shape, is provided with a row of perforations 4 on one side of which is a short stub 5 which is of reduced size to permit easy insertion into the pocket between the label and tie. The larger portion of the tag beyond the holes and designated by the character 6 is intended to be removed when the tie is sold, and conveys information as to size, price, etc. The part 5 of the tag may be provided with an adhesive substance on either or both faces, so that by merely wetting it the tag may be applied between the label and tie and secure the adhesive parts together. The adhesive material may, if desired, be first applied immediately before use.

When my improved tag is used the stub 5 is preferably pasted to the tie immediately under the label 2 so that the line of perforations extends adjacent the end 2^a of the said label as shown in Figs. 1, 2 and 3, except that in Figs. 1 and 2, for the purposes of illustration, the line of perforations is shown a little more removed from the label than is the case in practice. The tag may be removed by taking the end 6 between the thumb and forefinger of one hand and holding the tie so that the thumb and forefinger of the other hand grasps it opposite the stub and at the line 4 of perforations. The part 6 may be then readily removed.

Other embodiments of my invention within the scope of the appended claim may be made, but it is not necessary to describe them as they are similar to the foregoing.

What I claim is:—

1. The combination with a necktie having a quadrilateral label secured thereto by three of its edges, of a tag having a line of perforations running across it at the line of juncture of one end and the body of the tag, said end being of a size to be slid under said label at the unsecured edge of the latter and being provided with adhesive material whereby the tag is securely fastened to the tie and label and the body-portion of the tag can be readily torn off.

2. The combination with a necktie having a rectangular label secured thereto by three of its edges, of a tag having one end reduced in width and a line of perforations running across it at the line of juncture of said end and the body of the tag, said reduced end being of a size to be slid under said label at the unsecured edge of the latter and being provided with adhesive material, whereby the tag is securely fastened to the tie and label and the body-portion of the tag can be readily torn off.

Signed at New York city, this first day of October, 1907.

SAMUEL L. BACHRACH.
