(76) Inventor: **Frederick A. Taft**

Frederick A. Taft of Dedham, State of Massachusetts

Letters Patent.

The schedule referred to in these Letters Patent and making part of the same, containing a description in the words of the said Frederick A. Taft, himself of his improvement in manufacturing Paste Board & other paper. To all to whom these presents shall come,

Be it known that I Frederick A. Taft of Dedham in the County of Norfolk, Commonwealth of Massachusetts, manufacturer, have invented a new and useful improvement in the art of making Paste Board and other papers, and that the following is an exact description of my new and useful improvement in the art aforesaid, —

It consists in the mixing of solid pitch or rosin with fibrous substances for the making of Paste Board and other paper, and the cementing the whole together after the paper is made into sheets by the application of heat so as to soften the pitch or rosin and when in this softened state, the whole is consolidated by running the paper under or between rollers, My usual process is as follows, (although it may be varied in different ways to come to the same result) I pulverize the pitch or rosin and mix it with fibrous stock in the engine or other parts of the machinery, and when the paper is made and sufficiently dry I roll it between hot rollers, which cements and consolidates the whole together. —

What I claim is the right of making and vending paper made by mixing solid Pitch or Rosin with fibrous substances, and the cementing the whole together after the paper is made into sheets by softening the solid pitch or rosin by means of heat and rolling it when in this softened state
