Attention Canadian Intellectual Property Office:

The difference between The Baker Trotting Hopples and our competitors is, our Trotting Hopples do not attach to the race bike. Please note this is what we want to patent. We attach a 6" strap and buckle to the pulley, then a strap runs toward the back of the horse to a spreader that two straps split and run through the spreader. The straps extend 12 $\frac{1}{4}$ " past the spreader and attach to two buckles sewn on the crupper. Please advise if you do not understand the drawing and description.

Note: Every other Mfg. of Trotting Hopples run a strap from the pulley to the bike. They also use a larger Hopples size ours is 9". If there is anything you do not understand ~~██████~~
Please Advise.

Thanks:

INCLUDING 3/4 D
