**INDOLE COMPOUNDS AND METHODS FOR TREATING
VISCERAL PAIN**

(57) Abstract:

INDOLE COMPOUNDS AND METHODS FOR TREATING
VISCERAL PAIN ABSTRACT 5 The invention features methods
of treating visceral pain or a condition in a mammal caused
by the action of nitric oxide synthase (NOS) or by the action
of serotonin 5HTID/1B receptors, by administering to a patient
in need thereof a therapeutically effective amount of an indole
compound of Formula (I), or a pharmaceutically acceptable salt
or prodrug thereof. The methods of the invention may further
comprise the administration of 10 additional therapeutic agent.
The invention also features new compounds of Formula (I),
pharmaceutical compositions thereof, and methods of resolving
enantiomeric mixtures. No Suitable Figure

INDOLE COMPOUNDS AND METHODS FOR TREATING VISCERAL PAIN

ABSTRACT

5 The invention features methods of treating visceral pain or a condition in a mammal caused by the action of nitric oxide synthase (NOS) or by the action of serotonin 5HT1D/1B receptors, by administering to a patient in need thereof a therapeutically effective amount of an indole compound of Formula (I), or a pharmaceutically acceptable salt or prodrug thereof. The methods of the invention may further comprise the administration of
10 additional therapeutic agent. The invention also features new compounds of Formula (I), pharmaceutical compositions thereof, and methods of resolving enantiomeric mixtures.

INDOLE COMPOUNDS AND METHODS FOR TREATING VISCERAL PAIN

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims benefit to U.S. Provisional Application Nos. 60/988,757, filed November 16, 2007, and 61/133,930, filed July 3, 2008, each of which is hereby incorporated by reference.

FIELD OF THE INVENTION

The invention relates to compounds and methods for treating visceral pain.

BACKGROUND OF THE INVENTION

Visceral pain is the most common form of pain and is one of the most difficult forms of pain to treat, often with the use of opioids. Visceral pain is distinct from somatic pain and is generally described as pain that originates from the body's internal cavities or organs and has five important clinical and sensory characteristics: (1) it is not evoked from all visceral organs (eg liver, kidney, lung); (2) it is not always linked to visceral injury (e.g., cutting an intestine does not evoke pain); (3) it is diffuse; (4) it is referred to other locations; and (5) it can be referred to other autonomic and motor reflexes (e.g., nausea, lower-back muscle tension from renal colic) (*Lancet*, 1999, 353, 2145-48). Several theories have been proposed for the mechanisms of visceral pain. In the first theory, the viscera are innervated by separate classes of neurons, one concerned with autonomic regulation and the other with sensory phenomena such as pain. The second theory suggests a single homogenous class of sensory receptors that are active at low frequencies (normal regulatory signals) or at high frequencies of activation (induced by intense pain signals). However, studies indicate that the viscera is innervated by two classes of nociceptive sensory receptors: high threshold (mostly mechanical receptors found in heart, vein, lung, airways, oesophagus, biliary system, small intestine, colon, ureter, airways, urinary bladder and uterus; activated by noxious stimuli) and low threshold intensity coding receptors that respond to innocuous and nocuous stimuli (heart, oesophagus, colon, urinary bladder and testes). Yet another theory suggests a component of afferent fibres that are normally unresponsive to stimuli (silent nociceptors) that can become activated or sensitized during inflammation (*Trends Neurosci.* 1992, 15, 374-78). Once sensitized, these nociceptors now respond to innocuous stimuli that normally occur in the internal organs resulting in an enhanced barrage of convergent input to the spinal cord and subsequently triggering central mechanisms that amplify the effect of the peripheral input.

Compounds for the treatment of visceral pain would therefore be highly desirable.

SUMMARY OF THE INVENTION

The invention features methods of treating visceral pain by administering to a patient in need thereof a therapeutically effective amount of a compound having the formula:

(I), or a pharmaceutically acceptable salt or prodrug thereof, wherein,

R¹ is H, optionally substituted C₁₋₆ alkyl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₁₋₄ alkheterocyclyl, or optionally substituted C₃₋₈ cycloalkyl;

each of R² and R³ is, independently, H, Hal, optionally substituted C₁₋₆ alkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₂₋₉ bridged heterocyclyl, optionally substituted C₁₋₄ bridged alkheterocyclyl, optionally substituted C₂₋₉ heterocyclyl, or optionally substituted C₁₋₄ alkheterocyclyl;

each of R⁴ and R⁷ is, independently, H, F, C₁₋₆ alkyl, or C₁₋₆ alkoxy;

R⁵ is H, R^{5A}C(NH)NH(CH₂)_{r5}, or R^{5B}NHC(S)NH(CH₂)_{r5}, wherein r₅ is an integer from 0 to 2, R^{5A} is optionally substituted C₁₋₆ alkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₂₋₉ heterocyclyl, optionally substituted C₁₋₄ alkheterocyclyl, optionally substituted C₁₋₆ thioalkoxy, optionally substituted C₁₋₄ thioalkaryl, optionally substituted aryloyl, or optionally substituted C₁₋₄ thioalkheterocyclyl; and R^{5B} is optionally substituted C₁₋₆ alkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₂₋₉ heterocyclyl, optionally substituted C₁₋₄ alkheterocyclyl, optionally substituted C₁₋₆ thioalkoxy, optionally substituted C₁₋₄ thioalkaryl, or optionally substituted aryloyl; and

R⁶ is H, F, R^{6A}C(NH)NH(CH₂)_{r6}, or R^{6B}NHC(S)NH(CH₂)_{r6}, wherein r₆ is an integer from 0 to 2, R^{6A} is optionally substituted C₁₋₆ alkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₂₋₉ heterocyclyl, optionally substituted C₁₋₄ alkheterocyclyl, optionally substituted C₁₋₆ thioalkoxy, optionally substituted C₁₋₄ thioalkaryl, optionally substituted aryloyl, or optionally substituted C₁₋₄ thioalkheterocyclyl; and R^{6B} is optionally substituted C₁₋₆ alkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₂₋₉ heterocyclyl, optionally substituted C₁₋₄ alkheterocyclyl, optionally substituted C₁₋₆ thioalkoxy, optionally substituted C₁₋₄ thioalkaryl, or optionally substituted aryloyl.

In a preferred embodiment, R⁶ is H.

In certain embodiments, R^1 is H, optionally substituted C_{1-6} alkyl, optionally substituted C_{1-4} alkaryl, or optionally substituted C_{1-4} alkheterocyclyl. In preferred embodiments, R^1 is H.

The methods of the invention may treat visceral pain that is secondary to irritable bowel syndrome, inflammatory bowel syndrome, pancreatitis, diverticulitis, Crohn's disease, peritonitis, pericarditis, hepatitis, appendicitis, colitis, cholecystitis, gastroenteritis, endometriosis, dysmenorrhea, interstitial cystitis, prostatitis, pleuritis, upper gastrointestinal dyspepsia, renal colic, or biliary colic; visceral pain that is secondary to a disease of the liver, kidney, ovary, uterus, bladder, bowel, stomach, esophagus, duodenum, intestine, colon, spleen, pancreas, appendix, heart, or peritoneum; or visceral pain that results from a neoplasm or injury, or visceral pain that results from infection. Visceral pain treated by the methods of the invention may be inflammatory or non-inflammatory.

In certain embodiments, for the compounds employed R^{5A} or R^{6A} is methyl, fluoromethyl, ethyl, n-propyl, i-propyl, n-butyl, i-butyl, t-butyl, thiomethoxy, thioethoxy, thio-n-propyloxy, thio-i-propyloxy, thio-n-butyloxy, thio-i-butyloxy, thio-t-butyloxy, phenyl, benzyl, 2-thienyl, 3-thienyl, 2-furanyl, 3-furanyl, 2-oxazole, 4-oxazole, 5-oxazole, 2-thiazole, 4-thiazole, 5-thiazole, 2-isoxazole, 3-isoxazole, 4-isoxazole, 2-isothiazole, 3-isothiazole, and 4-isothiazole. In some embodiments, R^1 , R^2 , and R^3 are each H. In other embodiments, one or more of R^1 , R^2 , and R^3 is not H. For example, R^1 may be $(CH_2)_m X^1$, wherein X^1 is selected from the group consisting of:

each of R^{1A} and R^{1B} is, independently, H, optionally substituted C_{1-6} alkyl, optionally substituted C_{3-8} cycloalkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, C_{2-9} heterocyclyl, or optionally substituted C_{1-4} alkheterocyclyl;

each of R^{1C} and R^{1D} is, independently, H, F, OH, CO_2R^{1E} , or $NR^{1F}R^{1G}$, wherein each of R^{1E} , R^{1F} , and R^{1G} is, independently, H, optionally substituted C_{1-6} alkyl, optionally substituted C_{3-8} cycloalkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, C_{2-9} heterocyclyl, or optionally substituted C_{1-4} alkheterocyclyl, or R^{1C} and R^{1D} together with the carbon they are bonded to are $C=O$;

Z^1 is NR^{1H} , $NC(O)R^{1H}$, $NC(O)OR^{1H}$, $NC(O)NHR^{1H}$, $NC(S)R^{1H}$, $NC(S)NHR^{1H}$, $NS(O)_2R^{1H}$, O, S, $S(O)$, or $S(O)_2$, wherein R^{1H} is H, optionally substituted C_{1-6} alkyl, optionally

substituted C₃₋₈ cycloalkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, C₂₋₉ heterocyclyl, or optionally substituted C₁₋₄ alkheterocyclyl;

m1 is an integer of 0 to 6;

n1 is an integer of 1 to 4;

5 p1 is an integer of 0 to 2; and

q1 is an integer of 0 to 5.

In some embodiments, where X¹ is , X¹ has a structure selected from

and , where Z¹, q1, and p1 are as defined herein.

R² may be (CH₂)_mX², wherein X² is selected from the group consisting of:

10

each of R^{2A} and R^{2B} is, independently, H, optionally substituted C₁₋₆ alkyl, optionally substituted C₃₋₈ cycloalkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, C₂₋₉ heterocyclyl, or optionally substituted C₁₋₄ alkheterocyclyl;

each of R^{2C} and R^{2D} is, independently, H, F, OH, CO₂R^{2E}, or NR^{2F}R^{2G}, wherein each of
 15 R^{2E}, R^{2F}, and R^{2G} is, independently, H, optionally substituted C₁₋₆ alkyl, optionally substituted C₃₋₈ cycloalkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, C₂₋₉ heterocyclyl, or optionally substituted C₁₋₄ alkheterocyclyl, or R^{2C} and R^{2D} together with the carbon they are bonded to are C=O;

Z² is NR^{2H}, NC(O)R^{2H}, NC(O)OR^{2H}, NC(O)NHR^{2H}, NC(S)R^{2H}, NC(S)NHR^{2H},
 20 NS(O)₂R^{2H}, O, S, S(O), or S(O)₂, wherein R^{2H} is H, optionally substituted C₁₋₆ alkyl, optionally substituted C₃₋₈ cycloalkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, C₂₋₉ heterocyclyl, or optionally substituted C₁₋₄ alkheterocyclyl;

m2 is an integer of 0 to 6;

n2 is an integer of 1 to 4;

25 p2 is an integer of 0 to 2; and

q2 is an integer of 0 to 5.

In some embodiments where X^2 is

, X^2 can have a structure selected from

, and , where Z^2 , $p2$, and $q2$ are as defined herein.

R^3 may be $(CH_2)_mX^3$, wherein X^3 is selected from the group consisting of:

, wherein

- 5 each of R^{3A} and R^{3B} is, independently, H, optionally substituted C_{1-6} alkyl, optionally substituted C_{3-8} cycloalkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, C_{2-9} heterocyclyl, or optionally substituted C_{1-4} alkheterocyclyl;

- each of R^{3C} and R^{3D} is, independently, H, F, OH, CO_2R^{3E} , or $NR^{3F}R^{3G}$, wherein each of R^{3E} , R^{3F} , and R^{3G} is, independently, H, optionally substituted C_{1-6} alkyl, optionally substituted C_{3-8} cycloalkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, C_{2-9} heterocyclyl, or optionally substituted C_{1-4} alkheterocyclyl, or R^{3C} and R^{3D} together with the carbon they are bonded to are $C=O$;

- 10 Z^3 is NR^{3H} , $NC(O)R^{3H}$, $NC(O)OR^{3H}$, $NC(O)NHR^{3H}$, $NC(S)R^{3H}$, $NC(S)NHR^{3H}$, $NS(O)_2R^{3H}$, O, S, $S(O)$, or $S(O)_2$, wherein R^{3H} is H, optionally substituted C_{1-6} alkyl, optionally substituted C_{3-8} cycloalkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, C_{2-9} heterocyclyl, or optionally substituted C_{1-4} alkheterocyclyl;

- 15 $m3$ is an integer of 0 to 6;
 $n3$ is an integer of 1 to 4;
 $p3$ is an integer of 0 to 2; and
 $q3$ is an integer of 0 to 5.

In some embodiments, where R^3 is

, R^3 has a structure selected from

, and , where Z^3 , $p3$, and $q3$ are as defined herein.

In another embodiment of the invention, compounds of formula I wherein R^5 is $R^{5A}C(NH)NH(CH_2)_{r5}$ or $R^{5B}NHC(S)NH(CH_2)_{r5}$, R^6 , R^2 , and R^1 are H, and R^3 is $(CH_2)_{m3}X^3$ also bind to the serotonin 5HT_{1D/1B} receptors. Preferably the IC₅₀ or K_i value is between 10 and 0.001 micromolar. More preferably, the IC₅₀ or K_i is less than 1 micromolar. Most preferably, the IC₅₀ or K_i is less than 0.1. In other embodiments, compounds are agonists of the 5HT_{1B/1D} receptors.

In other embodiments, R^2 is

wherein each of R^{2J2} , R^{2J3} , R^{2J4} , R^{2J5} , and R^{2J6} is, independently, H; C₁₋₆ alkyl; OH; C₁₋₆ alkoxy; SH; C₁₋₆ thioalkoxy; Halo; NO₂; CN; CF₃; OCF₃; NR^{2Ja}R^{2Jb}, where each of R^{2Ja} and R^{2Jb} is, independently, H or C₁₋₆ alkyl; C(O)R^{2Jc}, where R^{2Jc} is H or C₁₋₆ alkyl; CO₂R^{2Jd}, where R^{2Jd} is H or C₁₋₆ alkyl; tetrazolyl; C(O)NR^{2Je}R^{2Jf}, where each of R^{2Je} and R^{2Jf} is, independently, H or C₁₋₆ alkyl; OC(O)R^{2Jg}, where R^{2Jg} is C₁₋₆ alkyl; NHC(O)R^{2Jh}, where R^{2Jh} is H or C₁₋₆ alkyl; SO₃H; S(O)₂NR^{2Ji}R^{2Jj}, where each of R^{2Ji} and R^{2Jj} is, independently, H or C₁₋₆ alkyl; S(O)R^{2Jk}, where R^{2Jk} is C₁₋₆ alkyl; and S(O)₂R^{2Jl}, where R^{2Jl} is C₁₋₆ alkyl.

Other compounds are those where R^1 or R^3 is

wherein Z is NR^x, o is an integer from 0-3, p is an integer from 1 to 2, q is an integer from 0 to 2, r is an integer from 0 to 1, s is an integer from 1 to 3, u is an integer from 0 to 1, and t is an integer from 3 to 7 (for example, from 5 to 7), wherein said R¹ or R³ substituent includes 0 to 6 carbon-carbon double bonds or 0 or 1 carbon-nitrogen double bonds, and wherein R^x is H, optionally substituted C₁₋₆ alkyl, optionally substituted C₃₋₈ cycloalkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, C₂₋₉ heterocyclyl, or optionally substituted C₁₋₄ alkheterocyclyl.

Still other compounds have the formula:

Compounds useful in the methods include 2-ethyl-1-(1H-indol-5-yl)-isothioureia; N-(1H-indol-5-yl)-thiophene-2-carboxamidine; N-[1-(2-dimethylamino-ethyl)-1H-indol-6-yl]-thiophene-2-carboxamidine; N-{1-[2-(1-methyl-pyrrolidin-2-yl)-ethyl]-1H-indol-6-yl}-thiophene-2-carboxamidine; 1-[1-(2-dimethylamino-ethyl)-1H-indol-6-yl]-2-ethyl-isothioureia;

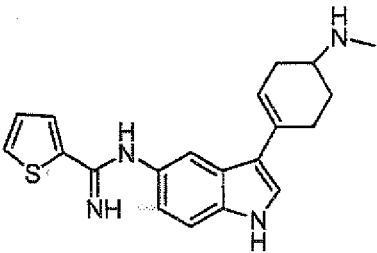

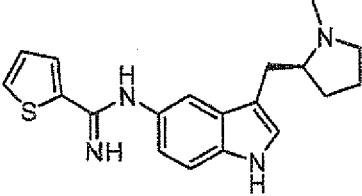

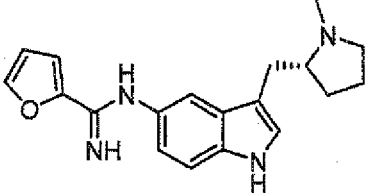

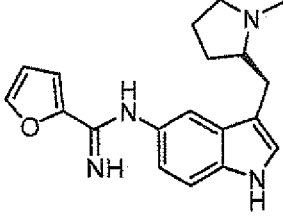

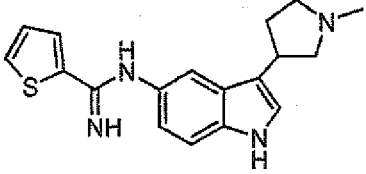

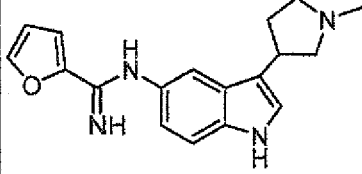

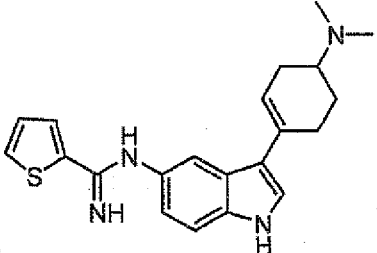

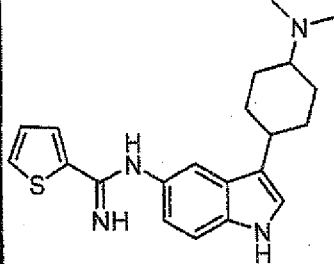

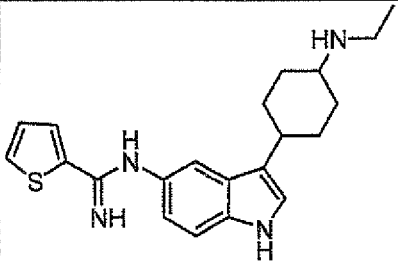

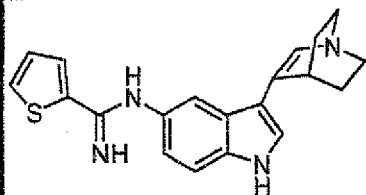

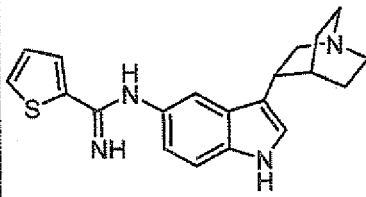

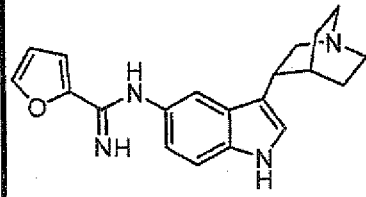

5 N-[1-(2-pyrrolidin-1-yl-ethyl)-1H-indol-6-yl]-thiophene-2-carboxamidine; N-(1-phenethyl-1H-indol-6-yl)-thiophene-2-carboxamidine; N-[3-(2-dimethylamino-ethyl)-1H-indol-5-yl]-thiophene-2-carboxamidine; N-(1-{2-[2-(4-bromo-phenyl)-ethylamino]-ethyl}-1H-indol-6-yl)-thiophene-2-carboxamidine; (+)-N-{1-[2-(1-methyl-pyrrolidin-2-yl)-ethyl]-1H-indol-6-yl}-thiophene-2-carboxamidine; (-)-N-{1-[2-(1-methyl-pyrrolidin-2-yl)-ethyl]-1H-indol-6-yl}-

10 thiophene-2-carboxamidine; N-[1-(1-methyl-azepan-4-yl)-1H-indol-6-yl]-thiophene-2-carboxamidine; and N-[1-(2-piperidin-1-yl-ethyl)-1H-indol-6-yl]-thiophene-2-carboxamidine.

Other exemplary compounds include:

	
	
	
	
	
	

Other compounds useful in the methods are

5 Yet other compounds useful in the methods of the invention are

Still other compounds useful in the methods of the invention are

The method may further include administering a 5HT_{1B} or 5HT_{1D} receptor agonist, e.g., a
 5 triptan, such as sumatriptan, rizatriptan, naratriptan, zolmitriptan, eletriptan, almotriptan, or frovatriptan.

The methods may also include administering one or more agents selected from the group consisting of analgesics, antidepressants, and anticonvulsants.

The invention further features the compounds

The invention yet further features the compound

The invention further features pharmaceutical compositions of any of the above
5 compounds in combination with a pharmaceutically acceptable carrier.

The invention also features the mixture of compounds:

The invention also features a method of synthesizing an enantiomer, e.g., (+) or (-) of

- a. reacting 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine with benzyl chloroformate to form (\pm) benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-ylcarbamate;
- b. subjecting (\pm) benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-ylcarbamate to chiral HPLC or SFC (supercritical fluid chromatography) to resolve the enantiomers of benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-ylcarbamate;
- 15 c. deprotecting one enantiomer of benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-ylcarbamate by hydrogenation to yield one enantiomer 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine; and
- d. reacting one enantiomer of 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine with methyl thiophene-2-carbimidothioate.

In yet another aspect, the invention features a method of treating a condition in a mammal, such as, for example, a human, caused by the action of nitric oxide synthase (NOS), and particularly nNOS, that includes administering an effective amount of a compound of the formula

, or a pharmaceutically acceptable salt thereof, to the mammal.

Examples of conditions that can be prevented or treated include migraine headache (with or without aura), chronic tension type headache (CTTH), migraine with allodynia, neuropathic pain, post-stroke pain, chronic headache, chronic pain, acute spinal cord injury, diabetic neuropathy, trigeminal neuralgia, diabetic nephropathy, an inflammatory disease, stroke, reperfusion injury, head trauma, cardiogenic shock, CABG associated neurological damage, HCA, AIDS associated dementia, neurotoxicity, Parkinson's disease, Alzheimer's disease, ALS, Huntington's disease, multiple sclerosis, metamphetamine-induced neurotoxicity, drug addiction, morphine/opioid induced tolerance, dependence, hyperalgesia, or withdrawal, ethanol tolerance, dependence, or withdrawal, epilepsy, anxiety, depression, attention deficit hyperactivity disorder, and psychosis. Compounds of the invention are particularly useful for treating stroke, reperfusion injury, neurodegeneration, head trauma, CABG associated neurological damage, migraine headache (with or without aura), migraine with allodynia, chronic tension type headache, neuropathic pain, post-stroke pain, opioid induced hyperalgesia, or chronic pain. In particular, 3,5-substituted indole compounds are useful for treating migraine, with or without aura, and CTTH.

These compounds of the invention can also be used in combination with one or more other therapeutic agents for the prevention or treatment of one of the aforementioned conditions. Examples of classes of therapeutic agents and some specific examples that are useful in combination with a compound of the invention are listed in Table 1.

Other agents useful in combination with these compounds, include antiarrhythmics; DHP-sensitive L-type calcium channel antagonists; omega-conotoxin (Ziconotide)-sensitive N-type calcium channel antagonists; P/Q-type calcium channel antagonists; adenosine kinase antagonists; adenosine receptor A₁ agonists; adenosine receptor A_{2a} antagonists; adenosine receptor A₃ agonists; adenosine deaminase inhibitors; adenosine nucleoside transport inhibitors; vanilloid VR1 receptor agonists; Substance P/NK₁ antagonists; cannabinoid CB1/CB2 agonists; GABA-B antagonists; AMPA and kainate antagonists, metabotropic glutamate receptor antagonists; alpha-2-adrenergic receptor agonists; nicotinic acetylcholine receptor agonists

(nAChRs); cholecystokinin B antagonists; sodium channel blockers; a K_{ATP} potassium channel, $K_{v1.4}$ potassium channel, Ca^{2+} -activated potassium channel, SK potassium channel, BK potassium channel, IK potassium channel, or KCNQ2/3 potassium channel opening agent (eg. retigabine); 5HT_{1A} agonists; muscarinic M3 antagonists, M1 agonists, M2/M3 partial agonist/antagonists; and antioxidants.

Table 1. Therapeutic agents useful in combination with compounds of the invention

Class	Examples
Opioid	alfentanil, butorphanol, buprenorphine, codeine, dextromoramide, dextropropoxyphene, dezocine, dihydrocodeine, diphenoxylate, etorphine, fentanyl, hydrocodone, hydromorphone, ketobemidone, levorphanol, levomethadone, methadone, meptazinol, morphine, morphine-6-glucuronide, nalbuphine, naloxone, oxycodone, oxymorphone, pentazocine, pethidine, piritramide, remifentanyl, sulfentanyl, tilidine, or tramadol
Antidepressant (selective serotonin re-uptake inhibitor)	citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, or sertraline
Antidepressant (norepinephrine-reuptake inhibitor)	clomipramine, doxepin, imipramine, imipramine oxide, trimipramine; adinazolam, amitriptyline, amoxapine, desipramine, maprotiline, nortriptyline, protriptyline, amineptine, butriptyline, demexiptiline, dibenzepin, dimetacrine, dothiepin, fluacizine, iprindole, lofepramine, melitracen, metapramine, norclobipramine, noxiptilin, opipramol, perlapine, pizotiline, propizepine, quinupramine, reboxetine, atomoxetine, bupropion, reboxetine, or tianeptine
Antidepressant (dual serotonin/norepinephrine reuptake inhibitor)	duloxetine, milnacipran, mirtazapine, nefazodone, or venlafaxine
Antidepressant (monoamine oxidase inhibitor)	amiflamine, iproniazid, isocarboxazid, M-3-PPC (Draxis), moclobemide, pargyline, phenelzine, tranylcypromine, or vanoxerine
Antidepressant (reversible monoamine oxidase type A inhibitor)	bazinaprine, befloxatone, brofaromine, cimoxatone, or clorgyline

Class	Examples
Antidepressant (tricyclic)	amitriptyline, clomipramine, desipramine, doxepin, imipramine, maprotiline, nortriptyline, protriptyline, or trimipramine
Antidepressant (other)	adinazolam, alaproclate, amineptine, amitriptyline/chlordiazepoxide combination, atipamezole, azamianserin, bazinaprine, befuraline, bifemelane, binodaline, bipenamol, brofaromine, caroxazone, cericlamine, cianopramine, cimoxatone, citalopram, clemeprol, clovoxamine, dazepinil, deanol, demexiptiline, dibenzepin, dothiepin, droxidopa, enefexine, estazolam, etoperidone, femoxetine, fengabine, fezolamine, fluotracen, idazoxan, indalpine, indeloxazine, iprindole, levoprotiline, lithium, litoxetine, lofepramine, medifoxamine, metapramine, metralindole, mianserin, milnacipran, minaprine, mirtazapine, montirelin, nebracetam, nefopam, nialamide, nomifensine, norfluoxetine, orotirelin, oxaflozane, pinazepam, pirlindone, pizotiline, ritanserin, rolipram, sercloremine, setiptiline, sibutramine, sulbutiamine, sulphiride, teniloxazine, thozalinone, thymoliberin, tianeptine, tiflucarbine, trazodone, tofenacin, tofisopam, tolloxatone, tomoxetine, veralipride, viloxazine, viqualine, zimelidine, or zometapine
Antiepileptic	carbamazepine, flupirtine, gabapentin, lamotrigine, oxcarbazepine, phenytoin, retigabine, topiramate, or valproate
Non-steroidal anti-inflammatory drug (NSAID)	acemetacin, aspirin, celecoxib, deracoxib, diclofenac, diflunisal, ethenzamide, etofenamate, etoricoxib, fenoprofen, flufenamic acid, flurbiprofen, lonazolac, lornoxicam, ibuprofen, indomethacin, isoxicam, kebuzone, ketoprofen, ketorolac, naproxen, nabumetone, niflumic acid, piroxicam, meclofenamic acid, mefenamic acid, meloxicam, metamizol, mofebutazone, oxyphenbutazone, parecoxib, phenidine, phenylbutazone, piroxicam, propacetamol, propyphenazone, rofecoxib, salicylamide, sulindac, suprofen, tiaprofenic acid, tenoxicam, tolmetin, valdecoxib, 4-(4-cyclohexyl-2-methyloxazol-5-yl)-2-fluorobenzenesulfonamide, N-[2-(cyclohexyloxy)-4-nitrophenyl]methanesulfonamide, 2-(3,4-difluorophenyl)-4-(3-hydroxy-3-methylbutoxy)-5-[4-(methylsulfonyl)phenyl]-3(2H)-pyridazinone, or 2-(3,5-difluorophenyl)-3-[4-(methylsulfonyl)phenyl]-2-cyclopenten-1-one
5HT _{1B/1D} agonist	almotriptan, eletriptan, frovatriptan, naratriptan, rizatriptan, sumatriptan, or zolmitriptan
Anti-inflammatory compounds	aspirin, celecoxib, cortisone, deracoxib, diflunisal, etoricoxib, fenoprofen, ibuprofen, ketoprofen, naproxen, prednisolone, sulindac, tolmetin, piroxicam, mefenamic acid, meloxicam, phenylbutazone, rofecoxib, suprofen, valdecoxib, 4-(4-cyclohexyl-2-methyloxazol-5-yl)-2-fluorobenzenesulfonamide, N-[2-(cyclohexyloxy)-4-nitrophenyl]methanesulfonamide, 2-(3,4-difluorophenyl)-4-(3-hydroxy-3-methylbutoxy)-5-[4-(methylsulfonyl)phenyl]-3(2H)-pyridazinone, or 2-(3,5-difluorophenyl)-3-[4-(methylsulfonyl)phenyl]-2-cyclopenten-1-one

Class	Examples
N-methyl-D-aspartate antagonist	<p>amantadine; aptiganel; besonprodil; budipine; conantokin G; delucemine; dexanabinol; dextromethorphan; dextropropoxyphen; felbamate; fluorofelbamate; gacyclidine; glycine; ipenoxazone; kaitocephalin; ketamine; ketobemidone; lanicemine; licostinel; midafotel; memantine; D-methadone; D-morphine; milnacipran; neramexane; orphenadrine; remacemide; sulfazocine; FPL-12,495 (racemide metabolite); topiramate; (αR)-α-amino-5-chloro-1-(phosphonomethyl)-1H-benzimidazole-2-propanoic acid; 1-aminocyclopentane-carboxylic acid; [5-(aminomethyl)-2-[[[(5S)-9-chloro-2,3,6,7-tetrahydro-2,3-dioxo-1H-,5H-pyrido[1,2,3-de]quinoxalin-5-yl]acetyl]amino]phenoxy]-acetic acid; α-amino-2-(2-phosphonoethyl)-cyclohexanepropanoic acid; α-amino-4-(phosphonomethyl)-benzeneacetic acid; (3E)-2-amino-4-(phosphonomethyl)-3-heptenoic acid; 3-[(1E)-2-carboxy-2-phenylethenyl]-4,6-dichloro-1H-indole-2-carboxylic acid; 8-chloro-2,3-dihydropyridazino[4,5-b]quinoline-1,4-dione 5-oxide salt with 2-hydroxy-N,N,N-trimethyl-ethanaminium; N'-[2-chloro-5-(methylthio)phenyl]-N-methyl-N-[3-(methylthio)phenyl]-guanidine; N'-[2-chloro-5-(methylthio)phenyl]-N-methyl-N-[3-[(R)-methylsulfinyl]phenyl]-guanidine; 6-chloro-2,3,4,9-tetrahydro-9-methyl-2,3-dioxo-1H-indeno[1,2-b]pyrazine-9-acetic acid; 7-chlorothiokynurenic acid; (3S,4aR,6S,8aR)-decahydro-6-(phosphonomethyl)-3-isoquinolinecarboxylic acid; (-)-6,7-dichloro-1,4-dihydro-5-[3-(methoxymethyl)-5-(3-pyridinyl)-4-H-1,2,4-triazol-4-yl]-2,3-quinoxalinedione; 4,6-dichloro-3-[(E)-(2-oxo-1-phenyl-3-pyrrolidinylidene)methyl]-1H-indole-2-carboxylic acid; (2R,4S)-rel-5,7-dichloro-1,2,3,4-tetrahydro-4-[[[(phenylamino)carbonyl]amino]-2-quinoxalinecarboxylic acid; (3R,4S)-rel-3,4-dihydro-3-[4-hydroxy-4-(phenylmethyl)-1-piperidinyl]-2H-1-benzopyran-4,7-diol; 2-[(2,3-dihydro-1H-inden-2-yl)amino]-acetamide; 1,4-dihydro-6-methyl-5-[(methylamino)methyl]-7-nitro-2,3-quinoxalinedione; [2-(8,9-dioxo-2,6-diazabicyclo[5.2.0]non-1(7)-en-2-yl)ethyl]-phosphonic acid; (2R,6S)-1,2,3,4,5,6-hexahydro-3-[(2S)-2-methoxypropyl]-6,11,11-trimethyl-2,6-methano-3-benzazocin-9-ol; 2-hydroxy-5-[[[(pentafluorophenyl)methyl]amino]-benzoic acid; 1-[2-(4-hydroxyphenoxy)ethyl]-4-[(4-methylphenyl)methyl]-4-piperidinol; 1-[4-(1H-imidazol-4-yl)-3-butynyl]-4-(phenylmethyl)-piperidine; 2-methyl-6-(phenylethynyl)-pyridine; 3-(phosphonomethyl)-L-phenylalanine; or 3,6,7-tetrahydro-2,3-dioxo-N-phenyl-1H,5H-pyrido[1,2,3-de]quinoxaline-5-acetamide</p>

Asymmetric or chiral centers may exist in any of the compounds of the present invention.

The present invention contemplates the various stereoisomers and mixtures thereof. These stereochemical mixtures can be resolved using methods exemplified by (1) attachment of a

5 racemic mixture of enantiomers, designated (+/-), to a chiral auxiliary, separation of the resulting

diastereomers by recrystallization or chromatography and liberation of the optically pure product from the auxiliary or (2) direct separation of the mixture of optical enantiomers on chiral chromatographic columns. Enantiomers are designated herein by the symbols "R," or "S," depending on the configuration of substituents around the chiral carbon atom. Alternatively,
5 enantiomers are designated as (+) or (-) depending on whether a solution of the enantiomer rotates the plane of polarized light clockwise or counterclockwise, respectively.

Geometric isomers may also exist in the compounds of the present invention. The present invention contemplates the various geometric isomers and mixtures thereof resulting from the arrangement of substituents around a carbon-carbon double bond and designates such isomers as
10 of the Z or E configuration, where the term "Z" represents substituents on the same side of the carbon-carbon double bond and the term "E" represents substituents on opposite sides of the carbon-carbon double bond. It is also recognized that for structures in which tautomeric forms are possible, the description of one tautomeric form is equivalent to the description of both, unless otherwise specified. For example, amidine structures of the formula $-C(=NR^Q)NHR^T$ and
15 $-C(NHR^Q)=NR^T$, where R^T and R^Q are different, are equivalent tautomeric structures and the description of one inherently includes the other.

It is understood that substituents and substitution patterns on the compounds of the invention can be selected by one of ordinary skill in the art to provide compounds that are chemically stable and that can be readily synthesized by techniques known in the art, as well as
20 those methods set forth below, from readily available starting materials. If a substituent is itself substituted with more than one group, it is understood that these multiple groups may be on the same carbon or on different carbons, so long as a stable structure results.

Other features and advantages will be apparent from the following description and the claims.

Definitions

The terms "acyl" or "alkanoyl," as used interchangeably herein, represent an alkyl group, as defined herein, or hydrogen attached to the parent molecular group through a carbonyl group, as defined herein, and is exemplified by formyl, acetyl, propionyl, butanoyl and the like.

30 Exemplary unsubstituted acyl groups include from 2 to 7 carbons.

The terms " C_{x-y} alkaryl" or " C_{x-y} alkylenearyl," as used herein, represent a chemical substituent of formula $-RR'$, where R is an alkylene group of x to y carbons and R' is an aryl group as defined elsewhere herein. Similarly, by the terms " C_{x-y} alkheteroaryl" or " C_{x-y}

alkyleneheteroaryl," is meant a chemical substituent of formula -RR", where R is an alkylene group of x to y carbons and R" is a heteroaryl group as defined elsewhere herein. Other groups preceded by the prefix "alk-" or "alkylene-" are defined in the same manner. Exemplary unsubstituted alkaryl groups are of from 7 to 16 carbons.

5 The term "alkycycloalkyl" represents a cycloalkyl group attached to the parent molecular group through an alkylene group.

 The term "alkenyl," as used herein, represents monovalent straight or branched chain groups of, unless otherwise specified, from 2 to 6 carbons containing one or more carbon-carbon double bonds and is exemplified by ethenyl, 1-propenyl, 2-propenyl, 2-methyl- 1-propenyl, 1-
10 butenyl, 2-butenyl, and the like.

 The term "alkheterocyclyl" represents a heterocyclic group attached to the parent molecular group through an alkylene group. Exemplary unsubstituted alkheterocyclyl groups are of from 3 to 14 carbons.

 The term "alkoxy" represents a chemical substituent of formula -OR, where R is an alkyl
15 group of 1 to 6 carbons, unless otherwise specified.

 The term "alkoxyalkyl" represents an alkyl group which is substituted with an alkoxy group. Exemplary unsubstituted alkoxyalkyl groups include between 2 to 12 carbons.

 The terms "alkyl" and the prefix "alk-," as used herein, are inclusive of both straight chain and branched chain saturated groups of from 1 to 6 carbons, unless otherwise specified.
20 Alkyl groups are exemplified by methyl, ethyl, n- and iso-propyl, n-, sec-, iso- and tert-butyl, neopentyl, and the like, and may be optionally substituted with one, two, three or, in the case of alkyl groups of two carbons or more, four substituents independently selected from the group consisting of: (1) alkoxy of one to six carbon atoms; (2) alkylsulfinyl of one to six carbon atoms; (3) alkylsulfonyl of one to six carbon atoms; (4) amino; (5) aryl; (6) arylalkoxy; (7) aryloyl; (8)
25 azido; (9) carboxaldehyde; (10) cycloalkyl of three to eight carbon atoms; (11) halo; (12) heterocyclyl; (13) (heterocycle)oxy; (14) (heterocycle)oyl; (15) hydroxyl; (16) N-protected amino; (17) nitro; (18) oxo; (19) spiroalkyl of three to eight carbon atoms; (20) thioalkoxy of one to six carbon atoms; (21) thiol; (22) -CO₂R^A, where R^A is selected from the group consisting of (a) alkyl, (b) aryl and (c) alkaryl, where the alkylene group is of one to six carbon atoms; (23) -
30 C(O)NR^BR^C, where each of R^B and R^C is, independently, selected from the group consisting of (a) hydrogen, (b) alkyl, (c) aryl and (d) alkaryl, where the alkylene group is of one to six carbon atoms; (24) -SO₂R^D, where R^D is selected from the group consisting of (a) alkyl, (b) aryl and (c) alkaryl, where the alkylene group is of one to six carbon atoms; (25) -SO₂NR^ER^F, where each of

R^E and R^F is, independently, selected from the group consisting of (a) hydrogen, (b) alkyl, (c) aryl and (d) alkaryl, where the alkylene group is of one to six carbon atoms; and (26) $-NR^GR^H$, where each of R^G and R^H is, independently, selected from the group consisting of (a) hydrogen; (b) an N-protecting group; (c) alkyl of one to six carbon atoms; (d) alkenyl of two to six carbon
5 atoms; (e) alkynyl of two to six carbon atoms; (f) aryl; (g) alkaryl, where the alkylene group is of one to six carbon atoms; (h) cycloalkyl of three to eight carbon atoms; and (i) alkycycloalkyl, where the cycloalkyl group is of three to eight carbon atoms, and the alkylene group is of one to ten carbon atoms, with the proviso that no two groups are bound to the nitrogen atom through a carbonyl group or a sulfonyl group.

10 The term "alkylene," as used herein, represents a saturated divalent hydrocarbon group derived from a straight or branched chain saturated hydrocarbon by the removal of two hydrogen atoms, and is exemplified by methylene, ethylene, isopropylene, and the like.

The term "alkylsulfinyl," as used herein, represents an alkyl group attached to the parent molecular group through an -S(O)- group. Exemplary unsubstituted alkylsulfinyl groups are of
15 from 1 to 6 carbons.

The term "alkylsulfonyl," as used herein, represents an alkyl group attached to the parent molecular group through an -SO₂- group. Exemplary unsubstituted alkylsulfonyl groups are of from 1 to 6 carbons.

The term "alkylsulfinylalkyl," as used herein, represents an alkyl group, as defined
20 herein, substituted by an alkylsulfinyl group. Exemplary unsubstituted alkylsulfinylalkyl groups are of from 2 to 12 carbons.

The term "alkylsulfonylalkyl," as used herein, represents an alkyl group, as defined herein, substituted by an alkylsulfonyl group. Exemplary unsubstituted alkylsulfonylalkyl groups are of from 2 to 12 carbons.

25 The term "alkynyl," as used herein, represents monovalent straight or branched chain groups of from two to six carbon atoms containing a carbon-carbon triple bond and is exemplified by ethynyl, 1-propynyl, and the like.

The term "amidine," as used herein, represents a $-C(=NH)NH_2$ group.

The term "amino," as used herein, represents an $-NH_2$ group.

30 The term "aminoalkyl," as used herein, represents an alkyl group, as defined herein, substituted by an amino group.

The term "aryl," as used herein, represents a mono- or bicyclic carbocyclic ring system having one or two aromatic rings and is exemplified by phenyl, naphthyl, 1,2-dihydronaphthyl,

1,2,3,4-tetrahydronaphthyl, fluorenyl, indanyl, indenyl, and the like, and may be optionally substituted with one, two, three, four, or five substituents independently selected from the group consisting of: (1) alkanoyl of one to six carbon atoms; (2) alkyl of one to six carbon atoms; (3) alkoxy of one to six carbon atoms; (4) alkoxyalkyl, where the alkyl and alkylene groups are independently of one to six carbon atoms; (5) alkylsulfinyl of one to six carbon atoms; (6) alkylsulfinylalkyl, where the alkyl and alkylene groups are independently of one to six carbon atoms; (7) alkylsulfonyl of one to six carbon atoms; (8) alkylsulfonylalkyl, where the alkyl and alkylene groups are independently of one to six carbon atoms; (9) aryl; (10) amino; (11) aminoalkyl of one to six carbon atoms; (12) heteroaryl; (13) alkaryl, where the alkylene group is of one to six carbon atoms; (14) aryloyl; (15) azido; (16) azidoalkyl of one to six carbon atoms; (17) carboxaldehyde; (18) (carboxaldehyde)alkyl, where the alkylene group is of one to six carbon atoms; (19) cycloalkyl of three to eight carbon atoms; (20) alkycycloalkyl, where the cycloalkyl group is of three to eight carbon atoms and the alkylene group is of one to ten carbon atoms; (21) halo; (22) haloalkyl of one to six carbon atoms; (23) heterocyclyl; (24) (heterocyclyl)oxy; (25) (heterocyclyl)oyl; (26) hydroxy; (27) hydroxyalkyl of one to six carbon atoms; (28) nitro; (29) nitroalkyl of one to six carbon atoms; (30) N-protected amino; (31) N-protected aminoalkyl, where the alkylene group is of one to six carbon atoms; (32) oxo; (33) thioalkoxy of one to six carbon atoms; (34) thioalkoxyalkyl, where the alkyl and alkylene groups are independently of one to six carbon atoms; (35) $-(CH_2)_qCO_2R^A$, where q is an integer of from zero to four, and R^A is selected from the group consisting of (a) alkyl, (b) aryl, and (c) alkaryl, where the alkylene group is of one to six carbon atoms; (36) $-(CH_2)_qCONR^BR^C$, where q is an integer of from zero to four and where R^B and R^C are independently selected from the group consisting of (a) hydrogen, (b) alkyl, (c) aryl, and (d) alkaryl, where the alkylene group is of one to six carbon atoms; (37) $-(CH_2)_qSO_2R^D$, where q is an integer of from zero to four and where R^D is selected from the group consisting of (a) alkyl, (b) aryl, and (c) alkaryl, where the alkylene group is of one to six carbon atoms; (38) $-(CH_2)_qSO_2NR^ER^F$, where q is an integer of from zero to four and where each of R^E and R^F is, independently, selected from the group consisting of (a) hydrogen, (b) alkyl, (c) aryl, and (d) alkaryl, where the alkylene group is of one to six carbon atoms; (39) $-(CH_2)_qNR^GR^H$, where q is an integer of from zero to four and where each of R^G and R^H is, independently, selected from the group consisting of (a) hydrogen; (b) an N-protecting group; (c) alkyl of one to six carbon atoms; (d) alkenyl of two to six carbon atoms; (e) alkynyl of two to six carbon atoms; (f) aryl; (g) alkaryl, where the alkylene group is of one to six carbon atoms; (h) cycloalkyl of three to eight carbon atoms; and (i) alkycycloalkyl, where the cycloalkyl

group is of three to eight carbon atoms, and the alkylene group is of one to ten carbon atoms, with the proviso that no two groups are bound to the nitrogen atom through a carbonyl group or a sulfonyl group; (40) thiol; (41) perfluoroalkyl; (42) perfluoroalkoxy; (43) aryloxy; (44) cycloalkoxy; (45) cycloalkylalkoxy; and (46) arylalkoxy.

5 The term "arylalkoxy," as used herein, represents an alkaryl group attached to the parent molecular group through an oxygen atom. Exemplary unsubstituted arylalkoxy groups are of from 7 to 16 carbons.

 The term "aryloxy" represents a chemical substituent of formula $-OR'$, where R' is an aryl group of 6 to 18 carbons, unless otherwise specified.

10 The terms "aryloyl" and "aroyl" as used interchangeably herein, represent an aryl group that is attached to the parent molecular group through a carbonyl group. Exemplary unsubstituted aryloyl groups are of 7 or 11 carbons.

 The term "azido" represents an N_3 group, which can also be represented as $N=N=N$.

15 The term "azidoalkyl" represents an azido group attached to the parent molecular group through an alkyl group.

 The term "bridged heterocyclyl" represents a heterocyclic compound, as otherwise described herein, having a bridged multicyclic structure in which one or more carbon atoms and/or heteroatoms bridges two non-adjacent members of a monocyclic ring. An exemplary bridged heterocyclyl group is a quinuclidinyl group.

20 The term "bridged alkheterocyclyl" represents a bridged heterocyclic compound, as otherwise described herein, attached to the parent molecular group through an alkylene group.

 The term "carbonyl," as used herein, represents a $C(O)$ group, which can also be represented as $C=O$.

 The term "carboxaldehyde" represents a CHO group.

25 The term "carboxaldehydealkyl" represents a carboxaldehyde group attached to the parent molecular group through an alkylene group.

 The term "cycloalkyl," as used herein represents a monovalent saturated or unsaturated non-aromatic cyclic hydrocarbon group of from three to eight carbons, unless otherwise specified, and is exemplified by cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, bicyclo[2.2.1.]heptyl and the like. The cycloalkyl groups of this invention can be optionally
30 substituted with (1) alkanoyl of one to six carbon atoms; (2) alkyl of one to six carbon atoms; (3) alkoxy of one to six carbon atoms; (4) alkoxyalkyl, where the alkyl and alkylene groups are independently of one to six carbon atoms; (5) alkylsulfinyl of one to six carbon atoms; (6)

alkylsulfinylalkyl, where the alkyl and alkylene groups are independently of one to six carbon atoms; (7) alkylsulfonyl of one to six carbon atoms; (8) alkylsulfonylalkyl, where the alkyl and alkylene groups are independently of one to six carbon atoms; (9) aryl; (10) amino; (11) aminoalkyl of one to six carbon atoms; (12) heteroaryl; (13) alkaryl, where the alkylene group is of one to six carbon atoms; (14) aryloyl; (15) azido; (16) azidoalkyl of one to six carbon atoms; (17) carboxaldehyde; (18) (carboxaldehyde)alkyl, where the alkylene group is of one to six carbon atoms; (19) cycloalkyl of three to eight carbon atoms; (20) alkycycloalkyl, where the cycloalkyl group is of three to eight carbon atoms and the alkylene group is of one to ten carbon atoms; (21) halo; (22) haloalkyl of one to six carbon atoms; (23) heterocyclyl; (24) (heterocyclyl)oxy; (25) (heterocyclyl)oyl; (26) hydroxy; (27) hydroxyalkyl of one to six carbon atoms; (28) nitro; (29) nitroalkyl of one to six carbon atoms; (30) N-protected amino; (31) N-protected aminoalkyl, where the alkylene group is of one to six carbon atoms; (32) oxo; (33) thioalkoxy of one to six carbon atoms; (34) thioalkoxyalkyl, where the alkyl and alkylene groups are independently of one to six carbon atoms; (35) $-(CH_2)_qCO_2R^A$, where q is an integer of from zero to four, and R^A is selected from the group consisting of (a) alkyl, (b) aryl, and (c) alkaryl, where the alkylene group is of one to six carbon atoms; (36) $-(CH_2)_qCONR^BR^C$, where q is an integer of from zero to four and where R^B and R^C are independently selected from the group consisting of (a) hydrogen, (b) alkyl, (c) aryl, and (d) alkaryl, where the alkylene group is of one to six carbon atoms; (37) $-(CH_2)_qSO_2R^D$, where q is an integer of from zero to four and where R^D is selected from the group consisting of (a) alkyl, (b) aryl, and (c) alkaryl, where the alkylene group is of one to six carbon atoms; (38) $-(CH_2)_qSO_2NR^ER^F$, where q is an integer of from zero to four and where each of R^E and R^F is, independently, selected from the group consisting of (a) hydrogen, (b) alkyl, (c) aryl, and (d) alkaryl, where the alkylene group is of one to six carbon atoms; (39) $-(CH_2)_qNR^GR^H$, where q is an integer of from zero to four and where each of R^G and R^H is, independently, selected from the group consisting of (a) hydrogen; (b) an N-protecting group; (c) alkyl of one to six carbon atoms; (d) alkenyl of two to six carbon atoms; (e) alkynyl of two to six carbon atoms; (f) aryl; (g) alkaryl, where the alkylene group is of one to six carbon atoms; (h) cycloalkyl of three to eight carbon atoms; and (i) alkycycloalkyl, where the cycloalkyl group is of three to eight carbon atoms, and the alkylene group is of one to ten carbon atoms, with the proviso that no two groups are bound to the nitrogen atom through a carbonyl group or a sulfonyl group; (40) thiol; (41) perfluoroalkyl; (42) perfluoroalkoxy; (43) aryloxy; (44) cycloalkoxy; (45) cycloalkylalkoxy; and (46) arylalkoxy.

The terms "cycloalkyloxy" or "cycloalkoxy", as used interchangeably herein, represent a cycloalkyl group, as defined herein, attached to the parent molecular group through an oxygen atom. Exemplary unsubstituted cycloalkyloxy groups are of from 3 to 8 carbons.

The term an "effective amount" or a "sufficient amount" of an agent, as used herein, is that amount sufficient to effect beneficial or desired results, such as clinical results, and, as such, an "effective amount" depends upon the context in which it is being applied. For example, in the context of administering an agent that is an inhibitor of NOS, an effective amount of an agent is, for example, an amount sufficient to achieve a reduction in NOS activity as compared to the response obtained without administration of the agent.

The terms "halide" or "halogen" or "Hal" or "halo," as used herein, represent bromine, chlorine, iodine, or fluorine.

The term "haloalkyl," as used herein, represents an alkyl group, as defined herein, substituted by a halo group.

The term "heteroaryl," as used herein, represents that subset of heterocycles, as defined herein, which are aromatic: i.e., they contain $4n+2$ pi electrons within the mono- or multicyclic ring system.

The terms "heterocycle" or "heterocyclyl," as used interchangeably herein represent a 5-, 6- or 7-membered ring, unless otherwise specified, containing one, two, three, or four heteroatoms independently selected from the group consisting of nitrogen, oxygen and sulfur.

The 5-membered ring has zero to two double bonds and the 6- and 7-membered rings have zero to three double bonds. The term "heterocycle" also includes bicyclic, tricyclic and tetracyclic groups in which any of the above heterocyclic rings is fused to one, two, or three rings independently selected from the group consisting of an aryl ring, a cyclohexane ring, a cyclohexene ring, a cyclopentane ring, a cyclopentene ring and another monocyclic heterocyclic ring, such as indolyl, quinolyl, isoquinolyl, tetrahydroquinolyl, benzofuryl, benzothienyl and the like. Heterocyclics include pyrrolyl, pyrrolinyl, pyrrolidinyl, pyrazolyl, pyrazolinyl, pyrazolidinyl, imidazolyl, imidazolinyl, imidazolidinyl, pyridyl, piperidinyl, homopiperidinyl, pyrazinyl, piperazinyl, pyrimidinyl, pyridazinyl, oxazolyl, oxazolidinyl, isoxazolyl, isoxazolidinyl, morpholinyl, thiomorpholinyl, thiazolyl, thiazolidinyl, isothiazolyl, isothiazolidinyl, indolyl, quinolinyl, isoquinolinyl, benzimidazolyl, benzothiazolyl, benzoxazolyl, furyl, thienyl, thiazolidinyl, isothiazolyl, isoindazolyl, triazolyl, tetrazolyl, oxadiazolyl, uricyl, thiadiazolyl, pyrimidyl, tetrahydrofuranyl, dihydrofuranyl, tetrahydrothienyl, dihydrothienyl, dihydroindolyl, tetrahydroquinolyl, tetrahydroisoquinolyl, pyranyl,

dihydropyranyl, dithiazolyl, benzofuranyl, benzothienyl and the like. Heterocyclic groups also include compounds of the formula

F' is selected from the group consisting of $-\text{CH}_2-$, $-\text{CH}_2\text{O}-$ and $-\text{O}-$, and G' is selected

- 5 from the group consisting of $-\text{C}(\text{O})-$ and $-(\text{C}(\text{R}')(\text{R}''))_v-$, where each of R' and R'' is, independently, selected from the group consisting of hydrogen or alkyl of one to four carbon atoms, and v is one to three and includes groups, such as 1,3-benzodioxolyl, 1,4-benzodioxanyl, and the like. Any of the heterocycle groups mentioned herein may be optionally substituted with one, two, three, four or five substituents independently selected from the group consisting of: (1)
- 10 alkanoyl of one to six carbon atoms; (2) alkyl of one to six carbon atoms; (3) alkoxy of one to six carbon atoms; (4) alkoxyalkyl, where the alkyl and alkylene groups are independently of one to six carbon atoms; (5) alkylsulfinyl of one to six carbon atoms; (6) alkylsulfinylalkyl, where the alkyl and alkylene groups are independently of one to six carbon atoms; (7) alkylsulfonyl of one to six carbon atoms; (8) alkylsulfonylalkyl, where the alkyl and alkylene groups are
- 15 independently of one to six carbon atoms; (9) aryl; (10) amino; (11) aminoalkyl of one to six carbon atoms; (12) heteroaryl; (13) alkaryl, where the alkylene group is of one to six carbon atoms; (14) aryloyl; (15) azido; (16) azidoalkyl of one to six carbon atoms; (17) carboxaldehyde; (18) (carboxaldehyde)alkyl, where the alkylene group is of one to six carbon atoms; (19) cycloalkyl of three to eight carbon atoms; (20) alkylcycloalkyl, where the cycloalkyl group is of
- 20 three to eight carbon atoms and the alkylene group is of one to ten carbon atoms; (21) halo; (22) haloalkyl of one to six carbon atoms; (23) heterocyclyl; (24) (heterocyclyl)oxy; (25) (heterocyclyl)oyl; (26) hydroxy; (27) hydroxyalkyl of one to six carbon atoms; (28) nitro; (29) nitroalkyl of one to six carbon atoms; (30) N-protected amino; (31) N-protected aminoalkyl, where the alkylene group is of one to six carbon atoms; (32) oxo; (33) thioalkoxy of one to six
- 25 carbon atoms; (34) thioalkoxyalkyl, where the alkyl and alkylene groups are independently of one to six carbon atoms; (35) $-(\text{CH}_2)_q\text{CO}_2\text{R}^A$, where q is an integer of from zero to four, and R^A is selected from the group consisting of (a) alkyl, (b) aryl, and (c) alkaryl, where the alkylene group is of one to six carbon atoms; (36) $-(\text{CH}_2)_q\text{CONR}^B\text{R}^C$, where q is an integer of from zero to four and where R^B and R^C are independently selected from the group consisting of (a)
- 30 hydrogen, (b) alkyl, (c) aryl, and (d) alkaryl, where the alkylene group is of one to six carbon atoms; (37) $-(\text{CH}_2)_q\text{SO}_2\text{R}^D$, where q is an integer of from zero to four and where R^D is selected from the group consisting of (a) alkyl, (b) aryl, and (c) alkaryl, where the alkylene group is of

one to six carbon atoms; (38) $-(CH_2)_qSO_2NR^E R^F$, where q is an integer of from zero to four and where each of R^E and R^F is, independently, selected from the group consisting of (a) hydrogen, (b) alkyl, (c) aryl, and (d) alkaryl, where the alkylene group is of one to six carbon atoms; (39) $-(CH_2)_qNR^G R^H$, where q is an integer of from zero to four and where each of R^G and R^H is, independently, selected from the group consisting of (a) hydrogen; (b) an N-protecting group; (c) alkyl of one to six carbon atoms; (d) alkenyl of two to six carbon atoms; (e) alkynyl of two to six carbon atoms; (f) aryl; (g) alkaryl, where the alkylene group is of one to six carbon atoms; (h) cycloalkyl of three to eight carbon atoms; and (i) alkycycloalkyl, where the cycloalkyl group is of three to eight carbon atoms, and the alkylene group is of one to ten carbon atoms, with the proviso that no two groups are bound to the nitrogen atom through a carbonyl group or a sulfonyl group; (40) thiol; (41) perfluoroalkyl; (42) perfluoroalkoxy; (43) aryloxy; (44) cycloalkoxy; (45) cycloalkylalkoxy; and (46) arylalkoxy.

The terms "heterocyclyloxy" and "(heterocycle)oxy," as used interchangeably herein, represent a heterocycle group, as defined herein, attached to the parent molecular group through an oxygen atom.

The terms "heterocyclyloyl" and "(heterocycle)oyl," as used interchangeably herein, represent a heterocycle group, as defined herein, attached to the parent molecular group through a carbonyl group.

The term "hydroxy" or "hydroxyl," as used herein, represents an -OH group.

The term "hydroxyalkyl," as used herein, represents an alkyl group, as defined herein, substituted by one to three hydroxy groups, with the proviso that no more than one hydroxy group may be attached to a single carbon atom of the alkyl group and is exemplified by hydroxymethyl, dihydroxypropyl, and the like.

The terms "inhibit" or "suppress" or "reduce," as relates to a function or activity, such as NOS activity, means to reduce the function or activity when compared to otherwise same conditions except for a condition or parameter of interest, or alternatively, as compared to another condition.

The term "N-protected amino," as used herein, refers to an amino group, as defined herein, to which is attached an N-protecting or nitrogen-protecting group, as defined herein.

The term "N-protected aminoalkyl," as used herein, represents an alkyl group, as defined herein, substituted by an amino group to which is attached an N-protecting or nitrogen-protecting group, as defined herein.

The terms "N-protecting group" and "nitrogen protecting group," as used herein, represent those groups intended to protect an amino group against undesirable reactions during synthetic procedures. Commonly used N-protecting groups are disclosed in Greene, "Protective Groups In Organic Synthesis," 3rd Edition (John Wiley & Sons, New York, 1999), which is incorporated herein by reference. N-protecting groups include acyl, aroyl, or carbamyl groups such as formyl, acetyl, propionyl, pivaloyl, t-butylacetyl, 2-chloroacetyl, 2-bromoacetyl, trifluoroacetyl, trichloroacetyl, phthalyl, o-nitrophenoxyacetyl, α -chlorobutyryl, benzoyl, 4-chlorobenzoyl, 4-bromobenzoyl, 4-nitrobenzoyl, and chiral auxiliaries such as protected or unprotected D, L or D, L-amino acids such as alanine, leucine, phenylalanine, and the like; sulfonyl groups such as benzenesulfonyl, p-toluenesulfonyl, and the like; carbamate forming groups such as benzyloxycarbonyl, p-chlorobenzyloxycarbonyl, p-methoxybenzyloxycarbonyl, p-nitrobenzyloxycarbonyl, 2-nitrobenzyloxycarbonyl, p-bromobenzyloxycarbonyl, 3,4-dimethoxybenzyloxycarbonyl, 3,5-dimethoxybenzyl oxycarbonyl, 2,4-dimethoxybenzyloxycarbonyl, 4-methoxybenzyloxycarbonyl, 2-nitro-4,5-dimethoxybenzyloxycarbonyl, 3,4,5-trimethoxybenzyloxycarbonyl, 1-(p-biphenyl)-1-methylethoxycarbonyl, α,α -dimethyl-3,5-dimethoxybenzyloxycarbonyl, benzhydryloxy carbonyl, t-butyloxycarbonyl, diisopropylmethoxycarbonyl, isopropyloxycarbonyl, ethoxycarbonyl, methoxycarbonyl, allyloxycarbonyl, 2,2,2-trichloroethoxycarbonyl, phenoxycarbonyl, 4-nitrophenoxy carbonyl, fluorenyl-9-methoxycarbonyl, cyclopentyloxycarbonyl, adamantyloxycarbonyl, cyclohexyloxycarbonyl, phenylthiocarbonyl, and the like, arylalkyl groups such as benzyl, triphenylmethyl, benzyloxymethyl, and the like and silyl groups such as trimethylsilyl, and the like. Preferred N-protecting groups are formyl, acetyl, benzoyl, pivaloyl, t-butylacetyl, alanyl, phenylsulfonyl, benzyl, t-butyloxycarbonyl (Boc), and benzyloxycarbonyl (Cbz).

The term "nitro," as used herein, represents an -NO₂ group.

The term "nitroalkyl," as used herein, represents an alkyl group, as defined herein, substituted by a nitro group.

The term "oxo" or (O) as used herein, represents =O.

The term "perfluoroalkyl," as used herein, represents an alkyl group, as defined herein, where each hydrogen radical bound to the alkyl group has been replaced by a fluoride radical. Perfluoroalkyl groups are exemplified by trifluoromethyl, pentafluoroethyl, and the like.

The term "perfluoroalkoxy," as used herein, represents an alkoxy group, as defined herein, where each hydrogen radical bound to the alkoxy group has been replaced by a fluoride radical.

5 The term "pharmaceutically acceptable salt," as use herein, represents those salts which are, within the scope of sound medical judgment, suitable for use in contact with the tissues of humans and animals without undue toxicity, irritation, allergic response and the like and are commensurate with a reasonable benefit/risk ratio. Pharmaceutically acceptable salts are well known in the art. For example, S. M Berge et al. describe pharmaceutically acceptable salts in detail in *J. Pharmaceutical Sciences* 66:1-19, 1977. The salts can be prepared *in situ* during the
10 final isolation and purification of the compounds of the invention or separately by reacting the free base group with a suitable organic acid. Representative acid addition salts include acetate, adipate, alginate, ascorbate, aspartate, benzenesulfonate, benzoate, bisulfate, borate, butyrate, camphorate, camphersulfonate, citrate, cyclopentanepropionate, digluconate, dodecylsulfate, ethanesulfonate, fumarate, glucoheptonate, glycerophosphate, hemisulfate, heptonate, hexanoate,
15 hydrobromide, hydrochloride, hydroiodide, 2-hydroxy-ethanesulfonate, lactobionate, lactate, laurate, lauryl sulfate, malate, maleate, malonate, methanesulfonate, 2-naphthalenesulfonate, nicotinate, nitrate, oleate, oxalate, palmitate, pamoate, pectinate, persulfate, 3-phenylpropionate, phosphate, picrate, pivalate, propionate, stearate, succinate, sulfate, tartrate, thiocyanate, toluenesulfonate, undecanoate, valerate salts and the like. Representative alkali or alkaline earth
20 metal salts include sodium, lithium, potassium, calcium, magnesium and the like, as well as nontoxic ammonium, quaternary ammonium, and amine cations, including, but not limited to ammonium, tetramethylammonium, tetraethylammonium, methylamine, dimethylamine, trimethylamine, triethylamine, ethylamine and the like.

25 The term "pharmaceutically acceptable prodrugs" as used herein, represents those prodrugs of the compounds of the present invention which are, within the scope of sound medical judgment, suitable for use in contact with with the tissues of humans and animals with undue toxicity, irritation, allergic response, and the like, commensurate with a reasonable benefit/risk ratio, and effective for their intended use, as well as the zwitterionic forms, where possible, of the compounds of the invention.

30 The term "Ph" as used herein means phenyl.

The term "prodrug," as used herein, represents compounds which are rapidly transformed *in vivo* to the parent compound of the above formula, for example, by hydrolysis in blood. Prodrugs of the compounds of the invention may be conventional esters. Some common esters

which have been utilized as prodrugs include, but are not limited to, phenyl esters, aliphatic (C₈-C₂₄) esters, acyloxymethyl esters, carbamates, and amino acid esters. For example, a compound of the invention that contains an OH group may be acylated at this position in its prodrug form. A thorough discussion is provided in T. Higuchi and V. Stella, Pro-drugs as Novel Delivery Systems, Vol. 14 of the A.C.S. Symposium Series, Edward B. Roche, ed., Bioreversible Carriers in Drug Design, American Pharmaceutical Association and Pergamon Press, 1987, and Judkins *et al.*, *Synthetic Communications* 26(23):4351-4367, 1996, each of which is incorporated herein by reference.

Each of the terms "selectively inhibits nNOS" or "a selective nNOS inhibitor" refers to a substance, such as, for example, a compound of the invention, that inhibits or binds the nNOS isoform more effectively than the eNOS and/or iNOS isoform by an *in vitro* assay, such as, for example, those assays described herein. Selective inhibition can be expressed in terms of an IC₅₀ value, a K_i value, or the inverse of a percent inhibition value which is lower when the substance is tested in an nNOS assay than when tested in an eNOS and/or iNOS assay. Preferably, the IC₅₀ or K_i value is 2 times lower. More preferably, the IC₅₀ or K_i value is 5 times lower. Most preferably, the IC₅₀ or K_i value is 10, or even 50 times lower.

The term "prophylaxis" refers to preventive or pre-emptive treatment for an event expected to result in a condition, for example, visceral pain, and encompasses procedures designed to target individuals at risk of suffering from a condition, such as visceral pain.

The term "solvate" as used herein means a compound of the invention wherein molecules of a suitable solvent are incorporated in the crystal lattice. A suitable solvent is physiologically tolerable at the dosage administered. Examples of suitable solvents are ethanol, water and the like. When water is the solvent, the molecule is referred to as a "hydrate."

The term "spiroalkyl," as used herein, represents an alkylene diradical, both ends of which are bonded to the same carbon atom of the parent group to form a spirocyclic group.

The term "sulfonyl," as used herein, represents an -S(O)₂- group.

The term "thioalkaryl," as used herein, represents a thioalkoxy group substituted with an aryl group.

The term "thioalkheterocyclyl," as used herein, represents a thioalkoxy group substituted with a heterocyclyl group.

The term "thioalkoxy," as used herein, represents an alkyl group attached to the parent molecular group through a sulfur atom. Exemplary unsubstituted alkylthio groups are of from 1 to 6 carbons.

The term "thioalkoxyalkyl" represents an alkyl group which is substituted with a thioalkoxy group. Exemplary unsubstituted thioalkoxyalkyl groups include between 2 to 12 carbons.

The term "thiol" represents an -SH group.

5 As used herein, and as well understood in the art, "treatment" is an approach for obtaining beneficial or desired results, such as clinical results. Beneficial or desired results can include, but are not limited to, alleviation or amelioration of one or more symptoms or conditions; diminishment of extent of disease, disorder, or condition; stabilized (i.e., not worsening) state of disease, disorder, or condition; preventing spread of disease, disorder, or
10 condition; delay or slowing the progress of the disease, disorder, or condition; amelioration or palliation of the disease, disorder, or condition; and remission (whether partial or total), whether detectable or undetectable. "Treatment" can also mean prolonging survival as compared to expected survival if not receiving treatment. "Palliating" a disease, disorder, or condition means that the extent and/or undesirable clinical manifestations of the disease, disorder, or condition are
15 lessened and/or time course of the progression is slowed or lengthened, as compared to the extent or time course in the absence of treatment.

By "visceral pain" is meant any pain felt by a subject secondary to a disease, disorder, or condition of an internal organ. Conditions that result in visceral pain include, but are not limited to, irritable bowel syndrome, inflammatory bowel syndrome, pancreatitis, diverticulitis, Crohn's
20 disease, peritonitis, pericarditis, hepatitis, appendicitis, colitis, cholecystitis, gastroenteritis, renal pain, interstitial cystitis, ovarian (e.g., cysts), endometriosis, dysmenorrhea, uterine pain, pain resulting from a cancer of a visceral organ, pain from injury, infection in an internal organ, gynecological pain, bladder pain, bowel pain, stomach pain, esophageal pain, referred cardiac pain, upper gastrointestinal dyspepsia, and colic (including renal and biliary colic). Visceral pain
25 can be experienced by an animal with a disease or condition of an internal organ.

As used herein, by a "5HT_{1B} agonist" and "5HT_{1D} agonist" are meant, respectively, an agent that enhances the activity of 5-hydroxytryptamine/serotonin receptors 1B and/or 1D, e.g., by directly binding and activating 5HT_{1B} or 5HT_{1D} receptors (e.g., as with a triptan) or by inhibiting reuptake of serotonin (e.g., as with an SSRI). Agonists of 5HT_{1B/1D} receptors include,
30 but are not limited to, antidepressants or antianxiety drugs (e.g., citalopram), amphetamines (e.g., dextroamphetamine and levoamphetamine), antiemetics or anxiolytics (e.g., benzodiazepines), anticonvulsants (e.g., sodium valproate), and triptans (e.g., sumatriptan). An agonist of 5HT_{1B}

receptors may also agonize 5HT_{1D} receptors; conversely, an agonist of 5HT_{1D} receptors may also agonize 5HT_{1B} receptors.

By “analgesic” is meant any member of the diverse group of drugs used to relieve pain. Analgesic drugs act in various ways on the peripheral and central nervous systems. They include, but are not limited to, paracetamol (i.e., acetaminophen), the nonsteroidal anti-inflammatory drugs (NSAIDs), and opiate drugs such as morphine.

By “antidepressant” is meant any member of the diverse group of drugs used to relieve depression or dysthymia. Classes of antidepressants include selective serotonin reuptake inhibitors (SSRIs), serotonin-norepinephrine reuptake inhibitors (SNRIs), noradrenergic and specific serotonergic antidepressants (NASSAs), norepinephrine (noradrenaline) reuptake inhibitors (NRIs), norepinephrine-dopamine reuptake inhibitors, tricyclic antidepressants (TCAs), and monoamine oxidase inhibitors (MAOIs). Examples of antidepressant agents include, but are not limited to, amitriptyline, citalopram, desipramine, duloxetine, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline, amitriptyline, desmethyramitriptyline, clomipramine, doxepin, imipramine, imipramine oxide, trimipramine; adinazolam, amitriptylinoxide, amoxapine, desipramine, maprotiline, nortriptyline, protriptyline, amineptine, butriptyline, demexiptiline, dibenzepin, dimetacrine, dothiepin, fluacizine, iprindole, lofepramine, melitracen, metapramine, norclolipramine, noxiptilin, opipramol, perlapine, pizotiline, propizepine, quinupramine, reboxetine, atomoxetine, bupropion, reboxetine, tomoxetine, duloxetine, milnacipran, mirtazapine, nefazodone, venlafaxine, amiflamine, iproniazid, isocarboxazid, M-3-PPC (Draxis), moclobemide, pargyline, phenelzine, tranlycypromine, vanoxerine, bazinaprine, befloxatone, brofaromine, cimoxatone, clorgyline, amitriptyline, clomipramine, desipramine, doxepin, imipramine, maprotiline, nortriptyline, protriptyline, trimipramine, adinazolam, alaproclate, amineptine, amitriptyline/chlordiazepoxide combination, atipamezole, azamianserin, bazinaprine, befuraline, bifemelane, binodaline, bipenamol, brofaromine, caroxazone, cericlamine, cianopramine, cimoxatone, citalopram, clemeprol, clovoxamine, dazepinil, deanol, demexiptiline, dibenzepin, dothiepin, droxidopa, enefexine, estazolam, etoperidone, femoxetine, fengabine, fezolamine, fluotracen, idazoxan, indalpine, indeloxazine, iprindole, levoprotiline, lithium, litoxetine; lofepramine, medifoxamine, metapramine, metralindole, mianserin, milnacipran, minaprine, mirtazapine, montirelin, nebracetam, nefopam, nialamide, nomifensine, norfluoxetine, orotirelin, oxaflozane, pinazepam, pirlindone, pizotiline, ritanserin, rolipram, sercloremine, setiptiline, sibutramine, sulbutiamine, sulpiride, teniloxazine, thozalinone, thymoliberin, tianeptine, tiplucarbine, trazodone, tofenacin,

tofisopam, toloxatone, tomoxetine, veralipride, viloxazine, viqualine, zimelidine, and zometapine.

By “anticonvulsive” is meant any of a diverse group of agents used in prevention of the occurrence of epileptic seizures (i.e., antiepileptic). The goal of an anticonvulsant is to suppress the rapid and excessive firing of neurons that start a seizure. Many anticonvulsants block sodium (Na^+) channels, calcium (Ca^{2+}) channels, AMPA receptors, or NMDA receptors. Some anticonvulsants inhibit the metabolism of GABA or increase its release. Examples of anticonvulsants include, but are not limited to, carbamazepine, flupirtine, gabapentin, lamotrigine, oxcarbazepine, phenytoin, retigabine, topiramate, and valproate.

By “cyclooxygenase-2 (COX-2) inhibitor” is meant any agent that inhibits the activity of the COX-2 enzyme. Examples of COX-2 inhibitors include, but are not limited to NSAIDS, paracetamol (i.e., acetaminophen), celecoxib, etoricoxib, lumiracoxib, parecoxib, rofecoxib, and valdecoxib.

By “non-steroidal anti-inflammatory drug” (NSAID) is meant an agent that exhibits analgesic, anti-inflammatory, and antipyretic effects on a treated subject. Examples of NSAIDS include, but are not limited to, aspirin, amoxiprin, benorilate, choline magnesium salicylate, faislamine, methyl salicylate, magnesium salicylate, salicyl salicylate (salsalate), aceclofenac, bromfenac, etodolac, sulindac, carprofen, fenbufen, loxoprofen, oxaprozin, azapropazone, sulfinpyrazone, nimesulide, licofelone, acetaminophen, celecoxib, deracoxib, diclofenac, diflunisal, ethebamide, etofenamate, etoricoxib, fenoprofen, flufenamic acid, flurbiprofen, lonazolac, lornoxicam, ibuprofen, indomethacin, isoxicam, kebufone, ketoprofen, ketorolac, naproxen, nabumetone, niflumic acid, sulindac, tolmetin, piroxicam, meclofenamic acid, mefenamic acid, meloxicam, metamizol, mofebutazone, oxyphenbutazone, parecoxib, phenidine, phenylbutazone, piroxicam, propacetamol, propyphenazone, rofecoxib, salicylamide, suprofen, tiaprofenic acid, tenoxicam, valdecoxib, 4-(4-cyclohexyl-2-methyloxazol-5-yl)-2-fluorobenzenesulfonamide, N-[2-(cyclohexyloxy)-4-nitrophenyl]methanesulfonamide, 2-(3,4-difluorophenyl)-4-(3-hydroxy-3-methylbutoxy)-5-[4-(methylsulfonyl)phenyl]-3(2H)-pyridazinone, and 2-(3,5-difluorophenyl)-3-[4-(methylsulfonyl)phenyl]-2-cyclopenten-1-one).

By “opiate” is meant any agent, natural or synthetic, that exerts an analgesic effect upon binding to an opioid receptor in the central nervous system. Examples of opiates include, but are not limited to, alfentanil, butorphanol, buprenorphine, codeine, dextromoramide, dextropropoxyphene, dezocine, dihydrocodeine, diphenoxylate, etorphine, fentanyl, hydrocodone, hydromorphone, ketobemidone, levorphanol, levomethadone, methadone,

meptazinol, morphine, morphine-6-glucuronide, nalbuphine, naloxone, oxycodone, oxymorphone, pentazocine, pethidine, piritramide, remifentanyl, sulfentanyl, tapentadol, tilidine, and tramadol.

BRIEF DESCRIPTION OF DRAWINGS

DETAILED DESCRIPTION OF THE INVENTION

We have discovered that certain indole compounds, such as 3,5-substituted indole compounds, are useful in treating visceral pain. Visceral pain may be caused by disease or injury to an internal organ, which refers pain to other parts of the body. Exemplary forms of visceral pain treated by the methods described herein include that secondary to irritable bowel syndrome, inflammatory bowel syndrome, pancreatitis, diverticulitis, Crohn's disease, peritonitis, pericarditis, hepatitis, appendicitis, colitis, cholecystitis, gastroenteritis, endometriosis, dysmenorrhea, interstitial cystitis, prostatitis, pleuritis, upper gastrointestinal dyspepsia, renal colic, or biliary colic. Other forms are described herein, and still others are known in the art. Particularly desirable compounds are disclosed in US 2006/0258721 and herein and have the formula:

or a pharmaceutically acceptable salt or prodrug thereof, wherein,

R^1 is H, optionally substituted C_{1-6} alkyl, optionally substituted C_{1-4} alkaryl, optionally substituted C_{1-4} alkheterocyclyl, or optionally substituted C_{3-8} cycloalkyl;

5 each of R^2 and R^3 is, independently, H, Hal, optionally substituted C_{1-6} alkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, optionally substituted C_{2-9} bridged heterocyclyl, optionally substituted C_{1-4} bridged alkheterocyclyl, optionally substituted C_{2-9} heterocyclyl, optionally substituted C_{1-4} alkheterocyclyl, or optionally substituted C_{3-8} cycloalkyl; each of R^4 and R^7 is, independently, H, F, C_{1-6} alkyl, or C_{1-6} alkoxy;

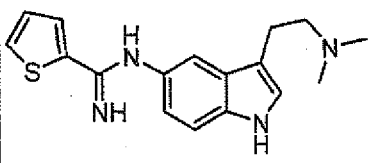

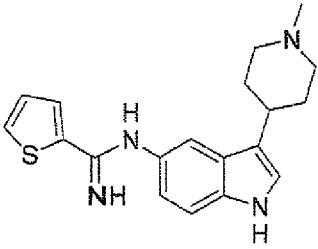

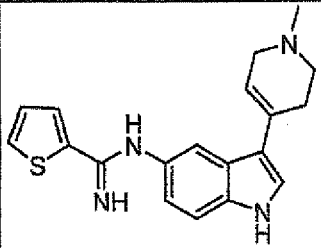

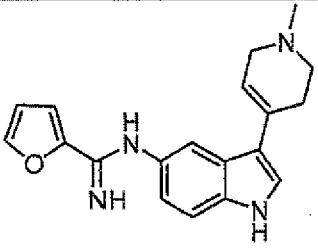

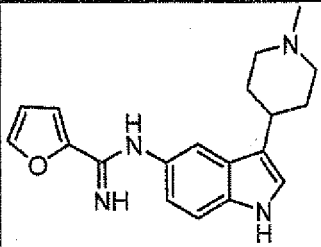

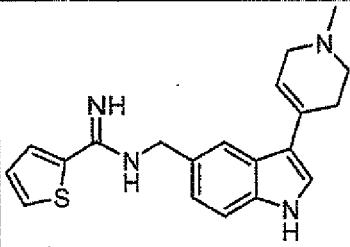

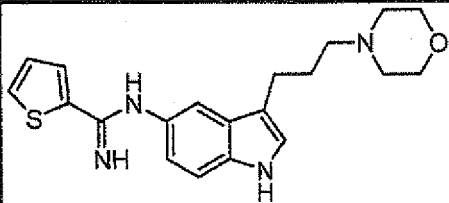

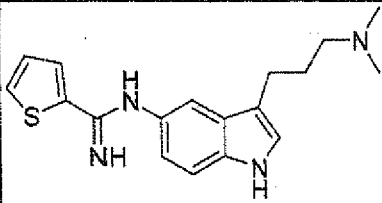

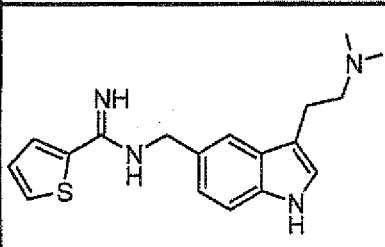

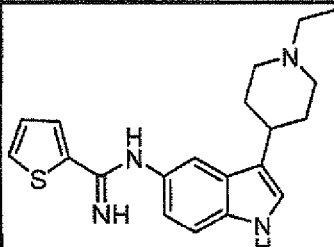

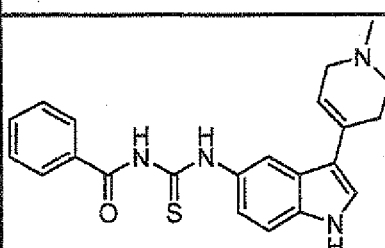

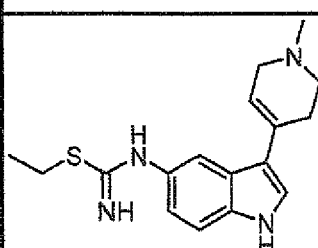

10 R^5 is H, $R^{5A}C(NH)NH(CH_2)_{r5}$, or $R^{5B}NHC(S)NH(CH_2)_{r5}$, wherein $r5$ is an integer from 0 to 2, R^{5A} is optionally substituted C_{1-6} alkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, optionally substituted C_{2-9} heterocyclyl, optionally substituted C_{1-4} alkheterocyclyl, optionally substituted C_{1-6} thioalkoxy, optionally substituted C_{1-4} thioalkaryl, optionally substituted aryloyl, or optionally substituted C_{1-4} thioalkheterocyclyl; and R^{5B} is C_{1-6} alkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, optionally substituted C_{2-9} heterocyclyl, optionally substituted C_{1-4} alkheterocyclyl, optionally substituted C_{1-6} thioalkoxy, optionally substituted C_{1-4} thioalkaryl, or optionally substituted aryloyl; and

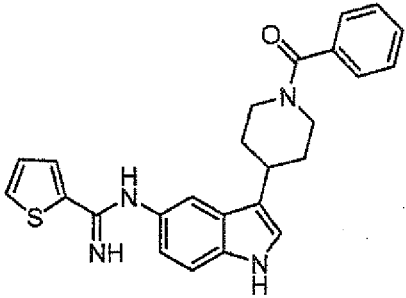

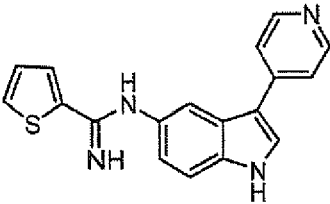

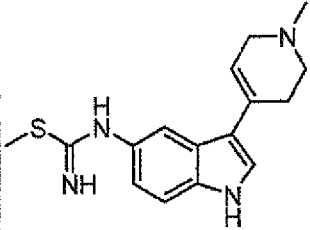

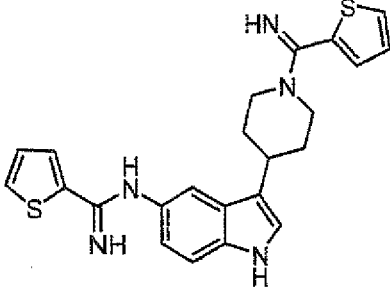

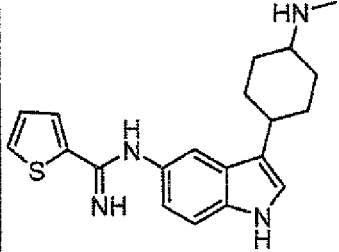

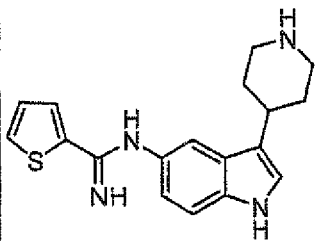

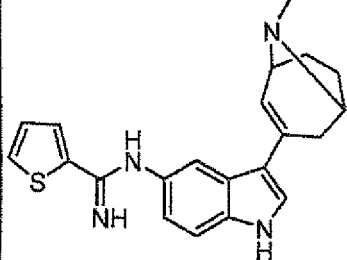

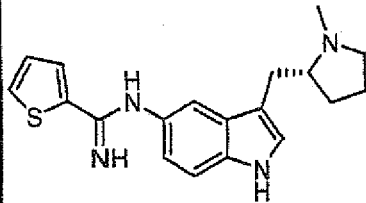

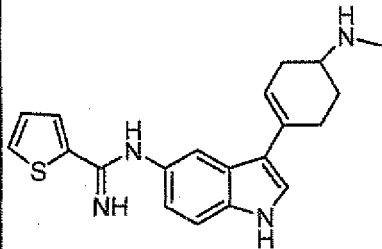

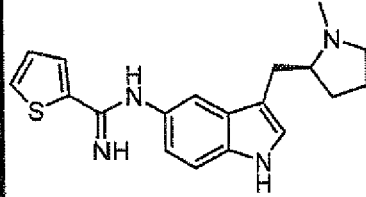

15 R^6 is H, F, $R^{6A}C(NH)NH(CH_2)_{r6}$, or $R^{6B}NHC(S)NH(CH_2)_{r6}$, wherein $r6$ is an integer from 0 to 2, R^{6A} is optionally substituted C_{1-6} alkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, optionally substituted C_{2-9} heterocyclyl, optionally substituted C_{1-4} alkheterocyclyl, optionally substituted C_{1-6} thioalkoxy, optionally substituted C_{1-4} thioalkaryl, optionally substituted aryloyl, or optionally substituted C_{1-4} thioalkheterocyclyl; and R^{6B} is C_{1-6} alkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, optionally substituted C_{2-9} heterocyclyl, optionally substituted C_{1-4} alkheterocyclyl, optionally substituted C_{1-6} thioalkoxy, optionally substituted C_{1-4} thioalkaryl, or optionally substituted aryloyl.

In a preferred embodiment, R^6 is H.

Specific examples of these compounds include those in Table 2.

Methods of synthesizing each of the compounds in Table 2 are provided in US 2006/0258721, hereby incorporated by reference.

Preferred compounds include

Additional 3,5 substituted indoles include

Another preferred compound is

Additional preferred compounds include:

Methods of preparing compounds of the invention

- 5 The synthesis of 3, 5-substituted indoles is described generally in U.S. Patent No. 7,375,219, herein incorporated by reference, and additional examples are described herein. The synthesis for 1, 3-disubstituted hexane ring is shown below:

10

The Michael addition of a suitable indole derivative to enone was carried according to the literature procedure reported in *J. Org. Chem.* 68: 2109-2114 (2003). Compound III can be synthesized by the standard reductive amination with various primary and secondary amines in

presence of sodium triacetoxy borohydride and an acid, preferably acetic acid. If the product is a secondary amine (where the reductive amination was carried with primary amine), it can be protected with a suitable protective group such as tert-butoxy carbonyl before proceeding further. The amine of formula IV can be achieved by the reduction of the nitro group under Pd-C/H₂ reduction conditions. In case of bromo-substitution, it can be converted into a primary amine under standard Buchwald amination conditions using Pd₂(dba)₃ (see, e.g., U.S. Patent No. 7,375,219). The primary amine IV can be converted into compound V by reaction with amidine reagent as described in U.S. Patent No. 7,375,219.

10 *Pharmaceutical Compositions*

The compounds of the invention are preferably formulated into pharmaceutical compositions for administration to human subjects in a biologically compatible form suitable for administration *in vivo*. Accordingly, in another aspect, the present invention provides a pharmaceutical composition comprising a compound of the invention in admixture with a suitable diluent or carrier.

The compounds of the invention may be used in the form of the free base, in the form of salts, solvates, and as prodrugs. All forms are within the scope of the invention. In accordance with the methods of the invention, the described compounds or salts, solvates, or prodrugs thereof may be administered to a patient in a variety of forms depending on the selected route of administration, as will be understood by those skilled in the art. The compounds of the invention may be administered, for example, by oral, parenteral, buccal, sublingual, nasal, rectal, patch, pump, or transdermal administration and the pharmaceutical compositions formulated accordingly. Parenteral administration includes intravenous, intraperitoneal, subcutaneous, intramuscular, transepithelial, nasal, intrapulmonary, intrathecal, rectal, and topical modes of administration. Parenteral administration may be by continuous infusion over a selected period of time.

A compound of the invention may be orally administered, for example, with an inert diluent or with an assimilable edible carrier, or it may be enclosed in hard or soft shell gelatin capsules, or it may be compressed into tablets, or it may be incorporated directly with the food of the diet. For oral therapeutic administration, a compound of the invention may be incorporated with an excipient and used in the form of ingestible tablets, buccal tablets, troches, capsules, elixirs, suspensions, syrups, wafers, and the like.

A compound of the invention may also be administered parenterally. Solutions of a compound of the invention can be prepared in water suitably mixed with a surfactant, such as hydroxypropylcellulose. Dispersions can also be prepared in glycerol, liquid polyethylene glycols, DMSO and mixtures thereof with or without alcohol, and in oils. Under ordinary
5 conditions of storage and use, these preparations may contain a preservative to prevent the growth of microorganisms. Conventional procedures and ingredients for the selection and preparation of suitable formulations are described, for example, in Remington's Pharmaceutical Sciences (2003 - 20th edition) and in The United States Pharmacopeia: The National Formulary (USP 24 NF19), published in 1999.

10 The pharmaceutical forms suitable for injectable use include sterile aqueous solutions or dispersions and sterile powders for the extemporaneous preparation of sterile injectable solutions or dispersions. In all cases the form must be sterile and must be fluid to the extent that may be easily administered via syringe.

Compositions for nasal administration may conveniently be formulated as aerosols,
15 drops, gels, and powders. Aerosol formulations typically include a solution or fine suspension of the active substance in a physiologically acceptable aqueous or non-aqueous solvent and are usually presented in single or multidose quantities in sterile form in a sealed container, which can take the form of a cartridge or refill for use with an atomizing device. Alternatively, the sealed container may be a unitary dispensing device, such as a single dose nasal inhaler or an aerosol
20 dispenser fitted with a metering valve which is intended for disposal after use. Where the dosage form comprises an aerosol dispenser, it will contain a propellant, which can be a compressed gas, such as compressed air or an organic propellant, such as fluorochlorohydrocarbon. The aerosol dosage forms can also take the form of a pump-atomizer.

Compositions suitable for buccal or sublingual administration include tablets, lozenges,
25 and pastilles, where the active ingredient is formulated with a carrier, such as sugar, acacia, tragacanth, or gelatin and glycerine. Compositions for rectal administration are conveniently in the form of suppositories containing a conventional suppository base, such as cocoa butter.

The compounds of the invention may be administered to an animal alone or in combination with pharmaceutically acceptable carriers, as noted above, the proportion of which
30 is determined by the solubility and chemical nature of the compound, chosen route of administration, and standard pharmaceutical practice.

The dosage of the compounds of the invention, and/or compositions comprising a compound of the invention, can vary depending on many factors, such as the pharmacodynamic

properties of the compound; the mode of administration; the age, health, and weight of the recipient; the nature and extent of the symptoms; the frequency of the treatment, and the type of concurrent treatment, if any; and the clearance rate of the compound in the animal to be treated. One of skill in the art can determine the appropriate dosage based on the above factors. The
5 compounds of the invention may be administered initially in a suitable dosage that may be adjusted as required, depending on the clinical response. In general, satisfactory results may be obtained when the compounds of the invention are administered to a human at a daily dosage of between 0.05 mg and 3000 mg (measured as the solid form). A preferred dose ranges between 0.05-500 mg/kg, more preferably between 0.05-50 mg/kg.

10 A compound of the invention can be used alone or in combination with other agents that have NOS activity, or in combination with other types of treatment (which may or may not inhibit NOS) to treat, prevent, and/or reduce the risk of stroke, neuropathic or migraine pain, or other disorders that benefit from NOS inhibition. In combination treatments, the dosages of one or more of the therapeutic compounds may be reduced from standard dosages when administered
15 alone. In this case, dosages of the compounds when combined should provide a therapeutic effect. Such additional agents include a 5HT_{1B} and/or 5HT_{1D} receptor agonist, e.g., a triptan, such as sumatriptan, rizatriptan, naratriptan, zolmitriptan, eletriptan, almotriptan, or frovatriptan.

Other agents include analgesics, antidepressants, and anticonvulsants. Specific examples are provided herein.

20

Example 1. *N*-(3-(1-Methylpyrrolidin-3-yl)-1H-indol-5-yl)thiophene-2-carboximidamide

(6a and 6b):

5 (a) *N*-Benzyl-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine (**1**):

Macor, J. E *et.al* J. Med. Chem., 37, 2509-2512, (1994).

(b) 5-Bromo-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine (**2**):

Macor, J. E *et.al* Synthesis, (1997), 443-449.

(c) 3-(1-Methylpyrrolidin-3-yl)-1H-indol-5-amine (3):

Method (1): *N*-benzyl-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine **1**, (4.0 g, 13.097 mmol) was dissolved in anhydrous ethanol (60 mL) in a dry argon purged flask. Palladium hydroxide, 20 wt% on carbon, wet (1.92 g, 2.734 mmol) is quickly added and the atmosphere from the flask evacuated by vacuum pump and replaced with hydrogen from a balloon. The atmosphere is evacuated from the flask and replaced with hydrogen twice more and the mixture stirred under a hydrogen atmosphere at room temperature. After 48 hours, the mixture is filtered through a pad of celite to remove insolubles, the pad washed with anhydrous ethanol (30 mL) and the solvent evaporated. The crude amine is purified via chromatography on silica gel (2M NH₃ in MeOH: CH₂Cl₂, 1:9 to 1:4) to yield a pale yellow foam, **3** (1.50 g, 53.6% yield). ¹H NMR (DMSO-*d*₆): δ 1.80-1.92 (m, 1H), 2.10-2.24 (m, 1H), 2.30 (s, 3H), 2.40 (t, 2H, *J* = 8.4 Hz), 2.66-2.78 (m, 1H), 2.93 (t, 1H, *J* = 8.2 Hz), 3.35-3.46 (m, 1H), 4.42 (br s, 2H), 6.46 (dd, 1H, *J* = 2.1, 8.5 Hz), 6.70 (d, 1H, *J* = 2.0 Hz), 6.92 (d, 1H, *J* = 2.3 Hz), 7.01 (d, 1H, *J* = 8.5 Hz), 10.23 (br s, 1H); MS (ESI+) *m/z* (%): 216 (MH⁺, 100), 173 (41).

Method (2): 5-Bromo-3-(1-methylpyrrolidin-3-yl)-1H-indole **2**, (405 mg, 1.4507 mmol), Tris(dibenzylideneacetone) dipalladium (0) (132.8 mg, 0.1450 mmol) and anhydrous tetrahydrofuran (20 mL) were charged to a dry argon purged flask fitted with magnetic stir bar and condenser. A solution of tri-*tert*-butylphosphine (10 wt% in hexane, 863 μL, 0.2901 mmol) is added followed by drop wise addition of a 1M tetrahydrofuran solution of Lithium bis(trimethylsilyl)amide (4.35 mL, 4.35 mmol) and the mixture was refluxed for a period of 70 minutes. The mixture was cooled to room temperature then to 0 °C, quenched with 1M HCl (10 mL) and stirred for 10 minutes. The solution was diluted with ethyl acetate and 5M NH₄OH added to adjust pH to 10. The mixture was transferred to a separatory funnel and the organic layer collected. The aqueous layer was further extracted with ethyl acetate and the combined organic layers were washed with brine, dried over magnesium sulphate, filtered, concentrated and the residue purified via dry chromatography on silica gel, eluting with ~ 25 mL portions of solvent system 20% 2M NH₃ in methanol/ 80% dichloromethane to yield a yellow residue, **3** (162 mg, 51.9% yield).

¹H NMR (DMSO-*d*₆): Identical to that prepared via Method 1 above.

(d) Benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-ylcarbamate ((±)-4):

Method (1): 3-(1-Methylpyrrolidin-3-yl)-1H-indol-5-amine **3**, (96 mg, 0.446 mmol), Dioxane (6 mL), 1M NaOH (0.89 mL, 0.89 mmol) and water (0.11 mL) were charged to a flask fitted with a stir bar and Argon atmosphere and the mixture cooled to 0 °C in an ice-bath. Benzyl

chloroformate (0.125 mL, 0.892 mmol) dissolved in dioxane (2 mL) is added dropwise at $< 5^{\circ}\text{C}$. The ice-bath was removed and mixture allowed to warm to room temperature. After 1 hour the mixture was partitioned between ethyl acetate (50 mL) and saturated aqueous NaHCO_3 (10 mL) and the organic layer collected. The aqueous layer was further extracted with ethyl acetate and the combined organic layers were washed with brine, dried over sodium sulphate, filtered, concentrated and the residue purified via chromatography on silica gel (10% 2M NH_3 in methanol/ 90% dichloromethane) to yield an off-white solid (\pm)-4 (110 mg, 70.6% yield). ^1H NMR ($\text{DMSO}-d_6$): δ 1.82-1.93 (m, 1H), 2.12-2.27 (m, 1H), 2.30 (s, 3H), 2.40 (t, 2H, $J = 8.4$ Hz), 2.68-2.79 (m, 1H), 2.95 (t, 1H, $J = 8.2$ Hz), 3.40-3.52 (m, 1H), 5.14 (s, 2H), 7.04-7.10 (2 m, 2H), 7.20-7.25 (m, 1H), 7.29-7.46 (m, 5H), 7.71 (br s, 1H), 9.45 (br s, 1H), 10.67 (br s, 1H); MS (ESI+) m/z (%): 350 (MH^+ , 100).

Method (2): Alternatively, (\pm)-4 was synthesized directly from *N*-benzyl-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine, 1, without purification of the intermediate amine 3. *N*-benzyl-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine 1, (4.8 g, 15.716 mmol) was dissolved in anhydrous ethanol (250 mL) in a dry argon purged flask. Palladium hydroxide, 20wt% on carbon, wet (2.688 g) is quickly added and the atmosphere from the flask evacuated by vacuum pump and replaced with hydrogen from a balloon. The atmosphere is evacuated from the flask and replaced with hydrogen twice more and the mixture stirred under a hydrogen atmosphere at room temperature. After 44 hours, thin layer chromatography in a solvent system of (15% 2M NH_3 in methanol/ 85% dichloromethane) shows complete conversion to 3, 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine. The mixture is filtered through a pad of celite to remove insolubles, the pad washed with anhydrous ethanol (50 mL) and the solvent evaporated and compound dried briefly on vacuum pump, yielding 3.40 grams of a pink-purple solid. A stir bar and Argon atmosphere is charged to the flask. Dioxane (135 mL), 1M NaOH (31.43 mL, 31.43 mmol, 2.0 equiv) and water (3.8 mL) are added and the mixture cooled to 0°C in an ice-bath. Benzyl chloroformate (4.42 mL, 31.432 mmol) dissolved in dioxane (40 mL) is added drop wise over ~ 20 mins at $< 5^{\circ}\text{C}$. The ice-bath was removed and mixture allowed to warm to room temperature. After 1 hour, the mixture was partitioned between ethyl acetate (500 mL) and saturated NaHCO_3 (50 mL) and the organic layer collected. The aqueous layer was further extracted with ethyl acetate and the combined organic layers were washed with brine, dried over sodium sulphate, filtered, concentrated and the residue purified via chromatography on silica gel (7.5% 2M NH_3 in methanol/92.5% dichloromethane to 10% 2M NH_3 in methanol/ 90%

dichloromethane) to yield a off-white solid (\pm)-**4** (3.18 g, 57.9% yield). ^1H NMR ($\text{DMSO}-d_6$): identical to that prepared via Method 1 above.

(e) **Benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-ylcarbamate (4a and 4b)**: Compounds **4a** and **4b** were separated from the corresponding racemate (\pm)-**4** by preparative HPLC using a
5 Chiralpak AD-H column, 5cm x 25cm, eluting with Hexane/Isopropanol/Diethylamine (80/20/0.1) at a flow rate of 120 mL/minute.

Chiral HPLC Purity Conditions:

Column: ChiralPak AD-H, 4.6 x 250mm.

Mobile Phase: Hexane/Isopropanol/Diethylamine (80/20/0.1)

10 Flow Rate: 1 mL/minute

UV Detection: 240nm

Sample Preparation: 1 mg/mL in mobile phase.

Injection Volume: 5 μL .

Compound **4a** (first eluting isomer at 14.7 min.): ^1H NMR ($\text{DMSO}-d_6$): δ 1.82-1.93 (m, 1H),
15 2.12-2.27 (m, 1H), 2.30 (s, 3H), 2.40 (t, 2H, $J = 8.4$ Hz), 2.68-2.79 (m, 1H), 2.95 (t, 1H, $J = 8.2$ Hz), 3.43-3.52 (m, 1H), 5.14 (s, 2H), 7.04-7.10 (2 m, 2H), 7.20-7.24 (m, 1H), 7.29-7.45 (m, 5H), 7.71 (br s, 1H), 9.43 (br s, 1H), 10.65 (br s, 1H); MS (ESI+) m/z (%): 350 (MH^+ , 100).

Compound **4b** (second eluting isomer at 19.6 min.): ^1H NMR ($\text{DMSO}-d_6$): δ 1.83-1.96 (m, 1H),
2.13-2.27 (m, 1H), 2.30 (s, 3H), 2.40 (t, 2H, $J = 8.4$ Hz), 2.67-2.78 (m, 1H), 2.95 (t, 1H, $J = 8.2$
20 Hz), 3.43-3.54 (m, 1H), 5.14 (s, 2H), 7.04-7.13 (2 m, 2H), 7.20-7.24 (m, 1H), 7.30-7.48 (m, 5H), 7.71 (br s, 1H), 9.43 (br s, 1H), 10.65 (br s, 1H); MS (ESI+) m/z (%): 350 (MH^+ , 100).

(f) **N-(3-(1-Methylpyrrolidin-3-yl)-1H-indol-5-yl)thiophene-2-carboximidamide (6a and 6b)**:

Benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-yl carbamate **4b**, (>99% ee, 1.90 g, 5.437
25 mmol) was dissolved in anhydrous ethanol (60 mL) in a dry argon purged flask. Palladium, 10 wt% on carbon (578.5 mg, 0.544 mmol) is quickly added and the atmosphere from the flask evacuated by vacuum pump and replaced with hydrogen from a balloon. The atmosphere is evacuated from the flask and replaced with hydrogen twice more and the mixture stirred under a hydrogen atmosphere at room temperature. After 5 hours, thin layer chromatography in a
30 solvent system of (20% 2M NH_3 in methanol/80% dichloromethane) shows complete conversion to **3b**, 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine. The mixture is filtered through a pad of celite to remove insolubles, the pad washed with anhydrous ethanol (30 mL). To the ethanolic solution of **3b** is charged a stir bar and Argon atmosphere and methyl thiophene-2-

carbimidothioate hydroiodide **5** (2.48 g, 8.699 mmol; prepared according to a known procedure, see US 20060258721) is added to the flask and the reaction was stirred under Ar at ambient temperature for 19 hours. At that time, the solvent was evaporated and the residue was partitioned between H₂O and ethyl acetate and 1M NaOH solution added to adjust pH to 10. The mixture was transferred to a separatory funnel and the organic layer collected. The aqueous layer was further extracted with ethyl acetate and the combined organic layers were washed with brine, dried over magnesium sulphate, filtered, concentrated and the residue purified via dry chromatography, eluting with ~ 50 mL portions of solvent system 15% 2M NH₃ in methanol/ 85% dichloromethane to 20% 2M NH₃ in methanol/ 80% dichloromethane to yield a yellow residue **6b** (1.40 g, 79.4% yield).

In a like manner starting from Benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-yl carbamate, **4a** (>99% ee, 2.0 g, 5.723 mmol) was prepared as a yellow solid **6a** (1.10 g, 59.3% yield).

Chiral HPLC Purity Conditions:

Column: ChiralPak AD-H, 4.6 x 250mm.

Mobile Phase: Hexane/Ethanol/Diethylamine (90/10/0.1)

Flow Rate: 0.4 mL/minute

UV Detection: 254, 230nm

Sample Preparation: 1mg/mL in Ethanol.

Injection Volume: 5 μ L

Compound **6b** (first eluting isomer at 75.0 min.): ¹H NMR (DMSO-*d*₆) δ : 1.83-1.98 (m, 1H), 2.16-2.28 (m, 1H), 2.32 (s, 3H), 2.50-2.60 (m, 2H), 2.66-2.74 (m, 1H), 2.95 (t, 1H, J = 8.4 Hz), 3.45-3.56 (m, 1H), 6.32 (br s, 2H), 6.64 (dd, 1H, J = 8.4, 1.8 Hz), 7.02 (d, 1H, J = 1.4 Hz), 7.08-7.11 (m, 2H), 7.27 (d, 1H, J = 8.5 Hz), 7.59 (d, 1H, J = 4.5 Hz), 7.71 (d, 1H, J = 3.3 Hz), 10.60 (br s, 1H). MS (ESI+) *m/z* (%): 325 (MH⁺, 89), 282 (90), 163 (100). EI-HRMS calculated for C₁₈H₂₀N₄S (M⁺) 324.1409; observed: 324.1407.

Compound **6a** (second eluting isomer at 83.1 min.): ¹H NMR (DMSO-*d*₆) δ : 1.83-1.96 (m, 1H), 2.19-2.28 (m, 1H), 2.33 (s, 3H), 2.50-2.62 (m, 2H), 2.66-2.74 (m, 1H), 2.95 (t, 1H, J = 8.4 Hz), 3.45-3.56 (m, 1H), 6.32 (br s, 2H), 6.64 (dd, 1H, J = 8.4, 1.8 Hz), 7.02 (d, 1H, J = 1.4 Hz), 7.08-7.11 (m, 2H), 7.27 (d, 1H, J = 8.5 Hz), 7.59 (m, 1H), 7.71 (d, 1H, J = 3.3 Hz), 10.62 (br s, 1H). MS (ESI+) *m/z* (%): 325 (MH⁺, 89), 282 (90), 163 (100). EI-HRMS calculated for C₁₈H₂₀N₄S (M⁺) 324.1409; observed: 324.1404.

(g) Dihydrochloride salt of N-(3-(1-methylpyrrolidin-3-yl)-1H-indol-5-yl)thiophene-2-carboximidamide (6b):

N-(3-(1-Methylpyrrolidin-3-yl)-1H-indol-5-yl)thiophene-2-carboximidamide **6b**, (2.40 g, 7.398 mmol) was dissolved in anhydrous methanol (70 mL) in a dry argon purged flask and treated with 1M HCl/Et₂O (22.2 mL, 22.2 mmol) for 60 minutes at room temperature. The solvent was evaporated and the residue dried to yield a pale yellow solid **6b.2HCl**, (2.60 g, 88.5 % yield). [α_D]²⁹ (c = 1.0, MeOH) = +13.0

(h) Dihydrochloride salt of N-(3-(1-methylpyrrolidin-3-yl)-1H-indol-5-yl)thiophene-2-carboximidamide (6a):

N-(3-(1-Methylpyrrolidin-3-yl)-1H-indol-5-yl)thiophene-2-carboximidamide **6a**, (1.10 g, 3.391 mmol) was dissolved in anhydrous methanol (25 mL) in a dry argon purged flask and treated with 1M HCl/Et₂O (10.17 mL, 10.17 mmol) for 30 minutes at room temperature. The solvent was evaporated and the residue dried to yield a pale yellow solid **6a.2HCl**, (1.15 g, 85.4 % yield). [α_D]²⁹ (c = 1.0, MeOH) = -13.0

Example 2. Attempted resolution of N-benzyl-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine (1):

General Procedure:

N-Benzyl-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine **1**, (1.0 g, 3.274 mmol) was dissolved in an anhydrous solvent (~10 mL) in a dry argon purged flask. To this solution was added a solution of chiral acid (0.5 equiv.) in anhydrous solvent (~10 mL) with swirling. If an immediate cloudiness appeared in the solution, further anhydrous solvent was added slowly with heating until the mixture was homogeneous. The mixture was allowed to cool slowly. If a viscous gum precipitated on the walls of the flask, further anhydrous solvent was added with heating until homogenous, and the solution allowed to cool to RT. Where no precipitation was observed at RT the flask was cooled to 0°C overnight, and/or an antisolvent was added to try to induce crystallization. Results are summarized in Table 3 below.

Table 3: Attempted resolution of *N*-benzyl-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine (1):

	MeOH	MeOH + Et ₂ O	EtOH	IPA	Acetone
Dibenzoyl-tartaric acid-(L)			Gum, dilute, add Acetone-no ppt.

(S)-mandelic acid			No ppt 0° C-no ppt

Example 4. Attempted resolution of 5-bromo-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine (2):

General Procedure:

5-Bromo-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine **2**, (0.544 g, 1.949 mmol) was dissolved in an anhydrous solvent (~8 mL) in a dry argon purged flask. To this solution was added a solution of chiral acid (0.5 equiv.) in anhydrous solvent (~2.5 mL) with swirling. The mixture was allowed to cool slowly to RT. Where no precipitation was observed at RT the flask was cooled to 0 °C overnight, and/or an antisolvent was added to try to induce crystallization. Results are summarized in Table 5 below.

Table 5: Attempted resolution of 5-bromo-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine (2):

	MeOH, RT	MeOH, 0° C	Conc to ½ volume.	Add IPA until cloudy

Table 6: Attempted chiral HPLC/SFC separation of enantiomers of *N*-(3-(1-methylpyrrolidin-3-yl)-1H-indol-5-yl)thiophene-2-carboximidamide (6):

Example 6. Attempted chiral HPLC/SFC separation of enantiomers of *N*-benzyl-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine (1); 5-bromo-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine (2); 3-(5-bromo-1H-indol-3-yl)-1-methylpyrrolidine-2,5-dione (7) and *N*-(3-(1-methyl-2,5-dioxopyrrolidin-3-yl)-1H-indol-5-yl)benzamide (8):

5

In a like manner, *N*-benzyl-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine (1); 5-bromo-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine (2); 3-(5-bromo-1H-indol-3-yl)-1-methylpyrrolidine-2,5-dione (7) (prepared according to Macor et al., *Synthesis*, 443-449 (1997)) and *N*-(3-(1-methyl-2,5-dioxopyrrolidin-3-yl)-1H-indol-5-yl)benzamide (8) (prepared according to Macor et al., *Synthesis*, 443-449 (1997)) were subjected to a screening protocol to determine the feasibility of a large scale chromatographic enantioselective separation. In all cases, the compounds either showed insufficient resolution or exhibited limited chiral stability on isolation.

10

For example, compound 1 was screened utilizing columns; Chiralpak AD-H, Chiralpak AS-H, Chiralcel OJ-H, Chiralcel OD-H, Chiralcel OB-H, Sepapak-3 and Whelk-01 (R,R) with solvents MeOH, EtOH, IPA, ACN with or without added 0.1% diethylamine or added 0.1% methane sulfonic acids where appropriate.

15

Example 7. 1-((5-Bromo-3-(1-methylpyrrolidin-3-yl)-1H-indol-1-ylsulfonyl) methyl)-7,7-dimethylbicyclo[2.2.1]heptan-2-one (9):

A solution of compound **2** (0.095 g, 0.34 mmol) in dry THF (3 mL) was treated with NaH (0.027 g, 0.680 mmol, 60% in mineral oil) at 0 °C. The reaction was brought to room temperature and stirred for 30 min. 1S-(+)-10-Camphorsulphonyl chloride (0.085 g, 0.340 mmol) was added at 0 °C, brought to room temperature over 1h and stirred for further 1h. The reaction was quenched with saturated NH₄Cl solution (15 mL) followed by water (10 mL), and the product was extracted into ethyl acetate (2 x 15 mL). The combined ethyl acetate layer was washed with brine (15 mL) and dried (Na₂SO₄). Solvent was evaporated and crude was purified by column chromatography on silica gel (4% 2 M NH₃ in methanol/ 96% dichloromethane) to obtain compound **9** (0.11 g, 66%) as a solid. ¹H NMR (DMSO-*d*₆): δ 0.77 (s, 3H), 1.01 (s, 3H), 1.40-1.48 (m, 1H), 1.58-1.67 (m, 1H), 1.77-2.01 (m, 3H), 2.07 (t, 1H, J = 4.2 Hz), 2.19-2.39 (s + m, 6H), 2.50-2.64 (m, 2H), 2.67-2.76 (m, 1H), 2.84 (t, 1H, J = 8.6 Hz), 3.42-3.63 (m, 3H), 7.45 (s, 1H), 7.55 (dd, 1H, J = 1.8, 8.8 Hz), 7.84 (d, 1H, J = 8.8 Hz), 8.00 (brs, 1H); MS (ESI+) *m/z* (%): 493/495 (MH⁺, 100). The separation of the diastereomeric mixture of compounds was not possible by regular column chromatography.

The same reaction with 1R-(-)-10-camphorsulphonyl chloride did not yield any product. In this case only starting material was recovered.

Example 8. Attempted preparation of 1-(7,7-dimethyl-2-oxobicyclo[2.2.1]heptan-1-yl)-N-(3-(1-methylpyrrolidin-3-yl)-1H-indol-5-yl)methanesulfonamide:

To a solution of 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine, **3** (62 mg, 0.288 mmol) in anhydrous dichloromethane (10 mL) was added triethylamine (72.9 mg, 0.720 mmol), and the mixture briefly cooled in an ice-bath. 1S-(+)-10-Camphorsulphonyl chloride (75.8 mg, 0.302 mmol) was added at 0 °C, the reaction brought to room temperature stirred for further 16h. The reaction was concentrated, and the crude residue purified via chromatography on silica gel (5% methanol/ 95% dichloromethane to 10% methanol/ 90% dichloromethane) to yield (bis)sulphonamide **10**, and (tris)sulphonamide **11**.

Compound **10**: 1-(7,7-dimethyl-2-oxobicyclo[2.2.1]heptan-1-yl)-N-((7,7-dimethyl-2-oxobicyclo[2.2.1]heptan-1-yl)methylsulfonyl)-N-(3-(1-methyl pyrrolidin-3-yl)-1H-indol-5-yl)methanesulfonamide. MS (ESI+) m/z (%): 644 (MH^+ , 100), ESI-HRMS calculated for $C_{33}H_{46}N_3O_6S_2$ (MH^+) 644.2822; observed: 644.2829.

Compound **11**: 1-(7,7-dimethyl-2-oxobicyclo[2.2.1]heptan-1-yl)-N-((7,7-dimethyl-2-oxobicyclo[2.2.1]heptan-1-yl)methylsulfonyl)-N-(1-((7,7-dimethyl-2-oxobicyclo[2.2.1]heptan-1-yl)methylsulfonyl)-3-(1-methylpyrrolidin-3-yl)-1H-indol-5-yl)methanesulfonamide. MS (ESI+) m/z (%): 858 (MH^+ , 100), ESI-HRMS calculated for $C_{43}H_{60}N_3O_9S_3$ (MH^+) 858.3492; observed: 858.3497.

Example 9. 3-(1-Methylpyrrolidin-3-yl)-N-((R)-1-phenylethyl)-1H-indol-5-amine (13):

General Procedure:

- 5 5-Bromo-3-(1-methylpyrrolidin-3-yl)-1H-indole **2**, (100 mg, 0.358 mmol), Tris(dibenzylideneacetone)dipalladium (0), (R)-1-phenylethylamine **12**, (52.1 mg, 0.430 mmol, 1.2 equiv.), (±)-BINAP, sodium tert-butoxide, and anhydrous solvent were charged to a 20 mL microwave vial with a magnetic stirbar under an atmosphere of Argon. The vial was sealed and heated in an oil bath as per the conditions outlined in Table 7.

10

Table 7: Attempted cross-coupling with (R)-1-phenylethylamine.

Palladium source (equiv)	Ligand (equiv)	Solvent	Base (equiv)	Reaction Temp, Time	Results (TLC)
Pd ₂ dba ₃ (2 mol%)	BINAP (4 mol%)	Toluene	NaOtBu (1.4 equiv)	70 °C, 21 hrs	Negligible Reaction
Pd ₂ dba ₃ (2 mol%)	BINAP (4 mol%)	Toluene	NaOtBu (3.0 equiv)	70 °C, 21 hrs	Negligible Reaction
Pd ₂ dba ₃ (5mol%)	BINAP (10 mol%)	Toluene	NaOtBu (2.5 equiv)	100 °C, 21 hrs	Negligible Reaction

Example 10. 3-(5-Bromo-1H-indol-3-yl)-1-methylpyrrolidine-2,5-dione (7):

General Procedure:

A solution of 3-(5-bromo-1H-indol-3-yl)-1-methyl-1H-pyrrole-2,5-dione **14**, (prepared according to a known method, EP 1 224 932 A1) in the corresponding solvent (as shown in Table 8) was treated with a metal catalyst and ligand at room temperature, and the reaction mixture was stirred at room temperature under an atmosphere of hydrogen as per the conditions outlined in Table 8. The reaction mixture was filtered through silica gel bed, and the solvent was evaporated to obtain crude product. The crude product was purified by flash column chromatography (60% Ethylacetate/ 40% Hexanes) to yield 3-(5-bromo-1H-indol-3-yl)-1-methylpyrrolidine-2,5-dione (**7**). The enantiomeric excess was determined with chiral HPLC.

Chiral HPLC Purity Conditions:

Column: ChiralPak AD-H, 4.6 x 250mm.

Mobile Phase: Hexane/Ethanol/Diethylamine (80/20/0.1)

Flow Rate: 1 mL/minute

UV Detection: 254, 230nm

Sample Preparation: 1mg/mL in Ethanol.

Injection Volume: 5 μ L

Table 8: Asymmetric hydrogenation of 3-(5-bromo-1H-indol-3-yl)-1-methyl-1H-pyrrole-2,5-dione, **14**

Metal precursor	Ligand	Solvent	H ₂ pressure	Reaction Time	Result
Rh(COD) ₂ OTf	(<i>R,R</i>)-MeDuphos	MeOH/THF	balloon	5 days	No reaction

Spin Cups & Holder: Cat. No. C8163, Fisher Scientific

Liquid Scintillation Counter: Tri-Carb 2000CA/LL, Canberra Packard Canada.

Liquid Scintillation Fluid: Cat. No. 6012239, Ultima Gold, Perkin-Elmer Life and

15 Analytical Sciences, MA

CO₂ Incubator: Lab-Line Enviro Shaker.

Microcentrifuge: Mikro 20.

Vortex Mixer: Mini Vortex mixer, IKA

20 **Procedure for Human nNOS and eNOS**

Primary stock solutions of test compounds at a concentration of 6 mM are prepared. The primary stock solutions of each test compound are prepared freshly in distilled water on the day of study. For determination of IC₅₀ values, 12 test compound concentrations are prepared as 3-fold serial dilutions. Concentration range of test compound utilized for nNOS are 0.001 to 300 μ M and for eNOS are 0.003 to 1000 μ M. The vehicle of the test compound or inhibitor is used as blank control. For non-specific activity, 100 μ M L-NMMA is used. The IC₅₀ concentration of L-NAME was run in parallel as a control.

All incubations are performed in duplicate:

30 Prepare the reaction mixture on ice by adding the following components with a micropipette to a polypropylene microcentrifuge tube:

10 μ L of test compound, inhibitor or control (vehicle or L-NMMA) solution

25 μ L of Reaction Buffer {25 mM Tris-HCl, 0.6 μ M BH₄, 0.2 μ M FMN, 0.2 μ M FAD}

5 μ L of 10 mM NADPH solution {1 mM} (freshly prepared in 10 mM Tris-HCl (pH 7.4)

5 μ L of 6 mM CaCl_2 {600 μ M}

5 μ L of 1 mM Calmodulin {100 μ M}

5 5 μ L of 0.02 μ g/ μ L nNOS or 0.12 μ g/ μ L eNOS

Pre-incubate the above reaction mixture at room temperature for 15 mins.

10 Start the reaction by addition of the substrate (in 5 μ L containing 1 μ Ci of [^3H]-L-Arginine + 2.5 μ M of unlabeled L-Arginine) to the reaction mixture. Total reaction volume is 60 μ L.

Mix using a vortex mixer and incubate the above reaction mixture at 37 $^{\circ}\text{C}$ in an incubator for 30 minutes.

Add 400 μ L of ice-cold Stop Buffer at the end of the incubation period to stop the reaction. (The EDTA in the Stop Buffer chelates all of the available calcium.)

15 Mix using a vortex mixer and transfer the reaction samples to spin cups and centrifuge using a microcentrifuge, at 13,000 rpm for 30 sec. at room temperature.

Remove the spin cups from the holder and transfer 450 μ L of eluate (containing the unbound L-citrulline) to scintillation vials. Add 3 mL of scintillation fluid and quantify the radioactivity in a liquid scintillation counter.

20 Calculation of IC_{50} Values:

Data is analyzed using a Sigmoidal dose-response (variable slope) curve to determine the IC_{50} value of the test compound.

$$Y = \text{Bottom} + (\text{Top} - \text{Bottom}) / (1 + 10^{((\text{LogIC}_{50} - X) * \text{Hill Slope}))}$$

X is the logarithm of test compound or inhibitor concentration

25 Y is the amount of L-citrulline formation (pmol)

Bottom refers to the lowest Y value and Top refers to the highest Y value.

This is identical the "four parameter logistic equation."

30 The slope factor (also called Hill slope) describes the steepness of a curve. A standard competitive binding curve that follows the law of mass action has a slope of -1.0. If the slope is shallower, the slope factor will be a negative fraction, e.g., -0.85 or -0.60.

Human iNOS Assay:

iNOS activity was determined by measuring the conversion of [³H]L-arginine to [³H]L-citrulline by radiometric method. Recombinant human inducible NOS (iNOS) was produced in *Baculovirus-infected Sf9* cells (ALEXIS). To measure constitutive isoforms NOS, 10 µL of enzyme is added to 100 µL of 40 mM HEPES, pH=7,4, containing 2,4 mM CaCl₂, 1mM MgCl₂, 1mg/ml BSA, 1mM EDTA, 1mM dithiotheitol, 1µM FMN, 1µM FAD, 10µM tetrahydrobiopterin, 1mM NADPH, 1,2 µM CaM.

1. 15 µL of test substances are added to the mixture with the specific enzyme and pre-incubated at RT for 15 min.
2. The reaction was initiated by addition of 20 µL L-arginine containing 0.25 µCi of [³H] arginine/ml and 24 µM L-arginine.
3. The incubation is carried out at 37 °C for 45 min.
4. The reaction is stopped by adding 20 µL of ice-cold buffer containing 100mM HEPES, 3mM EGTA, 3mM EDTA, pH=5,5.
5. [³H]L-citrulline is separated by DOWEX (ion-exchange resin DOWEX 50 W X 8-400, SIGMA).
6. The DOWEX is removed by spinning at 12,000 g for 10 min in the centrifuge.
7. An aliquot 70 µL of the supernatant is added to 100 µL scintillation fluid.
8. The samples are counted in a liquid scintillation counter (1450 Microbeta Jet, Wallac).

Specific NOS activity is reported as the difference between the activity (total) and that in the presence of the inhibitor L-NMMA (non-specific) in the final concentration 240 µM. The total volume of the reaction mixture is 150 µL in every well. All assays are performed at least in duplicate. Standard deviations are 10% or less. Results for exemplary compounds of the invention are shown in Table 10. These results again show the selectivity of the compounds of the invention for nNOS inhibition versus e or iNOS.

Table 10. Selective inhibition of human NOS by compounds of the Invention

Compound	nNOS _h (µM)	eNOS _h (µM)	e/n	iNOS _h (µM)
6	0.4	38.7	97	35
6a	0.68	45.5	67	25

Example 13. Serotonin 5HT1D/1B Binding Assays

5-HT1D binding assays (agonist radioligand) were performed using bovine caudate
 5 membranes according to the methods of Heuring and Peroutka (*J. Neurosci.*, 7: 894-903 (1987)).
 5-HT1B (rat cerebral cortex) binding assays (agonist radioligand) were performed according to
 the method of Hoyer et. al. (*Eur. J. Pharmacol.*, 118: 1-12 (1995)). For the purpose of result
 analysis, the specific ligand binding to the receptors is defined as the difference between the total
 binding and the nonspecific binding as determined in the presence of an excess of unlabelled
 10 ligand. The results are expressed as a percent of control specific binding obtained in the
 presence of the test compounds. IC₅₀ values (concentration causing a half-maximal inhibition of
 control specific binding) and Hill coefficients (n_H) were determined by non-linear regression
 analysis of the competition curves using Hill equation curve fitting and the inhibition constants
 (K_i) were calculated from the Cheng Prusoff equation ($K_i = IC_{50}/(1+(L/K_D))$, where L =
 15 concentration of radioligand in the assay, and K_D = affinity of the radioligand for the receptor).
 Results for the binding of selected compounds in 5HT1D and 1B are shown in Table 11.

Table 11. Binding of Compounds in bovine 1D and rat 1B receptors.

	5HT1D	5HT1B
Compound	(uM)	(uM)
6	0.19	0.85

20 **Example 14. Human Liver Microsome In Vitro Metabolism Assays of Enantiomers 6a, 6b, and 18**

General

The compounds (10 μM) were incubated with pooled human liver microsomes in the
 presence and absence of the co-factor, β-Nicotinamide adenine dinucleotide phosphate (NADP⁺),

required for oxidative metabolism by the Cytochrome P-450 (CYP) and flavin containing monooxygenase (FMO) enzymes. A tandem liquid chromatography mass spectrometry (LC-MS/MS) method was developed and/or qualified for each compound for measuring relative stability of **6a**, **6b**, and **18** in the terminated reaction mixtures. The relative disappearance of the test compounds following 15, 30, and 60 min of incubation with liver microsomes, NADP⁺, and an NADPH-regenerating system was determined in duplicate samples. **6a**, **6b**, and **18** stability following 0 and 60 min of incubation with liver microsomes in the absence of NADP⁺ was also determined. The metabolic stability of clozapine (10 µM) was determined in parallel as a positive control.

A 1 mM stock solution of each test compound was freshly prepared in distilled water on the day of the assay. The stock solutions were used for the metabolic stability assay as well as for preparation of calibration standards.

Reagents and Standards

1. Human Liver Microsomes (Pooled Mixed Gender, Cat. No. 452161, BD Gentest)
2. 0.5 M Potassium Phosphate Buffer, pH 7.4: prepared with 150 mL 0.5 M Potassium Phosphate monobasic (Cat No. P0662, Sigma Aldrich Co.) and 700 mL 0.5 M Potassium Phosphate dibasic (Cat No. P8281, Sigma Aldrich Co.).
3. 67 mM Potassium Phosphate Buffer, pH 7.4: prepared from a 0.5 M Potassium Phosphate Buffer pH 7.4 stock solution
4. Methanol (Cat No. MX0480-1, EMD)
5. Magnesium Chloride Hexahydrate (MgCl_2 , Cat No. M0250, Sigma Aldrich Co.)
- 10 6. Distilled water (Cat No. 15230-162, Invitrogen Corp.)
7. NADP^+ (Cat. No. N0505, Sigma Aldrich Co.)
8. Glucose-6-phosphate (G6P, Cat. No. G7250, Sigma Aldrich Co.)
9. Glucose-6-phosphate dehydrogenase (G6PDH, Cat. No. G7877, Sigma Aldrich Co.)
10. Clozapine (Cat. No. C6305, Sigma Aldrich Co.)
- 15 11. Mianserin (4486B, Cat. No. 153619, ICN)

Equipment and Supplies

1. Microcentrifuge (Mikro20, Hettich)
2. Orbital shaker/incubator (Lab-Line Enviro Shaker)
- 20 3. 24-Well BD cluster plates (Cat No.351147, VWR International)
4. 1.5 mL microcentrifuge tubes (Cat No. L-510-GRD, Rose Scientific Ltd.)
5. 15 mL Falcon tubes (Cat No. 35-2096, VWR International)
6. 50 mL Falcon tubes (Cat No. 21008-178, VWR International)

Bioanalysis

Bioanalytical Method Development and Qualification for the Test Compounds

- Method development and sample analysis was conducted using a PE Sciex API 4000 LC-MS/MS system equipped with an Agilent LC system with a binary pump, and solvent degasser, a suitable LC autosampler, as well as a divert valve (VIVI, Valco Instrument Co. Inc.) installed
- 30 between the column and mass spectrometer inlet. Method qualification for each test compound included: the determination of the ion transition for the compound and the internal standard (*i.e.*,

identification of the parent and daughter ions), determination of the linear dynamic range, using 5 calibration standards in duplicate, intra-batch precision and accuracy and system check reproducibility ($\pm 20\%$) using neat compound.

Clozapine was used as an internal standard (IS) for the test compounds. The concentration of IS was 0.570 ng/mL for **6a**, and 1.14 ng/mL for **6b**. A detailed summary of the bioanalytical method for the analytes is included below.

Sample Analysis of 6a, 6b and 18*

*This compound was analyzed in a separate experiment in a similar fashion to **6a** and **6b**

Samples for each test compound generated from the assay were analyzed as one batch by the qualified LC-MS/MS method. The sample batch consisted of the following: initial system check standards (three replicates), the assay samples (in duplicate) and the final system check standards (three replicates). A batch was considered acceptable if the system check injection acceptance criteria described above was met. Individual results for the % remaining following incubation with the test compounds were determined by comparing peak area ratios (analyte/internal standard) at each time point to the 0 hour (100% stable) value obtained.

Sample Analysis of Clozapine

Samples generated for clozapine from the human liver microsomal stability assays were analyzed by a validated LC-MS/MS method.

Metabolic Stability Assay

Human Liver Microsomes

The study was conducted with cryopreserved human liver microsomes, pooled from 15 donors (mixed pool of male and female donors). Pooled donor microsomes were used in order to represent an "average" metabolic activity. The microsomes have been characterized by the supplier for Phase I (CYP1A2, CYP2A6, CYP2B6, CYP2C8, CYP2C9, CYP2C19, CYP2D6, CYP2E1, CYP3A4, CYP4A11 and FMO) and Phase II (UGT1A1, UGT1A4 and UGT1A9) enzymatic activity.

Stability Assay

1. The assay was performed with 0.5 mg/mL human liver microsomes in 50 mM potassium phosphate buffer, pH 7.4 (PPB), and in the presence of an NADPH regenerating system (1.3 mM NADP⁺, 3.3 mM glucose-6-phosphate, 0.4 U/mL glucose-6-phosphate dehydrogenase) and 3.3

mM MgCl_2 . All incubations were performed in duplicate. One concentration of test compound was tested (10 μM).

2. A stock solution of microsomes (20 mg/mL) was thawed in a 37 °C water bath on the day of the assay and then immediately placed on ice. The microsomes were then diluted with an appropriate volume of PPB, such that the final protein concentration in the assay was 0.5 mg/mL, and the final PPB concentration was 50 mM.

3. An appropriate aliquot of the 1 mM stock solution of the test compounds (in water) was added to the diluted microsomes, and then the mixture was warmed to 37 °C for 5 min in an incubator. Two 75 μL aliquots of this warmed solution were added to chilled labeled polypropylene centrifuge tubes containing 100 μL of the appropriate ice cold internal standard solution in methanol and 25 μL of a 4-fold concentrated solution of the NADPH regenerating system (5.2 mM NADP^+ , 13.2 mM glucose-6-phosphate, 1.6 U/mL glucose-6-phosphate dehydrogenase) and 13.2 mM MgCl_2 . These samples represent the time zero samples.

4. An aliquot (375 μL) of the pre-warmed liver microsomes and test compound mixture was dispensed into a well of a 24-well plate. A 125 μL aliquot of pre-warmed (37 °C for 5 min) 4-fold concentrated NADPH regenerating system solution was then added to start the reaction. Reaction mixtures (0.5 mL) were incubated in a shaking incubator (150 rpm) at 37 °C.

5. One hundred μL of the reaction mixture was sampled following 15, 30, and 60 min of incubation. Each sample with test compound was immediately added to a chilled labeled centrifuge tube containing 100 μL of ice cold methanol to terminate the reaction.

6. All samples were mixed by vortex and then centrifuged (15,000 x g for 10 min at 4 °C) to pellet the protein. An aliquot of the supernatant from each sample was then transferred to a clean, labeled centrifuge tube and stored at -70 °C until bioanalysis.

7. The metabolic stability of clozapine (10 μM) was similarly monitored in parallel.

8. As a control, test compound was incubated with microsomes in the absence of NADP^+ . One hundred μL of the reaction mixture was sampled for control samples following 0 and 60 min of incubation as detailed above.

9. Data sheets with the date of the experiment, the Study No., the compound IDs, the sampling times, a plate map and any deviations to the protocol were recorded.

Preparation of Blank Simulated Matrix

Ten mL of simulated blank matrix for use in the bioanalysis (preparation of calibration standards and QC samples) was prepared without microsomal protein as follows:

1. 1.25 mL of the 4-fold concentrated solution of the NADPH regenerating system was added to 0.05 mL of water and 3.70 mL of potassium phosphate buffer, pH 7.4 (50 mM final concentration) and mixed thoroughly by vortex.
2. Five mL of ice cold methanol was then added, and the mixture was again mixed by vortex. The simulated matrix was stored at -70°C until use.

Calculations and Expression of Results

The mean of the test compound to the internal standard peak area ratios were calculated for the zero time sample. The duplicate peak area ratios following 15, 30, and 60 minutes of incubation, were individually compared to the mean zero time sample, and expressed as % remaining after 15, 30, and 60 minutes.

The data were analyzed by nonlinear regression analysis (GraphPad Prism software, Version 3.02) by curve fitting to the following equation for mono-exponential decay:

$$\%R_t = \%R_0 e^{-kt}$$

where $\%R_t$ represents the % remaining at time t , $\%R_0$ denotes the initial percentage of the parent compound in the incubation mixture (*i.e.*, at time zero), and k represents the rate constant for the decay. No weighting was used in the regression analysis. The half-life ($t_{1/2}$) for compound disappearance, where appropriate, was calculated as $0.693/k$.

Bioanalytical Method for 6a and 6b

Analyte ID	6a, 6b
Calibration Range	n/a (No standard curve. Using the ratio of compound / IS to compare change of concentration)
Internal Standard ID	Clozapine
Matrix	HLM
HPLC	Agilent 1100 Liquid Chromatograph with vacuum degasser (Model No. G1322A), quaternary pump (Model No. G1311A) and well plate auto-sampler (Model No. G1367A)

	Injection Volume	6b-10 µL, 6a-10 µL and Cloz-2.0 µL
	Analytical Column	Onyx Momolithic C-18, 100x3.0mm, Cat.# 051020-10, Phenomenex. Column #: 30
	Inline Filter	0.5 µm (Cat. No. A-428, Upchurch Scientific)
5	Column Temperature	Ambient
	Mobile Phase	A = 95% water with 10mM AmF,pH3 (v/v) and 5% methanol. B = 95% methanol and 5% water with 10mM AmF,pH3 (v/v) 80%B and 20% A
	Flow Rate	1.0 mL/min
10	Run Mode	Isocratic Elution
	Needle Wash	50% MeOH in water
	Analysis Time	1 min
	Switching Valve	VICI, Model No. EHMA (Valco Instrument Co. Inc.) 0 to 0.2 min, column effluent diverted to waste 0.2 to 0.9 min, column effluent flows to mass spectrometer 0.9 to 1.0 min, column effluent diverted to waste
15	Detector	API 4000 LC-MS/MS System (Applied Biosystems/MDS Sciex)
	Interface	APCI
	Polarity (Mode)	Positive Ion Multiple Reaction Monitoring (MRM)
20	Curtain Gas	40psig for all of analytes.
	Ion Source Gas 1	65 psig for all of analytes.
	Interface Temperature	500 °C
	Interface Heater	ON
	Nebulizer Current	5 uA
25	Dwell Time	150 ms
	Probe Position	X = 5, Y=3
	Collision Activity	
	Dissociation (CAD) Gas	6 psig for all of analytes.
	Declustering Potential	100V for all of analytes
30	Entrance Potential	10V for all of analytes
	Collision Energy	30V for clozapine and 40V for all of analytes.
	Collision Cell Exit Potential	15V for all of analytes.

Table 12a. Summary of Analyte Ion Transitions and Retention Times.

Analyte ID	Molecular Formula	Exact Mass (g/mol)	Ion Transitions (m/z)		Retention Time (min)
			Precursor Ion	Product Ion	
Clozapine	C ₁₈ H ₁₉ N ₄ Cl	326.8	327.3	270.0	0.66-0.68
6a	C ₁₈ H ₂₀ N ₄ S	324.443	325.1	225.0	0.56-0.58
6b	C ₁₈ H ₂₀ N ₄ S	324.443	325.1	225.0	0.56-0.58

RESULTS AND DISCUSSION

Bioanalytical Method Qualification and Sample Analysis

20

A detailed summary of the bioanalytical method for qualification of the test compounds in terminated microsomal reaction mixtures is included above. Results from the sample analyses are included in Table 13a. All acceptance criteria were met for both the method qualification and for analysis of the samples.

Metabolic Stability

The mean concentrations of clozapine and of the test compounds (**6a** and **6b**) as a function of incubation time are summarized in Table 12c. The data (expressed as % remaining *versus* incubation time) are depicted in the Figures described below. Clozapine was used as a positive control as it has been demonstrated to be well absorbed (90-95%) in humans following oral dosing, but is subject to first-pass metabolism resulting in an absolute bioavailability of 50 to 60%. Clozapine is also known to be metabolized primarily to *N*-desmethyl clozapine and clozapine *N*-oxide, with several CYP subtypes implicated in their formation.

The disappearance of clozapine upon incubation with human liver microsomes was NADPH-dependent (Table 12c). The estimated half-life for clozapine disappearance from the microsomal reaction mixture was 354 min, indicating that the microsomes were metabolically active. The test compound **6b** (Figure 1) and **18** (Figure 2) were metabolically stable over 60 min of incubation, indicating that these compounds are not substrates for oxidative metabolism by the CYP or FMO enzymes. The estimated half-life of **6a** was 132 min (Figure 1). The data indicate a significant difference in the metabolic stability of the two enantiomers. This shorter half life may contribute to the observed differences in efficacy of **6a** versus **6b** in the animal model of pancreatitis (See example 16).

Table 12c. Mean test compound peak area ratios, determined in duplicate, as a function of incubation time in human liver microsomes incubated in the presence and absence of NADP⁺.

Compound ID	Presence of co-factor (\pm NADP ⁺)	Peak Area Ratio ^a			
		0 min	15 min	30 min	60 min
18	+ NADP ⁺	5.17	4.99	5.00	5.23
	- NADP ⁺	5.65	n/a	n/a	5.12
6a	+ NADP ⁺	25.8	25.8	23.7	19.4
	- NADP ⁺	22.0			20.2
6b	+ NADP ⁺	20.6	20.5	21.4	20.5
	- NADP ⁺	20.2			20.6

Clozapine	+ NADP ⁺	9.25	8.81	8.91	8.19
	- NADP ⁺	8.70			8.79

^a Peak area ratio is the ratio of the peak response of the test compound relative to the peak response of the internal standard

Example 15. Efficacy in Models Predictive of Neuropathic-like Pain States for 6a and 6b

The efficacy of the compounds of the invention for the treatment of neuropathic pain was assessed using standard animal models predictive of anti-hyperalgesic and anti-allodynic activity induced by a variety of methods, each described in more detail below.

(a) Chung Model of Injury-induced Neuropathic-like Pain: The experimental designs for the Chung Spinal Nerve Ligation SNL Model assay for neuropathic pain are depicted in the Figure below. Nerve ligation injury was performed according to the method described by Kim and Chung (Kim and Chung, *Pain* 50:355-363, 1992). This technique produces signs of neuropathic dysesthesias, including tactile allodynia, thermal hyperalgesia, and guarding of the affected paw. Rats were anesthetized with halothane, and the vertebrae over the L4 to S2 region were exposed. The L5 and L6 spinal nerves were exposed, carefully isolated, and tightly ligated with 4-0 silk suture distal to the DRG. After ensuring homeostatic stability, the wounds were sutured, and the animals allowed to recover in individual cages. Sham-operated rats were prepared in an identical fashion except that the L5/L6 spinal nerves were not ligated. Any rats exhibiting signs of motor deficiency were euthanized. After a period of recovery following the surgical intervention, rats show enhanced sensitivity to painful and normally non-painful stimuli.

After one standard dose (30 mg/kg) injected IP according to the published procedure, there is a clear antihyperalgesic effect of a 5HT_{1D/1B}/nNOS selective compounds **6b** (see Figure 3), but only weakly for **6a** (see Figure 4). Administration of compounds **6b** but not **6a** to test animals also resulted in a reversal of tactile hyperthesia (see Figures 5 and 6, respectively). A clear difference between the two enantiomers of compound **6** was observed in this model of neuropathic pain.

Example 16. Experimental Animal Models of Visceral Pain

Animals

Adult male Sprague Dawley rats (Harlan, Indianapolis, IN), weighing 150-200 g were maintained in a climate-controlled room with ad lib food and water on a 12-h light/dark cycle (lights on at 07:00 hours). All procedures followed the policies of the International Association

for the Study of Pain and the NIH guidelines for the handling and use of laboratory animals. Studies were approved by the University of Arizona IACUC.

Experimental design:

Visceral pain models

5 Pancreatitis was produced by a tail vein injection of dibutyltin dichloride (DBTC, Aldrich, Milwaukee, WI, 0.25 cc) dissolved in 100% ethanol at a dose of 8 mg/kg under isoflurane anesthesia (2-3 liters/min, 4.0 %/vol until anesthetized, then 2.5 %/vol throughout the procedure) (Vera-Portocarrero et al., 2006). Control animals were injected with the vehicle solution only (100% ethanol, 0.25 cc).

10 Colonic hypersensitivity was induced by enemas of a sodium butyrate solution (1000 mM) twice daily for 3 days (Bourdu et al., 2005). For each enema, a catheter made of P100 polyethylene tube was placed into the colon at 7 cm from the anal opening, and the animals received 1 mL of sodium butyrate at neutral pH. Care was taken to avoid damage of the colonic wall by insertion of the catheter.

Behavioral measures

Referred abdominal hypersensitivity in the pancreatitis model was quantified by measuring the number of withdrawals events evoked by application of a calibrated von Frey filament (determined by either abdominal withdrawal, licking of the abdominal area, or whole
20 body withdrawal). Rats were placed inside Plexiglas boxes on an elevated fine fiberglass screen mesh and acclimated for 30 minutes before testing. A 4 g von Frey filament was applied from underneath through the mesh floor, to the abdominal area at different points on the surface. A single trial consisted of 10 applications of this filament applied once every 10 seconds to allow the animals to cease any response and return to a relatively inactive position. The mean
25 occurrence of withdrawal events in each trial is expressed as the number of responses to 10 applications as previously described (Vera-Portocarrero et al., 2003).

Referred lumbar hypersensitivity in the colonic hypersensitivity model was quantified by applying von Frey hairs to the lumbar dermatomes of rats (Bourdu et al., 2005). Rats were shaved on the lumbar dermatomes before any manipulation and acclimated inside Plexiglas
30 boxes for 30 minutes on the day of testing. Calibrated von Frey hairs of increasing diameter were applied 5 times for 1 second, ranging from 0.04 to 6 g. The mechanical threshold corresponded to the force in grams of the von Frey hair which induced lumbar skin wrinkling followed or not by escape behavior from the filament.

Statistical procedures

Significant differences between each experimental group for the behavioral test across time were detected by a two-factor ANOVA follow by the Fishers Least Significance Difference post-hoc test. One-factor ANOVA was used to detect significant differences in behavioral outcomes within each experimental group over time. A linear regression analysis was used to detect the dose-dependency of the effects. Significance was established at the $p < 0.05$ level.

20

Results of Animal Models Tests for 18, 6a, and 6b.

- 25 Figures 8 and 10 show the effects of 18 in pancreatitis and IBS models of visceral pain while Figures 9 and 11 show the effects of the enantiomer 6b in an experimental model of pancreatitis. Note that the enantiomer 6a does not reverse tactile allodynia in rats with experimental pancreatitis indicating that a compound with nNOS inhibitory activity and 5HT1B/1D activity is preferred for visceral pain (Figure 11). Both of these compounds reverse the tactile allodynia associated with the two types of insults. Thus it is expected that compounds of the invention would be useful for the treatment of visceral pain.

Example 17. Synthesis of *N*-(3-(1-ethyl-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide (Compound 19)

3-(1-Ethyl-1,2,3,6-tetrahydropyridin-4-yl)-5-nitro-1H-indole: A solution of 5-nitro-1H-indole (0.67 g, 4.13 mmol), 1-ethylpiperidin-4-one (1.094 mL, 8.26 mmol) and pyrrolidine (1.025 mL, 12.40 mmol) in dry methanol (10 mL) was refluxed for 48 h. The reaction was brought to room temperature, diluted with water and product was extracted into CH₂Cl₂ (2 x 50 mL). The combined CH₂Cl₂ layer was washed with brine (20 mL) and dried (Na₂SO₄). Solvent was evaporated, crude was stirred with isopropanol: hexanes, (15 mL, 1:7) and the yellow precipitate was filtered and dried to obtain 3-(1-ethyl-1,2,3,6-tetrahydropyridin-4-yl)-5-nitro-1H-indole (0.87 g, 78%). ¹H NMR (DMSO-*d*₆) δ 11.87 (s, 1H), 8.69 (d, 1H, *J* = 2.1 Hz), 8.01 (dd, 1H, *J* = 2.4, 9.0 Hz), 7.65 (s, 1H), 7.55 (d, 1H, *J* = 9.0 Hz), 6.18 (s, 1H), 3.16-3.12 (m, 2H), 2.64 (t, 2H, *J* = 5.1 Hz), 2.54-2.42 (m, 4H, merged with DMSO-peak), 1.70 (t, 3H, *J* = 7.2 Hz); ESI-MS (*m/z*, %): 272 (MH⁺, 100).

3-(1-Ethyl-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-amine: A suspension of 3-(1-ethyl-1,2,3,6-tetrahydropyridin-4-yl)-5-nitro-1H-indole (0.375 g, 1.382 mmol) in dry methanol (10 mL) was treated with Raney-nickel (0.1 g, 0.351 mmol), followed by hydrazine hydrate (0.672 mL, 13.82 mmol) at room temperature. The resulting mixture was placed in a pre-heated oil bath and refluxed for 5 min. (TLC basis, 2 M NH₃ in MeOH: CH₂Cl₂, 5:95). The reaction was brought to room temperature, filtered through celite bed and washed with methanol (3 x 5 mL). The combined methanol layer was evaporated and crude was purified by flash column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 5:95) to obtain 3-(1-ethyl-1,2,3,6-

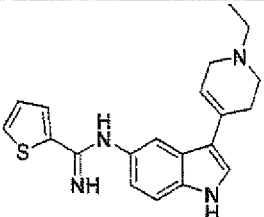

tetrahydropyridin-4-yl)-1H-indol-5-amine (0.33 g, 99%) as a foam. ¹H NMR (DMSO-*d*₆) δ 10.60 (s, 1H), 7.15 (d, 1H, *J* = 2.7 Hz), 7.05 (d, 1H, *J* = 8.4 Hz), 7.00 (d, 1H, *J* = 1.5 Hz), 6.48 (dd, 1H, *J* = 2.1, 8.5 Hz), 5.98 (s, 1H), 4.48 (s, 2H), 3.10-3.04 (m, 2H), 2.59 (t, 2H, *J* = 5.4 Hz), 2.54-2.39 (m, 4H, merged with DMSO peak), 1.06 (t, 3H, *J* = 7.2 Hz); EI-MS (*m/z*, %): 241 (*M*⁺, 100).

***N*-(3-(1-Ethyl-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide:** A solution of 3-(1-ethyl-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-amine (0.32 g, 1.326 mmol) in dry ethanol (10 mL) was treated with methyl thiophene-2-carbimidothioate hydroiodide (0.756 g, 2.65 mmol) at room temperature and stirred overnight (18 h). The reaction was basified with sat. NaHCO₃ solution (30 mL) and product was extracted into CH₂Cl₂ (2 x 25 mL). The combined CH₂Cl₂ layer was washed with brine (20 mL) and dried (Na₂SO₄). Solvent was evaporated and crude was purified by column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 1:9) to obtain *N*-(3-(1-ethyl-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide (0.37 g, 80%) as a solid. ¹H NMR (DMSO-*d*₆) δ 10.94 (s, 1H), 7.71 (d, 1H, *J* = 3.3 Hz), 7.59 (s, 1H, *J* = 5.1 Hz), 7.31 (dd, 1H, *J* = 2.7, 5.4 Hz), 7.22 (s, 1H), 7.10 (t, 1H, *J* = 4.8 Hz), 6.67 (d, 1H, *J* = 8.4 Hz), 6.26 (brs, 2H), 6.05 (s, 1H), 3.10 (brs, 2H), 2.63 (t, 2H, *J* = 5.1 Hz), 2.54-2.40 (m, 4H, merged with DMSO-peak), 1.06 (t, 3H, *J* = 7.2 Hz); ESI-MS (*m/z*, %): 351 (*MH*⁺, 37), 294 (100); ESI-HRMS calculated for C₂₀H₂₃N₄S (*MH*⁺), calculated: 351.1637; observed: 351.1636.

***N*-(3-(1-Ethyl-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide dihydrochloride:** A solution of *N*-(3-(1-ethyl-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide (0.35 g, 0.999 mmol) in dry methanol (5 mL) was treated with 1 N HCl in ether (2.99 mL, 2.99 mmol) at room temperature and stirred for 15 minutes. Solvent was evaporated and crude was dried under vacuum to obtain dihydrochloride salt of *N*-(3-(1-ethyl-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide as a solid. ¹H NMR (DMSO-*d*₆) δ 11.74 (s, 1H), 11.52 (s, 1H), 10.98 (brs, 1H), 9.68 (s, 1H), 8.62 (s, 1H), 8.22-8.16 (m, 2H), 7.93 (s, 1H), 7.68 (d, 1H, *J* = 2.1 Hz), 7.59 (d, 1H, *J* = 8.7 Hz), 7.39 (t, 1H, *J* = 4.2 Hz), 7.18 (d, 1H, *J* = 8.7 Hz), 6.16 (s, 1H), 3.97-3.92 (m, 1H), 3.75-3.59 (m, 2H), 3.27-3.16 (m, 3H), 2.99-2.93 (m, 1H), 2.81-2.75 (m, 1H), 1.32 (t, 3H, *J* = 7.2 Hz).

In experiments carried out as described above, Compound 19 was shown to selectively inhibit nNOS versus eNOS as shown in Table 13.

Table 13

Compound	Structure	Human nNOS (μM)	Human eNOS (μM)	eNOS/nNOS
19		0.74	68.4	92.4

5

Example 18. Synthesis of *N*-(3-((1*S*,3*R*)-3-(Methylamino)cyclohexyl)-1*H*-indol-5-yl)thiophene-2-carboximidamide (Compound (\pm)-20)

10

3-(5-Nitro-1*H*-indol-3-yl)cyclohexanone: To a solution of 5-nitroindole (4.00 g, 25.61 mmol) in dry MeCN (5.00 mL) was added cyclohex-2-enone (7.40 mL, 76.83 mmol) and $\text{Bi}(\text{NO}_3)_3$ (0.12g, 0.26 mmol) and the mixture stirred overnight at room temperature. The solvent

then was evaporated and the crude was purified by column chromatography (50% Hexane: 50%EtOAc) to obtain the title compound (2.70 g, 41%) as a yellow solid. ¹H-NMR (CDCl₃) δ 1.81-2.09 (m, 3H), 2.26-2.34 (m, 1H), 2.37-2.55 (m, 2H), 2.65 (dd, 1H, J = 9.9, 12.9 Hz), 2.77-2.85 (m, 1H), 3.47-3.56 (m, 1H), 7.15 (d, 1H, J = 2.1 Hz), 7.41 (d, 1H, J = 9.0 Hz), 8.12 (dd, 1H, J = 2.1, 9.0 Hz), 8.51 (s, 1H), 8.59 (d, 1H, J = 2.1 Hz); EI-MS (m/z, %) 258 (M⁺, 100).

N-Methyl-3-(5-nitro-1H-indol-3-yl)cyclohexanamine (mixture of *trans*-enantiomers) and N-Methyl-3-(5-nitro-1H-indol-3-yl)cyclohexanamine (mixture of *cis*-enantiomers): To a solution of 3-(5-nitro-1H-indol-3-yl)cyclohexanone (1.20 g, 4.65 mmol) in 1,2-dichloroethane (50 mL) was added AcOH (0.28 mL, 4.65 mmol), MeNH₂·HCl (0.38 g, 4.65 mmol) and NaBH(OAc)₃ (1.50 g, 7.00 mmol) and the mixture left to stir overnight at room temperature. The reaction mixture was extracted with 2N NaOH (10 mL) and washed with dichloromethane (2x10 mL); the dichloromethane layer was separated and evaporated. The crude was purified by column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 1:9) to obtain two diastereomers as yellow solids. The stereochemistry of both diastereomers was determined using COSY and NOESY spectroscopic techniques.

First eluting compound (mixture of *trans*-enantiomers): (0.58 g, 46%); ¹H-NMR (CDCl₃) δ 1.49-1.65 (m, 3H), 1.69-1.88 (m, 3H), 2.04-2.08 (m, 2H), 2.41 (s, 3H), 2.87-2.97 (m, 1H), 3.26-3.37 (m, 1H), 7.12 (s, 1H), 7.36 (d, 1H, J = 9.0 Hz), 8.09 (dd, 1H, J = 2.1, 9.0 Hz), 8.44 (s, 1H, NH), 8.63 (d, 1H, J = 2.1 Hz); EI-MS (m/z, %) 242 (100), 273 (10); 2D NOESY: H_a (δ 3.26-3.37) and H_c (δ 2.87-2.97) do not correlate; there is correlation between H_c and H_d; 2D COSY: H_a and H_c do not couple to each other.

Second eluting product (mixture of *cis*-enantiomers): (0.21 g, 16%); ¹H-NMR (CDCl₃) δ 1.26-1.38 (m, 2H), 1.45-1.57 (m, 2H), 1.89-1.95 (m, 1H), 2.01-2.08 (m, 1H), 2.13-2.17 (m, 1H), 2.33-2.44 (m, 1H), 2.56 (s, 3H), 2.75-2.93 (m, 2H), 7.06 (s, 1H), 7.35 (d, 1H, J = 9.0 Hz), 8.06 (dd, 1H, J = 2.1, 9.0 Hz), 8.54 (d, 1H, J = 2.4 Hz), 8.93 (s, 1H, NH); EI-MS (m/z, %) 230 (100), 273 (30); 2D NOESY: H_a (δ 2.75-2.93) and H_c (δ 2.33-2.44) strongly correlate; there is correlation between H_c and H_d; 2D COSY: H_a and H_c do not couple to each other.

***tert*-Butyl methyl((1*R*,3*S*)-3-(5-nitro-1H-indol-3-yl)cyclohexyl)carbamate carbamate (mixture of *cis*-enantiomers):** To a solution of *N*-methyl-3-(5-nitro-1H-indol-3-yl)cyclohexanamine (0.40 g, 1.46 mmol) in 1,4-dioxane (10 mL) was added (Boc)₂O (0.35 g, 1.61 mmol) and triethyl amine (0.40 mL, 2.92 mmol) and the resulting mixture left to stir overnight at room temperature. The solvent was evaporated and the crude purified on column chromatography (EtOAc: Hexanes, 1:1) to give the title compound as a yellow solid (0.40 g,

73%). ¹H-NMR (CDCl₃) δ 1.34-1.44 (m, 1H), 1.49 (s, 9H), 1.57-1.69 (m, 3H), 1.78-1.86 (m, 1H), 1.92-2.00 (m, 1H), 2.03-2.10 (m, 2H), 2.78 (s, 3H), 2.95-3.06 (m, 1H), 3.96-4.27 (m, 1H), 7.11 (d, 1H, J = 1.8 Hz), 7.38 (d, 1H, J = 9.0 Hz), 8.10 (dd, 1H, J = 2.1, 9.0 Hz), 8.37 (s, 1H, NH), 8.61 (d, 1H, J = 2.1 Hz); EI-MS (m/z, %), 242 (100), 373 (20).

5 ***tert*-Butyl 3-(5-amino-1*H*-indol-3-yl)cyclohexyl(methyl)carbamate (mixture of *cis*-enantiomers):** To a solution of *tert*-butyl methyl-(3-(5-nitro-1*H*-indol-3-yl)cyclohexyl)carbamate (0.38, g 1.02 mmol) in dry MeOH (10 mL) was added Ra-Ni (0.1 g as a slurry in water) and hydrazine hydrate (0.50 mL, 10.20 mmol). The resulting mixture was immersed in a preheated oil bath and refluxed for 15 min. or until the solution became clear. The
10 reaction was cooled and filtered through celite, washed with MeOH (20 mL) and the solvent evaporated. The crude was purified on column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 2:98) to give the title compound as a light brown solid (0.34 g, 97%). ¹H-NMR (CDCl₃) δ 1.31-1.66 (m, 4H), 1.48 (s, 9H), 1.75-1.80 (m, 1H), 1.89-1.96 (m, 1H), 2.03-2.11 (m, 2H), 2.74 (s, 3H), 2.84-2.93 (m, 1H), 3.52 (s, 2H, NH), 4.13-4.26 (m, 1H), 6.65 (dd, 1H, J = 2.1, 8.4 Hz), 6.88
15 (d, 1H, J = 2.4 Hz), 6.95 (s, 1H), 7.15 (d, 1H, J = 8.4 Hz), 7.72 (s, 1H, NH); EI-MS (m/z, %), 343 (100).

***tert*-Butyl methyl(3-(5-(thiophene-2-carboximidamido)-1*H*-indol-3-yl)cyclohexyl)carbamate (mixture of *cis*-enantiomers):** To a solution of *tert*-butyl 3-(5-amino-1*H*-indol-3-yl)cyclohexyl(methyl)carbamate (0.32 g, 0.93 mmol) in dry EtOH (25 mL)
20 was added methyl thiophene-2-carbimidothioate hydroiodide (0.53 g, 1.86 mmol) and the reaction left to stir at room temperature for 48h. The solvent then was evaporated and the mixture dissolved in dichloromethane (20 mL) and washed with 2N NaOH (10 mL). The organic layer was extracted and evaporated. The crude was purified on column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 2:98 to 5:95) to give the title compound as a yellow solid (0.32g, 75%).
25 ¹H- NMR (DMSO-*d*₆) δ 1.38 (s, 9H), 1.46-1.68 (m, 5H), 1.84-2.00 (m, 5H), 2.69 (s, 3H), 2.79-2.87 (m, 1H), 3.78-4.09 (m, 1H), 6.20 (s, 2H, NH), 6.62 (dd, 1H, J = 1.8, 8.4 Hz), 6.98 (s, 1H), 7.04 (s, 1H), 7.09 (dd, 1H, J = 3.6, 3.6 Hz), 7.26 (d, 1H, J = 8.4 Hz), 7.58 (d, 1H, J = 4.8 Hz), 7.70 (d, 1H, J = 3.3 Hz), 10.59 (s, 1H, NH); ESI-MS (m/z, %) 453 (MNa⁺, 100).

***N*-(3-(3-(Methylamino)cyclohexyl)-1*H*-indol-5-yl)thiophene-2-carboximidamide:**
30 *tert*-Butyl methyl(3-(5-(thiophene-2-carboximidamido)-1*H*-indol-3-yl)cyclohexyl)carbamate (0.30 g, 0.66 mmol) was treated with 20% trifluoroacetic acid (TFA) solution (31 mL) in dichloromethane at 0 °C and the mixture left to stir for 2h at 0 °C. The solution then was neutralized with 10% NH₄OH, the organic layer separated and evaporated. The crude was

purified by column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 1:4) to give the title product as a yellow solid (0.22 g, quantitative). ¹H-NMR (DMSO-*d*₆) δ 1.28-1.61 (m, 4H), 1.84-2.01 (m, 2H), 2.08-2.11 (m, 1H), 2.27-2.35 (m, 1H), 2.58 (s, 3H), 2.86-2.94 (m, 1H), 3.08-3.25 (m, 1H), 7.10 (d, 1H, J = 8.4 Hz), 7.28 (d, 1H, J = 2.1 Hz), 7.39 (pseudo t, 1H, J = 4.5 Hz), 7.52 (d, 1H, J = 8.4 Hz), 7.65 (s, 1H), 8.12 (d, 1H, J = 3.6 Hz), 8.16 (d, 1H, J = 4.5 Hz), 8.58 (s, 2H, NH), 9.61 (s, 1H); ESI-MS (*m/z*, %) 353 (100), ESI-HRMS calc. for C₂₀H₂₅N₄S 353.1794 found 353.1792.

Example 19. Synthesis of *N*-(3-(3-(methylamino)cyclohexyl)-1*H*-indol-5-yl)thiophene-2-carboximidamide dihydrochloride [(+)- and (-)-isomers] (Compounds 20a and 20b)

N-(3-(3-(Methylamino)cyclohexyl)-1*H*-indol-5-yl)thiophene-2-carboximidamide: For complete experimental details and spectral data, see Example 18 (Compound (±)-20).

Chiral separation: *N*-(3-(3-(methylamino)cyclohexyl)-1*H*-indol-5-yl)thiophene-2-carboximidamide (0.95 g, 2.70 mmol) was subjected to a chiral HPLC (CHIRALPAK AD-H)

separation. Flow rate 15 mL/min, 15% EtOH: 85% Hexane + 0.2% DEA. Maximum loading 270 mg.

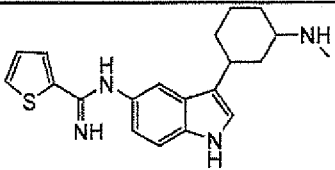

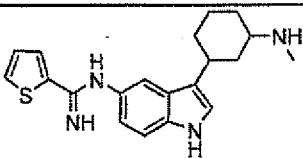

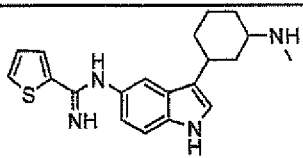

First eluting enantiomer started eluting at 15 minutes $[\alpha]_D = +23.77$ (4.50 mg in 2 mL MeOH), 88% ee by HPLC. Second eluting enantiomer started eluting at 28 minutes $[\alpha]_D = -28.64$ (4.80 mg in 2 mL MeOH), 100% ee by HPLC to obtain 160.00 mg of each enantiomer.

***N*-(3-(3-(Methylamino)cyclohexyl)-1H-indol-5-yl)thiophene-2-carboximidamide dihydrochloride [(+)-*cis*-enantiomer]:** *N*-(3-(3-(Methylamino)cyclohexyl)-1H-indol-5-yl)thiophene-2-carboximidamide [(+)-*cis*-enantiomer] (0.16 g, 0.45 mmol) was dissolved in a minimum amount of methanol to which hydrochloric acid (1.00 mL, 1.00 mmol, 1M in diethyl ether) was added. The mixture was left to stir for 1 hour at room temperature. The solvent was evaporated and the resulting solid dried under vacuum to give the product (0.16 g, 97 %) as a light yellow solid. $^1\text{H-NMR}$ (MeOH- d_4) δ 1.30-1.67 (m, 4H), 1.93-2.24 (m, 3H), 2.47-2.51 (m, 1H), 2.73 (s, 3H), 2.96-3.09 (m, 1H), 7.16 (d, 1H, $J = 8.7$ Hz), 7.25 (s, 1H), 7.38 (dd, 1H, $J = 4.5, 8.4$ Hz), 7.56 (d, 1H, $J = 8.4$ Hz), 7.73 (s, 1H), 8.05-8.07 (m, 2H); ESI-MS (m/z , %) 322 (100), 353 (MH^+ , free base, 50), ESI-HRMS calc. for $\text{C}_{16}\text{H}_{25}\text{N}_4\text{O}_5$ (MH^+ , free base), calculated: 353.1819, found: 353.1807.

***N*-(3-(3-(Methylamino)cyclohexyl)-1H-indol-5-yl)thiophene-2-carboximidamide dihydrochloride [(-)-*cis*-enantiomer]:** *N*-(3-(3-(Methylamino)cyclohexyl)-1H-indol-5-yl)thiophene-2-carboximidamide [(-)-*cis*-enantiomer] (0.16 g, 0.45 mmol) was dissolved in a minimum amount of methanol to which hydrochloric acid (1.00 mL, 1.00 mmol, 1M in diethyl ether) was added. The mixture was left to stir for 1 hour at room temperature and then the solvent evaporated and the solid dried under vacuum to give the product (0.16 g, 97 %) as a light yellow solid. $^1\text{H-NMR}$ (MeOH- d_4) δ 1.27-1.71 (m, 5H), 1.99-2.33 (m, 3H), 2.47-2.52 (m, 1H), 2.72 (s, 3H), 2.96-3.09 (m, 1H), 7.16 (dd, 1H, $J = 2.1, 8.7$ Hz), 7.25 (s, 1H), 7.38 (dd, 1H, $J = 4.2, 4.8$ Hz), 7.56 (d, 1H, $J = 8.7$ Hz), 7.73 (d, 1H, $J = 1.8$ Hz), 8.05-8.07 (m, 2H); ESI-MS (m/z , %) 322 (100), 353 (MH^+ , free base, 50), ESI-HRMS calc. for $\text{C}_{16}\text{H}_{25}\text{N}_4\text{O}_5$ (MH^+ , free base), calculated: 353.1819, found: 353.1809.

In experiments carried out as described above, Compounds (\pm)-20, 20a, and 20b were shown to selectively inhibit nNOS versus eNOS and further to exhibit 5HT 1B and 1D activities, as shown below in Table 14.

Table 14

Compound number	Structure	Human nNOS (μM)	Human eNOS (μM)	eNOS/nNOS	5HT 1B (μM)	5HT 1D (μM)
(\pm)-20	 <p>Mixture of cis-enantiomers</p>	0.49	77.6	158.3	20	2.8
20a (isomer-1)	 <p>(+)-cis-enantiomer</p>	0.57	49.3	86.4	1.3	3.2
20b (isomer-2)	 <p>(-)-cis-enantiomer</p>	1.37	75	54.7	12	1.4

Example 20. Synthesis of *N*-(3-(3-(methylamino)cyclohexyl)-1*H*-indol-5-yl)thiophene-2-carboximidamide (mixture of *trans*-enantiomers) (compound 21)

5

***N*-Methyl-3-(5-nitro-1*H*-indol-3-yl)cyclohexanamine (mixture of *trans*-enantiomers):**

For complete experimental details and spectral data, see example 19.

***tert*-Butyl methyl(3-(5-nitro-1*H*-indol-3-yl)cyclohexyl)carbamate (mixture of *trans*-enantiomers):** To a solution of *N*-methyl-3-(5-nitro-1*H*-indol-3-yl)cyclohexanamine (0.55 g, 2.0 mmol) in 1,4-dioxane (10 mL) was added $(\text{Boc})_2\text{O}$ (0.48 g, 2.21 mmol) and triethylamine (0.56 mL, 4.10 mmol) and the resulting mixture left to stir overnight at room temperature. The solvent was evaporated and the crude purified on column chromatography (EtOAc: Hexanes, 1:1) to give the compound as a yellow solid (0.73 g, quantitative). $^1\text{H-NMR}$ (CDCl_3) δ 1.43 (s, 9H), 1.64-1.81 (m, 3H), 1.86-1.98 (m, 1H), 1.49-1.57 (m, 2H), 2.09-2.18 (m, 2H), 2.78 (s, 3H), 3.57-3.63 (m, 1H), 4.35-4.52 (m, 1H), 7.26 (s, 1H), 7.35 (d, 1H, $J = 9.0$ Hz), 8.08 (dd, 1H, $J = 2.1, 9.0$ Hz), 8.50 (s, 1H, NH), 8.57 (d, 1H, $J = 2.1$ Hz); EI-MS (m/z , %) 299 (M^+ , 100).

***tert*-Butyl 3-(5-amino-1*H*-indol-3-yl)cyclohexyl(methyl)carbamate (mixture of *trans*-enantiomers).** To a solution of *tert*-butyl methyl(3-(5-nitro-1*H*-indol-3-yl)cyclohexyl)carbamate (0.70, g 1.87 mmol) in dry MeOH (15 mL) was added Raney-Ni (0.1 g

as a slurry in water) and hydrazine hydrate (1.00 mL, 18.70 mmol). The resulting mixture was immersed in a preheated oil bath and refluxed for 15 min. or until the solution became clear. The reaction was cooled and filtered through Celite, washed with MeOH (20 mL) and the solvent evaporated. The crude was purified on column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 2:98) to give the title compound as a light brown solid (0.60 g, 92%). ¹H-NMR (CDCl₃) δ 1.42 (s, 9H), 1.46-1.72 (m, 6H), 1.88 (ddd, 1H, J = 5.4, 12.3, 24.9 Hz), 2.05-2.16 (m, 2H), 2.76 (s, 3H), 3.50 (s, 2H, NH), 4.36-4.51 (m, 1H), 6.64 (dd, 1H, J = 2.1, 8.4 Hz), 6.89 (d, 1H, J = 2.1 Hz), 7.16 (d, 1H, J = 8.4 Hz), 7.28 (s, 1H), 7.76 (s, 1H, NH); EI-MS (m/z, %) 343 (M⁺, 70), 212 (100).

***tert*-Butyl methyl(3-(5-(thiophene-2-carboximidamido)-1*H*-indol-3-yl)cyclohexyl)carbamate (mixture of *trans*-enantiomers).** To a solution of *tert*-butyl 3-(5-amino-1*H*-indol-3-yl)cyclohexyl(methyl)carbamate (0.57 g, 1.66 mmol) in dry EtOH (25 mL) was added methyl thiophene-2-carbimidothioate hydroiodide (0.75 g, 3.32 mmol) and the reaction left to stir at room temperature for 48h. The solvent then was evaporated and the mixture dissolved in dichloromethane (20 mL) and washed with 2N NaOH (10 mL). The organic layer was extracted and evaporated. The crude was purified on column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 2:98 to 5:95) to give the title compound as a yellow solid (0.62g, 81%). ¹H-NMR (DMSO-*d*₆) δ 1.35 (s, 9H), 1.42-1.71 (m, 5H), 1.88-1.93 (m, 2H), 1.98-2.04 (m, 1H), 2.69 (s, 3H), 3.40-3.53 (m, 1H), 4.24-4.27 (m, 1H), 6.22 (s, 2H, NH), 6.64 (dd, 1H, J = 1.8, 8.4 Hz), 6.93 (s, 1H), 7.09 (dd, 1H, J = 3.6, 5.1 Hz), 7.28 (d, 2H, J = 8.4 Hz), 7.58 (d, 1H, J = 4.5 Hz), 7.70 (d, 1H, J = 3.6 Hz), 10.68 (s, 1H, NH); ESI-MS (m/z, %) 453 (MNa⁺, 100).

***N*-(3-(3-(Methylamino)cyclohexyl)-1*H*-indol-5-yl)thiophene-2-carboximidamide (mixture of *trans*-enantiomers).** *tert*-Butyl methyl(3-(5-(thiophene-2-carboximidamido)-1*H*-indol-3-yl)cyclohexyl)carbamate (0.60 g, 0.13 mmol) was treated with 20% TFA solution (31 mL) in dichloromethane at 0 °C and the mixture left to stir for 2 hours at 0 °C. The solution then was neutralized with 10% NH₄OH, the organic layer separated and evaporated. The crude product was purified by column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 1:4) to give the final product as a yellow solid (0.45 g, quantitative). ¹H-NMR (DMSO-*d*₆) δ 1.51-1.60 (m, 3H), 1.69-1.77 (m, 3H), 1.83-1.91 (m, 1H), 1.96-2.07 (m, 1H), 2.40 (s, 3H), 3.24-3.51 (m, 3H), 6.20 (brs, 2H, NH), 6.63 (d, 1H, J = 10.2 Hz), 7.02 (d, 2H, J = 10.4 Hz), 7.09 (dd, 1H, J = 3.6, 4.8 Hz), 7.58 (d, 1H, J = 5.1 Hz), 7.71 (d, 1H, J = 3.3 Hz), 10.59 (s, 1H, NH); ESI-MS (m/z, %) 353 (MH⁺, 80), 322 (100), ESI-HRMS (MH⁺) calc. for C₂₀H₂₅N₄S (MH⁺), calculated: 353.1794, found: 353.1812.

Example 21. Synthesis of *N*-(3-(3-(ethylamino)cyclohexyl)-1*H*-indol-5-yl)thiophene-2-carboximidamide (mixture of *trans*-enantiomers), (compound 22)

5

3-(5-Nitro-1*H*-indol-3-yl)cyclohexanone: For complete experimental details, see example 19.

***N*-Ethyl-3-(5-nitro-1*H*-indol-3-yl)cyclohexanamine ((±) - *trans*) and *N*-ethyl-3-(5-nitro-1*H*-indol-3-yl)cyclohexanamine ((±) - *cis*).** To a solution of 3-(5-nitro-1*H*-indol-3-yl)cyclohexanone (1.20 g, 4.65 mmol) in 1,2-dichloroethane (50 mL) was added AcOH (0.28 mL, 4.65 mmol), EtNH₂·HCl (0.38 g, 4.65 mmol) and NaBH(OAc)₃ (1.50 g, 7.00 mmol) and the mixture left to stir overnight at room temperature. The reaction mixture was extracted with 2*N* NaOH (10 mL) and washed with dichloromethane (2x10 mL), the dichloromethane layer was separated and evaporated. The crude was purified by column chromatography (2*M* NH₃ in MeOH: CH₂Cl₂, 1:9) to obtain two diastereomers as yellow solids.

First eluting isomer (mixture of *trans*-enantiomer) (0.70 g, 52%): ¹H-NMR (CDCl₃) δ 1.17 (t, 3H, *J* = 8.4 Hz), 1.55-1.70 (m, 4H), 1.74-1.82 (m, 2H), 2.01-2.07 (m, 2H), 2.70 (q, 2H, *J* = 7.2, 7.2 Hz), 3.01-3.06 (m, 1H), 3.24-3.42 (m, 1H), 7.12 (d, 1H, *J* = 2.1 Hz), 7.37 (d, 1H, *J* = 9.0 Hz), 8.09 (dd, 1H, *J* = 2.1, 9.0 Hz), 8.34 (s, 1H, NH), 8.64 (d, 1H, *J* = 2.1 Hz); EI-MS (*m/z*, %) 287 (*M*⁺, 10), 242 (100); 2D NOESY: H_a (δ 3.24-3.42) and H_c (δ 3.01-3.06) weakly correlate; there is correlation between H_c and H_d; 2D COSY: H_a and H_c do not couple to each other.

20

Second eluting isomer (mixture of *cis*-enantiomers) (0.21 g, 16%): ¹H-NMR (CDCl₃) δ 1.14 (t, 3H), 1.29-1.44 (m, 3H), 1.47-1.63 (m, 2H), 1.84-1.97 (m, 1H), 2.04-2.11 (m, 2H), 2.28-2.32 (m, 1H), 2.75 (q, 2H, J = 7.2, 7.2 Hz), 2.89-3.00 (m, 1H), 7.10 (d, 1H, J = 1.8 Hz), 7.37 (d, 1H, J = 9.0 Hz), 8.10 (dd, 1H, J = 2.1, 9.0 Hz), 8.37 (s, 1H, NH), 8.61 (d, 1H, J = 2.1 Hz); EI-MS (m/z, %) 287 (M⁺, 15), 244 (100); 2D NOESY: H_a (δ 2.89-3.00) and H_c (δ 2.28-2.32) strongly correlate; there is correlation between H_c and H_d; 2D COSY: H_a and H_c do not couple to each other.

***tert*-Butyl ethyl(3-(5-nitro-1*H*-indol-3-yl)cyclohexyl)carbamate (mixture of *trans*-enantiomers).** To a solution of *N*-ethyl-3-(5-nitro-1*H*-indol-3-yl)cyclohexanamine (0.67 g, 2.36 mmol) in 1,4-dioxane (10 mL) was added (Boc)₂O (0.57 g, 2.60 mmol) and triethylamine (0.66 mL, 4.74 mmol) and the resulting mixture left to stir overnight at room temperature. The solvent was evaporated and the crude purified on column chromatography (50% Hexane:50% EtOAc) to give the compound as a yellow solid (0.72 g, 78%). ¹H-NMR (CDCl₃) δ 1.14 (t, 3H, J = 6.9 Hz), 1.45-1.49 (m, 9H, 3H), 1.62-1.79 (m, 3H), 1.86-1.96 (m, 1H), 2.07-2.17 (m, 2H), 3.07-3.28 (m, 2H), 3.57-3.61 (m, 1H), 7.26 (s, 1H), 7.35 (d, 1H, J = 9.0 Hz), 7.63 (s, 1H), 8.08 (dd, 1H, J = 9.0, 2.1 Hz), 8.57 (d, 1H, J = 2.1 Hz); ESI-MS (m/z, %) 410 (MNa⁺, 50), 288 (100).

***tert*-Butyl 3-(5-amino-1*H*-indol-3-yl)cyclohexyl(ethyl)carbamate (mixture of *trans*-enantiomers).** To a solution of *tert*-butyl ethyl(3-(5-nitro-1*H*-indol-3-yl)cyclohexyl)carbamate (0.70 g, 1.81 mmol) in dry MeOH (15 mL) was added Raney-Ni (0.1 g as a slurry in water) and hydrazine hydrate (0.90 mL, 18.10 mmol). The resulting mixture was immersed in a preheated oil bath and refluxed for 15 minutes or until the solution became clear. The reaction was cooled and filtered through Celite, washed with MeOH (20 mL), and the solvent evaporated. The crude was purified on column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 2:98) to give the title compound as a brownish solid (0.64 g, quantitative). ¹H-NMR (CDCl₃) δ 1.12 (t, 3H, J = 6.8 Hz), 1.45 (s, 9H), 1.53-1.69 (m, 3H), 1.71-1.79 (m, 1H), 1.82-1.92 (m, 1H), 2.07-2.17 (m, 2H), 3.06-3.24 (m, 2H), 3.43-3.56 (m, 1H), 4.43 (s, 1H), 6.64 (dd, 1H, J = 2.1, 8.4 Hz), 6.89 (d, 1H, J = 2.1 Hz), 7.15 (d, 1H, J = 8.4 Hz), 7.26 (s, 1H), 7.33 (s, 1H), 7.82 (s, 1H); EI-MS (m/z, %) 357 (M⁺, 70), 212 (100).

***tert*-Butyl ethyl(3-(5-(thiophene-2-carboximidamido)-1*H*-indol-3-yl)cyclohexyl)carbamate (mixture of *trans*-enantiomers).** To a solution of *tert*-butyl 3-(5-amino-1*H*-indol-3-yl)cyclohexyl(ethyl)carbamate (0.62 g, 1.73 mmol) in dry EtOH (25 mL) was added methyl thiophene-2-carbimidothioate hydroiodide (1.00 g, 3.47 mmol) and the reaction left to stir at room temperature for 48 hours. The solvent then was evaporated and the mixture

dissolved in dichloromethane (20 mL) and washed with 2N NaOH (10 mL). The organic layer was extracted and evaporated. The crude was purified on column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 2:98 to 5:95) to give the title compound as a yellow solid (0.80g, quantitative).

¹H-NMR (DMSO-*d*₆) δ 1.04 (t, 3H, J = 6.9 Hz), 1.36 (s, 9H), 1.44-1.68 (m, 5H), 1.84-2.04 (m, 3H), 3.05-3.20 (m, 2H), 3.42-3.53 (m, 1H), 4.19-4.26 (m, 1H), 6.21 (s, 2H), 6.64 (dd, 1H, J = 1.8, 8.4 Hz), 6.92 (s, 1H), 7.09 (dd, 1H, J = 3.6, 5.1 Hz), 7.26 (s, 1H), 7.29 (s, 1H), 7.58 (d, 1H, J = 5.1 Hz), 7.70 (d, 1H, J = 3.9 Hz), 10.67 (s, 1H). Example 23. Synthesis of *N*-(3-(1-(2-hydroxyethyl)-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide (compound 24)

10

***Tert*-butyl 4-(5-nitro-1H-indol-3-yl)-5,6-dihydropyridine-1(2H)-carboxylate: A**

solution of 5-nitro-1H-indole (1 g, 6.17 mmol), *tert*-butyl 4-oxopiperidine-1-carboxylate (2.458 g, 12.33 mmol) and pyrrolidine (1.530 mL, 18.50 mmol) were refluxed for 48 hours. The reaction was brought to room temperature, diluted with water (50 mL) and product was extracted into ethyl acetate (2 x 50 mL). The combined ethyl acetate layer was washed with brine (15 mL) and dried (Na₂SO₄). Solvent was evaporated and crude was diluted with isopropanol: hexanes, 1:6 (20 mL). After stirring for 15 minutes, the solid was filtered off, washed with hexanes (2 x

15

10 mL), and dried to obtain *tert*-butyl 4-(5-nitro-1H-indol-3-yl)-5,6-dihydropyridine-1(2H)-carboxylate (1.515 g, 71.5%). ¹H NMR (CDCl₃) δ 8.83 (d, 1H, J = 1.5 Hz), 8.60 (brs, 1H), 8.14 (dd, 1H, J = 2.1, 9.0 Hz), 7.42 (d, 1H, J = 9.0 Hz), 7.31 (d, 1H, J = 2.1 Hz), 6.21 (s, 1H), 4.20-4.16 (m, 2H), 3.70 (t, 2H, J = 5.7 Hz), 2.60-2.50 (m, 2H), 1.51 (s, 9H).

5 **5-Nitro-3-(1,2,3,6-tetrahydropyridin-4-yl)-1H-indole:** A solution of *tert*-butyl 4-(5-nitro-1H-indol-3-yl)-5,6-dihydropyridine-1(2H)-carboxylate (0.8 g, 2.330 mmol) in CH₂Cl₂ (16 mL) was treated with TFA (4 mL) at 0 °C and the resulting mixture was stirred at same temperature for 3 h. The reaction was evaporated and crude was basified with 1 N NaOH solution (pH ~14). The solid was filtered off, washed with water (2 x 10 mL). The crude was
10 dried under vacuum and treated with 10% ethyl acetate in hexanes (20 mL). The solid was filtered and washed with hexanes (2 x 5 mL). The yellow solid was dried under vacuum to obtain 5-nitro-3-(1,2,3,6-tetrahydropyridin-4-yl)-1H-indole (0.56 g, 99%). ¹H NMR (DMSO-*d*₆) δ 8.69 (d, 1H, J = 2.1 Hz), 8.00 (dd, 1H, J = 2.1, 9.0 Hz), 7.63 (s, 1H), 7.55 (d, 1H, J = 9.0 Hz), 6.21 (s, 1H), 3.42-3.30 (m, 2H, merged with DMSO-peak), 2.93 (t, 2H, J = 5.4 Hz), 2.40-2.30
15 (m, 2H); ESI-MS (m/z, %): 244 (MH⁺, 77), 215 (100).

2-(4-(5-Nitro-1H-indol-3-yl)-5,6-dihydropyridin-1(2H)-yl)ethanol: A suspension of 5-nitro-3-(1,2,3,6-tetrahydropyridin-4-yl)-1H-indole (0.55 g, 2.261 mmol) in dry CH₂Cl₂:1,4-dioxane (15 mL, 2:1) was treated with triethylamine (0.636 mL, 4.52 mmol), followed by 2-bromoethanol (0.176 mL, 2.487 mmol) at room temperature. Only starting material was
20 observed after stirring for 4 h at room temperature. The reaction was then refluxed for 24 h. The reaction was brought to room temperature, diluted with 1 N NaOH solution (25 mL) and product was extracted into CH₂Cl₂ (2 x 25 mL). The combined CH₂Cl₂ layer was washed with brine (20 mL) and dried (Na₂SO₄). Solvent was evaporated and crude was purified by column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 5:95) to obtain 2-(4-(5-nitro-1H-indol-3-yl)-5,6-
25 dihydropyridin-1(2H)-yl)ethanol (0.24 g, 36.9%) as a dark yellow solid. ¹H NMR (DMSO-*d*₆) δ 11.86 (s, 1H), 8.68 (d, 1H, J = 2.1 Hz), 8.01 (dd, 1H, J = 2.4, 9.0 Hz), 7.65 (s, 1H), 7.55 (d, 1H, J = 9.0 Hz), 6.16 (s, 1H), 4.42 (t, 1H, J = 5.4 Hz), 3.56 (q, 2H), 3.18 (t, 2H, J = 6.3 Hz), 2.69 (t, 2H, J = 5.4 Hz), 2.54-2.50 (m, 4H); ESI-MS (m/z, %): 288 (MH⁺, 100).

2-(4-(5-Amino-1H-indol-3-yl)-5,6-dihydropyridin-1(2H)-yl)ethanol: A solution of 2-(4-(5-nitro-1H-indol-3-yl)-5,6-dihydropyridin-1(2H)-yl)ethanol (0.225 g, 0.783 mmol) in dry methanol (5 mL) was treated with hydrazine hydrate (0.244 mL, 7.83 mmol), followed by Raney-nickel (0.1 g, 0.783 mmol) at room temperature. The resulting mixture was placed in a pre-heated oil bath and refluxed for 5 minutes (TLC basis, 2 M NH₃ in MeOH: CH₂Cl₂, 1:9).

The reaction was brought to room temperature, filtered through a Celite bed, and washed with methanol (3 x 10 mL). The combined methanol layer was evaporated and crude was purified by column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 1:9) to obtain 2-(4-(5-amino-1H-indol-3-yl)-5,6-dihydropyridin-1(2H)-yl)ethanol (0.175 g, 87%) as a solid. ¹H NMR (DMSO-*d*₆) δ 10.59 (s, 1H), 7.15 (d, 1H, J = 2.4 Hz), 7.05 (d, 1H, J = 8.4 Hz), 6.99 (s, 1H), 6.48 (dd, 1H, J = 1.8, 8.4 Hz), 5.96 (s, 1H), 4.48 (brs, 2H), 4.40 (t, 1H, J = 5.4 Hz), 3.55 (q, 2H), 3.16-3.10 (m, 2H), 2.65 (t, 2H, J = 5.7 Hz), 2.50-2.45 (m, 4H); ESI-MS (m/z, %): 258 (MH⁺, 30), 185 (100).

***N*-(3-(1-(2-Hydroxyethyl)-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide:** A solution of 2-(4-(5-amino-1H-indol-3-yl)-5,6-dihydropyridin-1(2H)-yl)ethanol (0.16 g, 0.622 mmol) in dry ethanol (5 mL) was treated with methyl thiophene-2-carbimidothioate hydroiodide (0.355 g, 1.244 mmol) at room temperature and stirred overnight (18 h). The reaction was basified with sat. NaHCO₃ solution (50 mL) and product was extracted into CH₂Cl₂ (3 x 20 mL). The combined CH₂Cl₂ layer was washed with brine (20 mL) and dried (Na₂SO₄). Solvent was evaporated and crude was purified by column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 1:9) to obtain *N*-(3-(1-(2-hydroxyethyl)-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide (0.14 g, 61.4%) as a solid. ¹H NMR (DMSO-*d*₆) δ 10.92 (s, 1H), 7.71 (d, 1H, J = 3.6 Hz), 7.58 (d, 1H, J = 5.1 Hz), 7.33-7.30 (m, 2H), 7.21 (s, 1H), 7.09 (t, 1H, J = 3.9 Hz), 6.66 (d, 1H, J = 8.4 Hz), 6.23 (brs, 2H), 6.03 (s, 1H), 4.40 (t, 1H, J = 5.1 Hz), 3.54 (q, 2H), 3.16-3.10 (m, 2H), 2.66 (t, 2H, J = 5.4 Hz), 2.50-2.44 (m, 4H, merged with DMSO-peak); ESI-MS (m/z, %): 367 (MH⁺, 33), 294 (100).

***N*-(3-(1-(2-Hydroxyethyl)-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide dihydrochloride:** A solution of *N*-(3-(1-(2-hydroxyethyl)-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide (0.125 g, 0.341 mmol) in dry methanol (3 mL) was treated with hydrogen chloride (1M in diethyl ether) (1.023 mL, 1.023 mmol) at room temperature. Solvent was evaporated under reduced pressure after stirring for 15 minutes and the crude material was dried to obtain *N*-(3-(1-(2-hydroxyethyl)-1,2,3,6-tetrahydropyridin-4-yl)-1H-indol-5-yl)thiophene-2-carboximidamide dihydrochloride (0.14 g, 93 %) as a solid. ¹H NMR (DMSO-*d*₆) δ 11.70 (s, 1H), 11.47 (s, 1H), 10.57 (brs, 1H), 9.66 (s, 1H), 8.61 (s, 1H), 8.19-8.16 (m, 2H), 7.94 (s, 1H), 7.68 (d, 1H, J = 2.1 Hz), 7.59 (d, 1H, J = 8.4 Hz), 7.39 (t, 1H, J = 4.5 Hz), 7.18 (d, 1H, J = 9.3 Hz), 6.16 (s, 1H), 5.36 (s, 1H), 4.06-3.96 (m, 1H), 3.90-3.80 (m, 3H), 3.71-3.67 (m, 1H), 3.28-3.0 (m, 2H), 2.98-2.91 (m, 1H), 2.81-2.72 (m, 1H), 2.50-2.40 (m, 2H, merged with DMSO peak); ESI-MS (m/z, %): 367 (MH⁺, 39), 294 (100); ESI-HRMS calculated for C₂₀H₂₃N₄OS (MH⁺, free base), calculated: 367.1587; observed: 367.1605.

Example 24: Synthesis of *N*-(3-(2-(pyrrolidin-1-yl)ethyl)-1H-indol-5-yl)thiophene-2-carboximidamide (Compound 25)

5-Bromo-3-(2-(pyrrolidin-1-yl)ethyl)-1H-indole: Prepared according to literature procedure reported in *Bioorg. & Med. Chem. Lett.* 14: 727-729 (2004).

3-(2-(Pyrrolidin-1-yl)ethyl)-1H-indol-5-amine: A solution of Pd_2dba_3 (0.187 g, 0.205 mmol) in dry THF (10 mL) was treated with tri-*tert*-butylphosphine (2.483 mL, 0.819 mmol) at room temperature. After stirring for 10 min., 5-bromo-3-(2-(pyrrolidin-1-yl)ethyl)-1H-indole (1.2 g, 4.09 mmol) in dry THF (10 mL) was added followed by lithium bis(trimethylsilyl)amide 1M THF (10.23 mL, 10.23 mmol) at same temperature. The reaction was placed in a pre-heated oil bath and stirred for 3.5 h at 100 °C in a sealed tube. The reaction was brought to room temperature, quenched with 1 N HCl solution (25 mL) and stirred for 30 min. The reaction was basified with 1 N NaOH solution (50 mL) and product was extracted into ethyl acetate (3 x 25 mL). The combined ethyl acetate layer was dried (Na_2SO_4) and solvent was evaporated to obtain crude product. The crude material was purified by column chromatography (2 M NH_3 in MeOH: CH_2Cl_2 , 5:95) to obtain 3-(2-(pyrrolidin-1-yl)ethyl)-1H-indol-5-amine (0.6 g, 2.62 mmol, 63.9 % yield) as a brown foam. ESI-MS (m/z , %): 230 (MH^+ , 100).

***N*-(3-(2-(Pyrrolidin-1-yl)ethyl)-1H-indol-5-yl)thiophene-2-carboximidamide:** A solution of 3-(2-(pyrrolidin-1-yl)ethyl)-1H-indol-5-amine (0.59 g, 2.57 mmol) in dry ethanol (10

mL) was treated with methyl thiophene-2-carbimidothioate hydroiodide (1.467 g, 5.15 mmol) at room temperature and the resulting mixture was stirred overnight. The reaction was basified with saturated NaHCO₃ solution (50 mL) and product was extracted into CH₂Cl₂ (2 x 25 mL). The combined organic layer was washed with brine (20 mL) and dried (Na₂SO₄). Solvent was evaporated and crude was purified by column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 1:9) to obtain *N*-(3-(2-(pyrrolidin-1-yl)ethyl)-1H-indol-5-yl)thiophene-2-carboximidamide (0.39 g, 1.152 mmol, 44.8 % yield) as a solid. ¹H NMR (DMSO-*d*₆) δ 10.59 (s, 1H), 7.70 (d, 1H, *J* = 2.7 Hz), 7.58 (d, 1H, *J* = 3.9 Hz), 7.26 (d, 1H, *J* = 6.3 Hz), 7.10-7.08 (m, 2H), 6.92 (s, 1H), 6.62 (d, 1H, *J* = 6.3 Hz), 6.23 (s, 2H), 2.80 (t, 2H, *J* = 6.0 Hz), 2.65 (t, 2H, *J* = 5.4 Hz), 2.52-2.48 (m, 4H, merged with DMSO peak), 1.68 (s, 4H); ESI-MS (*m/z*, %): 339 (MH⁺, 100).

***N*-(3-(2-(Pyrrolidin-1-yl)ethyl)-1H-indol-5-yl)thiophene-2-carboximidamide**

dihydrochloride: A solution of *N*-(3-(2-(pyrrolidin-1-yl)ethyl)-1H-indol-5-yl)thiophene-2-carboximidamide (0.16 g, 0.473 mmol) in methanol (3 mL) was treated with 1 N hydrochloric acid in ether (1.418 mL, 1.418 mmol) and stirred for 15 minutes at room temperature. Solvent was evaporated and product was dried under reduced pressure to obtain *N*-(3-(2-(pyrrolidin-1-yl)ethyl)-1H-indol-5-yl)thiophene-2-carboximidamide dihydrochloride (0.17 g, 0.413 mmol, 87 % yield) as a solid. ¹H NMR (DMSO-*d*₆) δ 11.50 (s, 1H), 11.38 (s, 1H), 11.26 (brs, 1H), 9.71 (s, 1H), 8.64 (s, 1H), 8.20-8.17 (m, 2H), 7.75 (s, 1H), 7.53 (d, 1H, *J* = 6.6 Hz), 7.39 (s, 2H), 7.12 (d, 1H, *J* = 6.3 Hz), 3.58-3.52 (m, 2H), 3.40-3.32 (m, 2H), 3.20-3.16 (m, 2H), 3.06-3.04 (m, 2H), 2.00-1.88 (m, 4H); ESI-MS (*m/z*, %): 339 (MH⁺, free base, 100), 268 (74), 126 (59); ESI-HRMS calculated for C₁₉H₂₃N₄S (MH⁺, free base), calculated: 339.1637; observed: 339.1649.

Example 25. Synthesis of *N*-(3-(3-(ethylamino)cyclopentyl)-1*H*-indol-5-yl)thiophene-2-carboximidamide (compound 26)

5

3-(5-Nitro-1*H*-indol-3-yl)cyclopentanone: To a solution of 5-nitroindole (2.0 g, 12.80 mmol) in dry MeCN (10.0 mL) was added cyclopent-2-enone (2.0 mL, 23.87 mmol) and Bi(NO₃)₃ (0.06g, 0.13 mmol) and the mixture stirred overnight at room temperature. The solvent then was evaporated and the crude was purified by column chromatography (50% Hexane: 50% EtOAc) to obtain the title compound (1.63 g, 52%) as a yellow solid. ¹H-NMR (CDCl₃) δ 2.05-2.18 (m, 1H), 2.37-2.48 (m, 3H), 2.54-2.66 (m, 1H), 2.80 (dd, 1H, J = 7.2, 7.8 Hz), 3.72-3.82 (m, 1H), 7.15 (d, 1H, J = 1.5 Hz), 7.42 (d, 1H, J = 9.0 Hz), 8.15 (dd, 1H, J = 2.4, 9.0 Hz), 8.39 (brs, 1H, NH), 8.62 (d, 1H, J = 2.4 Hz); ESI-MS (m/z, %) 267 (MNa⁺, 100).

10

***N*-Ethyl-3-(5-nitro-1*H*-indol-3-yl)cyclopentanamine:** To a solution of 3-(5-nitro-1*H*-indol-3-yl)cyclopentanone (1.6 g, 6.55 mmol) in 1,2-dichloroethane (50 mL) was added AcOH (0.40 mL, 6.55 mmol), EtNH₂·HCl (0.53 g, 6.55 mmol) and NaBH(OAc)₃ (2.1 g, 9.83 mmol) and the mixture left to stir overnight at room temperature. The reaction mixture was extracted with 2N NaOH (10 mL) and washed with dichloromethane (2x10 mL). The dichloromethane layer was separated and evaporated. The crude material was purified by column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 1:9) to obtain the product as a yellow solid as a mixture of

15

20

diastereomers (1.2 g, 67%). ¹H-NMR (CDCl₃) δ 1.10-1.16 (m, 6H), 1.45-1.92 (m, 10H), 1.96-2.13 (m, 3H), 2.13-2.36 (m, 3H), 2.50-2.58 (m, 1H), 2.65-2.76 (m, 4H), 3.28-3.43 (m, 3H), 3.49-3.60 (m, 1H), 7.11 (d, 1H, J = 1.8 Hz), 7.15 (d, 1H, J = 1.5 Hz), 7.35 (s, 1H), 7.38 (s, 1H), 8.08 (d, 1H, J = 2.1 Hz), 8.11 (d, 1H, J = 2.1 Hz), 8.32 (brs, 1H, NH), 8.41 (brs, 1H, NH), 8.61 (d, 1H, J = 2.1 Hz), 8.63 (d, 1H, J = 2.1 Hz); EI-MS (m/z, %) 273 (M⁺, 90).

***tert*-Butyl ethyl(3-(5-nitro-1*H*-indol-3-yl)cyclopentyl)carbamate:** To a solution of *N*-ethyl-3-(5-nitro-1*H*-indol-3-yl)cyclopentanamine (1.1 g, 4.02 mmol) in 1,4-dioxane (10 mL) was added (Boc)₂O (0.97 g, 4.43 mmol) and triethylamine (1.2 mL, 8.04 mmol) and the resulting mixture left to stir overnight at room temperature. The solvent was evaporated and the crude purified on column chromatography (EtOAc: Hexanes, 1:1) to give the compound as a yellow solid (1.43 g, quantitative). ¹H-NMR (CDCl₃) δ 1.13-1.21 (m, 6H), 1.49 (s, 18H), 1.65-1.94 (m, 5H), 2.01-2.20 (m, 5H), 2.21-2.40 (m, 3H), 3.15-3.32 (m, 5H), 3.53-3.58 (m, 1H), 4.42-4.53 (m, 2H), 7.10 (d, 1H, J = 1.5 Hz), 7.14 (m, 1H, J = 1.8 Hz), 7.35 (d, 1H, J = 4.5 Hz), 7.38 (d, 1H, J = 4.5 Hz), 8.08 (dd, 1H, J = 2.7, 9.0 Hz), 8.11 (dd, 1H, J = 2.4, 4.8 Hz), 8.56 (d, 1H, J = 2.1 Hz), 8.60 (d, 1H, J = 2.1 Hz), 8.62 (brs, 1H, NH), 8.71 (brs, 1H, NH); EI-MS (m/z, %) 373 (M⁺, 30).

***tert*-Butyl 3-(5-amino-1*H*-indol-3-yl)cyclopentyl(ethyl)carbamate:** To a solution of *tert*-butyl ethyl(3-(5-nitro-1*H*-indol-3-yl)cyclopentyl)carbamate (1.40 g, 3.75 mmol) in dry MeOH (15 mL) was added Raney-Ni (0.1 g as a slurry in water) and hydrazine hydrate (1.9 mL, 37.5 mmol). The resulting mixture was immersed in a preheated oil bath and refluxed for 15 min. until the solution became clear. The reaction was cooled and filtered through celite, washed with MeOH (20 mL) and the solvent evaporated. The crude was purified on column chromatography (2% 2N NH₃ in MeOH: 98% CH₂Cl₂) to give the title compound as a brownish solid (1.25 g, quantitative). ¹H-NMR (CDCl₃) δ 1.11-1.19 (m, 6H), 1.49 (s, 18H), 1.67-1.89 (m, 6H), 1.96-2.12 (m, 4H), 2.13-2.22 (m, 2H), 2.26-2.35 (m, 2H), 3.10-3.28 (m, 4H), 3.37-3.58 (m, 4H), 4.44-4.59 (m, 2H), 6.64 (dd, 1H, J = 1.8, 9.0 Hz), 6.67 (dd, 1H, J = 2.1, 8.4 Hz), 6.91 (d, 1H, J = 2.4 Hz), 6.92 (d, 1H, J = 2.1 Hz), 7.14 (d, 1H, J = 2.1 Hz), 7.17 (d, 1H, J = 2.1 Hz), 7.73 (brs, 2H, NH); EI-MS (m/z, %) 343 (M⁺, 100).

***tert*-Butyl ethyl(3-(5-(thiophene-2-carboximidamido)-1*H*-indol-3-yl)cyclopentyl)carbamate:** To a solution of *tert*-butyl 3-(5-amino-1*H*-indol-3-yl)cyclopentyl(ethyl)carbamate (1.22 g, 3.55 mmol) in dry EtOH (30 mL) was added methyl thiophene-2-carbimidothioate hydroiodide (2.0 g, 7.10 mmol), and the reaction left to stir at room temperature for 48 hours. The solvent was evaporated, and the mixture dissolved in dichloromethane (20 mL) and washed with 2N NaOH (20 mL). The organic layer was extracted

and evaporated. The crude material was purified using column chromatography (2 M NH₃ in MeOH: CH₂Cl₂, 2:98 to 5:95) to give the title compound as a yellow solid (1.28 g, 80 %). ¹H-NMR (CDCl₃) δ 1.10-1.17 (m, 6H), 1.47 (s, 18H), 1.68-1.89 (m, 6H), 1.97-2.12 (m, 4H), 2.13-2.34 (m, 4H), 3.11-3.32 (m, 4H), 3.42-3.53 (m, 1H), 4.51 (brs, 2H), 4.92 (brs, 2H), 6.86 (dd, 1H, J = 2.1, 8.4 Hz), 6.89 (dd, 1H, J = 2.4, 8.4 Hz), 6.96 (d, 1H, J = 2.1 Hz), 6.98 (d, 1H, J = 2.1 Hz), 7.07-7.10 (m, 2H), 7.21-7.23 (m, 2H), 7.30 d, 1H, J = 3.3 Hz), 7.33 (d, 1H, J = 3.3 Hz), 7.42 (s, 1H), 7.43 (s, 1H), 7.95 (brs, 1H, NH), 7.97 (brs, 1H, NH); ESI-MS (m/z, %) 453 (M⁺, 100).

***N*-(3-(3-(Ethylamino)cyclopentyl)-1*H*-indol-5-yl)thiophene-2-carboximidamide (26):**
tert-Butyl ethyl(3-(5-(thiophene-2-carboximidamido)-1*H*-indol-3-yl)cyclopentyl)carbamate (1.25 g, 2.76 mmol) was treated with 20% TFA solution (31 mL) in dichloromethane at 0 °C and the mixture left to stir for 2 hours at 0 °C. The reaction then was neutralized with 10% NH₄OH solution, the organic layer separated and evaporated. The crude was purified by column chromatography (20% 2N NH₃ in MeOH: 80% CH₂Cl₂) to give the product as a yellow solid (0.87 g, 89 %). ¹H-NMR (DMSO-*d*₆) δ 1.07 (t, 3H, J = 7.2 Hz), 1.45-1.71 (m, 2H), 1.77-2.16 (m, 3H), 2.23-2.40 (m, 1H), 2.64-2.73 (m, 2H), 3.24-3.49 (m, 2H), 6.22 (brs, 2H, NH), 6.63 (d, 1H, J = 8.1 Hz), 7.03-7.11 (m, 3H), 7.26 (d, 1H, J = 8.4 Hz), 7.58 (d, 1H, J = 5.1 Hz), 7.71 (d, 1H, J = 3.6 Hz), 10.57 (s, 1H, NH); EI-MS (m/z, %) 352 (M⁺, 50), 243 (80), 158 (100), EI-HRMS (M⁺) calc. for C₂₀H₂₄N₄S, calculated: 352.1722, found: 352.1725.

Chiral separation of *N*-(3-(3-(ethylamino)cyclopentyl)-1*H*-indol-5-yl)thiophene-2-carboximidamide:

The compound (mixture of four isomers) was subjected to a chiral preparative HPLC (CHIRALPAK AD-H).

Flow rate 18 mL/min, 10% EtOH: 90% Hexane + 0.2% DEA.

First (least polar) isomer started eluting at 27 min. to obtain 13.0 mg with 100% enantiomeric purity. The second isomer started eluting at 33 min. to obtain 8.0 mg with 100% enantiomeric purity. The other two isomers started eluting together at 35 min. and could not be separated in to their pure enantiomeric forms.

nNOS and eNOS inhibitory activities for all new compounds are listed in Table 15 below.

Table 15

compound	IC ₅₀ in μ M (Human nNOS)	IC ₅₀ in μ M (Human eNOS)	eNOS/nNOS
21	0.309	7.76	25.1
22	0.264	10.8	40.9
23	0.735	31.8	43.2
24	0.748	74.1	99
25	0.427	9.92	23.2
26	0.257	14.3	55.6

Example 26. Effects of (R)-N-(3-((1-Methylpyrrolidin-2-yl)methyl)-1H-indol-5-yl)thiophene-2-carboximidamide (Compound (27)) in a pancreatitis visceral pain model

5 The effect of Compound (27), whose synthesis is described in U.S. Patent No. 7,375,219, hereby incorporated by reference, in a pancreatitis visceral pain model was demonstrated using the procedure described in Example 16. Figure 12 shows that Compound (27) reverts the tactile allodynia in rats with pancreatitis.

10 **Other embodiments**

 While the present invention has been described with reference to what are presently considered to be the preferred examples, it is to be understood that the invention is not limited to the disclosed examples. To the contrary, the invention is intended to cover various modifications and equivalent arrangements included within the spirit and scope of the appended claims.

15 All publications, patents and patent applications are herein incorporated by reference in their entirety to the same extent as if each individual publication, patent or patent application was specifically and individually indicated to be incorporated by reference in its entirety. Where a term in the present application is found to be defined differently in a document incorporated herein by reference, the definition provided herein is to serve as the definition for the term.

20 Other embodiments are in the claims.

What is claimed is:

CLAIMS

1. A method of treating visceral pain, said method comprising administering to a patient in need thereof a therapeutically effective amount of a compound having the formula:

(I), or a pharmaceutically acceptable salt or prodrug thereof, wherein,

R¹ is H, optionally substituted C₁₋₆ alkyl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₁₋₄ alkheterocyclyl, or optionally substituted C₃₋₈ cycloalkyl;

each of R² and R³ is, independently, H, Hal, optionally substituted C₁₋₆ alkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₂₋₉ bridged heterocyclyl, optionally substituted C₁₋₄ bridged alkheterocyclyl, optionally substituted C₂₋₉ heterocyclyl, or optionally substituted C₁₋₄ alkheterocyclyl;

each of R⁴ and R⁷ is, independently, H, F, C₁₋₆ alkyl, or C₁₋₆ alkoxy;

R⁵ is H, R^{5A}C(NH)NH(CH₂)_{r5}, or R^{5B}NHC(S)NH(CH₂)_{r5}, wherein r5 is an integer from 0 to 2, R^{5A} is optionally substituted C₁₋₆ alkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₂₋₉ heterocyclyl, optionally substituted C₁₋₄ alkheterocyclyl, optionally substituted C₁₋₆ thioalkoxy, optionally substituted C₁₋₄ thioalkaryl, optionally substituted aryloyl, or optionally substituted C₁₋₄ thioalkheterocyclyl; and R^{5B} is optionally substituted C₁₋₆ alkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₂₋₉ heterocyclyl, optionally substituted C₁₋₄ alkheterocyclyl, optionally substituted C₁₋₆ thioalkoxy, optionally substituted C₁₋₄ thioalkaryl, or optionally substituted aryloyl; and

R⁶ is H, F, R^{6A}C(NH)NH(CH₂)_{r6}, or R^{6B}NHC(S)NH(CH₂)_{r6}, wherein r6 is an integer from 0 to 2, R^{6A} is optionally substituted C₁₋₆ alkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₂₋₉ heterocyclyl, optionally substituted C₁₋₄ alkheterocyclyl, optionally substituted C₁₋₆ thioalkoxy, optionally substituted C₁₋₄ thioalkaryl, optionally substituted aryloyl, or optionally substituted C₁₋₄ thioalkheterocyclyl; and R^{6B} is optionally substituted C₁₋₆ alkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, optionally substituted C₂₋₉ heterocyclyl, optionally substituted C₁₋₄ alkheterocyclyl, optionally substituted C₁₋₆ thioalkoxy, optionally substituted C₁₋₄ thioalkaryl, or optionally substituted aryloyl.

2. The method of claim 1, wherein R^6 is H.

3. The method of claim 2, wherein R^1 is H, optionally substituted C_{1-6} alkyl, optionally substituted C_{1-4} alkaryl, or optionally substituted C_{1-4} alkheterocyclyl.

5

4. The method of claim 1, wherein said visceral pain is secondary to irritable bowel syndrome, inflammatory bowel syndrome, pancreatitis, diverticulitis, Crohn's disease, peritonitis, pericarditis, hepatitis, appendicitis, colitis, cholecystitis, gastroenteritis, endometriosis, dysmenorrhea, interstitial cystitis, prostatitis, pleuritis, upper gastrointestinal dyspepsia, renal colic, or biliary colic.

10

5. The method of claim 1, wherein said visceral pain results from a neoplasm, infection, or injury.

15

6. The method of claim 1, wherein said visceral pain is inflammatory.

7. The method of claim 1, wherein said visceral pain is non-inflammatory.

8. The method of claim 1, wherein R^{5A} is methyl, fluoromethyl, ethyl, n-propyl, i-propyl, n-butyl, i-butyl, t-butyl, thiomethoxy, thioethoxy, thio-n-propyloxy, thio-i-propyloxy, thio-n-butyloxy, thio-i-butyloxy, thio-t-butyloxy, phenyl, benzyl, 2-thienyl, 3-thienyl, 2-furanyl, 3-furanyl, 2-oxazole, 4-oxazole, 5-oxazole, 2-thiazole, 4-thiazole, 5-thiazole, 2-isoxazole, 3-isoxazole, 4-isoxazole, 2-isothiazole, 3-isothiazole, and 4-isothiazole.

20

9. The method of claim 1, wherein one or more of R^1 , R^2 , and R^3 is not H.

25

10. The method of claim 1, wherein R^1 is $(CH_2)_m X^1$, wherein X^1 is selected from the group consisting of:

each of R^{1A} and R^{1B} is, independently, H, optionally substituted C_{1-6} alkyl, optionally substituted C_{3-8} cycloalkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, C_{2-9} heterocyclyl, or optionally substituted C_{1-4} alkheterocyclyl;

each of R^{1C} and R^{1D} is, independently, H, F, OH, CO_2R^{1E} , or $NR^{1F}R^{1G}$, wherein each of R^{1E} , R^{1F} , and R^{1G} is, independently, H, optionally substituted C_{1-6} alkyl, optionally substituted C_{3-8} cycloalkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, C_{2-9} heterocyclyl, or optionally substituted C_{1-4} alkheterocyclyl, or R^{1C} and R^{1D} together with the carbon they are bonded to are $C=O$;

Z^1 is NR^{1H} , $NC(O)R^{1H}$, $NC(O)OR^{1H}$, $NC(O)NHR^{1H}$, $NC(S)R^{1H}$, $NC(S)NHR^{1H}$, $NS(O)_2R^{1H}$, O, S, $S(O)$, or $S(O)_2$, wherein R^{1H} is H, optionally substituted C_{1-6} alkyl, optionally substituted C_{3-8} cycloalkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, C_{2-9} heterocyclyl, or optionally substituted C_{1-4} alkheterocyclyl;

$m1$ is an integer of 0 to 6;

$n1$ is an integer of 1 to 4;

$p1$ is an integer of 0 to 2; and

$q1$ is an integer of 0 to 5.

11. The method of claim 10, wherein when X^1 is

, X^1 is selected from

12. The method of claim 1, wherein R^2 is $(CH_2)_mX^2$, wherein X^2 is selected from the group consisting of:

each of R^{2A} and R^{2B} is, independently, H, optionally substituted C_{1-6} alkyl, optionally substituted C_{3-8} cycloalkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, C_{2-9} heterocyclyl, or optionally substituted C_{1-4} alkheterocyclyl;

each of R^{2C} and R^{2D} is, independently, H, F, OH, CO_2R^{2E} , or $NR^{2F}R^{2G}$, wherein each of R^{2E} , R^{2F} , and R^{2G} is, independently, H, optionally substituted C_{1-6} alkyl, optionally substituted

C₃₋₈ cycloalkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, C₂₋₉ heterocyclyl, or optionally substituted C₁₋₄ alkheterocyclyl, or R^{2C} and R^{2D} together with the carbon they are bonded to are C=O;

Z² is NR^{2H}, NC(O)R^{2H}, NC(O)OR^{2H}, NC(O)NHR^{2H}, NC(S)R^{2H}, NC(S)NHR^{2H},

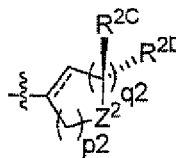

- 5 NS(O)₂R^{2H}, O, S, S(O), or S(O)₂, wherein R^{2H} is H, optionally substituted C₁₋₆ alkyl, optionally substituted C₃₋₈ cycloalkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, C₂₋₉ heterocyclyl, or optionally substituted C₁₋₄ alkheterocyclyl;

m2 is an integer of 0 to 6;

n2 is an integer of 1 to 4;

- 10 p2 is an integer of 0 to 2; and

q2 is an integer of 0 to 5.

13. The method of claim 12, wherein when X² is , X² is selected from

15

14. The method of claim 1, wherein R³ is (CH₂)_mX³, wherein X³ is selected from the group consisting of:

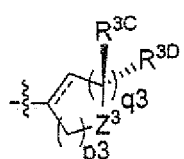

- 20 each of R^{3A} and R^{3B} is, independently, H, optionally substituted C₁₋₆ alkyl, optionally substituted C₃₋₈ cycloalkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, C₂₋₉ heterocyclyl, or optionally substituted C₁₋₄ alkheterocyclyl;

- 25 each of R^{3C} and R^{3D} is, independently, H, F, OH, CO₂R^{3E}, or NR^{3F}R^{3G}, wherein each of R^{3E}, R^{3F}, and R^{3G} is, independently, H, optionally substituted C₁₋₆ alkyl, optionally substituted C₃₋₈ cycloalkyl, optionally substituted C₆₋₁₀ aryl, optionally substituted C₁₋₄ alkaryl, C₂₋₉ heterocyclyl, or optionally substituted C₁₋₄ alkheterocyclyl, or R^{3C} and R^{3D} together with the carbon they are bonded to are C=O;

Z^3 is NR^{3H} , $NC(O)R^{3H}$, $NC(O)OR^{3H}$, $NC(O)NHR^{3H}$, $NC(S)R^{3H}$, $NC(S)NHR^{3H}$, $NS(O)_2R^{3H}$, O, S, $S(O)$, or $S(O)_2$, wherein R^{3H} is H, optionally substituted C_{1-6} alkyl, optionally substituted C_{3-8} cycloalkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, C_{2-9} heterocyclyl, or optionally substituted C_{1-4} alkheterocyclyl;

- 5 m_3 is an integer of 0 to 6;
 n_3 is an integer of 1 to 4;
 p_3 is an integer of 0 to 2; and
 q_3 is an integer of 0 to 5.

- 10 15. The method of claim 14, wherein when X^3 is , X^3 is selected from

16. The method of claim 1, wherein R^2 is

- 15 wherein each of R^{2J2} , R^{2J3} , R^{2J4} , R^{2J5} , and R^{2J6} is, independently, H, C_{1-6} alkyl; OH; C_{1-6} alkoxy; SH; C_{1-6} thioalkoxy; Halo; NO_2 ; CN; CF_3 ; OCF_3 ; $NR^{2Ja}R^{2Jb}$, where each of R^{2Ja} and R^{2Jb} is, independently, H or C_{1-6} alkyl; $C(O)R^{2Jc}$, where R^{2Jc} is H or C_{1-6} alkyl; CO_2R^{2Jd} , where R^{2Jd} is H or C_{1-6} alkyl; tetrazolyl; $C(O)NR^{2Je}R^{2Jf}$, where each of R^{2Je} and R^{2Jf} is, independently, H or C_{1-6} alkyl; $OC(O)R^{2Jg}$, where R^{2Jg} is C_{1-6} alkyl; $NHC(O)R^{2Jh}$, where R^{2Jh} is H or C_{1-6} alkyl; SO_3H ;
 20 $S(O)_2NR^{2Ji}R^{2Jj}$, where each of R^{2Ji} and R^{2Jj} is, independently, H or C_{1-6} alkyl; $S(O)R^{2Jk}$, where R^{2Jk} is C_{1-6} alkyl; and $S(O)_2R^{2Jl}$, where R^{2Jl} is C_{1-6} alkyl.

17. The method of claim 1, wherein said compound is selected from the group consisting of: 2-ethyl-1-(1H-indol-5-yl)-isothiourea; N-(1H-indol-5-yl)-thiophene-2-carboxamidine; N-[1-(2-dimethylamino-ethyl)-1H-indol-6-yl]-thiophene-2-carboxamidine; N-{1-[2-(1-methylpyrrolidin-2-yl)-ethyl]-1H-indol-6-yl}-thiophene-2-carboxamidine; 1-[1-(2-dimethylamino-ethyl)-1H-indol-6-yl]-2-ethyl-isothiourea; N-[1-(2-pyrrolidin-1-yl-ethyl)-1H-indol-6-yl]-

thiophene-2-carboxamidine; N-(1-phenethyl-1H-indol-6-yl)-thiophene-2-carboxamidine; N-[3-(2-dimethylamino-ethyl)-1H-indol-5-yl]-thiophene-2-carboxamidine; N-(1-{2-[2-(4-bromophenyl)-ethylamino]-ethyl}-1H-indol-6-yl)-thiophene-2-carboxamidine; (+)-N-{1-[2-(1-methylpyrrolidin-2-yl)-ethyl]-1H-indol-6-yl}-thiophene-2-carboxamidine; (-)-N-{1-[2-(1-methylpyrrolidin-2-yl)-ethyl]-1H-indol-6-yl}-thiophene-2-carboxamidine; N-[1-(1-methyl-azepan-4-yl)-1H-indol-6-yl]-thiophene-2-carboxamidine; and N-[1-(2-piperidin-1-yl-ethyl)-1H-indol-6-yl]-thiophene-2-carboxamidine.

18. The method of claim 1, wherein R^1 or R^3 is

wherein Z is NR^X , o is an integer from 0-3, p is an integer from 1 to 2, q is an integer from 0 to 2, r is an integer from 0 to 1, s is an integer from 1 to 3, u is an integer from 0 to 1, and t is an integer from 3 to 7, wherein said R^1 or R^3 substituent includes 0 to 6 carbon-carbon double bonds or 0 or 1 carbon-nitrogen double bonds, and wherein R^X is H, optionally substituted C_{1-6} alkyl, optionally substituted C_{3-8} cycloalkyl, optionally substituted C_{6-10} aryl, optionally substituted C_{1-4} alkaryl, C_{2-9} heterocyclyl, or optionally substituted C_{1-4} alkheterocyclyl.

19. The method of claim 1, wherein said compound has the formula:

20. The method of claim 1, wherein said compound is selected from:

21. The method of claim 1, wherein said compound has the formula:

22. The method of claim 1, wherein said compound has the formula:

23. The method of claim 1, wherein said compound has the formula:

24. The method of claim 1, wherein said compound has the formula:

Mixture of four isomers

25. The method of claim 1, wherein said compound has the formula

26. The method of claim 1, further comprising administering a 5HT_{1B} or 5HT_{1D} receptor agonist.

27. The method of claim 1, further comprising administering a triptan.

28. The method of claim 27, wherein said triptan is sumatriptan, rizatriptan, naratriptan, zolmitriptan, eletriptan, almotriptan, or frovatriptan.

29. The method of claim 1, further comprising administering to said patient one or more agents selected from the group consisting of analgesics, antidepressants, and anticonvulsants.

30. The method of claim 1, wherein said visceral pain is secondary to a disease of the liver, kidney, ovary, uterus, bladder, bowel, stomach, esophagus, duodenum, intestine, colon, spleen, pancreas, appendix, heart, or peritoneum.

5 31. A compound having the structure

32. A compound having the structure

33. A pharmaceutical composition comprising

15 34. A pharmaceutical composition comprising

35. A compound having the structure

36. A compound having the structure

5

37. A compound having the structure

38. A compound having the structure

39. A pharmaceutical composition comprising

15 40. A method of synthesizing an enantiomer of

, said method comprising the steps of:

- a. reacting 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine with benzyl chloroformate to form (\pm) benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-ylcarbamate;
- b. subjecting (\pm) benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-ylcarbamate to chiral HPLC or
5 SFC (supercritical fluid chromatography) to resolve the enantiomers of benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-ylcarbamate;
- c. deprotecting one enantiomer of benzyl 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-ylcarbamate by hydrogenation to yield one enantiomer 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine; and
- d. reacting one enantiomer of 3-(1-methylpyrrolidin-3-yl)-1H-indol-5-amine with methyl
10 thiophene-2-carbimidothioate.

41. The method of claim 40, wherein said enantiomer is the (+) enantiomer.

42. The method of claim 40, wherein said enantiomer is the (-) enantiomer.

43. A method of treating a condition in a mammal caused by the action of nitric oxide synthase (NOS), wherein said method comprises administering an effective amount of the compound of claim 1 to said mammal.

44. The method of claim 43, wherein said mammal is a human.

45. The method of claim 43, wherein said condition is migraine headache (with or without aura), chronic tension type headache (CTTH), migraine with allodynia, neuropathic pain, post-stroke pain, chronic headache, chronic pain, acute spinal cord injury, diabetic neuropathy, trigeminal neuralgia, diabetic nephropathy, an inflammatory disease, stroke, reperfusion injury, head trauma, cardiogenic shock, CABG associated neurological damage, HCA, AIDS associated dementia, neurotoxicity, Parkinson's disease, Alzheimer's disease, ALS, Huntington's disease, multiple sclerosis, amphetamine-induced neurotoxicity, drug addiction, morphine/opioid induced tolerance, dependence, hyperalgesia, or withdrawal, ethanol tolerance, dependence, or withdrawal, epilepsy, anxiety, depression, attention deficit hyperactivity disorder, or psychosis.

46. The method of claim 45 wherein said condition is stroke, reperfusion injury, neurodegeneration, head trauma, CABG associated neurological damage, migraine headache (with or without aura), migraine with allodynia, chronic tension type headache, neuropathic pain,
5 post-stroke pain, opioid induced hyperalgesia, or chronic pain

47. The method of claim 43, wherein said compound is a 3,5-substituted indole and said condition is migraine or chronic tension type headache.

10 48. The method of claim 43, wherein said method further comprises administering to said mammal an opioid.

49. The method of claim 48, wherein said opioid is alfentanil, butorphanol, buprenorphine, dextromoramide, dezocine, dextropropoxyphene, codeine, dihydrocodeine,
15 diphenoxylate, etorphine, fentanyl, hydrocodone, hydromorphone, ketobemidone, loperamide, levorphanol, levomethadone, meperidine, meptazinol, methadone, morphine, morphine-6-glucuronide, nalbuphine, naloxone, oxycodone, oxymorphone, pentazocine, pethidine, piritramide, propoxyphene, remifentanyl, sulfentanyl, tilidine, and tramadol.

20 50. The method of claim 43, wherein said method further comprises administering to said mammal an antidepressant.

51. The method of claim 50, wherein said antidepressant is a selective serotonin re-uptake inhibitor.

25 52. The method of claim 51, wherein said selective serotonin re-uptake inhibitor is citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine or sertraline.

53. The method of claim 50, wherein said antidepressant is a norepinephrine-reuptake
30 inhibitor.

54. The method of claim 53, wherein said norepinephrine-reuptake inhibitor is amitriptyline, desmethyramitriptyline, clomipramine, doxepin, imipramine, imipramine oxide,

trimipramine; adinazolam, amitriptylinoxide, amoxapine, desipramine, maprotiline, nortriptyline, protriptyline, amineptine, butriptyline, demexiptiline, dibenzepin, dimetacrine, dothiepin, fluacizine, iprindole, lofepramine, melitracen, metapramine, norclobipramine, noxiptilin, opipramol, perlapine, pizotyline, propizepine, quinupramine, reboxetine, or tianeptine.

5

55. The method of claim 50, wherein said antidepressant is a selective noradrenaline/norepinephrine reuptake inhibitor.

56. The method of claim 55, wherein selective noradrenaline/norepinephrine reuptake inhibitor is atomoxetine, bupropion, reboxetine, or tomoxetine.

10

57. The method of claim 50, wherein said antidepressant is a dual serotonin/norepinephrine reuptake inhibitor.

58. The method of claim 57, wherein said dual serotonin/norepinephrine reuptake inhibitor is duloxetine, milnacipran, mirtazapine, nefazodone, or venlafaxine.

15

59. The method of claim 50, wherein said antidepressant is a monoamine oxidase inhibitor.

20

60. The method of claim 59, wherein said monoamine oxidase inhibitor is amiflamine, iproniazid, isocarboxazid, M-3-PPC (Draxis), moclobemide, pargyline, phenelzine, tranylcypromine, or vanoxerine.

61. The method of claim 50, wherein said antidepressant is a reversible monoamine oxidase type A inhibitor.

25

62. The method of claim 61, wherein said reversible monoamine oxidase type A inhibitor is bazinaprine, befloxatone, brofaromine, cimoxatone, or clorgyline.

30

63. The method of claim 50, wherein said antidepressant is a tricyclic.

64. The method of claim 63, wherein said tricyclic is amitriptyline, clomipramine, desipramine, doxepin, imipramine, maprotiline, nortriptyline, protriptyline, or trimipramine.

65. The method of claim 50, wherein said antidepressant is adinazolam, alaproclate,
5 amineptine, amitriptyline/chlordiazepoxide combination, atipamezole, azamianserin,
bazinaprine, befuraline, bifemelane, binodaline, bipenamol, brofaromine, caroxazone,
cericlamine, cianopramine, cimoxatone, citalopram, clemeprol, clovoxamine, dazepinil, deanol,
demexiptiline, dibenzepin, dothiepin, droxidopa, enefexine, estazolam, etoperidone, femoxetine,
fengabine, fezolamine, fluotracen, idazoxan, indalpine, indeloxazine, iprindole, levoprotiline,
10 lithium, litoxetine; lofepramine, medifoxamine, metapramine, metralindole, mianserin,
milnacipran, minaprine, mirtazapine, montirelin, nebracetam, nefopam, nialamide, nomifensine,
norfluoxetine, orotirelin, oxaflozane, pinazepam, pirlindone, pizotiline, ritanserin, rolipram,
serclorephine, setiptiline, sibutramine, sulbutiamine, sulpiride, teniloxazine, thozalinone,
thymoliberin, tianeptine, tiiflucarbine, trazodone, tofenacin, tofisopam, toloxatone, tomoxetine,
15 veralipride, viloxazine, viqualine, zimelidine, or orzometrapine.

66. The method of claim 43, wherein said method further comprises administering to said mammal an antiepileptic.

20 67. The method of claim 66, wherein said antiepileptic is carbamazepine, flupirtine, gabapentin, lamotrigine, oxcarbazepine, phenytoin, retigabine, topiramate, or valproate.

68. The method of claim 43, wherein said method further comprises administering to said mammal a non-steroidal anti-inflammatory drug (NSAID).

25

69. The method of claim 68, wherein said NSAID is acemetacin, aspirin, celecoxib, deracoxib, diclofenac, diflunisal, ethebamide, etofenamate, etoricoxib, fenoprofen, flufenamic acid, flurbiprofen, lonazolac, lornoxicam, ibuprofen, indomethacin, isoxicam, kebuzone, ketoprofen, ketorolac, naproxen, nabumetone, niflumic acid, sulindac, tolmetin, piroxicam,
30 meclofenamic acid, mefenamic acid, meloxicam, metamizol, mofebutazone, oxyphenbutazone, parecoxib, phenidine, phenylbutazone, piroxicam, propacetamol, propyphenazone, rofecoxib, salicylamide, suprofen, tiaprofenic acid, tenoxicam, valdecoxib, 4-(4-cyclohexyl-2-methyloxazol-5-yl)-2-fluorobenzenesulfonamide, N-[2-(cyclohexyloxy)-4-

nitrophenyl]methanesulfonamide, 2-(3,4-difluorophenyl)-4-(3-hydroxy-3-methylbutoxy)-5-[4-(methylsulfonyl)phenyl]-3(2H)-pyridazinone, and 2-(3,5-difluorophenyl)-3-[4-(methylsulfonyl)phenyl]-2-cyclopenten-1-one).

5 70. The method of claim 43, wherein said method further comprises administering to said mammal an antiarrhythmic.

71. The method of claim 43, wherein said method further comprises administering to said mammal a GABA-B antagonist.

10 72. The method of claim 43, wherein said method further comprises administering to said mammal an alpha-2-adrenergic receptor agonist.

15 73. The method of claim 43, wherein said method further comprises administering to said mammal a serotonin 5HT_{1B/1D} agonist.

74. The method of claim 73, wherein said serotonin 5HT_{1B/1D} agonist is almotriptan, eletriptan, frovatriptan, naratriptan, rizatriptan, sumatriptan, or zolmitriptan.

20 75. The method of claim 43, wherein said method further comprises administering to said mammal an N-methyl-D-aspartate antagonist.

76. The method of claim 75, wherein said N-methyl-D-aspartate antagonist is amantadine; aptiganel; besonprodil; budipine; conantokin G; delucemine; dexanabinol; dextromethorphan; dextropropoxyphen; felbamate; fluorofelbamate; gacyclidine; glycine; ipenoxazone; kaitocephalin; ketamine; ketobemidone; lanicemine; licostinel; midafotel; memantine; D-methadone; D-morphine; milnacipran; neramexane; orphenadrine; remacemide; sulfazocine; FPL-12,495 (racemide metabolite); topiramate; (αR)-α-amino-5-chloro-1-(phosphonomethyl)-1H-benzimidazole-2-propanoic acid; 1-aminocyclopentane-carboxylic acid; [5-(aminomethyl)-2-[[[(5S)-9-chloro-2,3,6,7-tetrahydro-2,3-dioxo-1H-5H-pyrido[1,2,3-de]quinoxalin-5-yl]acetyl]amino]phenoxy]-acetic acid; α-amino-2-(2-phosphonoethyl)-cyclohexanepropanoic acid; α-amino-4-(phosphonomethyl)-benzeneacetic acid; (3E)-2-amino-4-(phosphonomethyl)-3-heptenoic acid; 3-[(1E)-2-carboxy-2-phenylethenyl]-4,6-dichloro-1H-

25
30

indole-2-carboxylic acid; 8-chloro-2,3-dihydropyridazino[4,5-b]quinoline-1,4-dione 5-oxide salt with 2-hydroxy-N,N,N-trimethyl-ethanaminium; N'-[2-chloro-5-(methylthio)phenyl]-N-methyl-N-[3-(methylthio)phenyl]-guanidine; N'-[2-chloro-5-(methylthio)phenyl]-N-methyl-N-[3-[(R)-methylsulfinyl]phenyl]-guanidine; 6-chloro-2,3,4,9-tetrahydro-9-methyl-2,3-dioxo-1H-indeno[1,2-b]pyrazine-9-acetic acid; 7-chlorothiokynurenic acid; (3*S*,4*aR*,6*S*,8*aR*)-decahydro-6-(phosphonomethyl)-3-isoquinolinecarboxylic acid; (-)-6,7-dichloro-1,4-dihydro-5-[3-(methoxymethyl)-5-(3-pyridinyl)-4-H-1,2,4-triazol-4-yl]-2,3-quinoxalinedione; 4,6-dichloro-3-[(E)-(2-oxo-1-phenyl-3-pyrrolidinylidene)methyl]-1H-indole-2-carboxylic acid; (2*R*,4*S*)-rel-5,7-dichloro-1,2,3,4-tetrahydro-4-[[[(phenylamino)carbonyl]amino]-2-quinolinecarboxylic acid; (3*R*,4*S*)-rel-3,4-dihydro-3-[4-hydroxy-4-(phenylmethyl)-1-piperidinyl]-2H-1-benzopyran-4,7-diol; 2-[(2,3-dihydro-1H-inden-2-yl)amino]-acetamide; 1,4-dihydro-6-methyl-5-[(methylamino)methyl]-7-nitro-2,3-quinoxalinedione; [2-(8,9-dioxo-2,6-diazabicyclo[5.2.0]non-1(7)-en-2-yl)ethyl]-phosphonic acid; (2*R*,6*S*)-1,2,3,4,5,6-hexahydro-3-[(2*S*)-2-methoxypropyl]-6,11,11-trimethyl-2,6-methano-3-benzazocin-9-ol; 2-hydroxy-5-[[[(pentafluorophenyl)methyl]amino]-benzoic acid; 1-[2-(4-hydroxyphenoxy)ethyl]-4-[(4-methylphenyl)methyl]-4-piperidinol; 1-[4-(1H-imidazol-4-yl)-3-butyryl]-4-(phenylmethyl)-piperidine; 2-methyl-6-(phenylethynyl)-pyridine; 3-(phosphonomethyl)-L-phenylalanine; or 3,6,7-tetrahydro-2,3-dioxo-N-phenyl-1H,5H-pyrido[1,2,3-de]quinoxaline-5-acetamide.

77. The method of claim 43, wherein said method further comprises administering to said mammal a cholecystokinin B antagonist.

78. The method of claim 43, wherein said method further comprises administering to said mammal a substance P antagonist.

79. The method of claim 43, wherein said method further comprises administering to said mammal an anti-inflammatory compound.

80. The method of claim 79, wherein said anti-inflammatory compound is aspirin, celecoxib, cortisone, deracoxib, diflunisal, etoricoxib, fenoprofen, ibuprofen, ketoprofen, naproxen, prednisolone, sulindac, tolmetin, piroxicam, mefenamic acid, meloxicam, phenylbutazone, rofecoxib, suprofen, valdecoxib, 4-(4-cyclohexyl-2-methyloxazol-5-yl)-2-fluorobenzenesulfonamide, N-[2-(cyclohexyloxy)-4-nitrophenyl]methanesulfonamide, 2-(3,4-

5 difluorophenyl)-4-(3-hydroxy-3-methylbutoxy)-5-[4-(methylsulfonyl)phenyl]-3(2H)-
pyridazinone, or 2-(3,5-difluorophenyl)-3-[4-(methylsulfonyl)phenyl]-2-cyclopenten-1-one.

81. The method of claim 43, wherein said method further comprises administering to
5 said mammal a DHP-sensitive L-type calcium channel antagonist, omega-conotoxin-sensitive N-
type calcium channel antagonist, or a P/Q-type calcium channel antagonist.

82. The method of claim 43, wherein said method further comprises administering to
said mammal an adenosine kinase antagonist.

10 83. The method of claim 43, wherein said method further comprises administering to
said mammal an adenosine receptor A₁ agonist, an adenosine receptor A_{2a} antagonist or an
adenosine receptor A₃ agonist.

15 84. The method of claim 43, wherein said method further comprises administering to
said mammal an adenosine deaminase inhibitor.

85. The method of claim 43, wherein said method further comprises administering to
said mammal an adenosine nucleoside transport inhibitor.

20 86. The method of claim 43, wherein said method further comprises administering to
said mammal a vanilloid VR1 receptor agonist.

87. The method of claim 43, wherein said method further comprises administering to
25 said mammal a cannabinoid CB1/CB2 agonist.

88. The method of claim 43, wherein said method further comprises administering to
said mammal an AMPA receptor antagonist.

30 89. The method of claim 43, wherein said method further comprises administering to
said mammal a kainate receptor antagonist.

90. The method of claim 43, wherein said method further comprises administering to said mammal a sodium channel blocker.

91. The method of claim 43, wherein said method further comprises administering to said mammal a nicotinic acetylcholine receptor agonist.

92. The method of claim 43, wherein said method further comprises administering to said mammal a K_{ATP} potassium channel, $K_{v1.4}$ potassium channel, Ca^{2+} -activated potassium channel, SK potassium channel, BK potassium channel, IK potassium channel, or KCNQ2/3 potassium channel opening agent.

93. The method of claim 43, wherein said method further comprises administering to said mammal a muscarinic M3 antagonist, a muscarinic M1 agonist, or a muscarinic M2/M3 partial agonist/antagonist.

94. The method of claim 43, wherein said method further comprises administering to said mammal an antioxidant.

95. A pharmaceutical composition comprising , and a pharmaceutically acceptable carrier.
