## NEW COMPOUNDS II

## FIELD OF THE INVENTION

The present invention relates to new compounds, to pharmaceutical formulations containing said compounds and to the use of said compounds in therapy. The present invention further relates to processes for the preparation of said compounds and to the use of intermediates in the preparation thereof.

## BACKGROUND OF THE INVENTION

Pain sensation in mammals is due to the activation of the peripheral terminals of a specialized population of sensory neurons known as nociceptors. Capsaicin, the active ingredient in hot peppers, produces sustained activation of nociceptors and also produces a dose-dependent pain sensation in humans. Cloning of the vanilloid receptor 1 (VR1 or TRPV1) demonstrated that VR1 is the molecular target for capsaicin and its analogues. (Caterina, M.J., Schumacher, M.A., et.al. *Nature* (1997) v. 389 p 816-824). Functional studies using VR1 indicate that it is also activated by noxious heat, tissue acidification and other inflammatory mediators (Tominaga, M., Caterina, M.J. et.al. *Neuron* (1998) v. 21, p. 531-543). Expression of VR1 is also regulated after peripheral nerve damage of the type that leads to neuropathic pain. These properties of VR1 make it a highly relevant target for pain and for diseases involving inflammation. While agonists of the VR1 receptor can act as analgesics through nociceptor destruction, the use of agonists, such as capsaicin and its analogues, is limited due to their pungency, neurotoxicity and induction of hypothermia. Instead, agents that block the activity of VR1 should prove more useful. Antagonists would maintain the analgesic properties, but avoid pungency and neurotoxicity side effects.

Compounds with VR1 inhibitor activity are believed to be of potential use for the treatment and/or prophylaxis of disorders such as pain, especially that of inflammatory or traumatic origin such as arthritis, ischaemia, cancer, fibromyalgia, low back pain and post-operative pain (Walker et al *J Pharmacol Exp Ther.* (2003) Jan; 304(1):56-62). In addition to this visceral pains such as chronic pelvic pain, cystitis, irritable bowel syndrome (IBS), pancreatitis and the like, as well as neuropathic pain such as sciatica, HIV neuropathy, multiple sclerosis, and the like (Walker et al *ibid*, Rashid et al *J Pharmacol Exp Ther.* (2003)

Mar; 304(3):940-8), are potential pain states that could be treated with VR1 inhibititon. These compounds are also believed to be potentially useful for inflammatory disorders like asthma, cough, inflammatory bowel disease (IBD) (Hwang and Oh Curr Opin Pharmacol (2002) Jun; 2(3):235-42). Compounds with VR1 blocker activity are also useful for itch 5 and skin diseases like psoriasis and for gastro-esophageal reflux disease (GERD), emesis, cancer, urinary incontinence and hyperactive bladder (Yiangou et al BJU Int (2001) Jun; 87(9):774-9, Szallasi Am J Clin Pathol (2002) 118: 110-21). VR1 inhibitors are also of potential use for the treatment and/or prophylaxis of the effects of exposure to VR1 activators like capsaicin or tear gas, acids or heat (Szallasi *ibid*).

10 A further portential use relates to the treatment of tolerance to VR1 activators.

VR1 inhibitors may also be useful in the treatment of interstitial cystitis and pain re-  
lated to interstitial cystitis.

VR1 inhibitors may also be useful in the treatment of obesity and migraine;  
WO2006/007851 discloses the use of VR1 antagonists for the treatment of obesity.

15 EP 66378 and EP 28906 disclose spiro-hydantoin derivatives for use as inhibitors of aldose reductase.

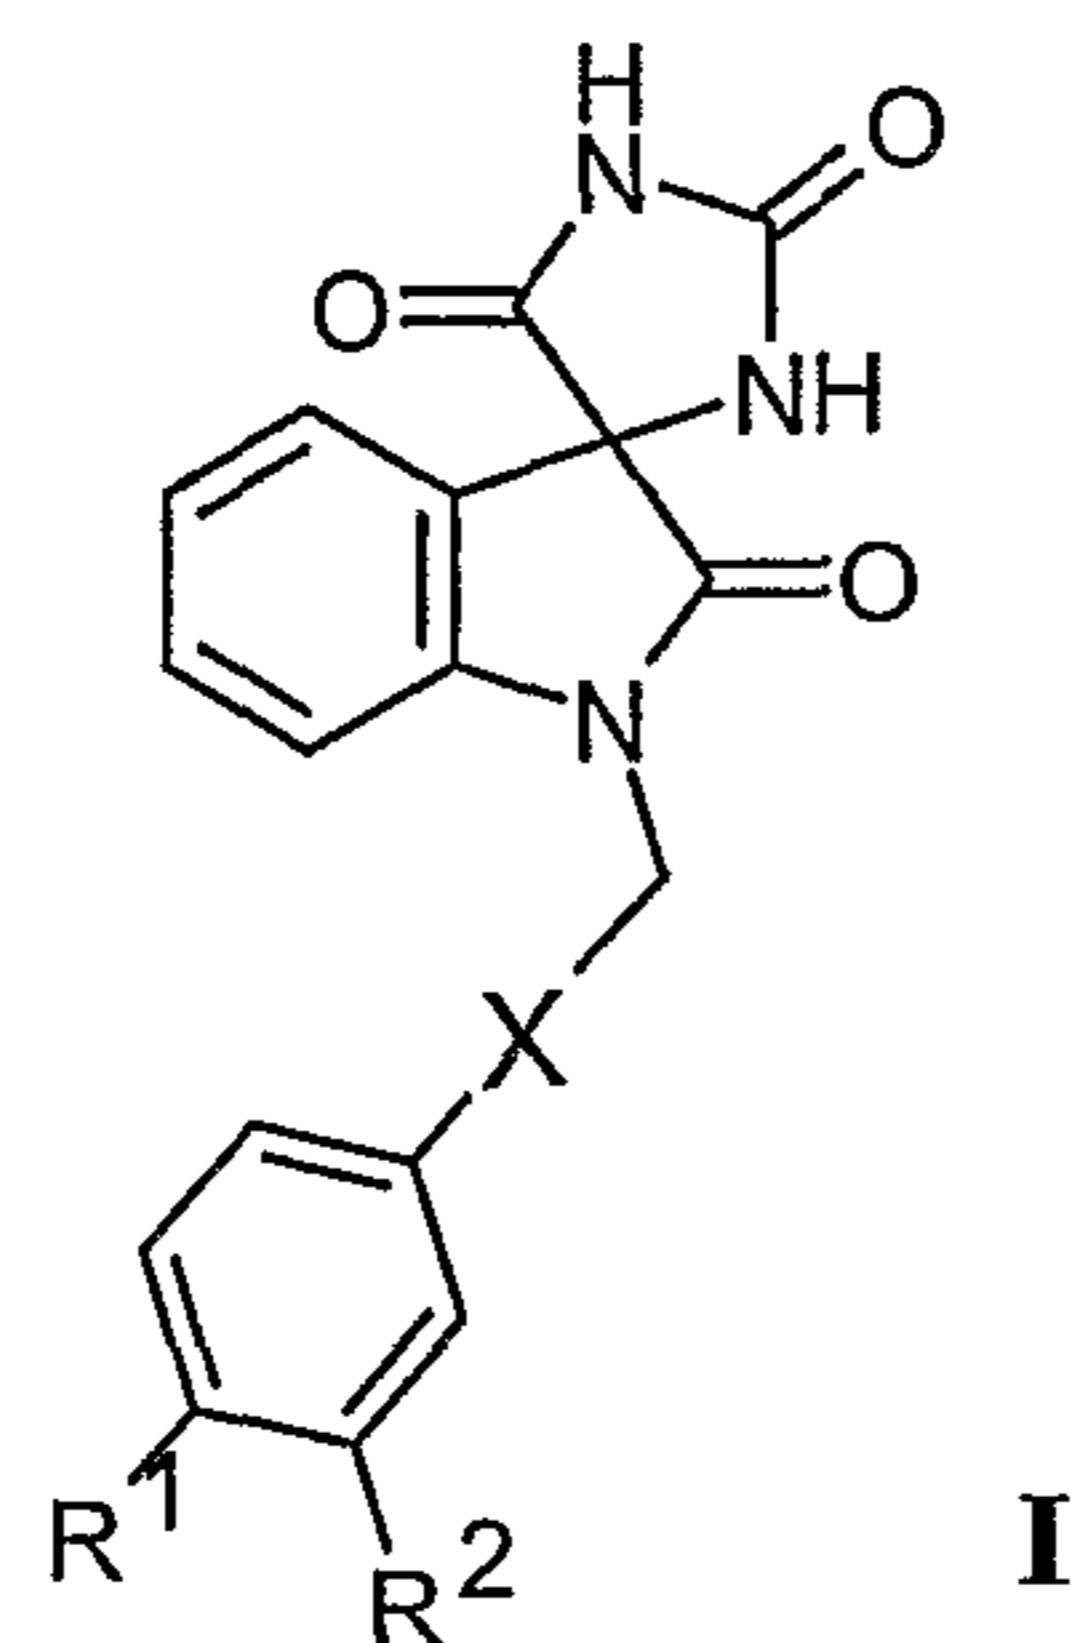

WO 92/07830 describes spiro-hydantoin derivatives and their use as antagonists for gastrin releasing peptide.

## 20 DETAILED DESCRIPTION OF THE INVENTION

The object of the present invention is to provide compounds of said kind which exhibit inhibitory activity at the vanilloid receptor 1 (VR1), along with good Drug Metabolism and Pharmacokinetics (DMPK) properties.

25 A further object is to provide such compounds that exhibit improved potency in-vitro, improved selectivity, and improved solubility.

Accordingly, the present invention provides compounds of formula I,

where  $R^1$  and  $R^2$  are independently halo or  $C_{1-3}$ haloalkyl,

$X$  is ethenyl or ethynyl,

or a salt thereof,

with the proviso that it is not 1'-(2E)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2H,5H-

5 spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione in racemic form.

One embodiment of the invention relates to a compound of formula I wherein  $R^1$  is halo and  $R^2$  is  $C_{1-3}$ haloalkyl.

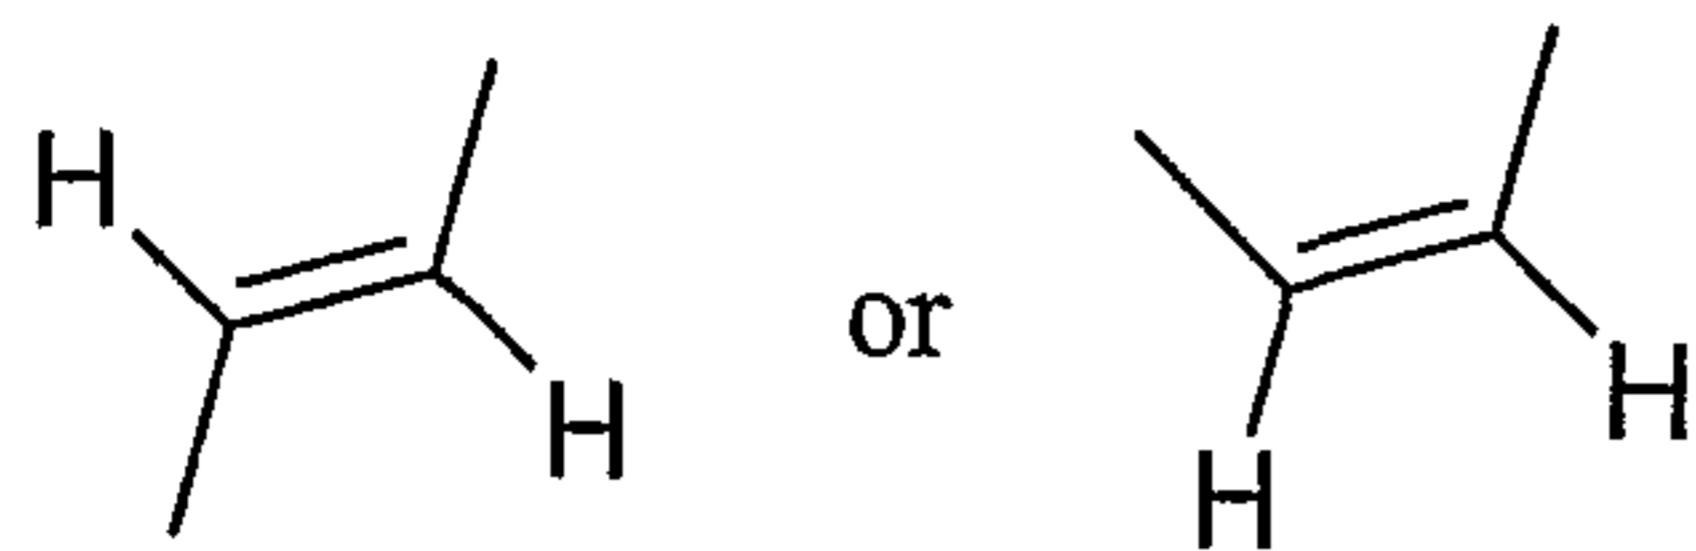

10 Another embodiment of the invention relates to a compound of formula I wherein  $R^1$  is chloro or fluoro and  $R^2$  is  $C_{1-3}$ chloroalkyl or  $C_{1-3}$ fluoroalkyl.

A further embodiment of the invention relates to a compound of formula I wherein  $R^1$  is chloro.

15

One embodiment of the invention relates to a compound of formula I wherein  $R^1$  and  $R^2$  are chloro.

Another embodiment of the invention relates to a compound of formula I wherein  
20  $X$  is

A further embodiment of the invention relates to a compound of formula I wherein X is ethynyl.

5

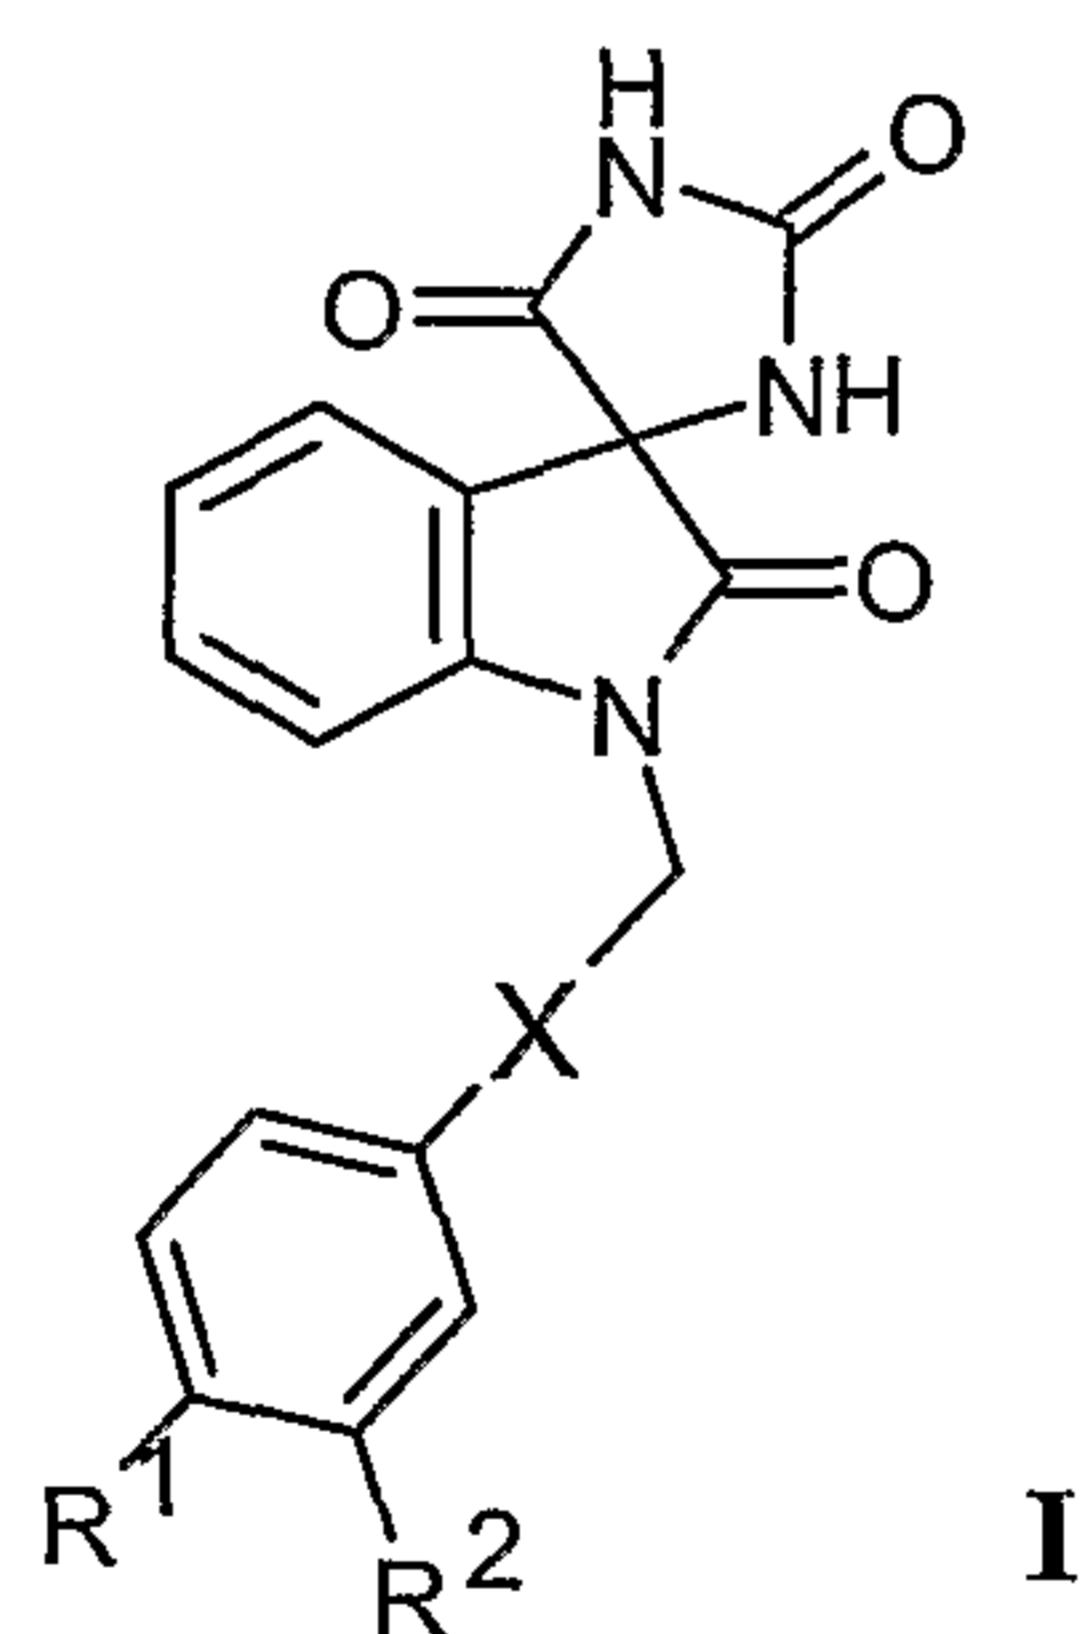

One embodiment of the invention relates to a compound of formula I selected from the group consisting of

1'-[*(2E*)-3-(3-chloro-4-trifluorophenyl)prop-2-en-1-yl]-2*H*,5*H*-spiro[imidazolidine-4,3'-indole]-2,2',5(1'*H*)-trione and

10 1'-[3-(3,4-dichlorophenyl)prop-2-yn-1-yl]-2*H*,5*H*-spiro[imidazolidine-4,3'-indole]-2,2',5(1'*H*)-trione.

Another embodiment of the invention relates to a compound of formula I for use as a medicament, with the proviso that the compound is not 1'-[*(2E*)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2*H*,5*H*-spiro[imidazolidine-4,3'-indole]-2,2',5(1'*H*)-trione in racemic form.

15 A further embodiment of the invention relates to a compound of formula I

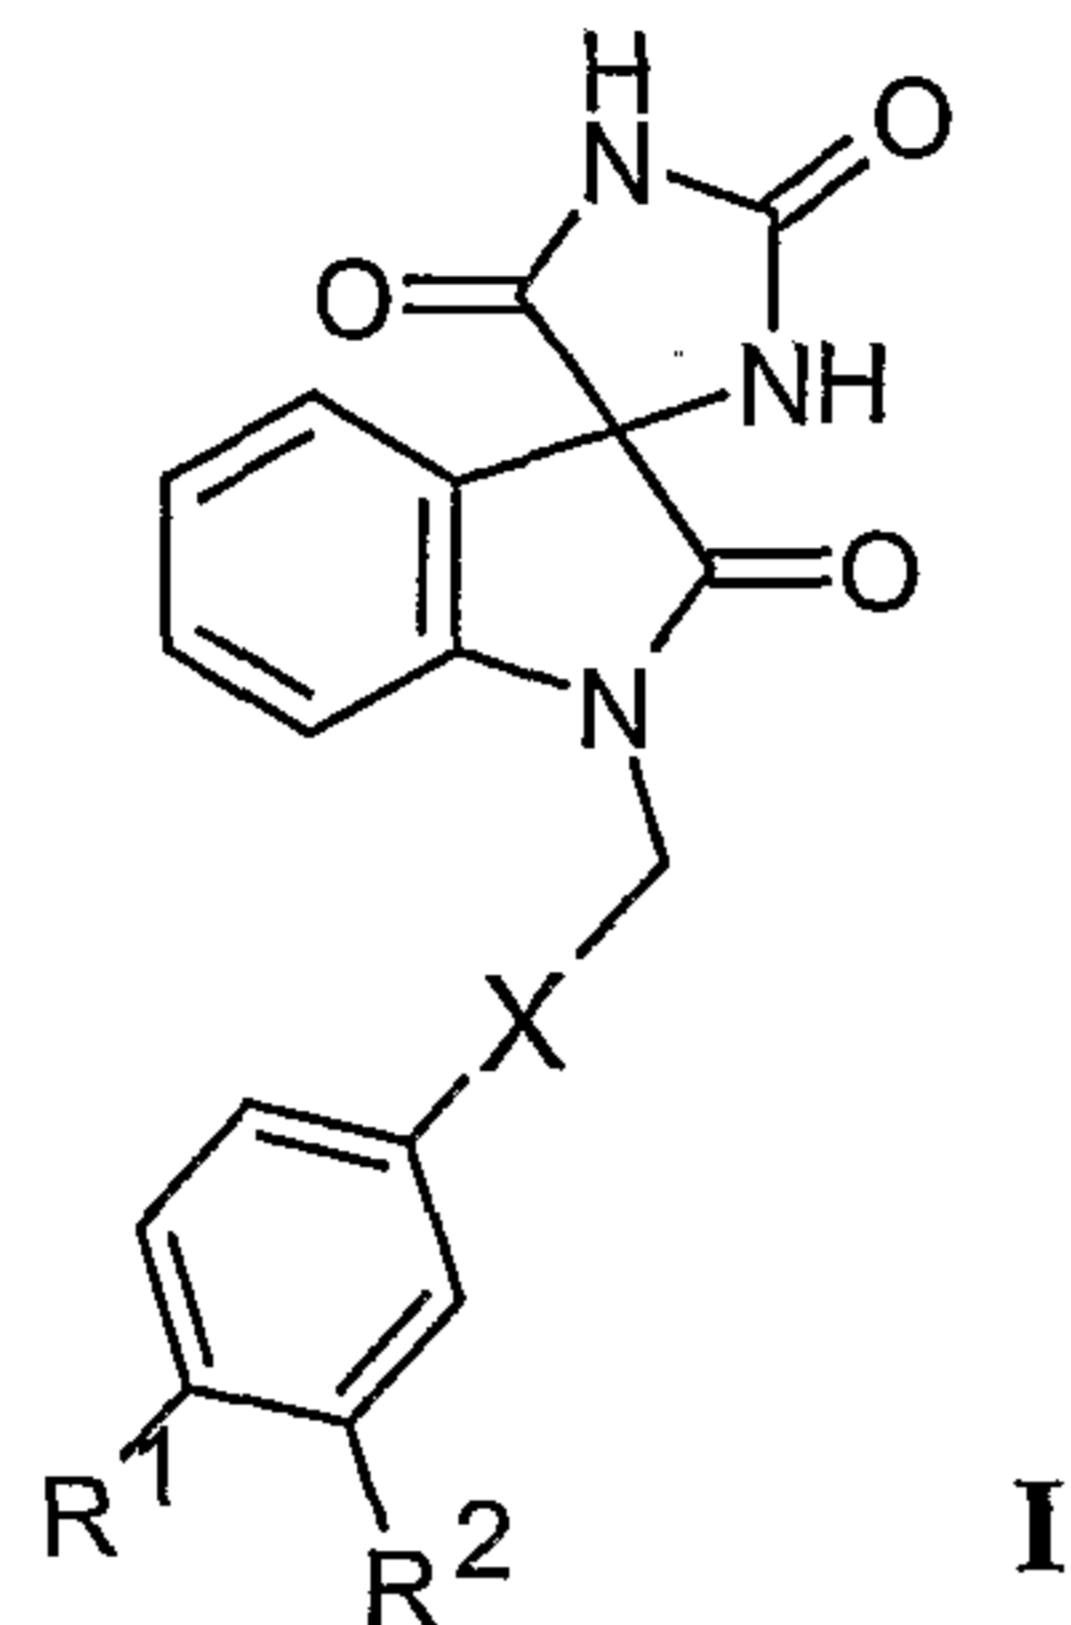

where R<sup>1</sup> and R<sup>2</sup> are independently halo or C<sub>1-3</sub>haloalkyl,

X is ethenyl or ethynyl,

20 or a salt thereof,

for use as a medicament for treatment of VR1 mediated disorders.

One embodiment of the invention relates to use of a compound having the formula I

where R<sup>1</sup> and R<sup>2</sup> are independently halo or C<sub>1-3</sub>haloalkyl,

5 X is ethenyl or ethynyl,

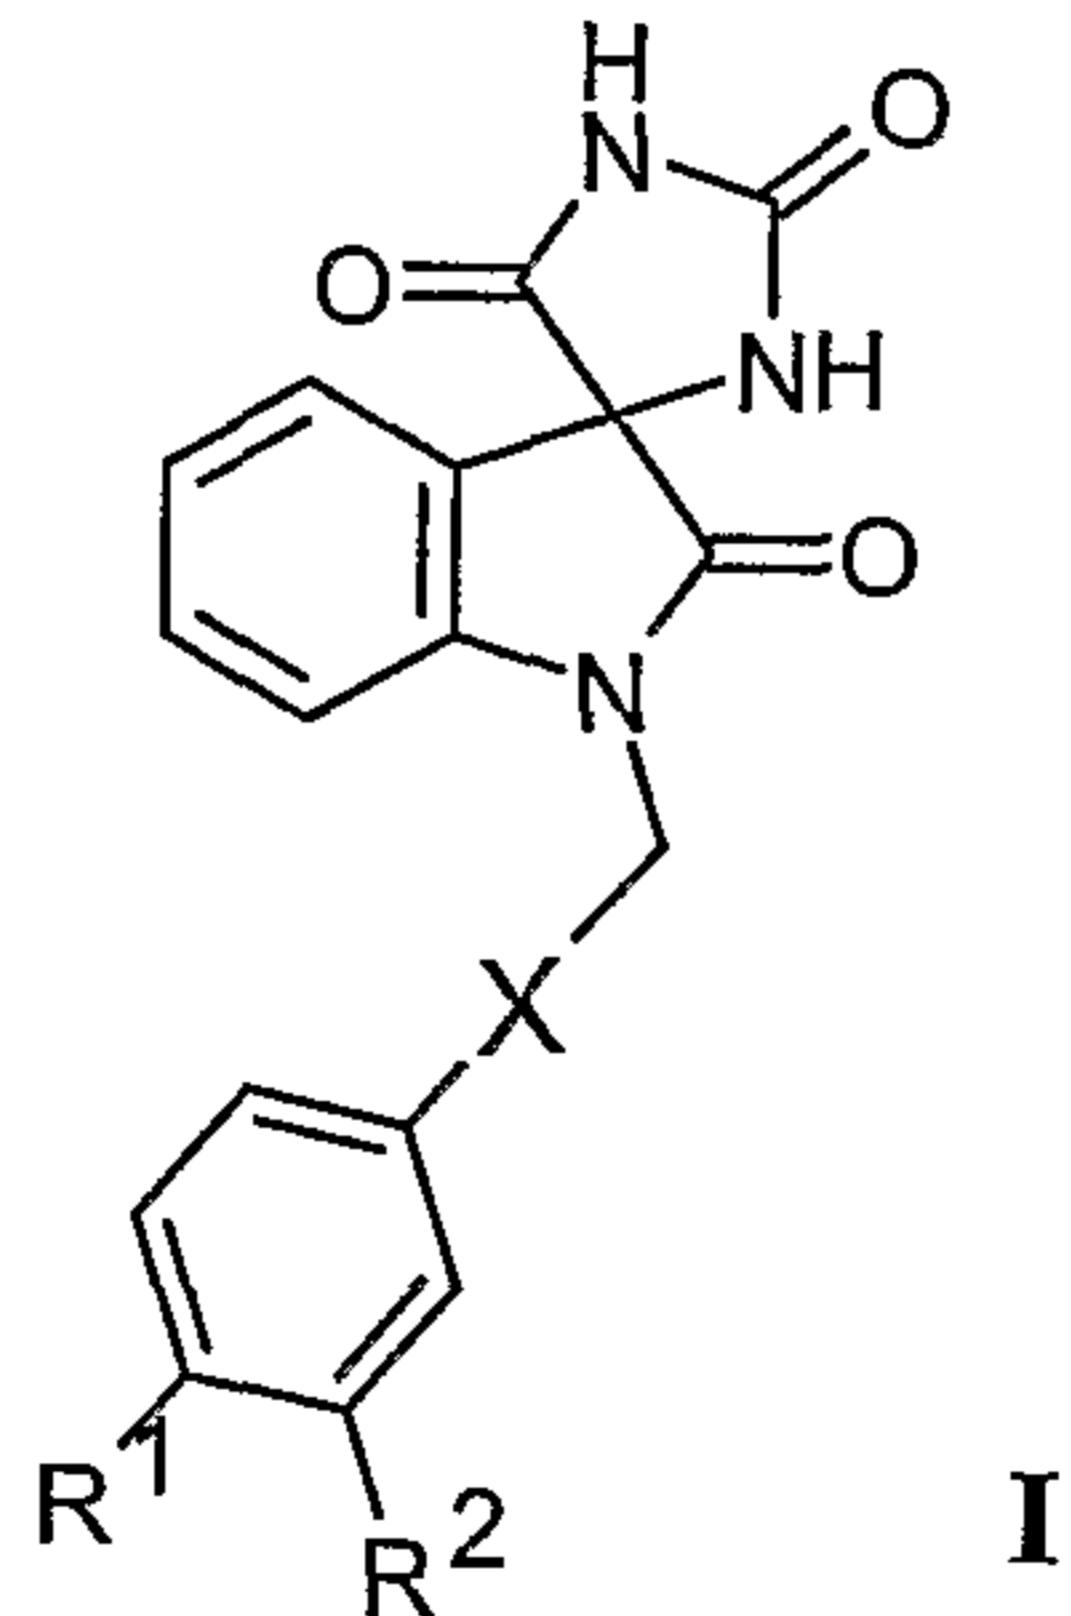

or a salt thereof,

in the manufacture of a medicament,

with the proviso that the compound is not 1'-(2E)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione in racemic form; in one

10 embodiment this use is for treatment of VR1 mediated disorders.

Another embodiment of the invention relates to use of a compound having the formula I

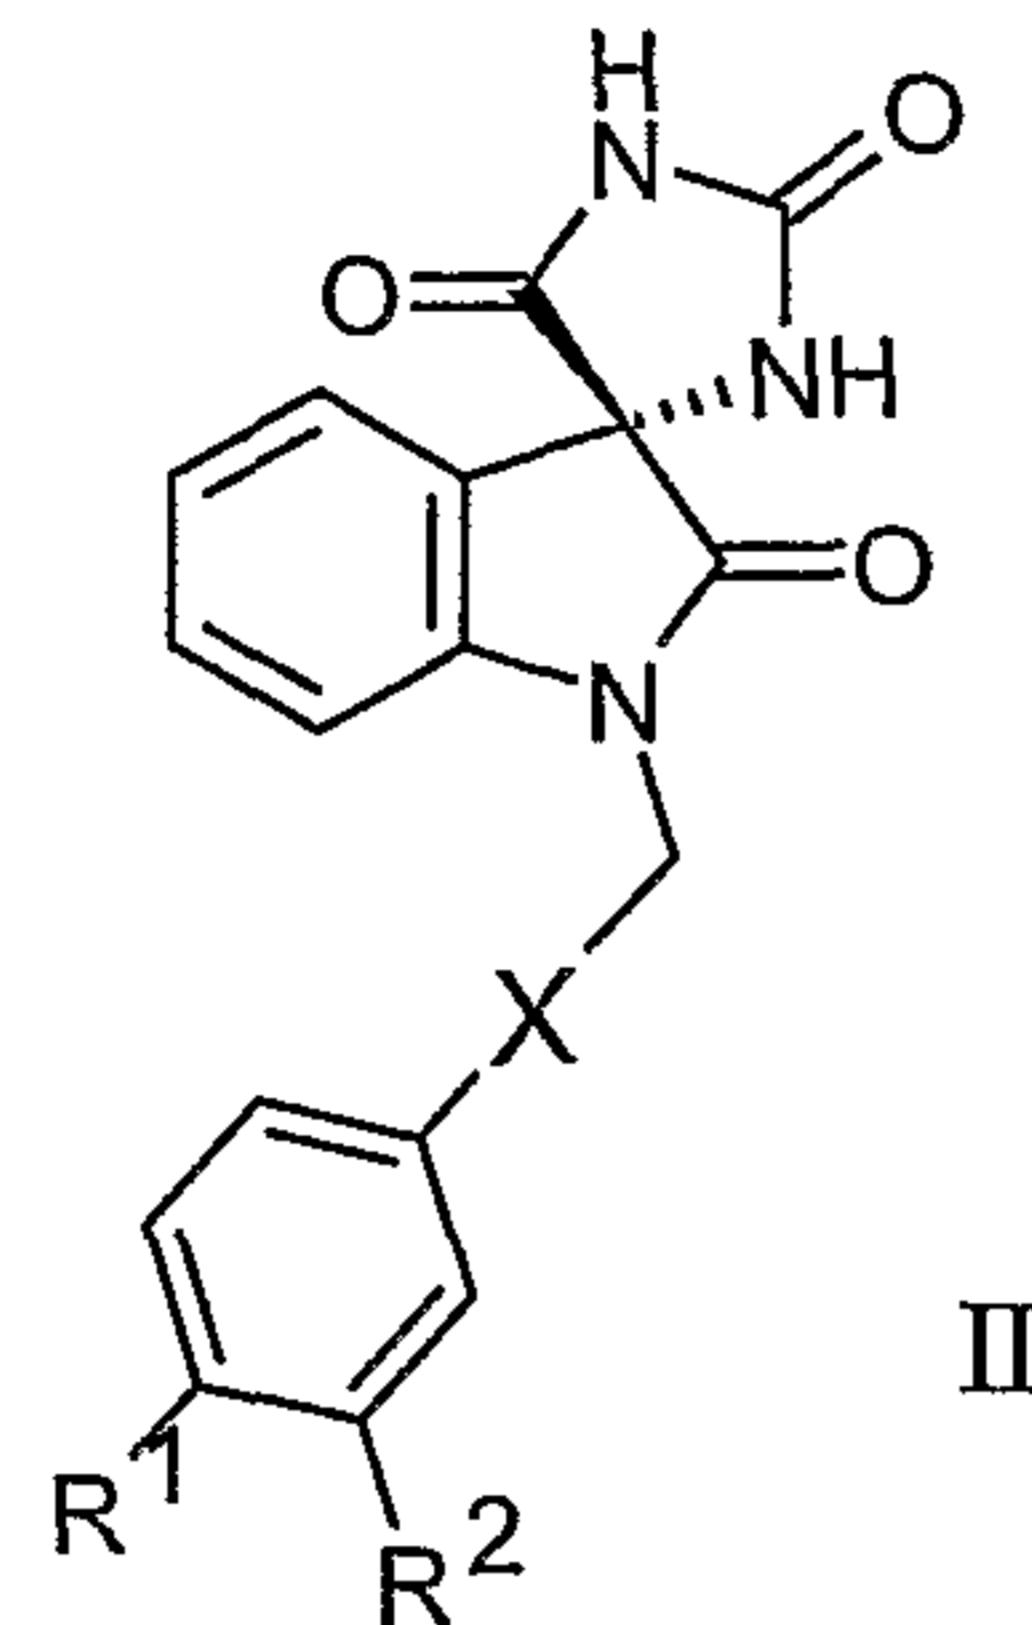

where R<sup>1</sup> and R<sup>2</sup> are independently halo or C<sub>1-3</sub>haloalkyl,

X is ethenyl or ethynyl,

15 or a salt thereof,

in the manufacture of a medicament for treatment of VR1 mediated disorders.

The present invention also provides a substantially pure single enantiomer having the formula II:

5 where  $R^1$  and  $R^2$  are independently halo or  $C_{1-3}$ haloalkyl,  
 X is ethenyl or ethynyl,  
 or a salt thereof.

One embodiment of the invention relates to an enantiomer of formula II wherein  $R^1$  is halo  
 10 and  $R^2$  is  $C_{1-3}$ haloalkyl.

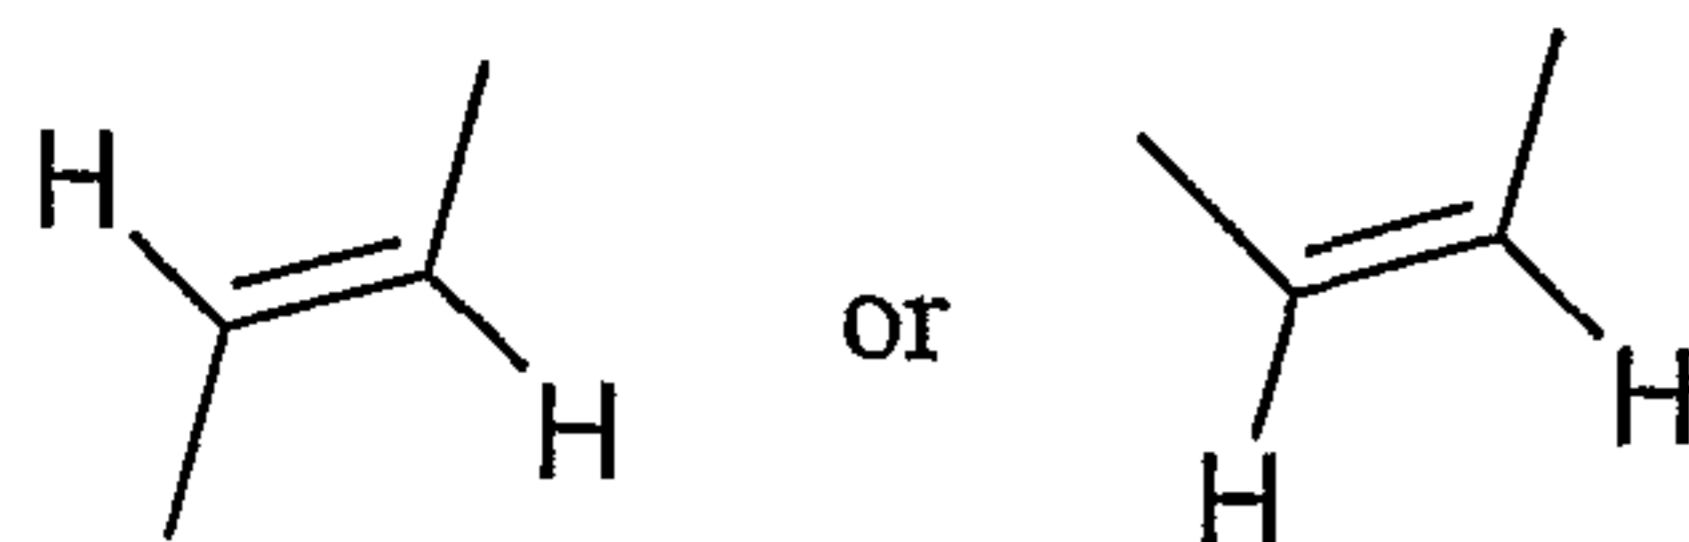

Another embodiment of the invention relates to an enantiomer of formula II wherein  $R^1$  is  
 chloro or fluoro and  $R^2$  is  $C_{1-3}$ chloroalkyl or  $C_{1-3}$ fluoroalkyl.

15 A further embodiment of the invention relates to an enantiomer of formula II wherein  $R^1$  is  
 chloro.

One embodiment of the invention relates to an enantiomer of formula II wherein  $R^1$  and  $R^2$   
 are chloro.

20

Another embodiment of the invention relates to an enantiomer of formula II wherein X is

A further embodiment of the invention relates to an enantiomer of formula II wherein X is ethynyl.

5

One embodiment of the invention relates to an enantiomer of formula II selected from the group consisting of

(4R)-1'-(2E)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione,

10 (4R)-1'-(2E)-3-(3-chloro-4-trifluorophenyl)prop-2-en-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione, and

(4R)-1'-(3-(3,4-dichlorophenyl)prop-2-yn-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione.

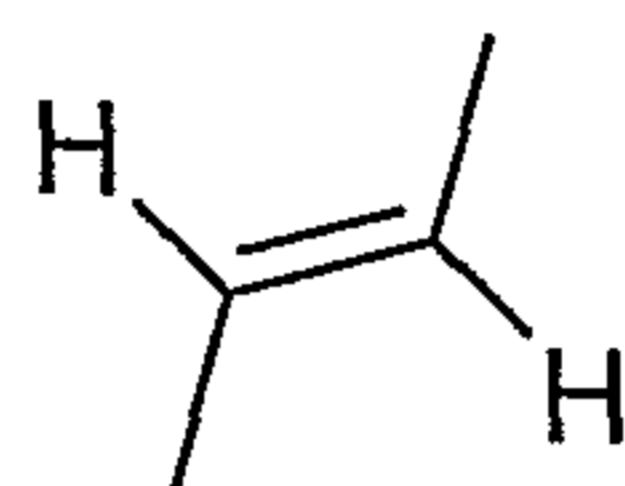

15 Listed below are definitions of various terms used in the specification and claims to describe the present invention.

For the avoidance of doubt it is to be understood that where in this specification a group is qualified by 'hereinbefore defined', 'defined hereinbefore' or 'defined above' the said 20 group encompasses the first occurring and broadest definition as well as each and all of the other definitions for that group.

Unless specified otherwise within this specification, the nomenclature used in this specification generally follows the examples and rules stated in *Nomenclature of Organic Chemistry, Sections A, B, C, D, E, F, and H*, Pergamon Press, Oxford, 1979, which is incorporated by references herein for its exemplary chemical structure names and rules on naming chemical structures.

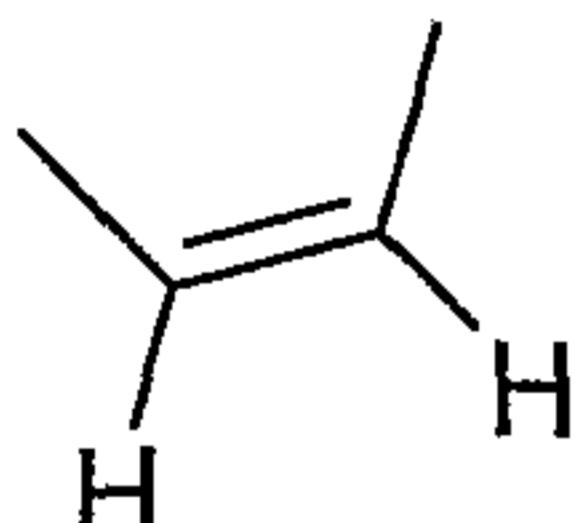

For the avoidance of doubt it is to be understood that in this specification "C<sub>1-3</sub>" means a carbon group having 1, 2, or 3 carbon atoms.

In this specification, unless stated otherwise, the term "alkyl" includes both straight and  
5 branched chain alkyl groups and may be, but are not limited to methyl, ethyl, n-propyl, i-  
propyl, n-butyl, i-butyl, s-butyl, t-butyl, n-pentyl, i-pentyl, t-pentyl, neo-pentyl, n-hexyl or  
i-hexyl, t-hexyl.

As depicted in this specification,

represents a trans-ethenyl group and

10 represents a cis-ethenyl group.

In this specification, unless stated otherwise, the term "halo" and "halogen" may be fluoro, iodo, chloro or bromo.

15 The term "haloalkyl" denotes an alkyl group wherein the alkyl is substituted with halogen ranging from one to fully substituted, wherein a fully substituted haloalkyl can be represented by the formula C<sub>h</sub>L<sub>2h+1</sub> wherein L is a halogen and "h" represents the number of carbon atoms; when more than one halogen is present then the halogens may be the same or different and selected from the group consisting of F, Cl, Br and I; it is understood that  
20 the terms "alkyl" and "halogen" have the same definition as found herein. In some embodiments, haloalkyl is a "C<sub>1-3</sub> haloalkyl" and the group contains 1 to 3 carbons, some embodiments contain 1 to 2 carbons, and some embodiments contain 1 carbon. When the haloalkyl is fully substituted with halogen atoms, this group is referred herein as a perhaloalkyl; one example is an alkyl fully substituted with fluorine atoms and is referred to  
25 herein as a "perfluoroalkyl." In some embodiments, examples of a haloalkyl include, but is not limited to, difluoromethyl, fluoromethyl, 2,2,2-trifluoroethyl, 2,2-difluoroethyl, 2-fluoroethyl, 1,2,2-trifluoroethyl, 1,2-difluoroethyl, 1,1-difluoroethyl, 1,1,2-trifluoroethyl, 3,3,3-trifluoropropyl, 2,2-difluoropropyl, 3,3-difluoropropyl, 3-fluoropropyl, 2,3,3-

trifluoropropyl, 2,3-difluoropropyl, 2,2,3,3,3-pentafluoropropyl, 2,2,3,3-tetrafluoropropyl, 2,2,3-trifluoropropyl, 1,2,3,3-tetrafluoropropyl, 1,2,3-trifluoropropyl, 3,3-difluoropropyl, 1,2,2,3-tetrafluoropropyl, 4,4-difluorobutyl, 3,3-difluorobutyl, 4,4,4-trifluorobutyl, 3,3-difluorobutyl, and the like. In some embodiments, examples of a perfluoroalkyl include,

5 but not limited to, trifluoromethyl, pentafluoroethyl, heptafluoropropyl, 1,2,2,2-tetrafluoro-1-trifluoromethyl-ethyl, and the like. In one embodiment the term “C<sub>1-3</sub>haloalkyl” may include, but is not limited to fluoromethyl, difluoromethyl, trifluoromethyl, fluoroethyl, difluoroethyl or bromopropyl.

10 The present invention relates to the compounds of formula I and the enantiomers of formula II as hereinbefore defined as well as to the salts thereof. Salts for use in pharmaceutical formulations will be pharmaceutically acceptable salts, but other salts may be useful in the production of the compounds of formula I and/or the enantiomers of formula II.

15 A suitable pharmaceutically acceptable salt of the compounds and enantiomers of the invention is, for example, an acid or base addition salt, for example a salt with an inorganic or organic base or acid. In addition, a suitable pharmaceutically acceptable salt of the compounds and enantiomers of the invention is an alkali metal salt, an alkaline earth metal salt or a salt with an organic base.

20 Other pharmaceutically acceptable salts and methods of preparing these salts may be found in, for example, Remington’s Pharmaceutical Sciences (18<sup>th</sup> Edition, Mack Publishing Co.).

25 The invention also relates to any and all tautomeric forms of the compounds of formula I and the enantiomers of formula II.

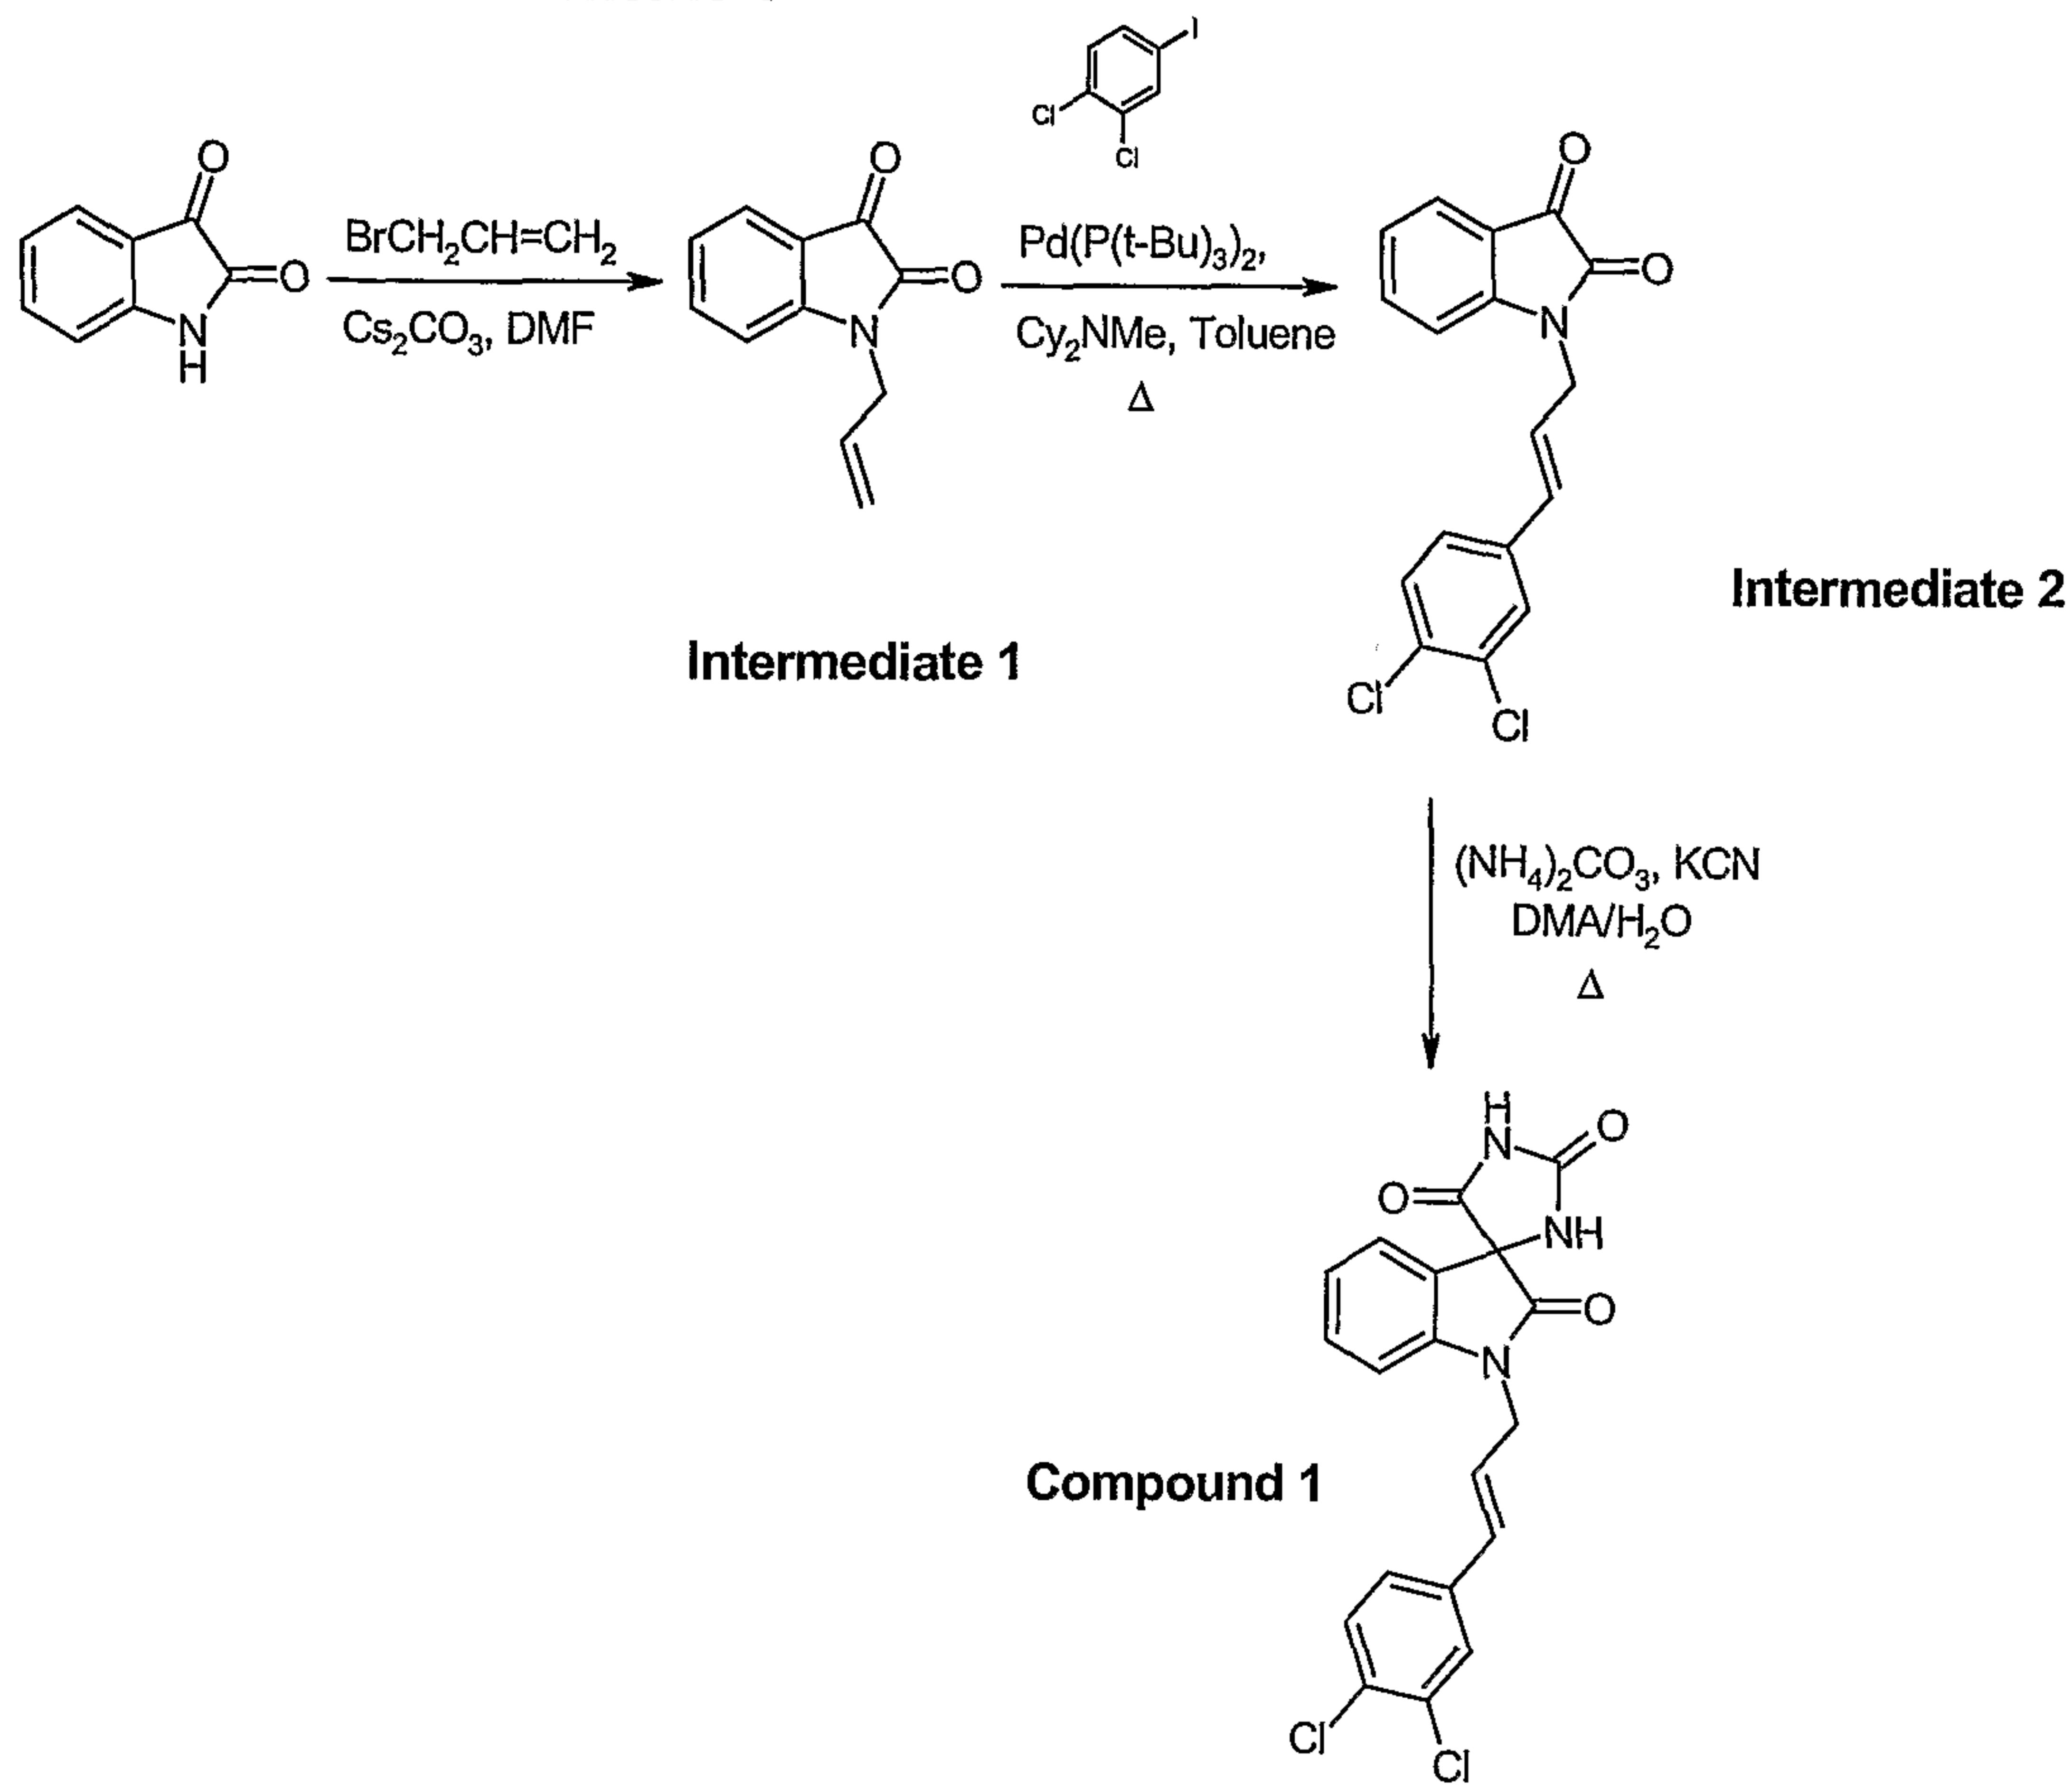

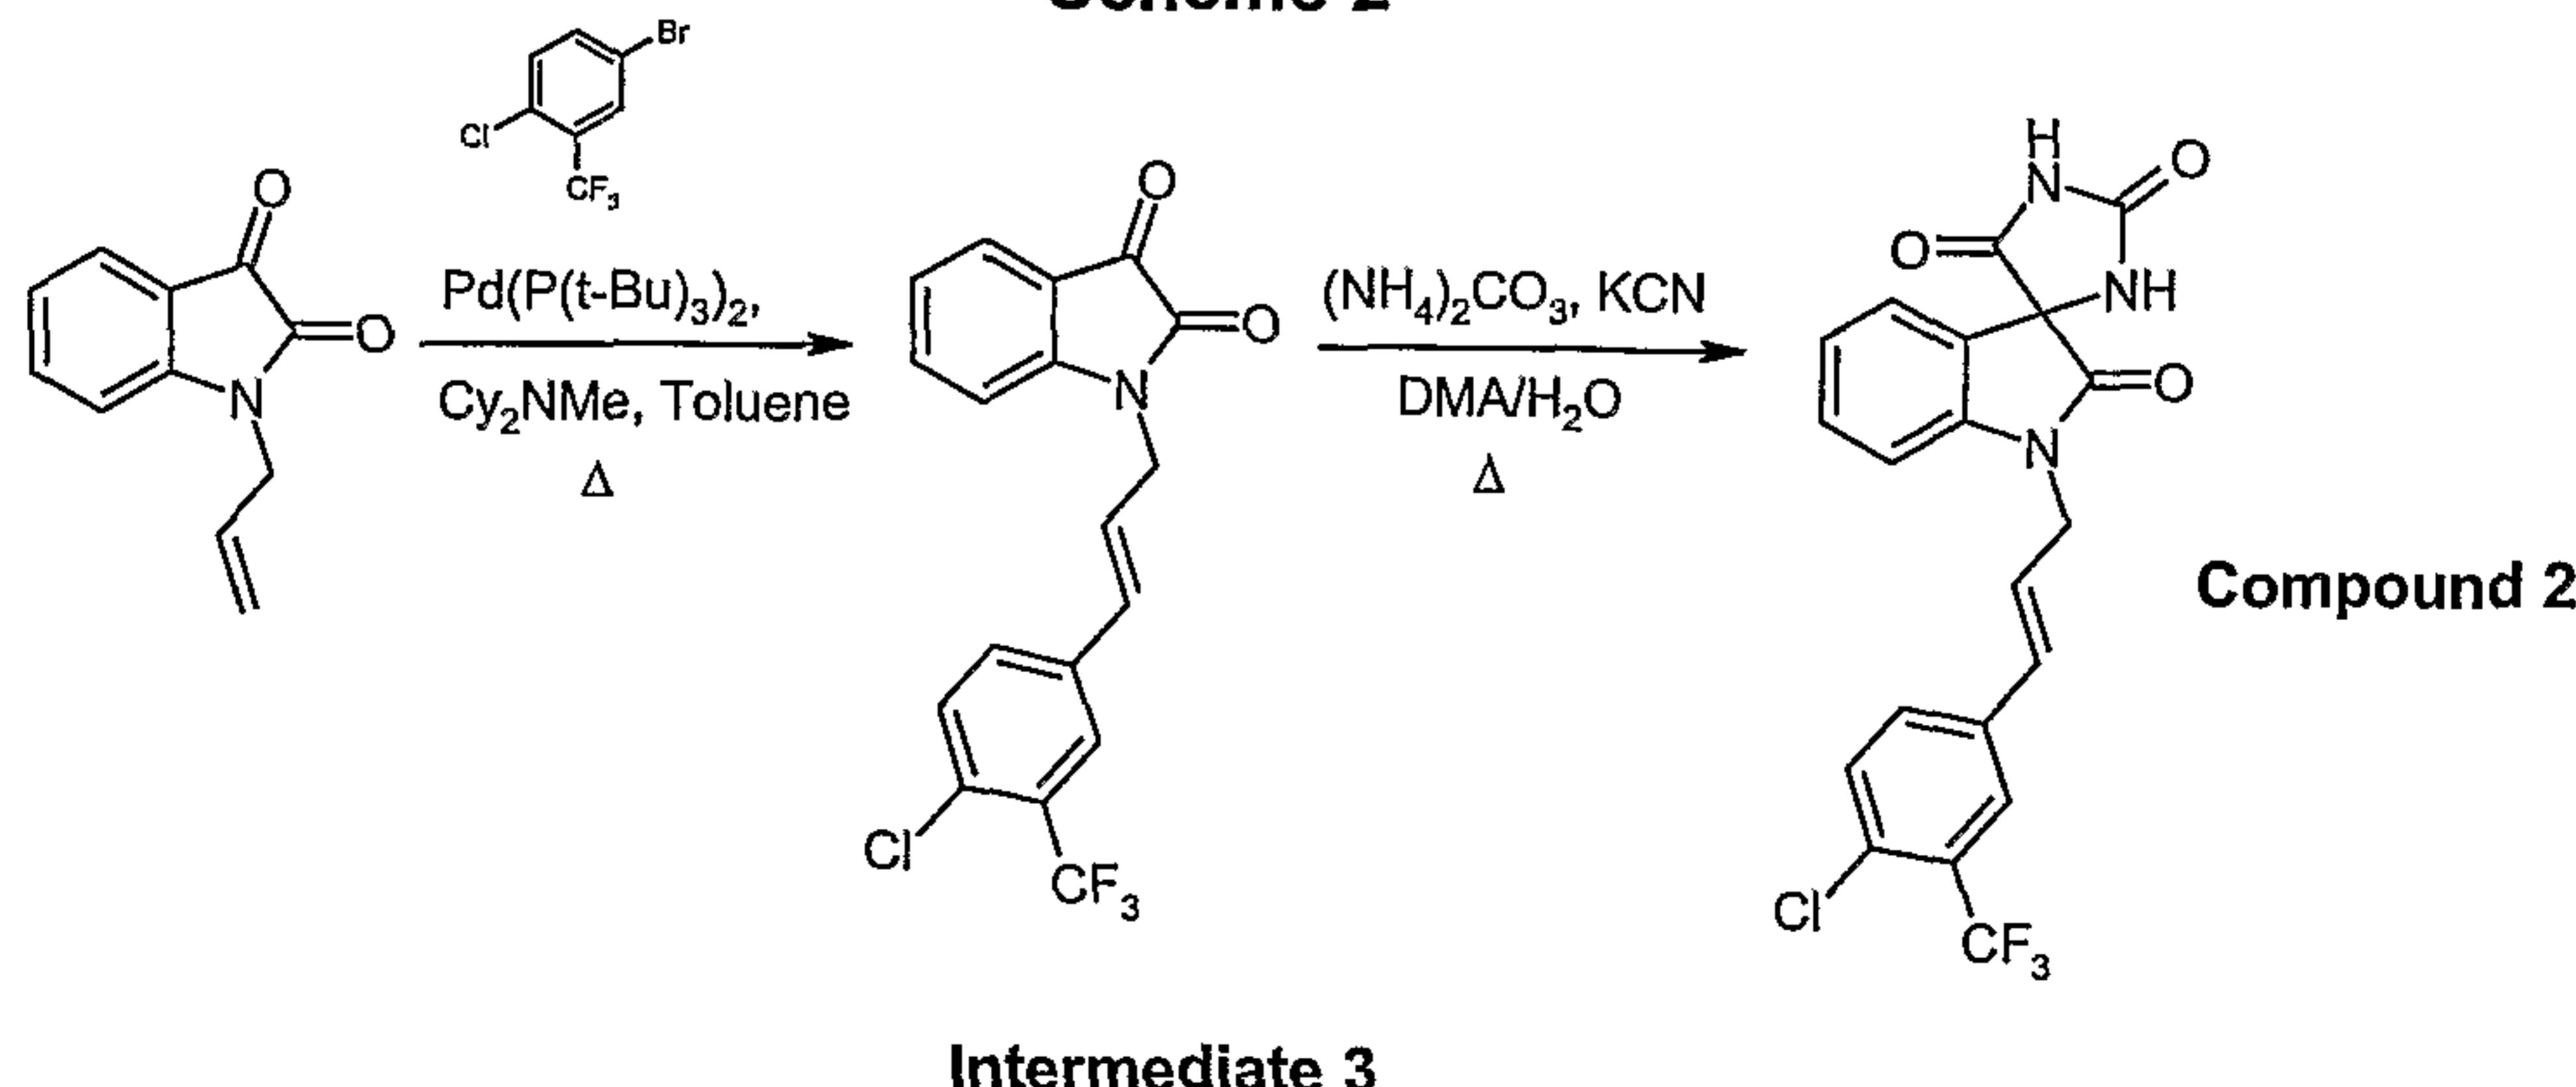

### Methods of Preparation

The present invention provides processes for preparing compounds and enantiomers of formula I and II, or salts thereof.

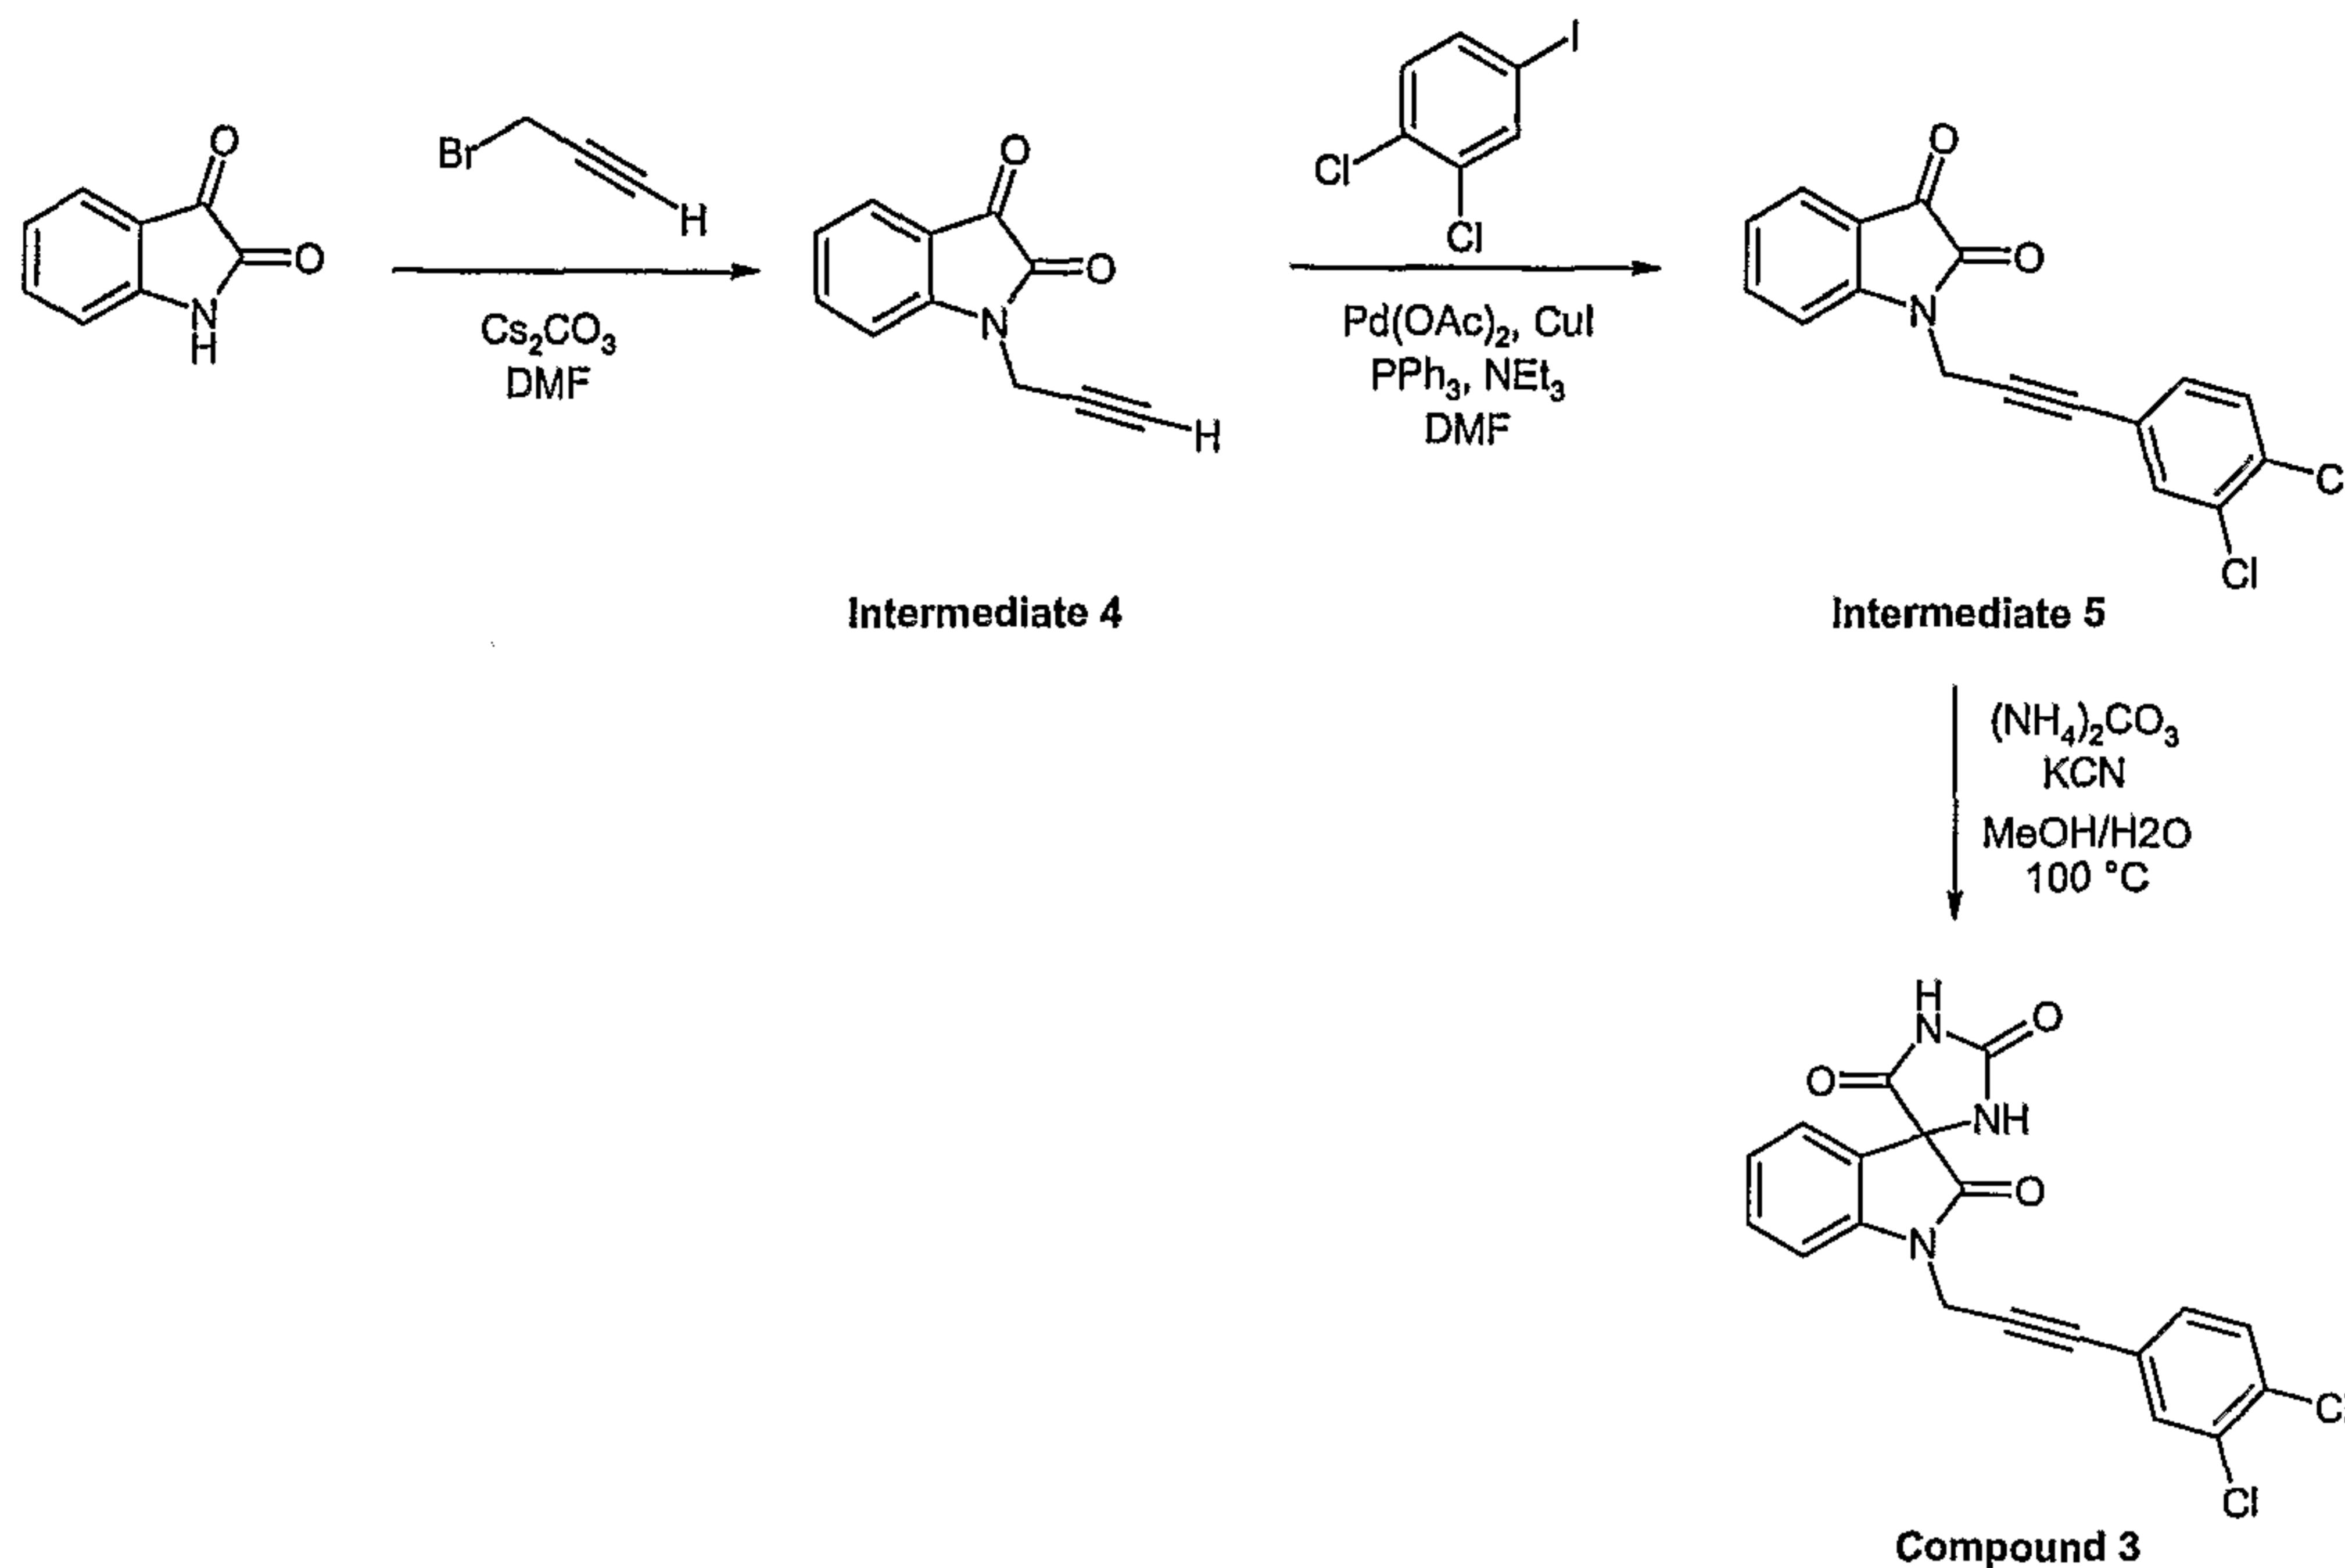

Throughout the following description of such processes it is to be understood that, 5 where appropriate, suitable protecting groups will be added to, and subsequently removed from, the various reactants and intermediates in a manner that will be readily understood by one skilled in the art of organic synthesis. Conventional procedures for using such protecting groups as well as examples of suitable protecting groups are described, for example, in "Protective Groups in Organic Synthesis", T.W. Green, P.G.M. Wuts, Wiley-Interscience, New York, (1999). References and descriptions of other suitable reactions are 10 described in textbooks of organic chemistry, for example, "Advanced Organic Chemistry", March, 4<sup>th</sup> ed. McGraw Hill (1992) or, "Organic Synthesis", Smith, McGraw Hill, (1994). For representative examples of heterocyclic chemistry see for example "Heterocyclic Chemistry", J. A. Joule, K. Mills, G. F. Smith, 3<sup>rd</sup> ed. Chapman and Hall (1995), p. 189- 15 224 and "Heterocyclic Chemistry", T. L. Gilchrist, 2<sup>nd</sup> ed. Longman Scientific and Technical (1992), p. 248-282.

The term "room temperature" and "ambient temperature" shall mean, unless otherwise specified, a temperature between 16 and 25 °C

The term "elevated temperature" shall mean, unless otherwise specified, a temperature 20 between 50 and 150 °C.

**Schemes****Scheme 1****Scheme 2**

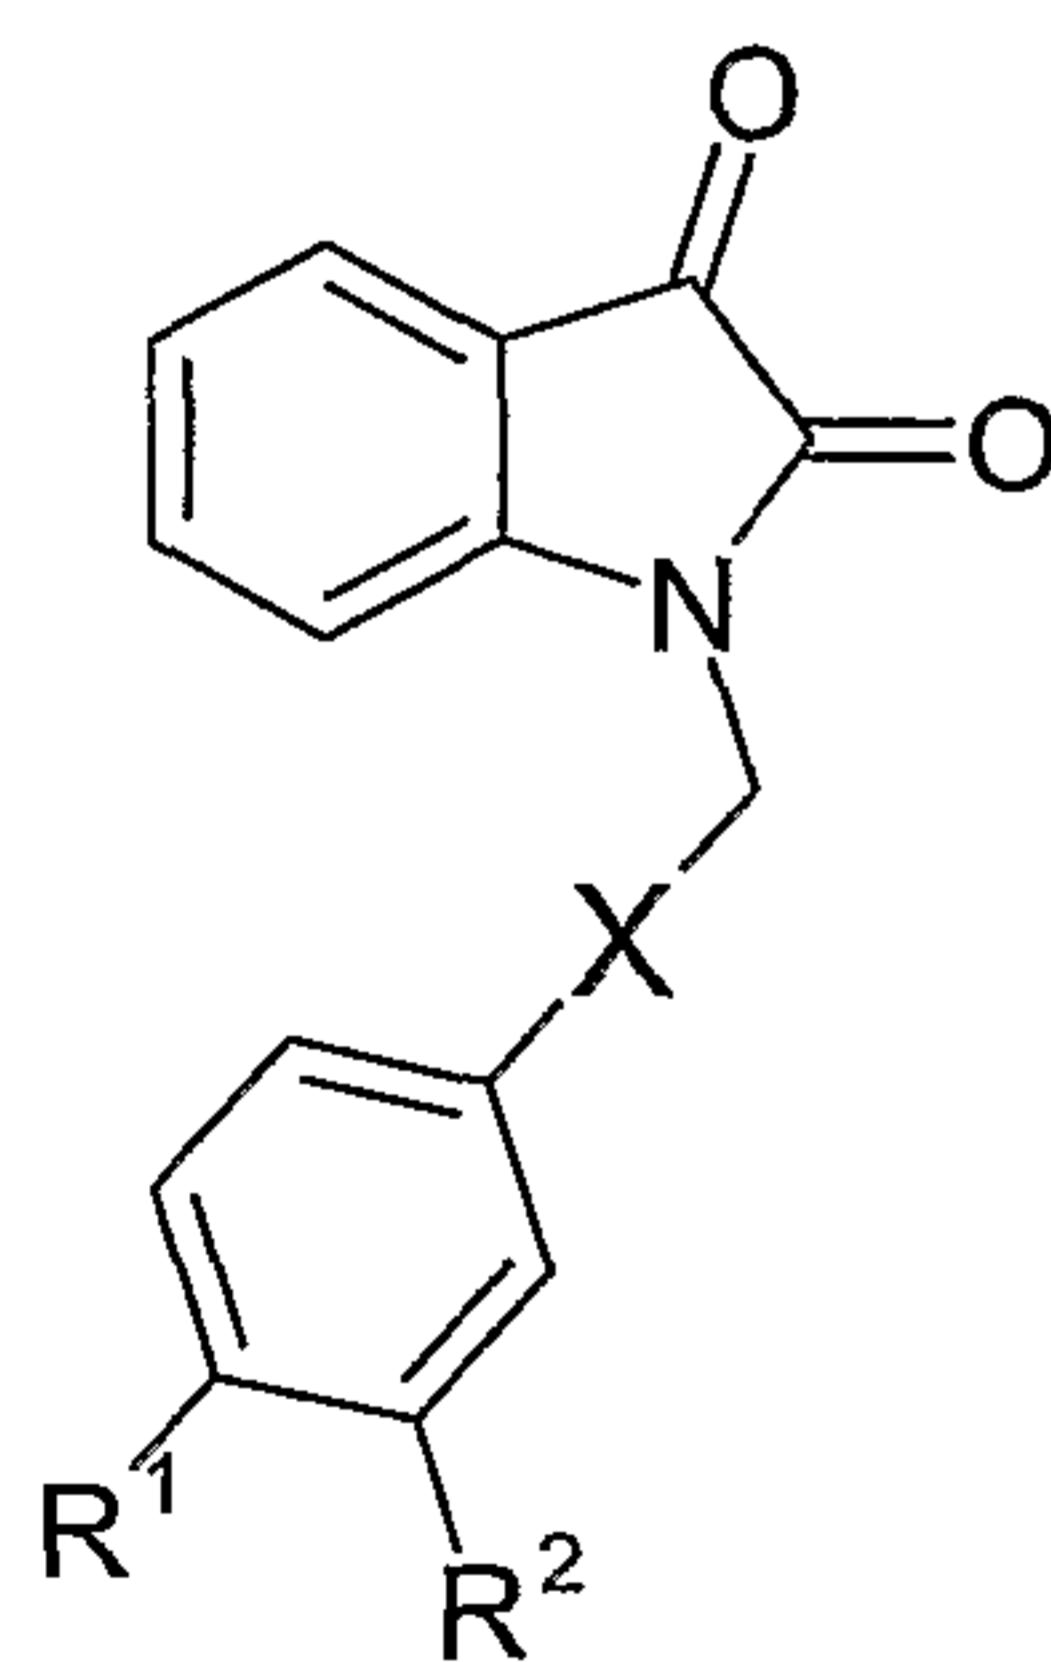

Scheme 3

One embodiment of the invention relates to a process for the preparation of compounds of formula I, wherein R<sup>1</sup>, R<sup>2</sup> and X are as defined as hereinabove, comprising:

5

Reaction of an optionally protected compound of formula III

III

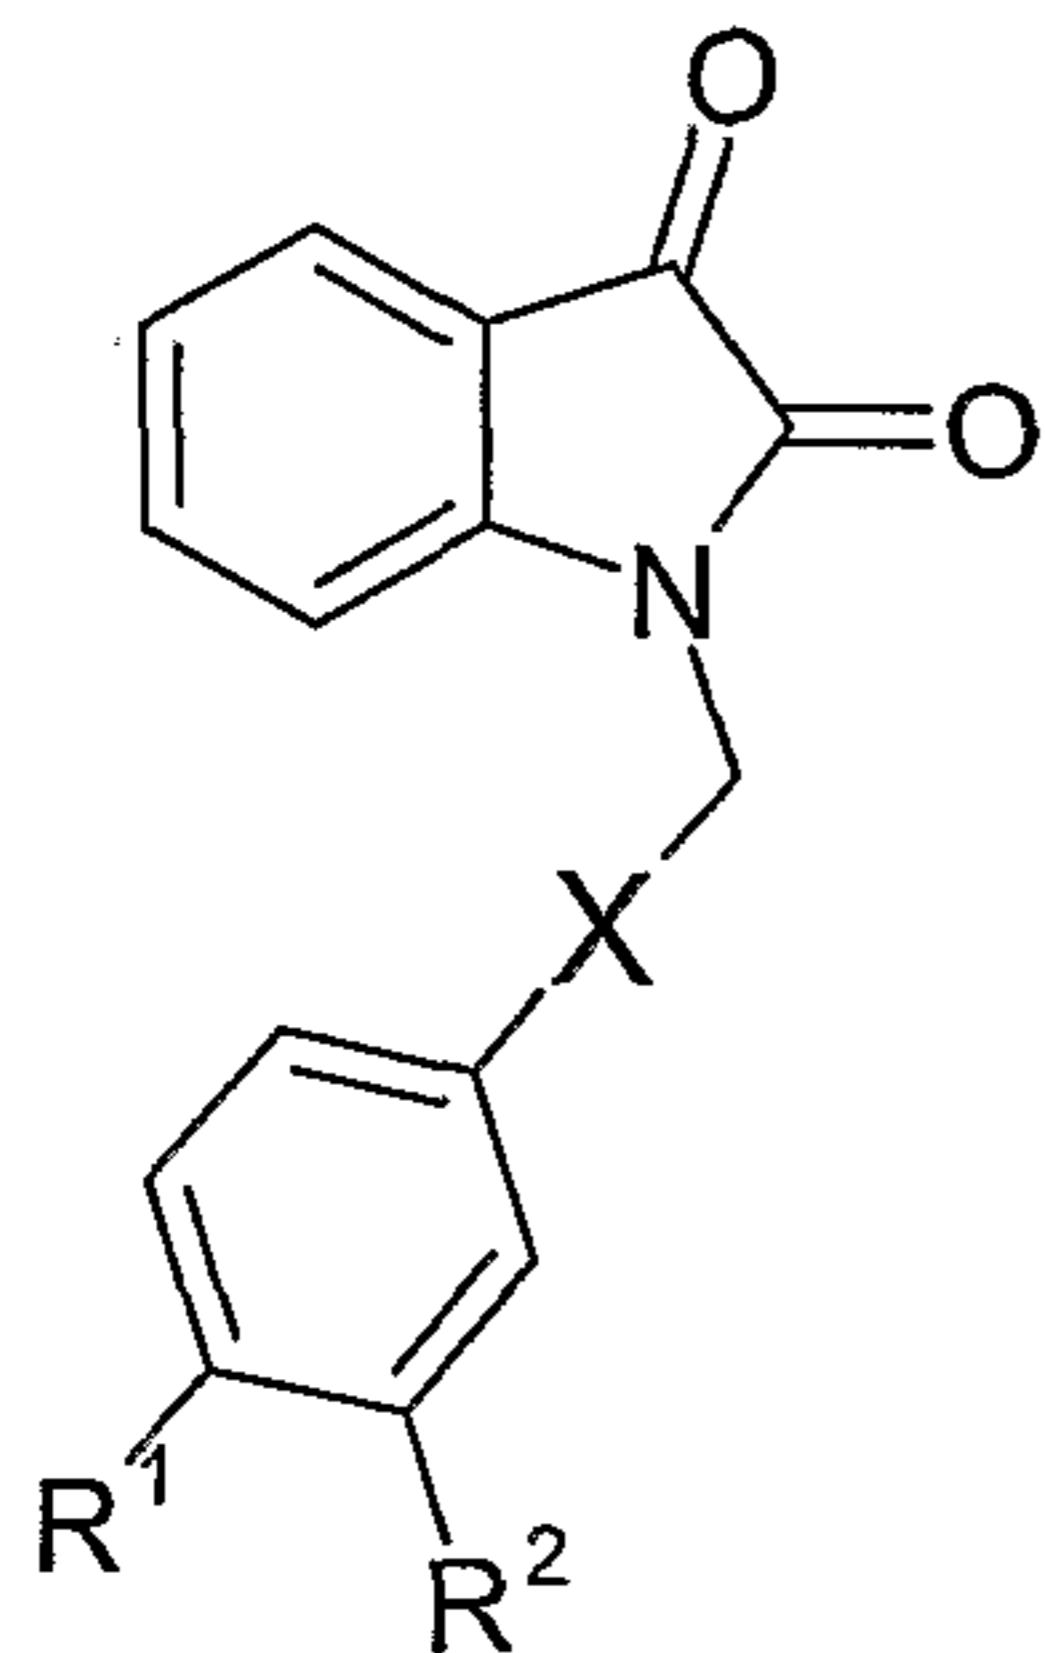

10 i) with KCN and (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> in at elevated temperature in a suitable solvent, and thereafter optionally:

ii) converting the compound of the formula I into another compound of the formula I; and/or

- iii) removing any protecting groups; and/or
- iv) forming a pharmaceutically acceptable salt.

One embodiment of the invention relates to a process for the preparation of an enantiomer  
5 of formula II, wherein R<sup>1</sup>, R<sup>2</sup> and X are as defined as hereinabove, comprising:

Reaction of an optionally protected compound of formula III

10 III

- i) with KCN and (NH4)<sub>2</sub>CO<sub>3</sub> in elevated temperature in a suitable solvent, and thereafter separation of said enantiomer from the racemic mixture by supercritical fluid chromatography.

15 **Intermediates**

A further embodiment of the invention relates to compounds selected from the group consisting of

1-Allyl-1*H*-indole-2,3-dione

1-[(2*E*)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-1*H*-indole-2,3-dione

20 1-[(2*E*)-3-[4-chloro-3-(trifluoromethyl)phenyl]prop-2-en-1-yl]-1*H*-indole-2,3-dione

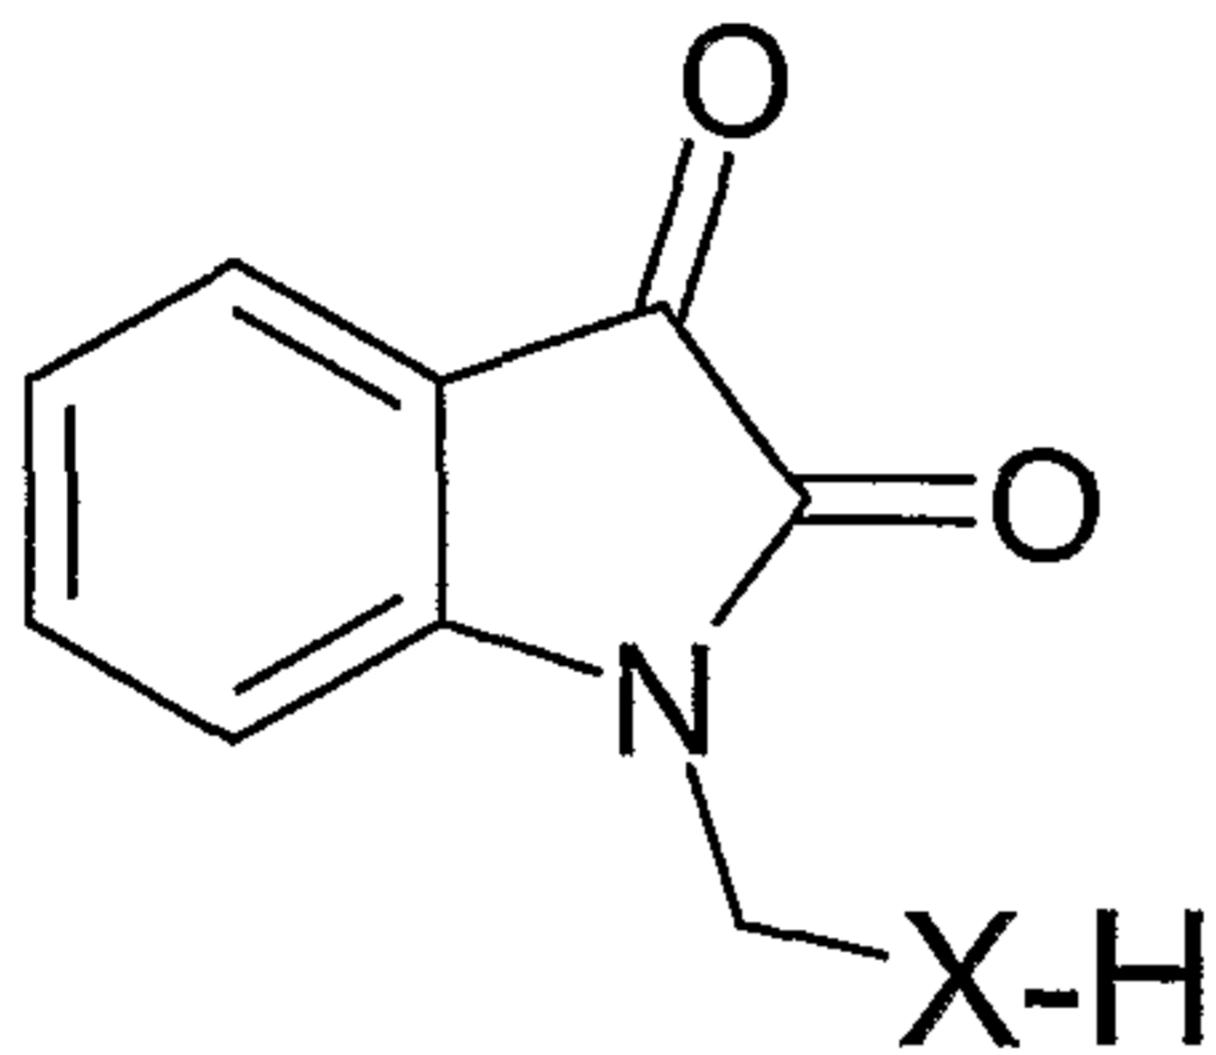

1-prop-2-yn-1-yl-1*H*-indole-2,3-dione

1-[3-(3,4-dichlorophenyl)prop-2-yn-1-yl]-1*H*-indole-2,3-dione

which may be used as intermediates in the preparation of compounds suited for the treatment of VR1 mediated disorders, especially for use as intermediates for the preparation of compounds of formula I and/or enantiomers of formula II.

5 One embodiment of the invention relates to a process for the preparation of intermediates of formula III, wherein  $R^1$ ,  $R^2$  and X are as defined as hereinabove, comprising:

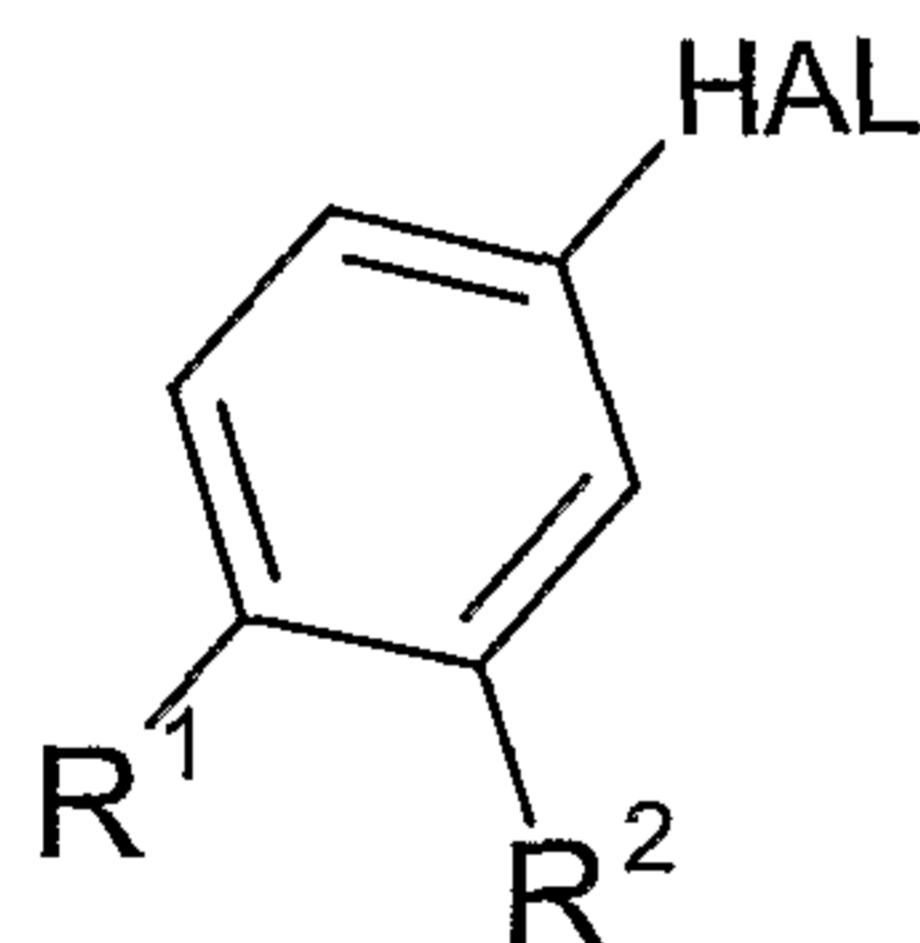

Reaction of an optionally protected compound of formula IV

10

IV

with

15

where HAL is an halogen atom, in the presence of a suitable palladium catalyst, such as  $Pd(P(t-Bu)_3)_2$  or  $Pd(OAc)_2$ , in a suitable solvent, and thereafter optionally:

ii) converting the intermediate of formula III into another intermediate of formula III;  
20 and/or  
iii) removing any protecting groups.

**Pharmaceutical composition**

According to one embodiment of the present invention there is provided a pharmaceutical composition comprising as active ingredient a therapeutically effective amount of the compound of formula I and/or the enantiomer of formula II, or salts thereof, in association with one or more pharmaceutically acceptable diluents, excipients and/or inert carriers.

The composition may be in a form suitable for oral administration, for example as a tablet, pill, syrup, powder, granule or capsule, for parenteral injection (including intravenous, subcutaneous, intramuscular, intravascular or infusion) as a sterile solution, suspension or emulsion, for topical administration e.g. as an ointment, patch or cream, for rectal administration e.g. as a suppository or for inhalation.

In general the above compositions may be prepared in a conventional manner using one or more conventional excipients, pharmaceutical acceptable diluents and/or inert carriers.

Suitable daily doses of the compounds of formula I and/or the enantiomer of formula II in the treatment of a mammal, including man, are approximately 0.01 to 250 mg/kg body-weight at peroral administration and about 0.001 to 250 mg/kg bodyweight at parenteral administration.

The typical daily dose of the active ingredient varies within a wide range and will depend on various factors such as the relevant indication, severity of the illness being treated, the route of administration, the age, weight and sex of the patient and the particular compound being used, and may be determined by a physician.

**Medical use**

The compounds according to the present invention are useful in therapy. The compounds and enantiomers of the invention, or salts thereof, as well as their corresponding active metabolites, exhibit a high degree of potency and selectivity for individual vanilloid receptor 1 (VR1) groups. Accordingly, the compounds of the present invention are expected

to be useful in the treatment of conditions associated with excitatory activation of vanilloid receptor 1 (VR1).

5 The compounds may be used to produce an inhibitory effect of VR1 in mammals, including man.

VR1 are highly expressed in the peripheral nervous system and in other tissues. Thus, it is expected that the compounds and enantiomers of the invention are well suited for the treatment of VR1 mediated disorders.

10

The compounds and enantiomers of the invention are expected to be suitable for the treatment of acute and chronic pain, acute and chronic neuropathic pain and acute and chronic inflammatory pain.

15

Examples of such disorder may be selected from the group comprising low back pain, post-operative pain, visceral pains like chronic pelvic pain and the like.

The compounds of the invention are also expected to be suitable for the treatment of acute and chronic nociceptive pain.

20

Further relevant disorders may be selected from the group comprising cystitis, including interstitial cystitis and pain related thereto, ischeamic, sciatica, multiple sclerosis, arthritis, osteoarthritis, rheumatoid arthritis, fibromyalgia, pain and other signs and symptoms associated with psoriasis, pain and other signs and symptoms associated with cancer, emesis, 25 urinary incontinence, hyperactive bladder and HIV neuropathy.

Additional relevant disorders may be selected from the group comprising gastro-esophageal reflux disease (GERD), irritable bowel syndrome (IBS), inflammatory bowel disease (IBD) and pancreatitis.

Other relevant disorders are related to respiratory diseases and may be selected from the group comprising asthma, cough, chronic obstructive lung disease, specifically chronic obstructive pulmonary disease (COPD) and emphysema, lung fibrosis and interstitial lung disease.

5

Yet other relevant disorders are obesity and obesity-related diseases or disorders, and migraine.

10 In one embodiment the obesity or obesity-related diseases or disorders is selected from the following: cardiovascular disease, hypertension, cancer and reproductive disorders.

The VR1 inhibitor(s) may be administrated by either an oral or inhaled route. The respiratory disease may be an acute and chronic illness and may be related to infection(s) and/or exposure to environmental pollution and/or irritants.

15

The compounds and enantiomers of the invention may also be used as antitoxin to treat (over-) exposure to VR1 activators like capsaicin, tear gas, acids or heat. Regarding heat, there is a potential use for VR1 antagonists in (sun-) burn induced pain, or inflammatory pain resulting from burn injuries.

20

The compounds may further be used for treatment of tolerance to VR1 activators.

One embodiment of the invention relates to the compounds and enantiomers of the invention as hereinbefore defined, for use as medicaments.

25

Another embodiment of the invention relates to the compounds and enantiomers of the invention as hereinbefore defined, for use as medicaments for treatment of VR1 mediated disorders.

A further embodiment of the invention relates to the compounds and enantiomers of the invention as hereinbefore defined, for use as medicaments for treatment of acute and chronic pain disorders.

5 Another embodiment of the invention relates to the compounds and enantiomers of the invention as hereinbefore defined for use as medicaments for treatment of acute and chronic nociceptive pain.

10 Yet another embodiment of the invention relates to the compounds and enantiomers of the invention as hereinbefore defined, for use as medicaments for treatment of acute and chronic neuropathic pain.

15 Yet a further embodiment of the invention relates to the compounds and enantiomers of the invention as hereinbefore defined, for use as medicaments for treatment of acute and chronic inflammatory pain.

One embodiment of the invention relates to the compounds and enantiomers of the invention as hereinbefore defined, for use as medicaments for treatment of low back pain, post-operative pain and visceral pains like chronic pelvic pain.

20 Another embodiment of the invention relates to the compounds and enantiomers of the invention as hereinbefore defined, for use as medicaments for treatment of cystitis, including interstitial cystitis and pain related thereto, ischaemic, sciatica, multiple sclerosis, arthritis, osteoarthritis, rheumatoid arthritis, fibromyalgia, pain and other signs and symptoms associated with psoriasis, pain and other signs and symptoms associated with cancer, emesis, 25 urinary incontinence, hyperactive bladder and HIV neuropathy.

A further embodiment of the invention relates to the compounds and enantiomers of the invention as hereinbefore defined, for use as medicaments for treatment of gastro-esophag-

esophageal reflux disease (GERD), irritable bowel syndrome (IBS), inflammatory bowel disease (IBD) and pancreatitis.

Yet a further embodiment of the invention relates to the compounds and enantiomers of the invention as hereinbefore defined, for use as medicaments for treatment of respiratory diseases selected from the group comprising asthma, cough, chronic obstructive pulmonary disease (COPD), chronic obstructive lung disease and emphysema, lung fibrosis and interstitial lung disease.

One embodiment of the invention relates to the use of the compounds and enantiomers of the invention as hereinbefore defined, in the manufacture of medicaments for treatment of VR1 mediated disorders and for treatment of acute and chronic pain disorders, acute and chronic neuropathic pain and acute and chronic inflammatory pain, and respiratory diseases and any other disorder mentioned above.

Another embodiment of the invention relates to a method of treatment of VR1 mediated disorders and acute and chronic pain disorders, acute and chronic neuropathic pain and acute and chronic inflammatory pain, and respiratory diseases, and any other disorder mentioned above, comprising administering to a mammal, including man in need of such treatment, a therapeutically effective amount of a compound and/or enantiomer of the invention, as hereinbefore defined.

A further embodiment of the invention relates to a pharmaceutical composition comprising a compound and/or enantiomer of the invention as hereinbefore defined, for use in treatment of VR1 mediated disorders and for treatment of acute and chronic pain disorders, acute and chronic neuropathic pain and acute and chronic inflammatory pain, and respiratory diseases, and any other disorder mentioned above.

In the context of the present specification, the term "therapy" and "treatment" includes prevention and prophylaxis, unless there are specific indications to the contrary. The terms "treat", "therapeutic" and "therapeutically" should be construed accordingly.

5 In this specification, unless stated otherwise, the term "inhibitor" and "antagonist" mean a compound that by any means, partly or completely, blocks the transduction pathway leading to the production of a response by the ligand.

The term "disorder", unless stated otherwise, means any condition and disease associated

10 with vanilloid receptor activity.

### Non-Medical use

In addition to their use in therapeutic medicine, the compounds and enantiomers of the invention, or salts thereof, are also useful as pharmacological tools in the development and 15 standardisation of *in vitro* and *in vivo* test systems for the evaluation of the effects of inhibitors of VR1 related activity in laboratory animals such as cats, dogs, rabbits, monkeys, rats and mice, as part of the search for new therapeutics agents.

### Examples

20 The invention will now be illustrated by the following non-limiting examples.

### **General methods**

The invention will now be illustrated by the following Examples in which, generally :

(i) operations were carried out at ambient or room temperature, *i.e.* in the range 17 to 25 25°C and under an atmosphere of an inert gas such as argon unless otherwise stated;

(ii) evaporation were carried out by rotary evaporation *in vacuo* and work-up procedures were carried out after removal of residual solids by filtration;

(iii) The <sup>1</sup>H NMR spectra were recorded on Bruker at 400 MHz. The mass spectra were recorded utilising electrospray (LC-MS; LC: Waters 2790, column XTerra MS C<sub>8</sub> 2.5

μm 2.1X30 mm, buffer gradient H<sub>2</sub>O+0.1%TFA:CH<sub>3</sub>CN+0.04%TFA, MS: micromass ZMD// ammonium acetate buffer) ionisation techniques;

(iv) yields, where present, are not necessarily the maximum attainable;

(v) the following abbreviations have been used:

5

alloc	allyloxycarbonyl
DCE	dichloroethane
DCM	dichloromethane
DMAP	dimethylaminopyridine
10 EDC	1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride
HATU	O-(7-azabenzotriazol-1-yl)-N,N,N',N'-tetramethyluronium hexafluorophosphate
HPLC	high performance liquid chromatography
LC	liquid chromatography
15 MsCl	methanesulfonyl chloride
MS	mass spectrometry
ret. time	retention time
TFA	trifluoroacetic acid
THF	tetrahydrofuran
20 DMF	dimethylformamide
TMEDA	tetramethylethylenediamine
EtOAc	ethyl acetate
BuLi	Butyl lithium
TMEDA	tetramethylethylenediamine

25

### INTERMEDIATE 1: 1-Allyl-1*H*-indole-2,3-dione

Isatin (10.102 g, 68.7 mmol) was dissolved in 100 mL dry DMF, and Cs<sub>2</sub>CO<sub>3</sub> (24.609 g, 75.5 mmol) was added. To the resulting purple-brown suspension was added allyl bromide (7.2 mL, 83 mmol) and the reaction was stirred at room temperature for 16 h. The resulting 30 cloudy orange-brown mixture was concentrated *in vacuo*, and the residue was partitioned

between EtOAc (160 mL) and water (80 mL). The layers were separated, and the aqueous layer was extracted with additional EtOAc (2 x 80 mL). The combined organic phases were dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated *in vacuo*. To the residue was added 300 mL hexanes. The mixture was heated to 70 °C with a water bath, and EtOAc was added until the compound went into solution (approx. 80 mL EtOAc). A small amount of insoluble red material was removed, and then the solution was allowed to cool. The resulting red crystals were filtered, washed with 3 x 30 mL hexanes, and then dried under vacuum to provide the title compound (11.740 g, 91%). <sup>1</sup>H NMR (600 MHz, CHLOROFORM-D) δ ppm 4.36 (d, *J*=5.6 Hz, 2 H), 5.26 - 5.34 (m, 2 H), 5.78 - 5.88 (m, 1 H), 6.88 (d, *J*=7.9 Hz, 1 H), 7.11 (t, *J*=7.6 Hz, 1 H), 7.56 (td, *J*=7.8, 1.3 Hz, 1 H), 7.61 (d, *J*=7.4 Hz, 1 H). MS (ESI) (M+H)<sup>+</sup> = 188.

**INTERMEDIATE 2: 1-[(2*E*)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-1*H*-indole-2,3-dione**

A mixture of 1-allyl-1*H*-indole-2,3-dione (1.00 g, 5.34 mmol), Pd(P(t-Bu)<sub>3</sub>)<sub>2</sub> (0.0819 g, 0.16 mmol), 1,2-dichloro-4-iodobenzene (1.458 g, 5.34 mmol), dry toluene (10 mL), and *N*-cyclohexyl-*N*-methylcyclohexanamine (1.23 mL, 5.86 mmol) in an oven-dried sealed tube under an atmosphere of N<sub>2</sub> was heated for 16 h at 80 °C. The reaction was cooled, diluted with CH<sub>2</sub>Cl<sub>2</sub>, and loaded directly onto a silica gel column that had been packed with CH<sub>2</sub>Cl<sub>2</sub>. The column was eluted with a gradient of 100% CH<sub>2</sub>Cl<sub>2</sub> to 95:5 CH<sub>2</sub>Cl<sub>2</sub>:EtOAc. The appropriate fractions were combined to provide the title compound as an orange solid (1.489 g, 84%). <sup>1</sup>H NMR (600 MHz, CHLOROFORM-D) δ ppm 4.52 (d, *J*=5.9 Hz, 2 H), 6.19 (dt, *J*=15.9, 5.9 Hz, 1 H), 6.56 (d, *J*=15.6 Hz, 1 H), 6.91 (d, *J*=7.9 Hz, 1 H), 7.09 - 7.20 (m, 2 H), 7.37 (d, *J*=8.2 Hz, 1 H), 7.42 (s, 1 H), 7.57 (t, *J*=7.8 Hz, 1 H), 7.64 (d, *J*=7.4 Hz, 1 H).

**INTERMEDIATE 3: 1-[(2*E*)-3-[4-chloro-3-(trifluoromethyl)phenyl]prop-2-en-1-yl]-1*H*-indole-2,3-dione**

Six separate oven-dried sealed tubes were charged with 1-allyl-1*H*-indole-2,3-dione (0.100 g, 0.534 mmol), Pd(P(t-Bu)<sub>3</sub>)<sub>2</sub> (0.0082 g, 0.016 mmol), 4-bromo-1-chloro-2-(trifluoro-

methyl)benzene (0.139 g, 0.536 mmol), dry toluene (1 mL), and *N*-cyclohexyl-*N*-methyl-cyclohexanamine (0.12 mL, 0.57 mmol) under an atmosphere of N<sub>2</sub>. The tubes were heated for 16 h at 80 °C in an oil bath, and then the reactions were cooled and concentrated *in vacuo*. The crude material was used in the subsequent step.

5

**INTERMEDIATE 4:** 1-prop-2-yn-1-yl-1*H*-indole-2,3-dione

To a solution of isatin (200 mg, 1.36 mmol) in DMF (5 mL) was added cesium carbonate (487 mg, 1.5 mmol). The reaction was stirred at room temperature for 90 minutes.

Propargyl bromide (243  $\mu$ L, 1.63 mmol) was then added. The reaction was stirred over-

10 night at room temperature, concentrated *in vacuo*, dissolved in EtOAc and washed with saturated NaHCO<sub>3</sub>(aq) (1x). The layers were separated and the aqueous layer was extracted with additional EtOAc (2x). The combined organic phases was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated *in vacuo*. Further purification of the residue was not necessary. The title compound was obtained as an orange solid (255 mg, quantitative yield). <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>)  $\delta$  2.31 (t, J = 2.54 Hz, 1H), 4.55 (d, J = 2.54 Hz, 2H), 7.12 - 7.15 (m, 1H), 7.19 (dt, J = 7.52, 0.78 Hz, 1H), 7.63 - 7.68 (m, 2H).

15 **INTERMEDIATE 5:** 1-[3-(3,4-dichlorophenyl)prop-2-yn-1-yl]-1*H*-indole-2,3-dione  
To a mixture of 1-prop-2-yn-1-yl-1*H*-indole-2,3-dione (190 mg, 1.03 mmol), 1,2-dichloro-  
20 4-iodobenzene (420 mg, 1.54 mmol), copper(I) iodide (11.0 mg, 0.06 mmol) and triphenylphosphine (40.0 mg, 0.15 mmol) in degassed DMF (24 mL) was added triethyl-  
amine (307  $\mu$ L, 2.15 mmol). The reaction was stirred for 5 minutes and Pd(OAc)<sub>2</sub> (13.0 mg, 0.06 mmol) was then added. The reaction was stirred at room temperature for 2 days, concentrated *in vacuo*, dissolved in EtOAc and washed with saturated NaHCO<sub>3</sub>(aq) (1x).

25 The layers were separated and the aqueous layer was extracted with additional EtOAc (2x). The combined organic phases was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated *in vacuo*. The crude product was purified by silica gel column chromatography, eluting with a solvent gradient of 35% EtOAc/Hexanes to 75% EtOAc/Hexanes, to give the title compound as an orange solid with 90% purity (375 mg, quantitative yield). <sup>1</sup>H NMR (400 MHz, DMSO-D<sub>6</sub>)  $\delta$  4.82 (s, 2H), 7.18 (dt, J = 7.52, 0.78 Hz, 1H), 7.32 (d, J = 8.01 Hz, 1H), 7.41

(dd,  $J = 8.40, 1.95$  Hz, 1H), 7.60 (dd,  $J = 7.42, 0.78$  Hz, 1H), 7.63 (d,  $J = 8.40$  Hz, 1H), 7.70 - 7.75 (m, 2H).

**COMPOUND 1: 1'-(2E)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione**

Four identical reactions were set up. For each reaction, 1-[(2E)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-1H-indole-2,3-dione (200 mg, 0.602 mmol) was dissolved in 5 mL N,N-dimethylacetamide (5 mL) in a sealed tube. Ammonium carbonate (0.555 g, 5.78 mmol) was added, followed by a solution of KCN (0.0470 g, 0.722 mmol) in water (5 mL).

The tubes were sealed and then heated to 100 °C in an oil bath for 2 h. The reactions turned from red to deep purple to yellow over the course of the reaction. The reactions were cooled and then concentrated *in vacuo*. Each reaction was taken up in EtOAc (5 mL) and water (5 mL). All 4 reactions were passed through one Varian ChemElut CE1020 column, and the column was rinsed with additional EtOAc (2 x 20 mL). The organic extracts were concentrated *in vacuo*, and the residue purified by silica gel column chromatography (1:2 Hexanes:EtOAc) to give the title compound (0.7075 g, 73%) as a white solid.  $^1\text{H}$  NMR (400 MHz, METHANOL-D<sub>4</sub>)  $\delta$  ppm 4.45 - 4.53 (m, 1 H), 4.57 - 4.66 (m, 1 H), 6.35 (dt,  $J = 16.1, 5.1$  Hz, 1 H), 6.59 (dt,  $J = 16.2, 1.5$  Hz, 1 H), 7.08 (d,  $J = 7.8$  Hz, 1 H), 7.17 (td,  $J = 7.6, 0.9$  Hz, 1 H), 7.30 (dd,  $J = 8.4, 2.0$  Hz, 1 H), 7.37 (dd,  $J = 7.4, 1.0$  Hz, 1 H), 7.39 - 7.45 (m, 2 H), 7.53 (d,  $J = 2.1$  Hz, 1 H). MS (APPI) (M+H)<sup>+</sup> = 402. Anal. Calcd for C<sub>19</sub>H<sub>13</sub>Cl<sub>2</sub>N<sub>3</sub>O<sub>3</sub>: C, 56.74; H, 3.26; N, 10.45. Found: C, 56.64; H, 3.26; N, 10.27.

The individual enantiomers of 1'-(2E)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione were obtained through separation of the racemic mixture (214 mg) by supercritical fluid chromatography (SFC) on a chiral solid support using a Berger SFC Multigram II system (Mettler Toledo) (SFC conditions: 50% Ethanol/CO<sub>2</sub> eluent, CHIRALCEL® OD SFC column (Chiral Technologies), 21 x 250 mm, 10 micron, flow 50 mL/min. Variable wavelength UV detector 254 or 280 nm, 6 minute run.) Enantiomeric purities were determined by SFC on a chiral solid support using a Berger SFC Analytix/MS system (Mettler Toledo) (SFC conditions: 50% Ethanol/CO<sub>2</sub> eluent,

CHIRALCEL® OD SFC column (Chiral Technologies), 4.6 x 250mm, 5 micron, flow 2.2 mL/min. Diode array UV, MS detector, 6 minute run). Yield: 80.7 mg (38%) of the first eluting enantiomer, 80.0 mg (37%) of the second eluting enantiomer. The IUPAC names of the enantiomers were generated using software ACD/Name (ACD/Labs 7.00 Release 5 Product version: 7.07, build: 16 Jul 2003).

**ENANTIOMER 1A: (4S)-1'-(2E)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione**

First eluting enantiomer: Retention time = 2.46 min, e.e. >99%,  $[\alpha]_D^{22} = +16.8$  (c 0.959

10 g/100 mL, CD<sub>3</sub>OD), <sup>1</sup>H NMR (400 MHz, METHANOL-D<sub>4</sub>) δ ppm 4.44 - 4.53 (m, 1 H), 4.57 - 4.65 (m, 1 H), 6.35 (dt, *J*=16.1, 4.9 Hz, 1 H), 6.58 (dt, *J*=16.0, 1.6 Hz, 1 H), 7.08 (d, *J*=7.8 Hz, 1 H), 7.17 (td, *J*=7.6, 0.9 Hz, 1 H), 7.30 (dd, *J*=8.4, 2.0 Hz, 1 H), 7.35 - 7.39 (m, 1 H), 7.38 - 7.45 (m, 2 H), 7.52 (d, *J*=2.0 Hz, 1 H). MS (APPI) (M+H)<sup>+</sup> = 402.

The absolute configuration of this enantiomer is determined by X-ray crystallography.

15

**ENANTIOMER 1B: (4R)-1'-(2E)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione**

Second eluting enantiomer: Retention time = 4.21 min, e.e. >99%,  $[\alpha]_D^{22} = -15.0$  (c 0.908

20 g/100 mL, CD<sub>3</sub>OD), <sup>1</sup>H NMR (400 MHz, METHANOL-D<sub>4</sub>) δ ppm 4.44 - 4.53 (m, 1 H), 4.56 - 4.65 (m, 1 H), 6.35 (dt, *J*=16.0, 5.1 Hz, 1 H), 6.58 (dt, *J*=16.1, 1.5 Hz, 1 H), 7.08 (d, *J*=7.8 Hz, 1 H), 7.17 (td, *J*=7.6, 0.9 Hz, 1 H), 7.30 (dd, *J*=8.5, 2.1 Hz, 1 H), 7.35 - 7.39 (m, 1 H), 7.39 - 7.45 (m, 2 H), 7.52 (d, *J*=2.0 Hz, 1 H). MS (APPI) (M+H)<sup>+</sup> = 402.

The absolute configuration of this enantiomer was determined by X-ray crystallography.

25

**COMPOUND 2: 1'-(2E)-3-[4-chloro-3-(trifluoromethyl)phenyl]prop-2-en-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione**

Six tubes of crude 1-{(2E)-3-[4-chloro-3-(trifluoromethyl)phenyl]prop-2-en-1-yl}-1*H*-indole-2,3-dione were treated identically. The material in each tube was dissolved in N,N-dimethylacetamide (4.4 mL). Ammonium carbonate (0.493 g, 5.13 mmol) was added to 30 each tube, followed by a solution of KCN (0.0417 g, 0.640 mmol) in water (4.4 mL). The

tubes were sealed and then heated to 100 °C in an oil bath for 3 h. The reactions were cooled and then concentrated *in vacuo*. Each reaction was taken up in EtOAc (8 mL) and water (5 mL), and then passed through a Varian ChemElut CE1005 column. The columns were rinsed with additional EtOAc (2 x 8 mL) and the organic extracts were concentrated 5 *in vacuo*. The residue was purified by reverse phase preparative scale LC/MS to give the title compound (0.2834 g, 20% over 2 steps) as a slightly orange solid following lyophilization.  $^1\text{H}$  NMR (400 MHz, DMSO- $\text{D}_6$ )  $\delta$  ppm 4.48 - 4.59 (m, 2 H), 6.52 (dt,  $J$ =16.2, 4.8 Hz, 1 H), 6.58 - 6.65 (m, 1 H), 7.10 - 7.18 (m, 2 H), 7.38 - 7.45 (m, 2 H), 7.64 - 7.68 (m, 1 H), 7.71 - 7.81 (m, 2 H), 8.68 (d,  $J$ =1.0 Hz, 1 H), 11.43 (s, 1 H). MS (APPI) ( $\text{M}+\text{H}$ )<sup>+</sup> = 10 436.

The individual enantiomers of 1'-{(2*E*)-3-[4-chloro-3-(trifluoromethyl)phenyl]prop-2-en-1-yl}-2*H*,5*H*-spiro[imidazolidine-4,3'-indole]-2,2',5(1'*H*)-trione were obtained through separation of the racemic mixture (19.96 g) by supercritical fluid chromatography (SFC) on a 15 chiral solid support using a Novasep SFC SuperSep 50 system (Novasep, Inc.) (SFC conditions: 30% Methanol/CO<sub>2</sub> eluent, CHIRALCEL® OD-H SFC column (Chiral Technologies, Inc), 3 x 25 cm, 5 micron, flow rate 150 mL/min. Variable wavelength UV detector 230 nm, 5 minute run.) Enantiomeric purities were determined by SFC on a chiral solid support using a Berger SFC system (Mettler Toledo) (SFC conditions: 30% Methanol/CO<sub>2</sub> 20 eluent, CHIRALCEL® OD-H SFC column (Chiral Technologies, Inc), 4.6 x 250 mm, 5 micron, flow rate 2 mL/min. Variable wavelength UV detector 220 nm, 9 minute run.) Yield: 45% of the first eluting enantiomer and 42% of the second eluting enantiomer. The IUPAC names of the enantiomers were generated using software ACD/Name (ACD/Labs 7.00 Release Product version: 7.07, build: 16 Jul 2003).

25

**ENANTIOMER 2A: (4*S*)-1'-{(2*E*)-3-[4-chloro-3-(trifluoromethyl)phenyl]prop-2-en-1-yl}-2*H*,5*H*-spiro[imidazolidine-4,3'-indole]-2,2',5(1'*H*)-trione**

First eluting enantiomer: Retention time = 4.29 min, e.e. >99%,  $[\alpha]_D^{22} = +16.8$  (c 1.03 g/100 mL, CD<sub>3</sub>OD),  $^1\text{H}$  NMR (400 MHz, DMSO- $\text{D}_6$ )  $\delta$  ppm 4.53 (d,  $J$ =4.5 Hz, 2 H), 6.52 30 (dt,  $J$ =16.2, 4.8 Hz, 1 H), 6.58 - 6.67 (m, 1 H), 7.09 - 7.19 (m, 2 H), 7.37 - 7.46 (m, 2 H),

7.63 - 7.69 (m, 1 H), 7.71 - 7.76 (m, 1 H), 7.79 (d,  $J=2.0$  Hz, 1 H), 8.68 (d,  $J=1.4$  Hz, 1 H), 11.43 (s, 1 H). MS (APPI) ( $M+H$ )<sup>+</sup> = 436.

The absolute configuration of this enantiomer is determined by X-ray crystallography.

5 **ENANTIOMER 2B: (4R)-1'-(2E)-3-[4-chloro-3-(trifluoromethyl)phenyl]prop-2-en-1-yl}-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione**

Second eluting enantiomer: Retention time = 5.92 min, e.e. >98%,  $[\alpha]_D^{22} = -15.6$  (c 1.33 g/100 mL, CD<sub>3</sub>OD), <sup>1</sup>H NMR (400 MHz, DMSO-D<sub>6</sub>)  $\delta$  ppm 4.53 (d,  $J=4.5$  Hz, 2 H), 6.52 (dt,  $J=16.2, 4.8$  Hz, 1 H), 6.58 - 6.66 (m, 1 H), 7.09 - 7.19 (m, 2 H), 7.37 - 7.46 (m, 2 H), 7.63 - 7.68 (m, 1 H), 7.70 - 7.76 (m, 1 H), 7.79 (d,  $J=2.0$  Hz, 1 H), 8.68 (d,  $J=1.4$  Hz, 1 H), 11.43 (s, 1 H). MS (APPI) ( $M+H$ )<sup>+</sup> = 436.

The absolute configuration of this enantiomer is determined by X-ray crystallography.

15 **COMPOUND 3: 1'-(3-(3,4-dichlorophenyl)prop-2-yn-1-yl)-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione**

A mixture of Intermediate 5 (50 mg, 0.15 mmol), potassium cyanide (12 mg, 0.18 mmol), and ammonium carbonate (140 mg, 1.45 mmol) in 1:1 MeOH:H<sub>2</sub>O (2.5 mL) was heated at 100 °C for 6 hours. The reaction was then cooled, concentrated *in vacuo* to remove the MeOH, diluted with EtOAc and washed with H<sub>2</sub>O (1x). The layers were separated and the aqueous layer was extracted with additional EtOAc (3x). The combined organic phases were dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated *in vacuo*. The residue was purified by reverse phase HPLC (gradient 50-80% CH<sub>3</sub>CN in H<sub>2</sub>O containing 0.1% trifluoroacetic acid) to give the title compound (2 mg, 3% yield) as its TFA salt. This material was lyophilized from CH<sub>3</sub>CN/H<sub>2</sub>O to produce a pale yellow solid. Purity (HPLC): 95% (215 nm), 94% (254 nm); <sup>1</sup>H NMR (400 MHz, DMSO-D<sub>6</sub>)  $\delta$  ppm 4.82 - 4.93 (m, 2H), 7.17 (dt,  $J = 7.57, 0.88$  Hz, 1H), 7.32 (d,  $J = 7.81$  Hz, 1H), 7.40 (dd,  $J = 8.30, 2.05$  Hz, 1H), 7.44 (dd,  $J = 7.42, 0.78$  Hz, 1H), 7.49 (dt,  $J = 7.76, 1.27$  Hz, 1H), 7.64 (d,  $J = 8.20$  Hz, 1H), 7.70 (d,  $J = 1.95$  Hz, 1H), 8.69 (d,  $J = 1.56$  Hz, 1H), 11.42 (s, 1H). Found: C, 57.05; H, 2.75; N, 10.55. C<sub>19</sub>H<sub>11</sub>N<sub>3</sub>O<sub>3</sub>Cl<sub>2</sub> has C, 57.02; H, 2.77; N, 10.50 %.

The individual enantiomers of 1'-(3-(3,4-dichlorophenyl)prop-2-yn-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione were obtained through separation of the racemic mixture (200 mg) by supercritical fluid chromatography (SFC) on a chiral solid support using a Berger SFC Multigram II system (Mettler Toledo) (SFC conditions: 50% Ethanol/CO<sub>2</sub> eluent, ChiralCel OD SFC column (Chiral Technologies), 21 x 250 mm, 10 micron, flow 50 mL/min. Variable wavelength UV detector 254 or 280 nm, 6 minute run.)

Enantiomeric purities were determined by SFC on a chiral solid support using a Berger SFC Analytix/MS system (Mettler Toledo) (SFC conditions: 50% Ethanol/CO<sub>2</sub> eluent, ChiralCel OD SFC column (Chiral Technologies), 4.6 x 250mm, 5 micron, flow 2.2 mL/min. Diode array UV, MS detector, 6 minute run). Yield: 83 mg (42%) of the first eluting enantiomer, 82 mg (41%) of the second eluting enantiomer. The IUPAC names of the enantiomers were generated using software ACD/Name (ACD/Labs 7.00 Release Product version: 7.07, build: 16 Jul 2003).

**15 ENANTIOMER 3A: (4S)-1'-(3-(3,4-dichlorophenyl)prop-2-yn-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione**

First eluting enantiomer: Retention time = 3.19 min, e.e. >99%,  $[\alpha]_D^{22} = +72.8$  (c 1.00 g/100 mL, CD<sub>3</sub>OD), <sup>1</sup>H NMR (400 MHz, CD<sub>3</sub>OD)  $\delta$  ppm 4.74 - 4.88 (m, 2H), 7.20 (dt, J = 7.57, 0.88 Hz, 1H), 7.26 - 7.31 (m, 2H), 7.36 (dd, J = 7.52, 0.68 Hz, 1H), 7.45 - 7.51 (m, 2H), 7.55 (d, J = 1.76 Hz, 1H). MS (APPI) (M+H)<sup>+</sup> = 400.

The absolute configuration of this enantiomer is determined by X-ray crystallography.

**ENANTIOMER 3B: (4R)-1'-(3-(3,4-dichlorophenyl)prop-2-yn-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione**

Second eluting enantiomer: Retention time = 4.47 min, e.e. >99%,  $[\alpha]_D^{22} = -75.1$  (c 1.03 g/100 mL, CD<sub>3</sub>OD), <sup>1</sup>H NMR (400 MHz, CD<sub>3</sub>OD)  $\delta$  ppm 4.74 - 4.87 (m, 2H), 7.17 - 7.22 (m, 1H), 7.26 - 7.31 (m, 2H), 7.35 - 7.38 (m, 1H), 7.44 - 7.51 (m, 2H), 7.54 (d, J = 1.76 Hz, 1H). MS (APPI) (M+H)<sup>+</sup> = 400.

The absolute configuration of this enantiomer is determined by X-ray crystallography.

## Pharmacology

### **hVR1 FLIPR (Fluorometric Image Plate Reader) screening assay**

Transfected CHO cells, stably expressing hVR1 (15,000 cells/well) are seeded in 50  $\mu$ L media in a black clear bottom 384 plate (Greiner) and grown in a humidified incubator 5 (37°C, 2% CO<sub>2</sub>), 24-30 hours prior to experiment.

Subsequently, the media is removed from the cell plate by inversion and 2  $\mu$ M Fluo-4 is added using a multidrop (Labsystems). Following the 40 min dye incubation in the dark at 37°C and 2% CO<sub>2</sub>, the extracellular dye present is washed away using an EMLA (Scatron), leaving the cells in 40  $\mu$ L of assay buffer (1 X HBSS, 10 mM D-Glucose, 1 mM 10 CaCl<sub>2</sub>, 10 mM HEPES, 10 X 7.5% NaHCO<sub>3</sub> and 2.5 mM Probenecid).

### FLIPR assay - IC<sub>50</sub> determination protocol

For IC<sub>50</sub> determinations the fluorescence is read using FLIPR filter 1 (em 520-545 nM). A 15 cellular baseline recording is taken for 30 seconds, followed by a 20  $\mu$ L addition of 10, titrated half-log concentrations of the test compound, yielding cellular concentration ranging from 3  $\mu$ M to 0.1 nM. Data is collected every 2 seconds for a further 5 min prior to the addition of a VR1 agonist solution: either 50 nM solution of capsaicin or MES (2-[N- 20 morpholino] ethanesulfonic acid) buffer (pH 5.2), by the FLIPR pipettor. The FLIPR continues to collect data for a further 4 min. Compounds having antagonistic properties against the hVR1 will inhibit the increase in intracellular calcium in response to the 25 capsaicin addition. This consequently leading to a reduction in fluorescence signal and providing a reduced fluorescence reading, compared with no compound, buffer controls. Data is exported by the FLIPR program as a sum of fluorescence calculated under the curve upon the addition of capsaicin. Maximum inhibition, Hill slope and IC<sub>50</sub> data for each compound are generated.

A comparative aldose reductase activity determination was carried out by the company MDS Pharma Services – Taiwan Ltd; the results of that study is set forth in Table 1 below.

**List of abbreviations**

VR1	vanilloid receptor 1
IBS	irritable bowel syndrome
IBD	inflammatory bowel disease
5 GERD	gastro-esophageal reflux disease
HEPES	4-(2-Hydroxyethyl)piperazine-1-ethanesulfonic acid

**Results**

Typical  $IC_{50}$  values as measured in the assays described above are 10  $\mu$ M or less. In one

10 aspect of the invention the  $IC_{50}$  is below 3000 nM. In another aspect of the invention the  $IC_{50}$  is below 1000 nM.

Table 1.

Results from the hVR1 FLIPR and a comparative aldose reductase activity determination

Example No.	$IC_{50}$ (human VR1, capsaicin) nM	$IC_{50}$ (aldose reductase) nM
Enantiomer 1A	10000 nM	25 nM
Enantiomer 1B	43 nM	758 nM
Enantiomer 2A	3850 nM	33 nM
Enantiomer 2B	241 nM	3300 nM
Enantiomer 3A	15454 nM	72.3 nM
Enantiomer 3B	881 nM	983 nM

15

**Biological tests**

The *in vivo* pharmacological properties of the present invention have been determined using two classical NSAID-sensitive inflammatory models, the Carrageenan model and the Freund's Complete Adjuvant (FCA) model.

20

In the former, Carrageenan-lambda (algae-derived polysaccharide, type IV, 100 $\mu$ l, from Sigma-Aldrich), dissolved in sterile saline 0.9% at a concentration of 1%, and in the latter

FCA (25 $\mu$ l, from Sigma-Aldrich, (1ml of FCA contains 1mg mycobacterium tuberculosis heat killed and dried, 0.85 ml mineral oil and 0.15ml mannide monooleate, cf. Nagakura et al. in *Journal of Pharmacology and Experimental Therapeutics*, 2003; 306(2):490-497)) is injected into the subcutaneous space under the plantar surface (intra-plantar; i.pl.) of the rat 5 left hind paw. This creates an inflammatory response, with accompanying edema, redness, and hyperalgesia. Heat (and mechanical) hyperalgesia is fully developed by 3 hours for carrageenan, and remains stable for 6 hours, while FCA is fully developed by 24h and remains stable for weeks. In order to assess the degree of hyperalgesia, the heat plantar test was chosen, as it is a robust, consistent, and reproducible endpoint (based on the Har- 10 greaves method of assessing nociception, cf. *Pain*, 1988; 32(1):77-88). Rats are placed in individual plexiglass boxes on a glass surface, which is maintained at 30°C, and a heat-source (rate of heat increase:  $\sim$ 1.1 °C/s) is focused onto the plantar surface of the affected paw. The time from the initiation of the heat until the animal withdraws the paw is recorded. A decrease in Paw Withdrawal Latency (PWL) relative to naïve animals indicates 15 a hyperalgesic state.

The degree of reversal of hyperalgesia is measured by the ability of the compound to return PWL to normal levels. (4R)-1'-(2E)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2H,5H- 20 spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione (= Enantiomer 1B) was orally administered during the established phase of inflammation and tested at its Tmax. The PWL of each animal is measured twice, and the average of the two is taken as the response. The responses of all animals within a given group are then averaged, and Standard Deviation and Standard Error of the Mean (SEM) are calculated for each group. The data is expressed as mean  $\pm$  SEM. Statistical significance is assessed with a T-test for comparison between naïve and treated groups, and One Way ANOVA followed by Holm-Sidak multiple comparisons versus control (vehicle) group test for drug effectiveness. The level of statistical significance is set at  $p < 0.05$ . GraphPad Prism® version 4 is used for non-linear regression analysis (using the variable slope sigmoidal equation model) of raw data to calculate the ED50, EC50, EC80, and Emax.

Prior to any manipulation, rats (150-175g, Charles River, St. Constant, Canada) were housed in groups of 7-9 in a temperature controlled room (22±1.5°C, 30-80% humidity, 12h light/dark cycle) and were acclimatized in the animal facility for at least one day prior to use. All experimental protocols are approved by the AstraZeneca Animal Care Committee. Experiments are performed during the light phase of the cycle, rooms are illuminated at 300 lux intensity. Animals have food and water ad libitum.

10 *In vivo* efficacy and potency of the tested compound in nociceptive pain are summarized in Table 2 below. The tested compound is potent and effective in reversing both carrageenan- and FCA-induced heat hyperalgesia.

Table 2. Efficacy and Potency in the *carrageenan* and FCA model *in vivo*

Compound tested: (4 <i>R</i> )-1'-(2 <i>E</i> )-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2 <i>H</i> ,5 <i>H</i> -spiro[imidazolidine-4,3'-indole]-2,2',5(1' <i>H</i> )-trione		
	Carrageenan model	FCA model

## CLAIMS

1. A compound having the formula I:

5 where R<sup>1</sup> and R<sup>2</sup> are independently halo or C<sub>1-3</sub>haloalkyl,  
 X is ethenyl or ethynyl,  
 or a salt thereof,  
 with the proviso that it is not 1'-(2E)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2H,5H-  
 spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione in racemic form.

10

2. A compound or salt thereof according to claim 1, where R<sup>1</sup> is halo and R<sup>2</sup> is  
 C<sub>1-3</sub>haloalkyl.

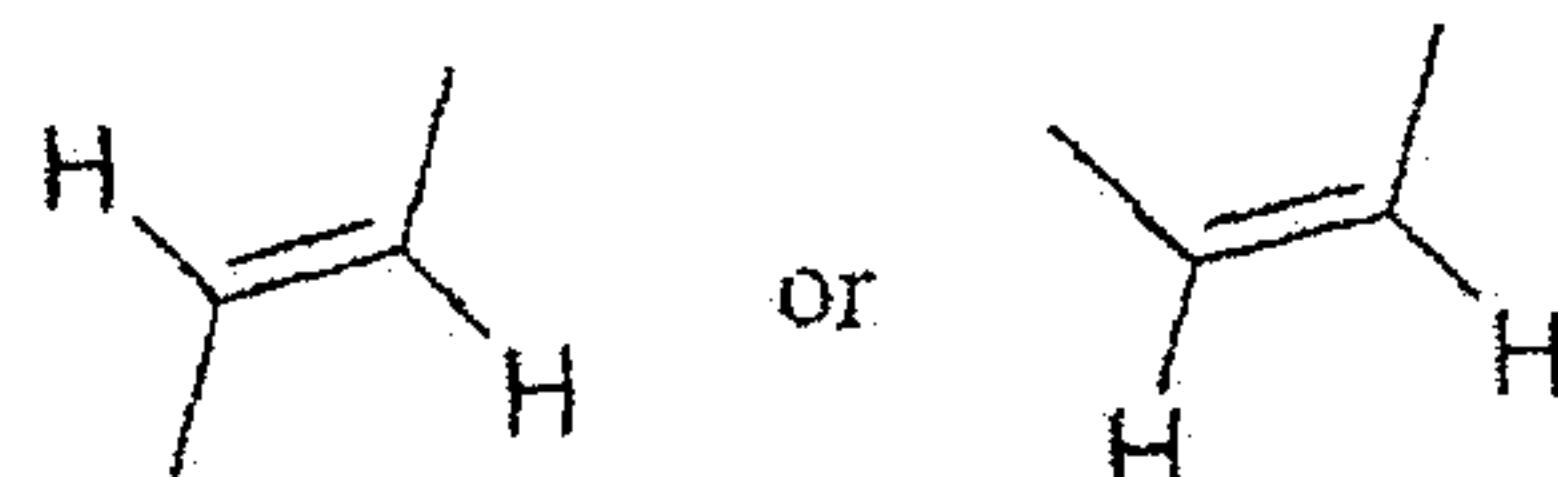

15 3. A compound or salt thereof according to claim 1, where R<sup>1</sup> is chloro or fluoro and R<sup>2</sup> is  
 C<sub>1-3</sub>chloroalkyl or C<sub>1-3</sub>fluoroalkyl.

4. A compound or salt thereof according to claim 1, where R<sup>1</sup> is chloro.

5. A compound or salt thereof according to claim 1, where R<sup>1</sup> and R<sup>2</sup> are chloro.

20

6. A compound or salt thereof according to claim 1, where X is

x 2

7. A compound or salt thereof according to claim 1, where X is ethynyl.

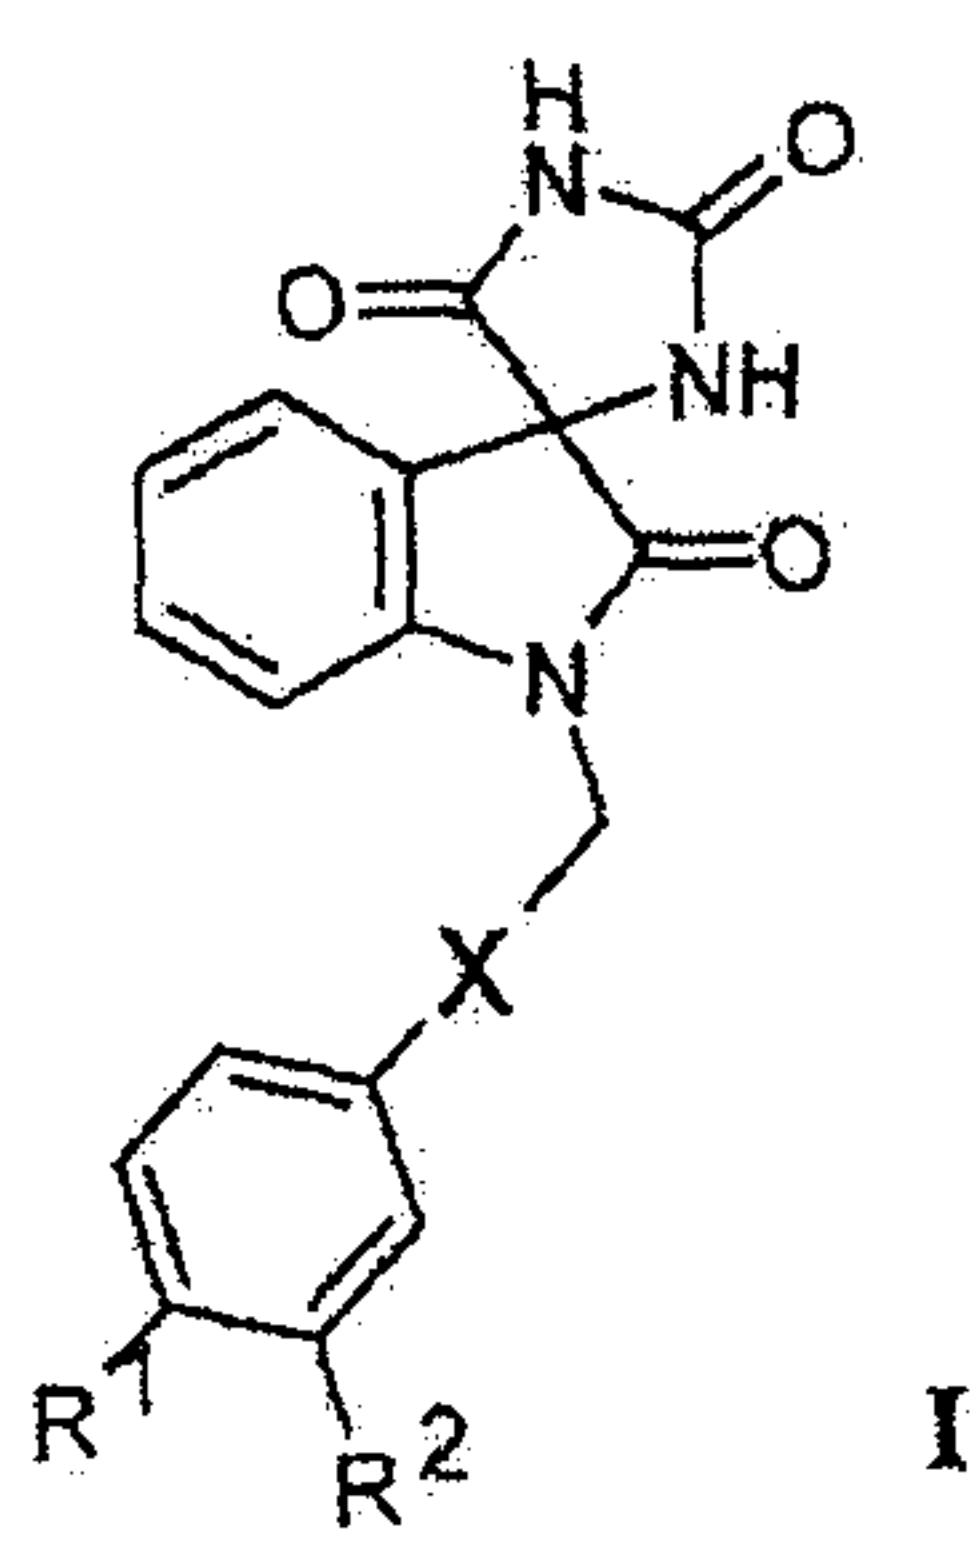

8. A salt of a compound according to claim 1.

9. A salt according to claim 8, which is a pharmaceutically acceptable salt.

10. A compound according to claim 1 selected from the group consisting of  
1'-(2E)-3-(3-chloro-4-trifluorophenyl)prop-2-en-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione and  
1'-(3-(3,4-dichlorophenyl)prop-2-yn-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione.

11. A compound or salt thereof according to any one of claims 1 to 10, for use as a medicament.

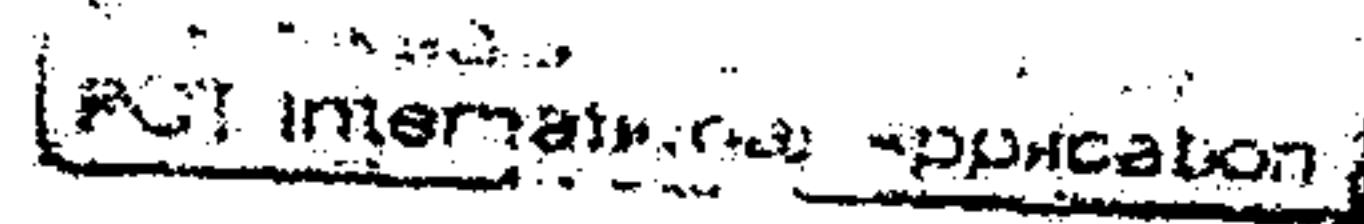

12. Use of a compound having the formula I:

I

where R<sup>1</sup> and R<sup>2</sup> are independently halo or C<sub>1-3</sub>haloalkyl,  
X is ethenyl or ethynyl,  
or a salt thereof,  
in the manufacture of a medicament,  
with the proviso that the compound is not 1'-(2E)-3-(3,4-dichlorophenyl)prop-2-en-1-yl]-2H,5H-spiro[imidazolidine-4,3'-indole]-2,2',5(1'H)-trione in racemic form.

2 3

13. The use according to claim 12 in the manufacture of a medicament for treatment of acute and chronic pain disorders.

5 14. The use according to claim 12 in the manufacture of a medicament for treatment of acute and chronic neuropathic pain.

15. The use according to claim 12 in the manufacture of a medicament for treatment of acute and chronic inflammatory pain.

10

16. The use according to claim 12 in the manufacture of a medicament for treatment acute and chronic nociceptive pain.

17. The use according to claim 12 in the manufacture of a medicament for treatment of low back pain, post-operative pain, visceral pains like chronic pelvic pain, cystitis, including interstitial cystitis and pain related thereto, ischeamic, sciatica, multiple sclerosis, arthritis, fibromyalgia, pain and other signs and symptoms associated with psoriasis, pain and other signs and symptoms associated with cancer, emesis, urinary incontinence, hyperactive bladder, HIV neuropathy, gastro-esophageal reflux disease (GERD), irritable bowel syndrome (IBS), inflammatory bowel disease (IBD) and/or pancreatitis, including signs and/or symptoms related to said diseases.

25 18. The use according claim 12 in the manufacture of a medicament for treatment of osteoarthritis, rheumatoid arthritis, asthma, cough, chronic obstructive lung disease, specifically chronic obstructive pulmonary disease (COPD) and emphysema, lung fibrosis, and interstitial lung disease, including signs and/or symptoms related to said diseases.

19. The use according to claim 12 in the manufacture of a medicament for treatment of respiratory diseases.

20. The use according to claim 12 in the manufacture of a medicament for treatment of  
obesity and/or migraine.

21. The use according to claim 12 in the manufacture of a medicament for treatment of  
5 burn induced pain and/or inflammatory pain resulting from burn injuries.

22. A method of treatment of VR1 mediated disorders and for treatment of acute and  
chronic pain disorders, acute and chronic neuropathic pain and acute and chronic inflam-  
matory pain, and/or respiratory diseases, comprising administering to a mammal,  
10 including man in need of such treatment, a therapeutically effective amount of a compound  
or salt thereof according to any one of claims 1 to 10.

23. A pharmaceutical composition comprising as active ingredient a therapeutically effec-  
tive amount of a compound or salt thereof according to any one of claims 1 to 10, in asso-  
15 ciation with one or more pharmaceutically acceptable diluents, excipients and/or inert car-  
riers.

24. The pharmaceutical composition according to claim 23, for use in the treatment of VR1  
mediated disorders and for treatment of acute and chronic pain disorders such as acute or  
20 chronic neuropathic pain and acute or chronic inflammatory pain; and/or respiratory dis-  
eases.

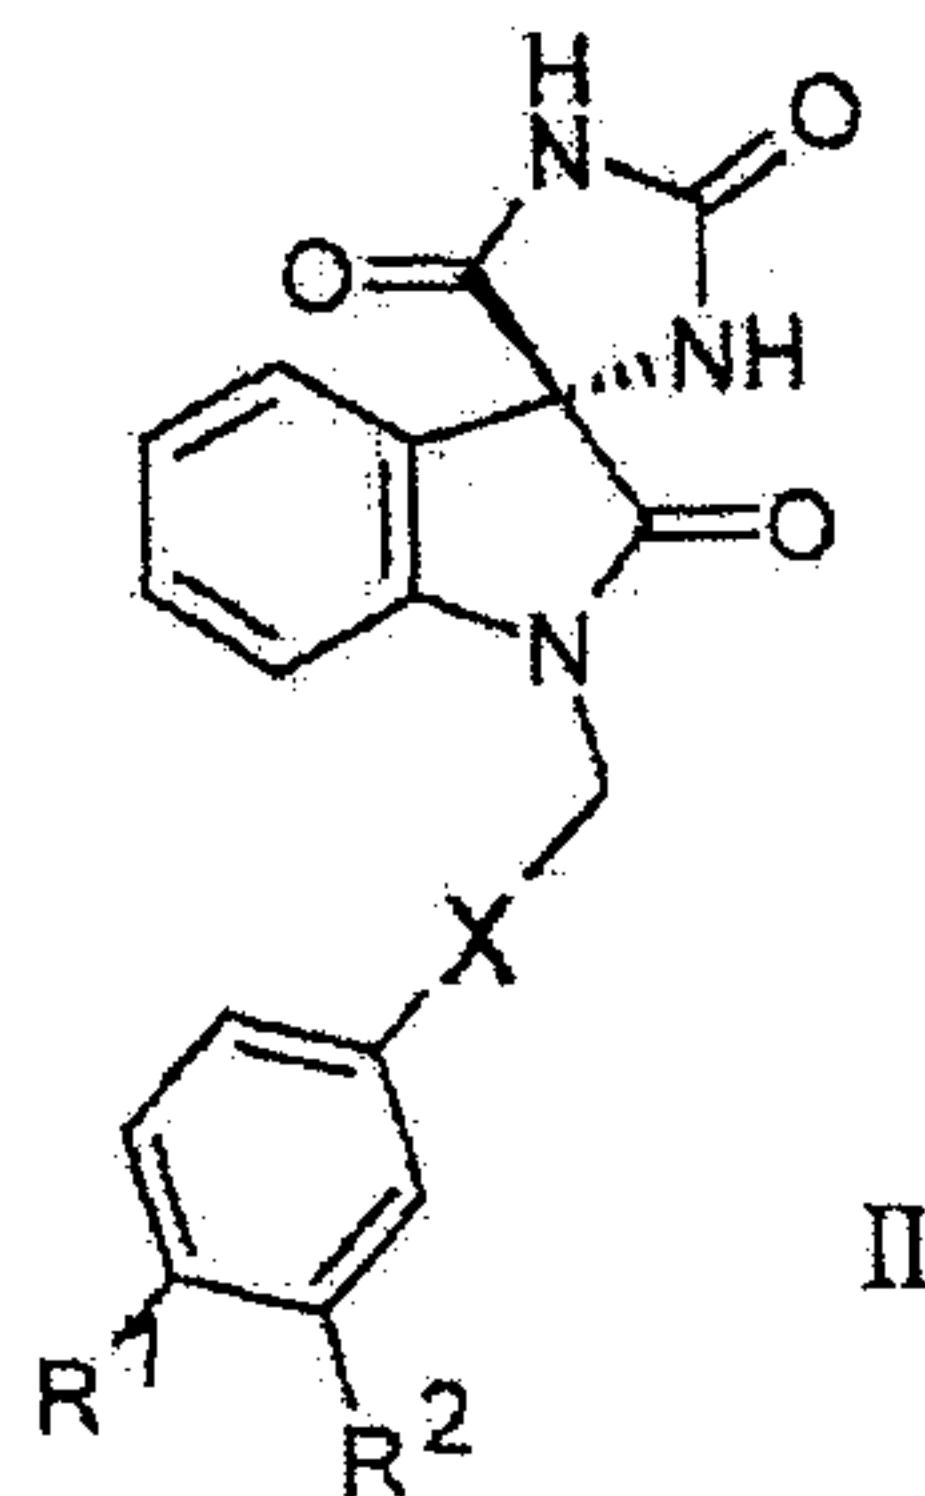

25. A substantially pure single enantiomer having the formula II:
