(54) Title: WATER-IN-OIL EMULSION TYPE SUNSCREEN COSMETIC

(54) 発明の名称: 油中水型乳化日焼け止め化粧料

(57) Abstract: Disclosed is a water-in-oil emulsion type sunscreen cosmetic which contains (a) 0.1 to 10 mass% of dimethyl diethyl benzalmalonate, (b) 0.02 to 8 mass% of phenylbenzimidazole sulfonic acid, and (c) a neutralizing agent for the component (b), wherein an aqueous phase makes up 40 mass% or less of the cosmetic. It becomes possible to provide a water-in-oil emulsion type sunscreen cosmetic which comprises (a) dimethyl diethyl benzalmalonate and (b) phenylbenzimidazole sulfonic acid, does not cause the crystallization of phenylbenzimidazole sulfonic acid contained therein, and is extremely stable over time.

(57) 要約: 本発明は、(a) ジメチルジエチルベンザルマロネートを 0.1~10 質量%、(b) フェニルベンズイミダゾールスルホン酸を 0.02~8 質量%、(c) 前記 (b) 成分の中和剤を含有し、かつ、水相が 40 質量%以下であることを特徴とする油中水型乳化日焼け止め化粧料である。本発明の目的は、(a) ジメチルジエチルベンザルマロネートと (b) フェニルベンズイミダゾールスルホン酸とを配合する油中水型乳化日焼け止め化粧料において、フェニルベンズイミダゾールスルホン酸が結晶化せず、経時で極めて安定な油中水型乳化日焼け止め化粧料を提供することである。

WO 2009/104353 A1

DESCRIPTION

WATER-IN-OIL EMULSION TYPE SUNSCREEN COSMETIC

5 TECHNICAL FIELD

{0001}

The present invention relates to a water-in-oil emulsified sunscreen cosmetic. More specifically, it relates to a water-in-oil
10 emulsified sunscreen cosmetic that has superior ultraviolet protection, causes no precipitation of the ultraviolet absorbent, and has superior stability of the base agent.

15 BACKGROUND ART

{0002}

Ultraviolet absorbents and/or ultraviolet scattering agents (zinc oxide, titanium oxide, etc.) are added to sunscreen cosmetics in order to
20 block ultraviolet irradiation on the skin to achieve a high SPF (Sun Protection Factor) (refer to Patent Citations 1 and 2, for example).

{0003}

One of the ultraviolet absorbents added to
25 sunscreen cosmetics is octocrylene. Octocrylene is

an ultraviolet absorbent; when used with hydrophobicized ultraviolet scattering agents (zinc oxide, titanium dioxide, etc.), it generates an offensive odor over time. To solve this problem, Patent Citation 3 discloses a water-in-oil emulsified sunscreen cosmetic comprising (a) 0.2-10 wt% of octocrylene, (b) 0.2-30 wt% of hydrophobicized titanium dioxide and/or zinc oxide, (c) 0.02-8 wt% of phenylbenzimidazole sulfonic acid, and (d) a neutralizing agent for said ingredient (c). Triethanolamine is listed as the most preferable neutralizing salt (paragraph 0023). {0004}

Patent Citation 4 discloses a sunscreen cosmetic that contains, as ultraviolet absorbents, 1,4-dihydropyridine and 1,4-dihydropyran. In addition phenylbenzimidazole sulfonic acid, aminomethyl propanol and such are among those listed as the various potential ingredients that can be added to this sunscreen cosmetic. However, there is no description of directly connecting these two combinations. {0005}

Patent Citation 1: Japanese Patent Laid-Open H10-120543 bulletin

Patent Citation 2: Japanese Patent Laid-Open 2002-521417 bulletin

Patent Citation 3: Japanese Patent Laid-Open 2007-217379 bulletin

Patent Citation 4: Japanese Patent Laid-Open 2005-518425 bulletin

5 DISCLOSURE OF INVENTION

{0006}

The inventors of the present patent application took the
aforementioned Patent Citation 3 into account and, for the purpose of
10 developing a new sunscreen cosmetic, were looking into developing a
sunscreen cosmetic that contains (a) dimethicodiethylbenzalmalonate and
(b) phenylbenzimidazole sulfonic acid. However, when triethanolamine,
which was described as the most preferable neutralizing agent in Patent
Citation 3, was used, there was an unexpected problem in that the
15 phenylbenzimidazole sulfonic acid crystallized.

{0007}

The present invention is an invention achieved as a result of
earnest research aiming to solve such a problem; the inventors discovered
that a sunscreen cosmetic containing (a) dimethicodiethylbenzalmalonate
20 and (b) phenylbenzimidazole sulfonic acid that used aminomethyl propanol

instead of triethanolamine, which was specifically recommended in the
aforementioned Patent Citation 3, and had a ratio of the water phase in
the water-in-oil emulsified sunscreen cosmetic of 40 wt%, unexpectedly
did not cause phenylbenzimidazole sulfonic acid to crystallize, which led
5 to a stable sunscreen cosmetic of a water-in-oil emulsified composition,
thus completing the present invention.

{0008}

An aspect of the present invention provides a water-in-oil
emulsified sunscreen cosmetic containing (a)
10 dimethiocodiethylbenzalmalonate and (b) phenylbenzimidazole sulfonic
acid, said cosmetic aiming to cause no crystallization of
phenylbenzimidazole sulfonic acid and being very stable over time.

{0009}

15 That is, the present invention provides a water-in-oil emulsified
sunscreen cosmetic comprising (a) 0.1-10 wt% of
dimethiocodiethylbenzalmalonate, (b) 0.02-8 wt % of phenylbenzimidazole
sulfonic acid, and (c) aminomethyl propanol, said cosmetic having a water
phase content of 40 wt% or less.

20 {0010}

Also, the present invention provides the aforementioned water-in-oil emulsified sunscreen cosmetic wherein the blend ratio of ingredient (b) is 0.5-4 wt%.

{0011}

5 Also, the present invention provides the aforementioned water-in-oil emulsified sunscreen cosmetic wherein ingredient (c) is contained in the amount of 0.01-3 wt%.

{0012}

Paragraph 0012 has been intentionally deleted.

10 {0013}

Also, the present invention provides the aforementioned water-in-oil emulsified sunscreen cosmetic that additionally contains (d) a silicone type surfactant in the amount of 0.01-20 wt%.

{0014}

15 Also, the present invention further provides the aforementioned water-in-oil emulsified sunscreen cosmetic that additionally contains (e) hydrophobicized titanium dioxide and/or zinc oxide in the amount of 10.1-25 wt%.

20 ADVANTAGEOUS EFFECTS

{0015}

The present invention aims to provide the advantage of a water-in-oil emulsified sunscreen cosmetic containing (a) dimethicodiethylbenzalmalonate and (b) phenylbenzimidazole sulfonic acid, 5 said cosmetic aiming to cause no crystallization of phenylbenzimidazole sulfonic acid and being very stable over time, can be provided.

BEST MODE FOR CARRYING OUT THE INVENTION

{0016}

10 The water-in-oil emulsified sunscreen cosmetic of the present invention is described in detail below.

{0017}

"(a) Dimethicodiethylbenzalmalonate"

Ingredient (a),

dimethicodiethylbenzalmalonate, used in the present invention is a prior art ultraviolet absorbent; it is commercially available as, for example, "Parsol SLX" (from DSM Nutrition Japan, Ltd.), which can be used preferably.

{0018}

The blend ratio of ingredient (a) is 0.1-10 wt%, preferably 2.5-7.5 wt%, of the total amount of the water-in-oil emulsified sunscreen cosmetic.

If the blend ratio is outside of the aforementioned range, then the effect of the present invention may not be manifested sufficiently.

{0019}

"(b) Phenylbenzimidazole sulfonic acid"

Ingredient (b), phenylbenzimidazole sulfonic acid, used in the present invention is a water soluble ultraviolet absorbent; it is commercially available as, for example, "Neo Heliopan Hydro" (from Symrise, Ltd.) and "Eusolex 232" (from Merck, Ltd.), which can be used preferably.

{0020}

The blend ratio of ingredient (b) is 0.02-8 wt%, preferably 0.5-4 wt%, more preferably 1-3 wt%, of the total amount of the water-in-oil emulsified

sunscreen cosmetic.

If the blend ratio is outside of the aforementioned range, then the effect of the present invention may not be manifested sufficiently.

{0021}

" (c) Neutralizing agent for said ingredient (b)"

Ingredient (c) used in the present invention is a neutralizing agent to neutralize the aforementioned ingredient (b). The neutralizing agent is aminomethyl propanol.

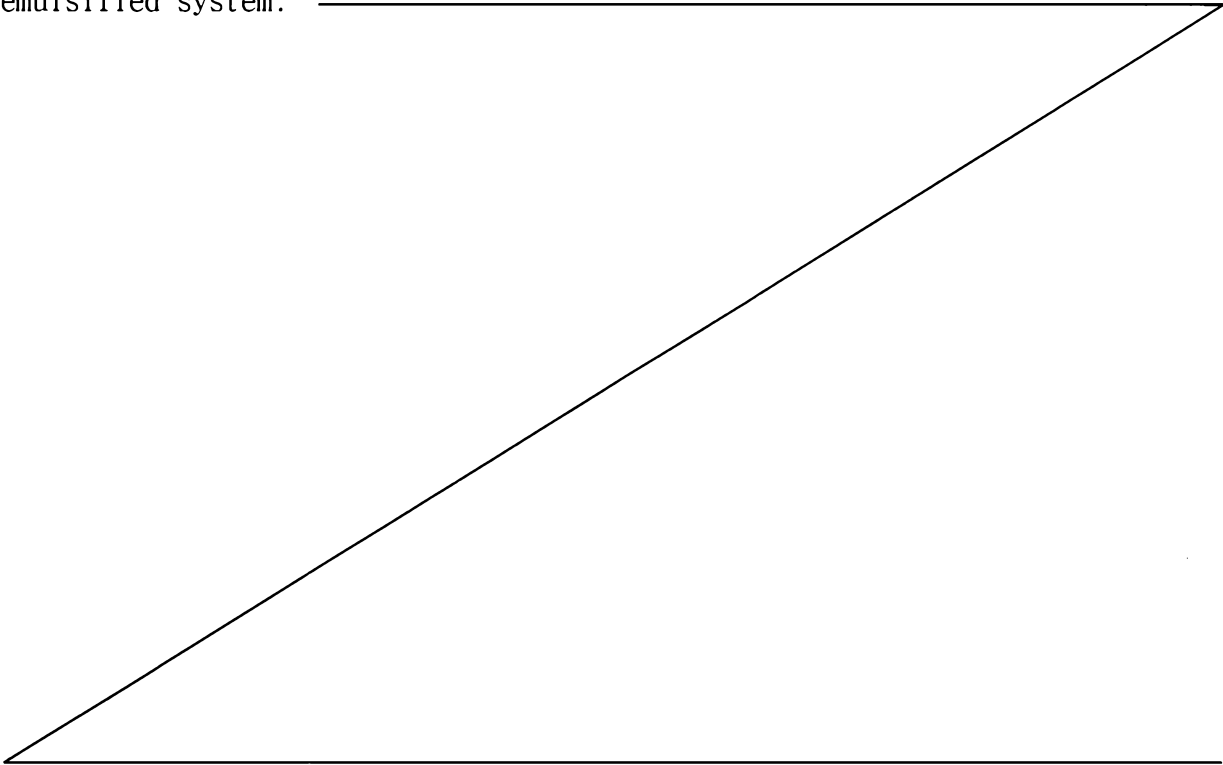

{0022}

The blend ratio of ingredient (c) is not limited in particular as long as it is sufficient to neutralize ingredient (b). The blend ratio of ingredient (c) is preferably 0.01-3 wt% of the total amount of the sunscreen cosmetic.

{0023}

"(d) Silicone type surfactant"

In the present invention, it is preferable to add (d) a silicone type surfactant as an emulsifier. Selection of the silicone type surfactant is not limited in particular as long as it can be used in a water-in-oil emulsified system.

Examples include poly (oxyethylene/oxypropylene)
methylpolysiloxane copolymer, polyoxyethylene
methylpolysiloxane copolymer, branched-silicone-
chain type methylpolysiloxane copolymer, branched-
5 alkyl-chain type polyoxyethylene
methylpolysiloxane copolymer, branched-alkyl-
chain/silicone-chain type polyoxyethylene
methylpolysiloxane copolymer, cross-linked
polyoxyethylene methylpolysiloxane, alkyl-group-
10 containing cross-linked polyoxyethylene
methylpolysiloxane, branched-polyglycerin-modified
silicone, cross-linked-polyglycerin-modified
silicone, alkyl group-containing cross-linked-
polyglycerin-modified silicone, and alkyl group
15 branched-polyglycerin-modified silicone.
{0024}

Examples of the poly
(oxyethylene/oxypropylene) methylpolysiloxane
copolymer include PEG/PPG-20/22 butylether
20 dimethicone ("KF-6012" ; from Shin-Etsu Chemical
Co., Ltd.), PEG/PPG-20/20 dimethicone ("BY22-
008M" ; from Dow Corning Toray Silicone Company
Ltd.), Lauryl PEG/PPG-18 methicone ("5200
Formulation Aid"; from Dow Corning Toray Company
25 Ltd.), PEG/PPG-19/19 dimethicone ("5330 Fluid";

from Dow Corning Toray Company Ltd.), and PEG/PPG-15/15 dimethicone ("5330 Fluid"; from Dow Corning Toray Company Ltd.).

{0025}

5 Examples of the polyoxyethylene

methylpolysiloxane copolymer include PEG-11 methyl ether dimethicone ("KF6011" ; from Shin-Etsu Chemical Co., Ltd.), PEG-9 dimethicone ("KF-6013" ; from Shin-Etsu Chemical Co., Ltd.), PEG-3

10 ("KF-6015" ; from Shin-Etsu Chemical Co., Ltd.), PEG-9 methyl ether dimethicone ("KF-6016" ; from Shin-Etsu Chemical Co., Ltd.), PEG-10 dimethicone ("KF-6017" ; from Shin-Etsu Chemical Co., Ltd.), PEG-11 methyl ether dimethicone ("KF6018" ; from
15 Shin-Etsu Chemical Co., Ltd.), PEG-9 dimethicone ("KF-6019" ; from Shin-Etsu Chemical Co., Ltd.), and PEG-12 dimethicone ("SH3771M" , "SH3772M" , "SH3773M" , "SH3775M" ; from Dow Corning Toray Company Ltd.

20 {0026}

Examples of the branched-silicone-chain type methylpolysiloxane copolymer include PEG-9 polydimethylsiloxylethyl dimethicone ("KF-6028" ; from Shin-Etsu Chemical Co., Ltd.).

25 {0027}

Examples of the branched-alkyl-chain type polyoxyethylene methylpolysiloxane copolymer include PEG/PPG-10/3 oleyl ether dimethicone ("KF-6026" ; from Shin-Etsu Chemical Co., Ltd.).

5 {0028}

Examples of the branched-alkyl-chain/silicone-chain type polyoxyethylene methylpolysiloxane copolymer include lauryl PEG-9 polydimethylsiloxylethyl dimethicone ("KF-6038" ; from Shin-Etsu Chemical Co., Ltd.).

10

{0029}

Examples of the cross-linked polyoxyethylene methylpolysiloxane include dimethicone (dimethicone/(PEG-10/15)) crosspolymer ("KSG-210" ; from Shin-Etsu Chemical Co., Ltd.) and cyclomethicone/PEG-12 dimethicone/dimethicone crosspolymer ("9011 silicone elastomer blend" ; from Dow Corning Toray Silicone Company Ltd.).

15

{0030}

Examples of the alkyl-group-containing cross-linked polyoxyethylene methylpolysiloxane include mineral oil/PEG-15 lauryl dimethicone crosspolymer ("KSG-310" ; from Shin-Etsu Chemical Co., Ltd.), isododecane/PEG-15 lauryl dimethicone crosspolymer ("KSG-320" ; from Shin-Etsu Chemical

20

25

Co., Ltd.), trioctanoin/PEG-15 lauryl dimethicone crosspolymer ("KSG-330" ; from Shin-Etsu Chemical Co., Ltd.), and squalane/PEG-15 lauryl dimethicone crosspolymer/PEG-10 lauryl dimethicone crosspolymer ("KSG-340" ; from Shin-Etsu Chemical Co., Ltd.).

{0031}

Examples of the branched-polyglycerin-modified silicone include polyglyceryl-3 dicyclohexane dimethicone ("KF-6100" ; from Shin-Etsu Chemical Co., Ltd.) and polyglyceryl-3 polydimethylsiloxyl dimethicone ("KF-6104" ; from Shin-Etsu Chemical Co., Ltd.).

{0032}

Examples of the cross-linked polyglycerin-modified silicone include dimethicone/(dimethicone/polyglycerin-3) crosspolymer ("KSG-710" ; from Shin-Etsu Chemical Co., Ltd.).

{0033}

Examples of the alkyl-group-containing cross-linked polyglycerin-modified silicone include mineral oil/(lauryl dimethicone/polyglycerin 3) crosspolymer ("KSG-810" ; from Shin-Etsu Chemical Co., Ltd.),

isododecane/(lauryl dimethicone/polyglycerin 3)
crosspolymer ("KSG-820" ; from Shin-Etsu Chemical
Co., Ltd.), trioctanoin/(lauryl
dimethicone/polyglycerin 3) crosspolymer ("KSG-
5 830" ; from Shin-Etsu Chemical Co., Ltd.), and
squalane/(lauryl dimethicone/polyglycerin 3)
crosspolymer ("KSG-840" ; from Shin-Etsu Chemical
Co., Ltd.).

{0034}

10 Examples of the alkyl group branched-
polyglycerin-modified silicone include lauryl
polyglyceryl-3 polydimethylsiloxylethyl dimethicone
("KF-6105" ; from Shin-Etsu Chemical Co., Ltd.).

{0035}

15 Of those mentioned above, polyoxyethylene
methylpolysiloxane copolymer, poly
(oxyethylene/oxypropylene) methylpolysiloxane
copolymer, branched-silicone-chain type
methylpolysiloxane copolymer, and branched-alkyl-
20 chain/silicone-chain type polyoxyethylene
methylpolysiloxane copolymer are used preferably.

{0036}

 The lower limit of the blend ratio of
ingredient (d) is preferably 0.01 wt% or more,
25 more preferably 0.1 wt% or more, even more

preferably 0.5 wt% or more, of the total amount of the water-in-oil emulsified sunscreen cosmetic. Also, the upper limit should preferably be 20 wt% or less, more preferably 10 wt% or less.

5 If the blend ratio is less than 0.01 wt%, then the stability of the emulsified composition may worsen. If the blend ratio is significantly over 20 wt%, then the sensation during use may worsen due to stickiness. The blend ratio is
10 determined appropriately from the combination of the aforementioned lower limit and upper limit.

 A preferable blend ratio is 0.01-20 wt%, more preferably 0.05-10 wt%, of the total amount of the water-in-oil emulsified sunscreen cosmetic.
15 If the stability of the emulsified composition has a priority, then 0.5-10 wt% is preferable.

{0037}

“(e) Hydrophobicized titanium dioxide and/or zinc oxide”

20 In the present invention, it is preferable to add hydrophobicized titanium oxide and/or zinc oxide as ingredient (e). These are ultraviolet scattering agents; after a hydrophobicizing treatment they can be efficiently dispersed in the
25 oil phase (outer phase) to increase the

ultraviolet prevention effect of the present invention.

{0038}

In terms of the ultraviolet scattering effect, titanium dioxide and zinc oxide are preferably in the powder form prepared as fine particles. Preferable examples of the fine particle titanium dioxide include those having an average primary particle size of 30 nm or less, more preferably those having an average primary particle size of 20 nm or less. Examples of the fine particle zinc oxide include those having an average primary particle size of 40 nm or less, more preferably those having an average primary particle size of 30 nm or less. However, they are not limited to those having these particle sizes.

{0039}

The method of hydrophobicizing is not limited in particular; the treatment can be done with a prior art method. Examples include a treatment in which silicones such as methylhydrogen polysiloxane, methylhydrogen polysiloxane/dimethyl polysiloxane copolymer, and dimethyl polysiloxane are used, a treatment in which silane compounds such as

octyltriethoxysilane and hexyltrimethoxysilane are used, a treatment in which a fatty acid such as palmitic acid or stearic acid is used, a metal soap treatment in which an alkali metal salt or
5 alkali earth metal salt of said fatty acid is used, and a fluorine treatment in which diethanolamine perfluoroalkylphosphate, perfluoroalkyltrimethoxysilane, etc. are used.
{0040}

10 Examples of the hydrophobicized titanium dioxide include "TTO-S-4", "TTO-V-4" (both from Ishihara Sangyo Kaisha, Ltd.), "MT-100TV", and "MT-014V" (both from Tayca Corporation).

Examples of the hydrophobicized zinc oxide
15 include "FZO-50" (from Ishihara Sangyo Kaisha, Ltd.), "MZ-700" (from Tayca Corporation), and "Z-Cote HP-1" (from BASF).

In the present invention, commercially available products of these can be preferably used.

20 {0041}

The blend ratio of the ingredient (e) is 10.1-25 wt% of the total amount of the water-in-oil emulsified sunscreen cosmetic. Outside of this range may not be preferable in terms of the
25 ultraviolet scattering effect and the sensation

during use (squeakiness and such) due to the addition of the powder.

If the blend ratio of ingredient (e) is 10.1 wt% or more, then a very high ultraviolet scattering effect can be obtained, but usually the occurrence of an offensive odor due to the ultraviolet absorbent and these powders is expected. However, in the present invention, it is possible to prevent/suppress the offensive odor in a stable manner.

{0042}

In the present invention, it is essential that the blend ratio of the water phase (inner phase) be 40 wt% or less of the total amount of the water-in-oil emulsified sunscreen cosmetic. The preferable range is 10-40 wt%.

The ingredient of the water phase is water; however, the 40 wt% is a total of water and the water based ingredients dissolved in water (not including the surfactant). Ingredients (b) and (c) are included, but ingredients (a), (d), and (e) are not included.

{0043}

On the other hand, the oil phase (outer phase) is preferably 60-85 wt% of the total amount

of the water-in-oil emulsified sunscreen cosmetic. Selection of the oil component that constitutes the oil phase is not limited in particular.

{0044}

5 In addition to the aforementioned ingredients, other ingredients usually used in cosmetics can be added as necessary into the water-in-oil emulsified sunscreen cosmetic of the present invention as long as the object and/or
10 effect of the present invention is not adversely affected. Examples of such ingredients include water soluble polymers, oil soluble polymers, polymer powders, emulsifiers (other than the aforementioned ingredient (d)), waxes, alcohols,
15 liquid fats and oils, ester oils, hydrocarbon oils, silicone oils, fatty acids, higher alcohols, fatty acid esters, drugs, ultraviolet absorbents (other than the aforementioned ingredient (e)), ultraviolet scattering agents (other than the
20 aforementioned ingredient (a) and ingredient (b)), and organic modified-clay minerals. Details are illustrated below.

{0045}

 Examples of the water soluble polymers
25 include homopolymer or copolymer of 2-acrylamide-

2-methylpropanesulfonic acid (hereafter abbreviated as "AMPS"). Examples of the copolymer include copolymers with vinylpyrrolidone, acrylic acid amide, sodium acrylate, and

5 hydroxyethyl acrylate, etc. Therefore, examples include AMPS homopolymer, vinylpyrrolidone/AMPS copolymer, dimethylacrylamide/AMPS copolymer, acrylic acid amide/AMPS copolymer, and sodium acrylate/AMPS copolymer.

10 {0046}

Examples further include carboxyvinyl polymer, ammonium polyacrylate, sodium polyacrylate, sodium acrylate/alkyl acrylate/sodium methacrylate/alkyl methacrylate
15 copolymer, carrageenan, pectin, mannan, curdlan, chondroitin sulfuric acid, starch, glycogen, gum arabic, sodium hyaluronate, traganth gum, xanthan gum, mucoitin sulfuric acid, hydroxyethyl guar gum, carboxymethyl guar gum, guar gum, dextran, kerato
20 sulfate, locustbean gum, succinoglucane, chitin, chitosan, carboxymethyl chitin, and agar.

{0047}

Examples of the oil soluble polymers include trimethylsiloxysilicate, alkyl modified silicone,
25 and polyamide modified silicone.

{0048}

Examples of the polymer powders include dimethicone crosspolymer, (dimethicone/vinyl dimethicone) crosspolymer,

5 polymethylsilsesquioxane, polyethylene, and methyl polymethacrylate.

{0049}

Examples of the waxes include honeybee wax, candelilla wax, carnauba wax, lanolin, liquid

10 lanolin, and jojoba wax.

{0050}

Examples of the emulsifiers include glycerin fatty acid esters, polyglycerin fatty acid esters, polyoxyethylene glycerin fatty acid esters,

15 sorbitan fatty acid esters, and polyoxyethylene sorbitan fatty acid esters.

{0051}

Examples of the alcohols include lower alcohols such as ethanol and isopropanol, higher

20 alcohols such as isostearyl alcohol,

octyldodecanol, and hexyldecanol, and polyhydric alcohols such as ethylene glycol, propylene glycol, 1,3-butylene glycol, dipropylene glycol, and polybutylene glycol.

25 {0052}

Examples of the liquid fats and oils include
avocado oil, tsubaki oil, turtle fatty acid,
macadamia nut oil, corn oil, mink oil, olive oil,
rapeseed oil, egg yolk oil, sesame oil, persic oil,
5 wheat germ oil, sasanqua oil, castor oil, linseed
oil, safflower oil, cotton seed oil, perilla oil,
soybean oil, peanut oil, tea seed oil, Japanese
nutmeg oil, rice bran oil, Chinese gimlet oil,
Japan gimlet oil, jojoba oil, germ oil, and
10 triglycerin.
{0053}

Examples of the ester oils include isopropyl
myristate, cetyl octanoate, octyl dodecyl
myristate, isopropyl palmitate, butyl stearate,
15 hexyl laurate, myristil myristate, decyl oleate,
dimethyl hexyl decyl octanoate, cetyl lactate,
myristil lactate, lanolin acetate, iso cetyl
stearate, iso cetyl isostearate, cholesteryl 12-
hydroxystearate, di-2-ethylene glycol
20 ethylhexanoate, dipentaerythritol fatty acid ester,
n-alkylene glycol monoisostearate, neopentyl
glycol dicaprates, diisostearyl malate, glyceryl
di-2-heptylundecanoate, trimethylolpropane tri-2-
ethyl hexanoate, trimethylolpropane triisostearate,
25 tetra-2-pentaerythritol ethylhexanoate, glycerin

tri-2-ethylhexanoate, glyceryl trioctanoate,
glycerin triisopalmitate, trimethylolpropane
triisostearate, cetyl 2-ethyl hexanoate, 2-
ethylhexyl palmitate, glycerin trimyristate, tri-
5 2-heptyl undecanoic acid glyceride, methyl castor
oil fatty acid, oleyl oleate, aceto glyceride, 2-
heptylundecyl palmitate, diisobutyl adipate, 2-
octyldodecyl N-lauroyl-L-glutamate, di-2-
heptylundecyl adipate, ethyl laurate, di-2-
10 ethylhexyl sebacate, 2-hexyldecyl myristate, 2-
hexyldecyl palmitate, 2-hexyldecyl adipate,
diisopropyl sebacate, 2-ethylhexyl succinate, and
triethyl citrate.

{0054}

15 Examples of the hydrocarbon oils include
liquid petrolatum, ozocerite, squalane, pristane,
paraffin, ceresin, squalene, petrolatum,
microcrystalline wax, polyethylene wax, and
Fischer-Tropsch wax.

20 {0055}

Examples of the silicone oils include
dimethylpolysiloxane, octamethyl siloxane,
decamethyltetrasiloxane, methyl hydrogen
polysiloxane, methylphenyl polysiloxane,
25 hexamethyl cyclotrisiloxane, octamethyl

cyclotetrasiloxane, and decamethyl
cyclopentasiloxane.

{0056}

Examples of the fatty acids include lauric
5 acid, myristic acid, palmitic acid, stearic acid,
behenic acid, and arachidonic acid.

{0057}

Examples of the higher alcohols include
lauryl alcohol, myristyl alcohol, cetyl alcohol,
10 stearyl alcohol, behenyl alcohol, arachyl alcohol,
batyl alcohol, chimyl alcohol, carnaubyl alcohol,
ceryl alcohol, koryanyl alcohol, myricyl alcohol,
lacceryl alcohol, elaidyl alcohol, isostearyl
glyceryl ether, octyl alcohol, triacontyl alcohol,
15 serachyl alcohol, cetostearyl alcohol, oleyl
alcohol, lanolin alcohol, hydrogenated lanolin
alcohol, hexyl decanol, and octyl decanol.

{0058}

Examples of the fatty acid esters include
20 myristyl myristate, cetyl palmitate, choresteryl
stearate, and bees wax fatty acid 2-octyldedecyl
ester.

{0059}

Examples of the drugs include salts of L-
25 ascorbic acid and its derivatives, glycyrrhizic

acid and its derivatives such as dipotassium glycyrrhizate and monoammonium glycyrrhizate, glycyrrhetinic acid and its derivatives such as stearyl glycyrrhetinate, allantoin, salts of

5 tranexamic acid and its derivatives, salts of alkoxysalicylic acid and its derivatives, salts of glutathione and its derivatives, allantoin, and azulene.

{0060}

10 Examples of the ultraviolet absorbents other than the aforementioned ingredients (a) and (b) include cinnamic acid derivatives such as ethylhexyl methoxycinnamate, isopropyl methoxycinnamate, and isoamyl methoxycinnamate;

15 para-aminobenzoic acid (hereafter abbreviated as PABA) derivatives such as PABA, ethyl PABA, ethyl-dihydroxypropyl PABA, ethylhexyl-dimethyl PABA, and glyceryl PABA; salicylic acid derivatives such as homosalate, ethylhexyl salicylate, dipropylene

20 glycol salicylate, and TEA salicylate; benzophenone derivatives such as benzophenone-1, benzophenone-2, benzophenone-3 or oxybenzone, benzophenone-4, benzophenone-5, benzophenone-6, benzophenone-8, benzophenone-9, and benzophenone-

25 12; benzylidene camphor derivatives such as 3-

benzylidene camphor, 4-methylbenzylidene camphor,
benzylidene camphor sulfonic acid, camphor
benzalkonium methosulfate, terephthalylidene
camphor sulfonic acid, and polyacrylamide
5 methylbenzylidene camphor; triazine derivatives
such as anisotriazine, ethylhexyl triazone,
diethylhexyl butamido triazone, and 2,4,6-tris
(diisobutyl-4'-aminobenzalmalonate)-s-triazine;
phenylbenzimidazole derivatives such as disodium
10 phenyldibenzimidazole tetrasulfonate;
phenylbenzotriazole derivatives such as
drometrizole, trisiloxane and methylenebis
(benzotriazoryl tetrabutylphenol); anthranyl
derivatives such as mentyl anthranilate;
15 imidazoline derivatives such as
ethylhexyldimethoxybenzylidene dioxoimidazoline
propionate; benzalmalonate derivatives such as
polyorganosiloxane having benzalmalonate
functional groups; 4,4-diarylbutadiene derivatives
20 such as 1,1-dicarboxy (2,2'-dimethylpropyl)-4,4-
diphenylbutadiene.
{0061}

Examples of ultraviolet scattering agents
other than the aforementioned ingredient (e)
25 include hydrophobicized inorganic pigments such as

kaolin and calcium carbonate.

{0062}

Examples of the organic modified clay minerals include quaternary ammonium salt type cation-modified clay minerals.

{0063}

The product forms of the water-in-oil emulsified sunscreen cosmetic of the present invention include emulsions and creams. These products can be prepared by an ordinary method using the aforementioned essential ingredients and other ingredients usually contained in cosmetics.

EXAMPLES

15 {0064}

Next, the present invention is described in detail by referring to Examples. The present invention is not limited to the following Examples. The blend ratios are all in wt% units.

20 {0065}

"Example 1, Comparative examples 1-4"

Sunscreen cosmetics were prepared based on the recipes shown in the following Table 1.

Specifically, (9) <part B> was added to (1)-(8)

25 <part A> and homogeneously dispersed, to which

(10)-(12) <part C> was added and homogeneously dispersed, and then (13)-(20) <part D> was gradually added and emulsified to obtain a water-in-oil emulsified sunscreen cosmetic.

5 The water phase of Example 1 and Comparative examples 1-4 is 30.9-31.15 wt%.

{0066}

<Whether crystallization occurs or not>

10 The obtained sunscreen cosmetics (samples) were evaluated based on the following to check whether the phenylbenzimidazole sulfonic acid crystallized or not. The results are shown in Table 1.

<Test method>

15 Each sample was left at rest for one month while the temperature was cycled between 0° C and 40° C every hour and observed with a microscope (BX-50-33PHD x400 from Olympus) to evaluate whether or not there were crystals by using the
20 following evaluation criteria.

<Evaluation criteria>

Crystals are observed: Yes

Crystals are not observed: No

{0067}

25 <Stability in terms of preventing/suppressing an

offensive odor>

The obtained sunscreen cosmetics (samples) were evaluated based on the following for the offensive odor prevention/suppression effect. The results are shown in Table 1.

<Test method>

Each sample was left at rest for one month in a thermostatic tank at 50° C and 10 female panelists actually used it to evaluate the odor at the time of application based on the following evaluation criteria.

<Evaluation criteria>

◎: 9 or more out of 10 reported that the odor was within tolerance.

○: 6-8 out of 10 reported that the odor was within tolerance.

△: 3-5 out of 10 reported that the odor was within tolerance.

×: Less than 3 out of 10 reported that the odor was within tolerance.

{0069}

20 As clearly shown in Table 1, the water-in-
oil emulsified sunscreen cosmetic of the present
invention does not generate crystals of
phenylbenzimidazole sulfonic acid even after being
left at rest at 50° C, indicating good stability.

25 It is also verified to be superior in terms of the

offensive odor prevention/suppression effect.

INDUSTRIAL APPLICABILITY

{0070}

5 The present invention can provide a water-in-oil emulsified
sunscreen cosmetic that has superior ultraviolet protection, aims to
cause no precipitation of the ultraviolet absorbent, and has superior
stability of the base agent. The present invention can be used preferably
as a sunscreen product in the emulsion form.

10 {0071}

It will be understood that the term “comprise” and any of its
derivatives (eg. comprises, comprising) as used in this specification is
to be taken to be inclusive of features to which it refers, and is not
meant to exclude the presence of any additional features unless otherwise
15 stated or implied.

{0072}

The reference to any prior art in this specification is not, and
should not be taken as, an acknowledgement of any form of suggestion that
such prior art forms part of the common general knowledge.

20 {0073}

It will be appreciated by those skilled in the art that the invention is not restricted in its use to the particular application described. Neither is the present invention restricted in its preferred embodiment with regard to the particular elements and/or features

5 described or depicted herein. It will be appreciated that various modifications can be made without departing from the principles of the invention. Therefore, the invention should be understood to include all such modifications in its scope.

THE CLAIMS DEFINING THE INVENTION ARE AS FOLLOWS:

1. A water-in-oil emulsified sunscreen cosmetic comprising (a) 0.1-10 wt% of dimethicodiethylbenzalmalonate, (b) 0.02-8 wt % of phenylbenzimidazole sulfonic acid, and (c) aminomethyl propanol, said
5 cosmetic having a water phase content of 40 wt% or less.
2. The water-in-oil emulsified sunscreen cosmetic of claim 1 that contains ingredient (b) in the amount of 0.5-4 wt%.
3. The water-in-oil emulsified sunscreen cosmetic of claim 1 or 2 that contains ingredient (c) in the amount of 0.01-3 wt%
- 10 4. The water-in-oil emulsified sunscreen cosmetic of any of claims 1-3 that additionally contains (d) a silicone type surfactant in the amount of 0.01-20 wt%.
5. The water-in-oil emulsified sunscreen cosmetic of any of claims 1-4 that contains (e) hydrophobicized titanium dioxide and/or zinc oxide
15 in the amount of 10.1-25 wt%.
