MONROE GUETT, OF HARTFORD, CONNECTICUT, ASSIGNOR TO THE HART & HEGEMAN MANUFACTURING COMPANY, OF HARTFORD, CONNECTICUT, A CORPORATION OF CONNECTICUT.

FLUSH SWITCH-MOUNTING.

1,067,331. Specification of Letters Patent. Patented July 15, 1913.

Application filed April 26, 1911. Serial No. 623,361.

To all whom it may concern:

Be it known that I, MONROE GUETT, a citizen of the United States, and a resident of Hartford, in the county of Hartford and State of Connecticut, have invented certain new and useful Improvements in Flush Switch-Mountings, of which the following is a specification.

The object of the invention is to produce a device of the character described having features of novelty and advantage.

Referring to the drawings:

Figure 1 is a front view illustrating the invention. Fig. 2 is a side view thereof.

The novel mounting herein illustrated comprises a pair of U-shaped straps 10—10 arranged side by side with end flanges 11—11 by means of which the straps can be secured in place. The switch receptacles are supported at each end on these straps and are secured thereto as by the screws 12—12.

At the present time and in many varieties of work only a very limited amount of space is provided for the installation of electric switches and it is very difficult to obtain a proper support or mounting for the switches of the flush type with the methods and devices now at hand. By my invention a very simple means of mounting is provided which requires the least possible amount of room and which gives a firm and secure support for the switch.

I claim as my invention:—

In a device of the character described a pair of longitudinally extending U-shaped straps arranged side by side, means for securing said straps in place with their bases below the surface of the support, a switch receptacle arranged transversely of said straps with its ends resting on the bases, and means in the receptacle to engage the bases to hold the receptacle in position.

MONROE GUETT.
