JEFFERSON BROWN, JR., OF NEW YORK, N. Y.

Letters Patent No. 114,404, dated May 2, 1871.

IMPROVEMENT IN SAFETY ATTACHMENTS FOR POCKET-BOOKS.

The Schedule referred to in these Letters Patent and making part of the same.

To all whom it may concern:

Be it known that I, JEFFERSON BROWN, Jr., of New York city, in the county of New York and State of New York, have invented certain new and useful Improvements in Safety Attachments for Pocket-Books or other Money-Receptacles; and I do hereby declare that the following is a full, clear, and exact description thereof, reference being had to the accompanying drawing and to the letters of reference marked thereon which form a part of this specification.

The nature of my invention consists in a device to prevent a pocket-book or other money-receptacle from being snatched from the hand, and also obviating the necessity of laying it down while using the hand, thereby insuring safety against loss by theft or carelessness without preventing the use of the hand.

In order to enable others skilled in the art to which my invention appertains to make and use the same, I will now proceed to describe its construction and operation, referring to the annexed drawing, in which—

Figure 1 is a perspective view from the front of a pocket-book with my device attached thereto;

Figure 2 shows the same in position on the hand; and

Figure 3 is a rear view of the same.

A represents a pocket-book or other money-receptacle, to which is secured a bracelet, B, by means of a spring, *g*. This spring is covered by any suitable material and fastened to the back of the pocket-book.

The bracelet B is provided with a slot, *s*, and button *t* for fastening around the wrist.

A ring, E, is also attached to the pocket-book by means of a band, *x*, in such a manner that when the bracelet is put around the wrist and the ring upon the forefinger the pocket-book will occupy the palm of the hand, and the fingers and thumb can be used without detaching the pocket-book.

I do not confine myself to the particular device

above described, as it may be varied in numerous ways, all, however, involving the same principle, namely, the securing of a pocket-book or other money-receptacle to one of the fingers or to the wrist, or to both conjointly.

I will here mention a few of the ways in which this same object may be accomplished, but I do not want to be understood to say that these are the only methods. A number of variations would easily suggest themselves to almost anybody.

It can be attached to any bracelet by making the lower end of the part *g* in the form of a loop or equivalent device. The part *g* may be elastic or non-elastic, as desired.

A band of elastic or other material may encircle the hand below the thumb and hold the pocket-book with or without the bracelet. It may be made adjustable by means of loops.

An elastic band may be attached to any pocket-book by buttons, and be adjustable to any bracelet by means of a loop.

It can be secured to a glove by means of projecting pieces of suitable material, or a frame, which are secured to the money-receptacle and which can be attached to the glove by sewing or otherwise.

Having thus fully described my invention,

What I claim as new, and desire to secure by Letters Patent, is—

A pocket-book or money-receptacle, provided with a ring and bracelet, (either or both,) and so arranged that it may be carried in the palm of the hand, substantially as and for the purpose set forth.

In testimony that I claim the foregoing as my own I affix my signature in presence of two witnesses.

JEFFERSON BROWN, JR.
