(54) Title: MANAGEMENT OF CARE AREA TRANSITIONS OF INTRAVENOUS INFUSIONS

FIG. 1

(57) Abstract: An infusion device providing an in-progress infusion of at least one of a drug or a fluid consistent with one or more parameters of a first care area in a hospital can be transitioned to a second care area of the hospital. Details of the in-progress infusion can be compared against one or more second parameters defined for the second care area, and a compatibility determination can be made between the in-progress infusion and the one or more second parameters defined for the second care area. A handling mode of the in-progress infusion in the second care area can be selected based on the compatibility determination, and the in-progress infusion can be resolved consistent with the selected handling mode. Related apparatus, systems, techniques and articles are also described.
