 (57) Abstract:

A device (1) for removably securing a flag (2) to a flag pole (3) which device (1) comprises a first connecting member (7) configured to be secured to the flag pole (3) and a second connecting member (9) configured to be removably secured to said first connecting member (7) and when secured to the latter act as a stop for a flag (2) which is brought over the flag pole (3). The device (1) further comprises locking means configured to removably secure the first (7) and second (9) connecting members with respect to each other, which locking means comprises a locking member which is movable between a locking position and a releasing position. The locking means further comprises biasing means configured to apply a biasing force on said locking member towards said locking position in which said biasing force is to be overcome for transferring the locking member to said releasing position.
