(54) **Title:** SYSTEM FOR FASTENING GEMS TO A WATCH DIAL AND A WATCH PROVIDED WITH SUCH A SYSTEM FOR FASTENING GEMS

Fig. 4

(57) **Abstract:** In order to make a system for fastening gems to a watch dial, the dial (13) is made of an upper plate-shaped element (23) and of a lower plate-shaped element (24) facing each other, the upper plate-shaped element (23) being provided with one or more openings (30) for housing a respective gem in a visible manner and the lower plate-shaped element (24) being provided with one or more openings (31) at the one or more openings (30) of the upper plate-shaped element (23) and having the same size as these latter. Each of the openings (30, 31) facing one another by pairs extending across the thickness of the respective plate-shaped element (23, 24) with an own peripheral edge (32, 33) inclined so that each opening narrows, within the section of the respective plate-shaped element, going from the surface of the plate-shaped element facing the other plate-shaped element towards the opposite surface thereof for forming a seat for housing and retaining a gem (14) between the two plate-shaped elements (23, 24). A lower body (25) for supporting and holding the plate-shaped elements (23, 24) in position is provided, at the position of the gems on the dial, with cavities (36) having a concave bottom, designed to form a seat for receiving a part of the gem body arranged below the dial (13).
