UNITED STATES PATENT OFFICE.

WILLIAM H. DAVIS, OF TAUNTON, MASSACHUSETTS.

BLIND-FASTENER.

Specification of Letters Patent No. 25,634, dated October 4, 1859.

To all whom it may concern:

Be it known that I, WILLIAM H. DAVIS, of Taunton, in the county of Bristol and State of Massachusetts, have invented a new and Improved Mode of Fastening Blinds; and I do hereby declare that the following is a full and exact description thereof.

The nature of my invention consists in providing the catch on the window sill and on the side of the house with a box, and the part fixed to the blind to rest.

To enable others skilled in the art to make and use my invention I will proceed to describe its construction.

I make two boxes A and B as shown in the accompanying drawings. I make two catches as shown at E. I make two hooks as shown at C. I make a thin plate as shown at H.

C is set in the under edge of a blind having two hooks or notches that pass in an opening in the end of boxes A and B and fastens and rests the blind as shown at D in the accompanying drawing. The catches E are fastened in the boxes A and B with a rivet, and pressing on the knobs as shown on the top of box B and bottom of box A throws the catch out of the notch on C and unfastens the blind; F bottom view of box B fastened on sill with three screws; G bottom view of box A and is fastened on the house with a screw as shown on plan; H a thin plate as shown at I set in bottom of box A. I side view of catches E.

What I claim as my invention and desire to secure by Letters Patent is—

The application to the catch of a box to secure it from getting out of place and of the hook on the blind a rest to prevent the blind from sagging as herein described.

WILLIAM H. DAVIS.
