(54) Title: COMPUTER LEARNING MEMORY GAME AND SYSTEM

(57) Abstract: A diagnostically and audibly responsive computer learning memory game works with small children and other persons in teaching them to read. Based upon the game of concentration, square or rectangular tiles to be uncovered are displayed upside down, concealing words to be matched with words or words to be matched with phrases or visual pictures or audible sounds. The computer game matches the cards or tiles with sight words that the user is learning to read from a word list. For example, the computer displays typically 16 rectangles on a video screen, each hiding a word of pairs of words. Gradually the number of rectangles are chosen reduced in number. The user must remember where a correct word of the word pairs is located. The user must read word orally, if not, the computer will prompt the user with a clue until the user answers. If nothing is heard, the user is told the answer.
